18. Thirty Miles to the North-Eaſt of *Sheraz* are found the nobleſt Ruins of an ancient Palace or Temple, that are now to be ſeen on the Face of the Earth; even *Rome* itſelf, as it is ſaid, has nothing comparable to theſe venerable Remains of Antiquity; the Place at this Day is called *Chilmaner*, or forty Pillars. Mr. *Herbert* ſays, it was built upon a Mountain of dark colour'd Marble, and the Steps hew'd out of the ſolid Rock; but others who have viewed it more narrowly ſince, obſerve, that the Steps are compoſed of large Stones, fifteen or ſixteen Foot in Length, and of ſuch a Thickneſs, that ſix or ſeven Steps are cut out of one Stone, the whole being ſo artificially joined, that they appear to be but one Piece, which might eaſily occaſion Mr. *Herbert* to miſtake. It is ſeated at the North-Eaſt End of that ſpacious Plain where *Perſepolis* once ſtood, and generally held to be part of the Palace of *Darius*, who was conquered by *Alexander the Great*. The Front of this Palace ſtood towards the Weſt, and was about five hundred Paces in Length, the whole taking up near

threeſcore Acres of Ground. The Aſcent to it is by ninety-five Steps, thirty Feet in Length, and twenty Inches broad, but not more than three Inches deep, ſo that a Horſe may eaſily go up or down them. The Stair-Caſe divides as you aſcend, one Branch winding to the Right, and the other to the Left; each having a Wall on one Side, and a Marble Balluſtrade on the other; afterwards both Branches turn again, and end at a large ſquare Landing-place, from whence you go into a Portico of white Marble, twenty Foot wide. On it are carved in *Baſs relievo*, two Beaſts as big as Elephants, but their Bodies are like Horſes, and their Feet and Tails like Oxen.

Ten Feet farther ſtand two fluted Columns of whitiſh Stone, about ſixty Feet high, beſides their Capitals and Baſes, and as thick as three Men can fathom; a little farther ſtand two other Pilaſters, carved like the firſt, only that the Beaſts on the latter have Wings and Men's Heads. Beyond this Portal or Hall is ſuch another double Stair-Caſe, leading to the upper Rooms, twenty-five Feet broad, but incomparably more beautiful than the former, for on its Walls are carved in Baſs Relief, a Kind of Triumph, conſiſting of a great Train of People, in diſtinct Companies, carrying ſome Banners, and others Offerings, and after all comes a Chariot drawn by ſeveral Horſes, with a little Altar upon it, from whence the Flames of Fire ſeem to aſcend. On the other Side are carved wild Beaſts fighting; and among others a Lion and a Bull are cut with great Exactneſs, and ſo hard is the Stone, that to this Day the moſt curious Part of the Workmanſhip is preſerved. On the Top of the ſecond Stair-caſe is a ſquare Place, which has been ſurrounded with Columns, whereof ſeventeen only are now ſtanding, but there are a hundred Pedeſtals; thoſe that are left are of red and white Marble fluted, ſome of them ſixty, and others ſeventy Foot high, and twelve of them near three Fathom round. Theſe, ſome Antiquaries imagine, ſupported the Temple of the Sun.

On the ſame Floor near thoſe Columns is a Place fifty Foot ſquare, encloſed with Walls ſix or ſeven Foot thick, of a much finer Marble than any that hath been yet mentioned, and ſo wonderfully carved, that it would take up ſeveral Days to view all the Figures; which Way ſoever a Man turns himſelf in this ſecond Floor, there appear Figures cut in Braſs and half Relieve. Here you ſee Men fighting with Lions, and in another Place, a Man holding a Unicorn by the Horn; in a third you ſee the Figures of Giants, and in a fourth, a Prince giving Audience to his People or Ambaſſadors, and numberleſs other Scenes. Here are alſo Abundance of Inſcriptions, in laſting Characters, which have been tranſcribed, and brought into *Europe*, but none of them underſtood at this Day by the Learned, any more than they are by the People of the Country: This glorious Palace or Temple, with the whole City of *Perſepolis*, the nobleſt and wealthieſt then in the World, was burnt to the Ground by *Alexander the Great*, about the Year of the World 3724, at the Perſuaſion of *Lais*, the *Athenian* Harlot, as is ſaid, in Revenge for the Towns the *Perſian* Emperors had deſtroyed in *Greece*.

19. In the former Section, and in this, almoſt all the great Cities have been deſcribed, as they ſtood in Time paſt, and as they are repreſented to us by ſuch as had ſeen them; yet theſe Accounts bear but very little Relation to thoſe Places at this Day, for in the Courſe of the Civil Wars and Confuſions, with which this Empire has been overwhelmed, there is hardly any one of theſe Cities that has eſcaped. *Taurus* has been plundered over and over, *Schiras* burnt to the Ground, and even *Spahawn* has ſuffered not a little. The Port of *Gambron*, or *Bander Abaſſi*, had been always conſidered ſince the Time of *Shah Abbas*, as one of the richeſt Jewels of the *Perſian* Diadem; and notwithſtanding the Badneſs of the Air, and ſome Inconveniences that attended the Port, it was always a Place of great Trade, and might have been a Place of much greater Trade, if the ſucceeding Monarchs of *Perſia* had been Princes of the like Spirit, and had conceived as juſt Notions of Commerce as he did.

By their Fault it was, that the greateſt Part of the *Perſian* Trade came to be carried on by Land, through *Turkey*, which was neither agreeable to the Intereſts of the *Perſians*, nor requiſite for tranſporting their Commodities to *Europe*, for which other Means might have been employed. But when *Shah Nadir* had aſſumed the Empire, and by his amazing Succeſſes had acquired ſo great a Power, that he thought himſelf in no Kind of Danger from his Neighbours, he began to entertain Notions of Commerce, which, like all his other Notions, were of a Stamp peculiar to himſelf, and which do not ſeem, from any of the Accounts that we have met with, to have been at all underſtood in *Europe*. He ſaw plainly, that the *Turks* were prodigiouſly enriched by the carrying on of the *Perſian* Trade for Silk through their Country, and this he was reſolved to prevent at any Rate. It was with this View that he formed a Project, which we have more than once mentioned, of forcing a Paſſage to the *Black-Sea*, and thereby opening a direct Trade with *Europe*, which, with all his Power, he could never effect. He then turned his Thoughts towards the *Caſpian*, and having recovered the Province of *Gilan* from the *Ruſſians*, and provided effectually againſt any Impreſſions they could make upon his Territories by Land, he reſolved to carry on the Trade of *Perſia* that Way, by the Aſſiſtance of the *Armenians*, and to reſtore the Credit of that Nation, which had been very much ſunk in *Perſia*, by the vaſt Loſſes that had been ſuſtained by their Eſtabliſhment at *Julpha*, which, in the Courſe of the Civil Wars, has been almoſt totally ruined.

But beſides theſe Schemes, he had another, the Grounds of which it would take up too much Room to explain, and therefore I ſhall content myſelf with barely ſaying, that from certain Motives, that appeared to him reaſonable, he determin'd to remove the Capital of *Perſia*, and inſtead of fixing, as his Predeceſſors had done, the Imperial Reſidence at *Iſpahan*, he reſolved to transfer it Northward, and ſo place the Seat of his Empire in the Province of *Choraſſan*, to which perhaps he might in ſome Meaſure be determined by his Fondneſs for his native Country. He fixed there upon the Town of *Meſched*, which had been formerly the Capital of the Province. It is to be obſerved, that the Word *Metſchid*, ſignifies both in the *Perſian* and *Turkiſh* Languages, a Houſe or Temple conſecrated to the Service of God, and it is from thence that we have framed our Word *Moſque*. The Name of this City therefore implies a great Moſque, and it was ſo called from one of the fineſt in that Part of the World, erected over the Tomb of the Iman *Riza*, a great Saint, which rendred it a Place frequented by Pilgrims, who out of Charity erected there ſeveral publick Structures of great Magnificence. It was beſides famous for its Manufactures of all Sorts, ſuch as Gold and Silver Brocades, Tapeſtry, rich Silks, and woollen Stuff, as beautiful and as dear as Silks; there was beſides a Manufacture of earthen Ware, which was looked upon as the beſt in *Aſia*, on this Side *China*; ſo that an Age ago this City for Moſques, publick Baths, Caravanſera's, Bazars, and other publick Structures, was not in the leaſt inferior to any City in *Perſia*; but the *Uſbeck Tartars* had ſo totally deſtroyed it, that it made but a very indifferent Figure when the *Shah Nadir* made Choice of it for the Seat of his Empire.

The City of *Meſched* is ſituated in the Latitude of thirty-five Degrees twenty Minutes North, upon a ſmall Stream that falls into the River *Kurgan*, which ſeparates the Province of *Choraſan* from *Aſterabat*; and it may be very truly affirmed, that a happier Situation there is not in the World. The Air is extremely mild and temperate, the Soil about it wonderfully fruitful, and while it continues the Capital of the Empire, there is no doubt that the *Tartars* will be kept at a ſufficient Diſtance. While *Shah Nadir* was employed in his Expedition againſt the Mogul, his eldeſt Son *Riza Kuli Mirza* reſided there with the Title and Authority of *Shah* of *Perſia*; by his Care the City was rebuilt and reſtored to its ancient Luſtre, and ſuch Privileges granted to the Inhabitants, as not only came up to, but exceeded thoſe that former *Shah*'s had granted to the People of *Iſpahan.* This young Prince was not contented with barely attending to the Civil Government of the Empire, he was deſirous of diſplaying alſo his Military Capacity, which induced him to attack the Khan of *Balkh*, the Sovereign of the Southern Part of *Great Bucharia*; which Country, together with its Capital, he reduced, and thereby gained not only an Acceſſion of Territory, but one of the greateſt and beſt Cities in thoſe Parts. *Balkh* having been, for ſeveral Ages, the Center of the Commerce carried on by Land to and from the *Indies.*

By this Eſtabliſhment, and theſe Conqueſts, the Face of Affairs in *Perſia* is abſolutely changed, and this is a Thing that has not hitherto been ſufficiently conſidered. It is poſſible, and indeed it is probable, that the Southern Provinces of the *Perſian* Empire will ſuffer extremely by this Alteration; and it is not altogether unlikely, that if a civil War ariſes from the Death of the late Shah, a new Principality may be erected in the Southern Parts, of which *Spahawn*, or ſome other great City, may become the Capital; but ſtill *Meſched* will, in all Probability, remain the Seat of the *Perſian* Empire, and the Monarchs who govern there will extend their Conqueſts Northwards, through Countries formerly indeed dependent upon the *Perſians*, but which have been for many Ages in the Hands of the *Tartars*; and if this ſhould be the Caſe, we muſt conſider ourſelves extremely happy in having ſet on Foot a Trade through *Ruſſia* into *Perſia* by the *Caſpian* Sea, by which the moſt lucrative Part of the Commerce of that Empire will fall into our Hands, and may be juſtly eſteemed the Fruits of our great Naval Power, and the Effects of ſending our Squadrons into the *Baltick*, which gave the Court of *Peterſbourg* ſuch an Impreſſion of our Power to aſſiſt or diſtreſs them, as it is our Intereſt to take Care that Time ſhall never efface.

20. We promiſed to ſay ſomewhat of the ancient and preſent State of the Country and People of *Perſia*, conſidered in a comparative Light, and we will endeavour to execute this as ſuccinctly as poſſible. The learned Dr. *Hyde* wrote an admirable Treatiſe in *Latin*, of the Religion of the ancient *Perſians*, a Work equally curious and uſeful, and which, notwithſtanding, was ſo ill received by the Publick, that the Doctor boil'd his Tea-kettle with the greateſt Part of the Impreſſion, which has made it ſo ſcarce, that from its natural Price of Ten Shillings, or leſs, it is now ſold for Two Guineas, and even at that Price will not be eſteemed dear by ſuch as can judge of its real Value. It is from this learned Book that we are informed of what we ſhould otherwiſe never have known, that the ancient *Perſians*, on whom the *Greeks* beſtowed the Name of *Barbarians*, were in Reality the beſt governed, the politeſt, and the moſt civilized Nation upon the Face of the Earth. Their Religion was far more incorrupt than thoſe of *Egypt*, *Greece*, or *Rome*, for they worſhipped only one God; and though they were over-run with Superſtition, they never degenerated into Atheiſm or Idolatry. The common People were from Principle extremely induſtrious; they cultivated their Country with the utmoſt Care, inſomuch that thoſe Diſtricts that are now ſandy Deſerts, were then perfect Gardens; and many rich and populous Cities were ſeated in Places that at this Day are waſte and howling Wilderneſſes. Yet there even ſtill remain clear and indiſputable Proofs of the Truth of what this learned Gentleman has aſſerted, and theſe are of two Kinds; Firſt, The Ruins and Remains of this ancient Magnificence, which even the Iron Teeth of Time have not been able to deſtroy, as appears from what the Reader has been told of *Perſepolis*; and next from the Temper and Diſpoſition of that Remnant of the ancient *Perſees*, *Gubers*, *Gaurs*, or Fire-worſhippers, that are ſtill left in this Country and in *India*, and who are, beyond all Controverſy, the moſt quiet, induſtrious, and moſt inoffenſive Nation, if we may yet ſtile them ſo, on the Face of the Globe. The Seat of their preſent Habitations is the wildeſt and worſt Part of the Province of *Kerman*, and yet even there the ſmall Diſtricts they poſſeſs, appear a Kind of Paradiſe in Compariſon of the Country round about; and by them thoſe Woollen Stuffs are wrought, which the modern *Perſians*, from a true Principle of Luxury, think too good for any Bodies Wear but their own, and therefore never ſuffer them to be carried out of their Dominions.

As for theſe People, it is no Wonder that they have brought the ſame Diſcredit upon the large and fruitful Provinces they inhabit, that the *Turks* have done upon the Land of *Canaan*; and indeed it is the Genius of the *Mahometan* Religion to deface all Marks of former Improvements, as well as to receive no Benefit from ſuch Examples. The Wars, by which this Empire has been continually waſted ſince it fell into the Hands of its preſent Poſſeſſors, has contributed not a little to thin it of People; ſo that now there are not above a twentieth Part of the People in *Perſia* that there were at the Time that *Alexander* invaded it. Beſides this, there are ſeveral Nations ſcattered up and down it, that are rather Vaſſals than Subjects to the Shahs, and live after the Manner of the *Tartars* in their Tents. The Want of a ſettled Nobility, and the little Security that the People in general have for their Fortunes, is another great Obſtacle to the cultivating their Lands, and the Improvement of their Cities. We may add to this, the Revolutions and Civil Wars which have been ſo frequent in *Perſia*; as alſo the Incurſions of the *Tartars* and other barbarous Nations, from which they are hardly ever free. As to the Lazineſs and Luxury of the *Perſians*, though it is in one Senſe a Cauſe of the wide Difference between the paſt and preſent State of their Empire, yet conſidered in another Light, it is the Source of what little Commerce they have; for as they are not willing to work themſelves, they are very ready to let other Nations dwell amongſt them; and provided they reap the Fruits of their Induſtry, treat them fairly and civilly enough, without any Mixture of that haughty, inſolent, and unbridled Temper, which is ſo hateful and ſo intolerable amongſt the *Turks.* Beſides, as they ſpend without the leaſt Conſideration, all they get, this occaſions a quick Circulation of Money, ſo that the *Armenians*, *Indians*, and other Foreigners that live amongſt them, pick up a tolerable Livelihood, and are not impoſed upon and oppreſſed as in the Territories of the Grand Signior.

It is the Want of People that makes a great Part of *Perſia* lie waſte and barren; and the natural Fertility of the Country is another Cauſe of this, for even the few Parts that are now cultivated, produce much more than is neceſſary for the Subſiſtance of its Inhabitants; and it is from thence that their Trade and their Riches ariſe; for ſince there are no Mines now wrought in *Perſia*, what Gold and Silver they have comes into that Country by the Purchaſe of their Silks, and other rich Commodities; whence the Reader will eaſily diſcern, how powerful and how happy the People might be under a ſettled Government, that paid ſome tolerable Reſpect to the Welfare of its Subjects; but after all, this is hardly to be hoped for while in the Hands of the *Mahometans*, who, on the one Hand, are very little inclined to any Kind of Induſtry themſelves, and, on the other, are very apt to be jealous of their Chriſtian Subjects thriving, tho' they are the better for it. While the *Ruſſians* were Maſters of *Gilan*, which was but for a very ſhort Space, the Inhabitants were ſo ſenſible of the Change, that there was nothing they dreaded ſo much as returning again under the Dominion of their old Maſters; and when this actually happened, great Numbers of them quitted their Habitations, and retired into the neighbouring Parts of *Georgia*, *Dageſtan*, and *Armenia*, that they might avoid falling under the Yoke of *Thamas Kuli Kan*, notwithſtanding that was as light, at leaſt in Time of Peace, as any of the former Shahs.

21. It is to very little Purpoſe that we increaſe the Stock of our Knowledge by reading, unleſs we enable ourſelves to make ſome Uſe of it by Reflection; as a Trader does not thrive by having his Warehouſes ſtocked with Goods, but by his knowing where and how to carry them to Market. We ſee plainly from

the Deſcription of the *Perſian* Empire, at the Beginning of this Section, that in Point of Territory, the Shah's of *Perſia* are very little inferior to any of the great Monarchs in the Univerſe; but we know experimentally, that for all this, the Princes of this Country, from the Time of Shah *Abbas*, have made but a very indifferent Figure, and are not like to make a better in Time to come. This ſhews us the terrible Effects of arbitrary Power, a Thing altogether inſupportable; but from the Wiſdom of ſome great Princes, who by diſſembling and letting it down, preſerve it. Shah *Nadir* had this in his Will, but never in his Power; he had acquired his Authority by being at the Head of an Army, and he found it impoſſible to ſuſtain it any other Way than by remaining at the Head of it; for he neither durſt diſband his Troops, nor could he truſt them any longer than they were employed; this was the true Reaſon of his *Indian* Expedition, and this muſt be the Caſe, till ſuch Time as the Army, by which he attained his Sovereignty, is in ſome Meaſure worn out, and then perhaps, the Feebleneſs of the State may draw upon it foreign Invaſions.

If either the Extent, or the Quality of Countries, could make Princes eaſy or happy, the Sovereigns of *Perſia* might be ſo without making Slaves of their Subjects, or diſturbing their Neighbours. We may from hence alſo diſcover the Value of right Principles with Regard to Induſtry and Commerce, which always include due Reſpect to Liberty and Property, without which the former can never ſubſiſt, and the latter can never be attained. If we could, with any Probability, ſuppoſe that a well-conſtituted Government could take Place and be thoroughly eſtabliſhed in *Perſia*, it is very evident, that in the Space of a Century, not only the Affairs, but the very Face of the Country would be changed; their great Cities would be re-peopled, the Trade through *Perſia* to *India* and *Tartary* would be revived, their Silk-works and Manufactures would be reſtored, and Multitudes of People would flock into all their Provinces for the Sake of that Plenty, which, in ſuch a Situation of Things, they would be ſure to enjoy. But as this Suppoſition is, on the one Hand, improbable; ſo, on the other, it is very evident, that for this very Reaſon the *Perſian* Monarchy muſt, for a long Series of Years, continue broken and weak; for it is by Commerce only that the People of that Country can become formidable; for while, on the one Side, they want a Naval Power to maintain the Sovereignty of the *Caſpian* Sea, to which they pretend; and on the other Hand, to have no Fortreſſes of great Strength to ſecure their Frontiers againſt the *Uſbeck Tartars* on the North, and the *Turks* on the Weſt, they will always be in Danger from both thoſe Neighbours.

Theſe Things are ſo plain, that they cannot be denied or doubted. The ſingle Inference I would draw from this is, that ſo far as human Foreſight reaches, there ſeems to be a Diſpoſition in Providence to overturn the *Mahometan* Powers every where; for if we compare the preſent State of Things with the paſt, we cannot help ſeeing, that they are much in the ſame Situation that the *Greeks* were at the Time their Empire began to decline; and though it may be ſome Centuries before their total Deſtruction comes on, yet we muſt ſhut our Eyes againſt Evidence, if we are not convinced that it is coming. We muſt indeed allow, that there were ſome viſionary People here in *Europe*, who apprehended mighty Things from the Shah *Nadir*, and believed that he would overwhelm the *Turkiſh* Empire; but there was no Kind of Reaſon for this, except the known Weakneſs of that Empire; and if it were not for this, we might with more Reaſon expect, that the *Turks*, at this Juncture, ſhould make ſome Impreſſion upon *Perſia*, which however I am perſuaded will not happen. But if the Feuds of Chriſtian Princes were once laid aſleep, there is no Improbability in the Conjecture, that the *Ruſſians* might make themſelves Maſters, at leaſt, of ſome of the Provinces of this Empire, which lie neareſt to the *Caſpian* Sea; and whenever it ſhall happen, it may prove a Beginning to much greater Revolutions, ſince there are Multitudes of Chriſtians in the adjacent Countries, who are either of the *Greek* Religion, or very little removed from it; and if their Spirits ſhould once revive, the Weakneſs of the *Mahometans*, both here and elſewhere, would be quickly ſeen. I know very well how little Heed the preſent Generation will give to Remarks of this Nature; but I flatter myſelf, that how weak or how impertinent ſoever they may be now eſteemed, Experience will juſtify them to Poſterity.

SECTION III.

Of the Diſpoſition and Temper of the *Perſians*, their Perſons, Habits, Manner of Living, their Artificers, and Mechanicks, the Reſpect paid to Merchants, the Method in which their Inland Trade is carried on, the paſt and preſent State of the *Engliſh* Commerce, and other Particulars; together with ſome curious Obſervations on the Nature of the Silk Trade, and a Computation of the annual Balance in Favour of *Perſia*.

Collected as well from private Memoirs, as from Accounts that have been publiſhed.

1. *An Introductory Account of the Subject of this Section; the Difficulty of drawing National Characters, the likelieſt Way of coming at the Truth, the general Temper, Diſpoſition and Genius of the modern* Perſians. 2. *Of their Perſons, Dreſs, great Value of their Turbants, and of the Magnificence and Profuſion into which all Ranks of People are apt to run in that Country, in every Thing that regards Appearance and Equipage.* 3. *Of the Womens Habits, their Painting, their Head-dreſſes uſually adorned with Feathers, frequently ſet out with Jewels, and more eſpecially with Pearls, which were eſteemed the beſt in the World, ſo long as the* Perſians *were poſſeſſed of the Iſland of* Baharen. 4. *The Manner of Living in* Perſia, *the Method of eating and drinking, their Cuſtoms at their Meals, the Commonneſs of Cooks-Shops and Ordinaries amongſt them, and of the open and general Hoſpitality in* Perſia. 5. *A View of their Entertainments, the Ceremonies and Civilities that paſs upon ſuch Occaſions, their laudable*

Temperance and great Sobriety, and of the Manner in which, by the Uſe of Opium, *they ſupply their Want of ſtrong Liquors.* 6. *The Manner of travelling in* Perſia, *the Nature of Caravans, how they ſupply the Want of Wheel-Carriages, of their Foot-Poſts, and of the wonderful Swiftneſs of their Shatirs or Running-Footmen.* 7. *Of their Artificers and Mechanicks of all Sorts, the Neatneſs of ſome and the Inexpertneſs of other Workmen, and of the Nature of their Companies, and the Rules by which they are governed.* 8. *Of the Silken, Woollen, and Mohair Manufactures that are carried on in this Empire, the Management of their Domeſtick Traffick, the great Uſe of Brokers; the Manner in which their foreign Trade is carried on, and the Reaſons that hinder* Mahometans *from becoming Merchants; with ſome political Remarks upon that Subject.* 9. *The Nature of the* Engliſh *Trade in* Perſia, *the Meaſures, Weights, Money, generally uſed in that Country, and the Alterations that have happened by the Removal of the Capital from* Iſpahan *to* Meſched. 10. *A ſuccinct View of the ſeveral Routes by which foreign Commodities are introduced into* Perſia, *with a clear View of the Advantages ariſing from the new Trade to that Empire, through* Ruſſia. 11. *A ſhort Repreſentation of the Value of Silk, conſidered as the Staple Commodity of* Perſia, *and of the Advantages that would reſult to this Nation by the joint Endeavours of the* Ruſſian, Levant, *and* Eaſt-India *Companies, to import* Perſian *and* China *Silks on the cheapeſt Terms poſſible.*

1. AFTER taking a View of the Country of *Perſia*, and its Product of all Kinds, it is very natural for us to come next to the Inhabitants, for whoſe Sake the other Deſcription was held neceſſary, and made entirely with a View to render this more clear and intelligible. It muſt indeed be owned, that there is ſomething very difficult and hazardous in attempting to characterize a whole Nation, and nothing is more common than Inſtances even of great Authors falling into Miſtakes on this Head; yet as the Thing is neceſſary, ſo it is alſo very feaſible; Nations certainly have their Characters as well as private Men, and theſe are frequently hit, though to be ſure ſometimes they are miſtaken.

The Means of hitting them, is to obſerve carefully the Points in which all Travellers agree, for theſe, without Doubt, are founded in Truth and Nature; when a ſufficient Number of theſe are fixed, they will ſerve to guide you in the reſt, for the Humours of Men, though of ſeveral Sorts, and vaſtly different from each other, yet have a Connection among themſelves, that is to ſay, one Humour aſſorts with, and joins eaſily with another, while there are ſome Humours that never come together, or are found in the ſame Breaſts. That there really is ſuch a Thing as national Characters, appears from hence, that the Inhabitants of the ſame Country, through a great Diverſity of Ages, and deſcribed by Authors of various Diſpoſitions, keep pretty nearly the ſame Character; of this, the Deſcription of the People of *Paris*, by the Emperor *Julian*, is a remarkable Inſtance, and others might be mentioned, if that before us were not as good a one as any of the reſt; for whoever conſiders attentively what is ſaid of the Temper, Genius and Cuſtoms of the *Perſians*, independant of their Religion and Government, by the *Greek* and *Latin* Writers, and compares theſe with the Writings of modern Travellers, will be amazed to ſee what a Conformity there is between them, and be from thence convinced, that national Characters are nothing leſs than imaginary. But to come to the Point, and to that Deſcription which will juſtify this Obſervation, at the ſame Time that it carries on the Thread of our Diſcourſe, and performs the proper Buſineſs of this Section.

The *Perſians* are Men of bright Parts, and Abundance of Vivacity, fond of Glory, and known to excel their Neighbours of *India* in Point of Courage, inſomuch that the *Mogul* prefers them to the greateſt Poſts, both in his Court and Army; and as they were obſerved anciently to be of all Men the moſt civil and obliging, they retain the ſame Diſpoſition to this Day, eſpecially towards Foreigners, who admire their Hoſpitality and Benevolence; they are far from being guilty of that brutiſh Behaviour towards Chriſtians, as the *Turks* are; what they ſeem to be moſt juſtly and univerſally charged with, is Vanity and Profuſion in their Cloaths, their Equipages and Number of Servants; as to Voluptuouſneſs in Eating and Drinking, this does not appear to be their Vice, at leaſt we are much more guilty of it in *Europe*; for the greateſt Part of their Food is Rice, Fruits, and Garden Stuff; they have not any great Variety of Fleſh, neither have they many Ways of dreſſing it; *Pilo* ſeems to be the ſtanding Diſh, even among thoſe of the beſt Quality. And as for ſtrong Liquors, tho' they drink them now and then by Stealth, Drunkenneſs is very far from being common; Liquor is never forced, and every Man may retire from an Entertainment without Ceremony when he ſees fit, without a Breach of good Manners.

No People have a greater Genius for Poetry, inſomuch that there is not a Feſtival or Entertainment made, but a Poet is introduced and deſired to oblige the Company with his Compoſitions; and theſe Gentlemen are often found with a Crowd about them in Coffee-houſes, and other Places of publick Reſort. The *Perſians* are by ſome looked upon to be very covetous, but by this they muſt mean covetous in getting, for as to hoarding up Money they are generally abſolved. They only get that they may ſpend, and when they have furniſhed themſelves with an Equipage, Houſe and Gardens ſuitable to their Mind; they rather lay out their Money in building *Caravanſera*'s, Moſques, and on other publick Occaſions, than let it lie by them, inſomuch that ſome Travellers obſerve, that there are no People in the World that take leſs Thought for To-morrow. A Man who happens to have eight or ten thouſand Pounds fall to him, ſhall in a few Weeks lay it out in purchaſing Wives and Slaves, Cloathing, and Furniture, without conſidering where he ſhall meet a Supply, and in two or three Months after, you will ſee him diſpoſing of them again for Subſiſtance. Theſe People, it is obſerved, have a great Command of their Paſſions; they are not eaſily moved, and when they are, it proceeds very ſeldom to Blows. The Quarrel generally ends in ill Language, and perhaps ſome hearty Curſes; and to ſum up all, they call one another *Jews* or *Chriſtians*. They are of a very inſinuating Addreſs, and a moſt obliging Behaviour; few *European* Nations are more polite.

2. The *Perſians* are generally of a good Stature, well ſhaped, clean limb'd, and of agreeable Features, and in *Georgia* and the Northern Provinces, of an admirable Complexion; towards the South they are a little upon the Olive. However, the great Men having had their Wives and Concubines chiefly from *Georgia* and *Circaſſia*, for a hundred Years paſt, their Complexions are very much mended even in the Southern Provinces. Their Eyes and their Hair are generally black, and they wear only one Lock on the Crown of their Heads, like other *Mahometans*, by which they expect *Mahomet* will lift them up to Paradiſe.

As to their Beards, the Shah and the great Officers of State, and Soldiery, wear only long Whiſkers on the upper Lip, which joined to a Tuft of Hair on the upper Part of their Cheeks, grow to a very enormous Size, inſomuch that ſome of them, it is ſaid, are near half a Foot long. Their *Mollahs* and religious People wear their Beards long, only clipping them into Form, and the common People clip their Beards pretty ſhort, but none of the *Perſians* ſuffer any Hair to grow upon their Bodies. They wear large Turbants on their

Heads, ſome white, and others ſtriped with red or other Colours, and the Great Men have Flowers of Gold and Silver woven or marked on the Cloth. They have alſo a Scull-cap under their Turbant, and all together does not weigh leſs than ſeven or eight Pounds, ſometimes a great deal more. Next to their Skins they wear a Shirt of colour'd Silk or Calico, generally blue, which they ſeldom or never waſh; this Shirt has an open Boſom, but neither Neck nor Wriſtbands, and is made cloſe to the Arm; they have alſo a Pair of Breeches, or rather Drawers, cloſe before, they reach half down their Legs; their Stockings are made of woollen Cloth, but not at all ſhaped to the Leg; over the Shirt they wear a Waiſtcoat, and upon theſe a Coat with cloſe Sleeves, and Buttons and Loops before, tied with a Saſh; this is wide at Bottom, and hangs a little below their Knees; beſides this, they put on another Coat frequently, without Sleeves, the uppermoſt Coat being the ſhorteſt, and in the Winter Time over all they have another looſe Coat lined with Furrs: Inſtead of Shoes they have piqued Slippers, turned up at the Toes, and made of *Turkey* Leather, which are neither tied nor buckled, and when they ride, they have Boots of yellow Leather; their Bridles, Saddles and Houſing are immoderately fine, being almoſt covered with Gold; the Houſing is ſo large, that it almoſt hides the hinder Part of the Horſe, and whether on Foot or on Horſeback, they wear a broad Sword, and a Crice or Poniard. Their Ladies have alſo a Dagger at their Sides, eſpecially thoſe of high Rank.

3. The Garb of the Women is not very different from that of the Men, except it be, that the Women neither wear Turbants on their Heads, nor Saſhes about their Waiſts, and their Coats or Veſts reach almoſt down to their Heels. If ever they go into the Streets, which Women of Quality ſeldom do, they have a white Veil which covers them from Head to Foot. The Girls wear a ſtifned Cap upon their Heads, turned up like a Hunting-Cap, with a Heron's Feather in it, their Hair being made up in Treſſes, and falling down their Backs to a very great Length, and the Quality have Pearls and Jewels interwoven and mixed with their Hair. The married Women comb their Hair back, and having bound it about with a broad Ribbon, or rich *Tiara*, ſet with Jewels, which looks like a Coronet, let the reſt of their Hair fall gracefully down their Shoulders, than which there cannot be a more becoming Dreſs. As for Gloves, neither Men nor Women ever wear them, but their Arms and Fingers are uſually full of Rings and Bracelets enriched with Jewels.

As black Hair is the moſt common, ſo it is in moſt Eſteem, and the thickeſt and broadeſt Eye-brows are thought the fineſt; the Women, if their Eye-brows be not black, will colour them, and commonly paint their Faces; they rub their Hands and Feet with an Orange-coloured *Pomatum*. Some will have Feathers ſtand upright in their *Tiara*, and others have a String of Pearls or precious Stones faſtned to it, which hangs down between their Eye-brows; they wear alſo Jewels in their Ears, and Rows of Pearls fall down their Temples, as low as the Neck, and in ſome Provinces bordering on *India*, they have Jewels in their Noſtrils, which to the *Europeans* do not ſeem very becoming, for hanging down to the Mouth, it makes them look as if they had Hare-Lips, but the Ladies of *Iſpahan* never wear theſe Noſe-Jewels. Their Necklaces are either Gold or Pearl; they fall upon the Boſom, and there always hangs a little golden Box to them, filled with moſt reviving Perfumes.

As their Clothes are of the richeſt flower'd and brocaded Silks, it appears that their Dreſs is no inconſiderable Article in *Perſia*, where People of mean Fortunes endeavour to vie with the Quality, and will have fine Clothes, though they want Food. An ordinary Turbant cannot be purchaſed under Ten Pounds, and they frequently give twice as much, and they muſt have Variety of them, leſt they ſhould be known by their Clothes. Their Saſhes alſo are brocaded, and coſt from twenty to a hundred Crowns, and over this they have frequently another of Camel's Hair, of which the Workmanſhip is ſo curious, that it ſeldom coſts leſs. Thoſe who wear Sables, which they will not be without if they can purchaſe them, ſeldom pay leſs than a hundred Pounds for a cloſe bodied Coat; all this, with the rich Furniture and Equipage they have, when they ride out, amounts to a vaſt Sum; and this, as it well may, keeps them exceeding poor. The common Mode of living is thus:

4. Early in the Morning they uſually drink a Diſh of Coffee. About Eleven they go to Dinner, when they eat Melons, Sweetmeats, Fruit, Cheeſe, Curds, or Milk, but their principal Meal is in the Evening, when you may depend on a Diſh of *Pilo*, which is boiled Rice well buttered, and ſeaſon'd with a Fowl, a Piece of Mutton or Kid ſerved up with it; they have an excellent Way of boiling their Rice all over the Eaſt, the Water is perfectly dried away, by that Time the Rice is enough, after which they ſeaſon it with Spices, and mix Saffron or Turmeriſk with it, giving it a yellow, or what other Colour they think fit; but there is very little Variety ether in their Food, or Way of Dreſſing it; if they have a large Joint, it is baked, inſtead of being roaſted, but their uſual Way is to cut their Fleſh into little Slices, and Spitting or Skewering them together, roaſt them over a Charcoal Fire, and whether they boil or roaſt, it is always done to Rags, or it would be impoſſible to pull the Meat to Pieces with their Hands, as they do without Knives or Forks. Pork is never eaten here any more than Veal, nor do they eat Hares or other Animals prohibited to the *Jews*, Beef but ſeldom; they do not deal much in Veniſon, Fiſh or wild Fowl, they dreſs only plain Diſhes, being Strangers to Haſhes, Ragouts and other Compounds, and ſeldom have any other Sauce than a Slice of Lemon, or ſome Pickles. Bread they have baked in thin Cakes the Moment they uſe it, but eat much more Rice. They uſe no beaten Pepper, only whole, and not Abundance of Salt in their Seaſoning, nor is there any brought to Table: Meat is never ſalted before it is dreſſed. They uſually kill their Meat and Fowls the ſame Day they uſe them, and ſet by nothing to be eaten cold.

They ſit down croſs-legg'd at their Meals, and a Cloth is ſpread upon the Carpet. Then one of the Perſons who has the Proviſion before him, diſtributes Rice and Fleſh to the Company. They uſe no Spoons except for Soup and Liquids, but take up their Rice by Handfuls. They ſeldom ſit above half an Hour at Table. They waſh both before and after their Meals, making uſe of their Handkerchiefs inſtead of a Towel. The common People of *Iſpahan* ſeldom dreſs their Victuals at Home, but when they have ſhut up their Shops of an Evening, go ſtrait to the Cooks, of which there are great Numbers in that City, and buy Pilo for their Families. The Cooks have Kettles or Coppers fixed in Brick-work, in their Shops, and Stoves, over which they dreſs moſt of their Meat, making ſcarce any Uſe of Chimnies. It is remarkable of the *Perſians*, that they are ſo far from ſhutting their Doors at their Meals, that they invite every one to eat with them, who happens to come to their Houſes.

5. When a Perſon makes an Entertainment, it is uſually a Supper, notwithſtanding which the Gueſts generally come at nine or ten in the Morning, and ſpend the whole Time at the Place to which they are invited. They diſcourſe, they ſmoke, eat Sweetmeats, and paſs away the Time with a thouſand Amuſements; ſometimes they hear Poems repeated in Honour of their Prince, ſometimes the Singing Women are introduced, who ſing, and dance, and play, and ſhow antick Tricks, to divert the Company; and if any one of the Gueſts are diſpoſed to withdraw with any of theſe Dancing-Girls, they are ſhown into a private Room, and when they return Nobody takes any Notice of it. When Supper is ſerved up, the Son or ſome Relation of the Maſter of the Houſe, takes the Honours of the Feaſt upon him, and helps the Gueſts to their Meat.

They generally provide Variety of Sherbets on theſe Occaſions, their uſual Drink being nothing but fair Water, and even this, it ſeems, they drink with Ice;

it is the Employment therefore of Abundance of People about *Iſpahan*, in the Winter-Seaſon, to heap up vaſt Quantities of Ice together, and keep it in Repoſitaries under Ground all the Summer, when they ſell it to great Advantage. Wine is made in ſeveral Provinces of *Perſia*; but the *Armenians* and other Chriſtians drink the greateſt Share of it. The Officers will indeed ſometimes indulge themſelves in this Liquor, and other People drink it as they pretend for their Health, but that is not common; much the greateſt Part of it is either tranſported to the neighbouring Countries, or drank by the Chriſtians, who are diſperſed through the *Perſian* Dominions.

But thoſe who abſtain from Wine out of Conſcience, becauſe it is prohibited by Law, raiſe their Spirits with *Opium*, Bang, Poppy-ſeed, and other intoxicating Ingredients. The *Perſians*, like other Eaſtern Nations, take Pills of *Opium*, which ſome of them gradually increaſe to ſuch a Doſe, as would deſtroy half a Dozen *Europeans*. Within an Hour after they have taken the Pill, it begins to operate, and a thouſand pleaſant Scenes preſent themſelves to their Imagination; they laugh and ſing, and ſay Abundance of humorous Things like Men intoxicated with Wine, but after the Effect of it is gone off, they find their Spirits exhauſted and grow penſive and melancholy, till they repeat the Doſe again; and ſome make it ſo neceſſary to them that they cannot live without it. There is alſo a Decoction of the Seed of Poppies, ſold in moſt Cities of *Perſia*, and in theſe Houſes you will ſee People looking and talking as Men do when they are drunk: As long as they keep to the Letter of the Law, and abſtain from Wine, it is no Matter how much they diſorder themſelves, they think they ſhall never be accountable for that.

6. There are no Wheel-Carriages in this Country, but all People travel upon Camels, Horſes, Mules or Aſſes. The Women, who are to be concealed as much as poſſible, are put into a ſquare wooden Machine, of which they hang one on each Side of a Camel; they are about three Foot deep, and juſt large enough for one to ſit down in, and over-head are three or four Hoops like theſe which ſupport the Tilt of a Waggon, with a Cloth thrown over them. Their Aſſes are much larger and nimbler than ours, and will trot ten Miles at a pretty good Rate, but they are very obſtinate, and frequently throw their Riders. People uſually travel in this Country with the Caravan, conſiſting of four or five hundred Camels, beſides other Beaſts, and there is no Place where they travel with greater Security and leſs Expence, there being Caravanſera's at proper Diſtances, where they have their Lodging *Gratis*, and purchaſe Proviſion at the beſt Hand; and though the Roads are frequently ſteep and mountainous, yet ſuch Care is taken in laying Bridges and Cauſeways, and to level and enlarge the Ways, that a Traveller ſeldom meets with any Difficulties but what are eaſily ſurmounted.

Here are no General Poſts, but if any Perſon has Letters to ſend, he diſpatches a Shatir or Footman with them on Purpoſe, who will travel a thouſand Miles in eighteen or twenty Days, and not aſk more than twenty Pence or two Shillings a Day for his Trouble: They carry with them a Bottle of Water, and a little Bag of Proviſion, which ſerves them thirty or forty Hours: They generally leave the high Road, and croſs over the Country the neareſt Way. There are a great many Families which make this their only Employment, and breed their Children up to it, obliging them to run from their Infancy.

The Shah, and all the great Men, have ſeveral of theſe *Shatirs* or Footmen in their Retinue, but before a Man can be admitted one of the Imperial Footmen, he muſt give a very extraordinary Proof that he does not want Heels or Breath; for he muſt run from the great Gate of the Palace called *Aly Capi*, to a Place a League and half from the City, twelve Times in one Day, and every Time bring an Arrow along with him, which is delivered him by thoſe who ſtand at the End of the Race, to ſhew that he has run the whole Courſe; and this he performs between Sun-riſe and Sun-ſet, in thirteen or fourteen Hours at moſt, being no leſs than a hundred and eight Miles. It is always ſome Favourite Servant of the Shah's who is admitted to this Honour. On the Day of Trial the Elephants and Horſemen are drawn up in the Royal Square, with the Muſick, Drums and Trumpets ſounding, and as if it was a Feſtival. All the Great Men make Preſents to the *Shatir*, and ſeveral of them ride the Courſe with him to ingratiate themſelves with the Shah; and the Mob attend him every Time he returns with their Shouts and Acclamations. The Chams and Viceroys, who admit a *Shatir* into their Service, make him run the ſame Number of Miles, and they are careſſed and preſented by all their Dependents in the ſame Manner the Royal *Shatirs* are, though not ſo largely; for it is a very common Thing to ſee the Shah's *Shatir* preſented with above a thouſand Pounds on ſuch an Occaſion. This is a very ſtrong Mark of the Spirit of this Nation, and of that Diſpoſition they have to diſplay their Generoſity, ſometimes at the Expence of Juſtice, but without Regard to Prudence always.

7. With reſpect to their Artificers, Manufacturers, and common Tradeſmen, the Regulations that are made in this Country are extremely well contrived, for every Company has a Head or Maſter, who, with a ſmall Number of his Brethren, form a Kind of Council, and ſettle ſuch Rules and Orders for the general Benefit of ſuch as are engaged in the particular Branch of Trade he ſuperintends as to him and them ſeem requiſite. Whoever intends to ſet up a Trade, goes to the Maſter, and regiſters his Name and Abode, and no Enquiry is made who was his Maſter, or whether he underſtands the Buſineſs or not; nor is there any Reſtraint laid upon them that they ſhall not encroach upon any other Profeſſion; for Inſtance, the Braziers are at Liberty to make Silver Veſſels, as they frequently do, without being in Danger of any Diſturbance from the Silverſmiths Neither do they take Apprentices for a Number of Years, but hire their Servants, and allow them Wages from the firſt Day they entertain them. Every Trade almoſt is bound to work for the Shah whenever he requires it, and thoſe who are not, pay an annual Tax to the Government for an Exemption.

Their Armourers make very good Broad Sword Blades, and damaſk them as well as any *European*. The Barrels of their Fire-arms are not amiſs, they make them very ſtrong, and as thick at the Muzzle as at the Breech. Their Stocks are but ill contrived, being thin and light at the Butt, and not fit for a Man's Shoulder; and for Locks to their Guns, or any other Locks that have Springs, they do not pretend to make them any more than Watches or Clocks, which they either purchaſe abroad, or employ *European* Workmen to make for them. Knives, Razors, Sciſſars, and ſome other Cutlery Wares, they make very well, and little Steel Mirrors, which they uſe inſtead of Looking-glaſſes; they are almoſt all convex, and the Air is ſo perfectly dry, that they ſeldom ruſt or grow dull. The Art of making Looking-glaſſes they do not underſtand, but have them from *Europe*. However, they have a Manufacture of Glaſs, which ſerves for Windows and Bottles. The Glaſs of *Shiraz* is the beſt in the Country.

As the Uſe of the Bow is what the *Perſians* value themſelves much upon, there are no where better Bows made; the chief Materials are Wood and Horn with Sinews bound about them; they are painted and varniſhed, and made as fine as poſſible. The Bow-ſtring is of twiſted Silk, of the Bigneſs of a Gooſe-quill; their Quivers of Leather, embroidered or worked with Silk. This is a Trade they are as well verſed in as any thing, eſpecially the Gold or Silver Embroidery, either on Cloath, Silk, or Leather. They cover their Saddles and Houſings almoſt with Embroidery, and their ſtitching of the Leather is much beyond any Thing we do. Their Saddles are made after the *Morocco* Model, and the Stirrups mighty ſhort; they have a Kind of Breaſt-plate to them, and where we uſe Braſſes about our Furniture, their Men of Quality have Gold. The Leather which we call *Turkey* Leather, from its coming to us through that Country, is all made in *Perſia*. The Shagreen alſo comes from thence, which is made of the Skin of an Aſs's Rump. The Tanners dreſs their coarſe

Skins with Lime, and uſe no Bark, but Salt and Galls inſtead of it.

The making Earthen Ware is another Manufacture the *Perſians* excel in; it is much beyond the *Dutch*, and ſome ſay almoſt equal to *China* Ware. The Places where it is chiefly made, are, *Sheraz*, *Metſch*, *Yeſd*, and at *Kerman*: And mending of Glaſs and Earthen Ware, is a particular Trade in *Perſia*; they will drill Holes through them, and faſten the Pieces together, ſo that a broken Bowl or Plate will hold Liquids, as well as it did at firſt. Their Gold Wire-drawers and Thread-twiſters are Artiſts alſo in their Way; they will draw a Piece weighing a Drachm, to the Length of three hundred *Perſian* Ells. Their Lapidaries underſtand the Grinding of ſoft Stones, and cutting them pretty well. Their Dying is preferred to any Thing of that Kind in *Europe*, which is not aſcribed ſo much to the Artiſt, as to the Air, which being dry and clear, gives a Livelineſs to the Colours, and fixes them.

The *Perſian* Taylors work very neatly; and as the Men's Clothes are made of the richeſt flower'd and brocaded Silks, they are fitted exactly to their Bodies without the leaſt Wrinkle, and their Sewing is incomparably beyond that of our Workmen, as the fine Materials they work on require it ſhould. They work Flowers alſo upon their Carpets, Cuſhions and Window-Curtains, ſo very nicely, that they look as if they were painted.

With Taylors, we muſt not forget to mention their Barbers, who are no leſs excellent in their Way; for they will ſhave the Head almoſt at half a Dozen Strokes, and have ſo light a Hand, that you can ſcarce feel them; they uſe only cold Water, and hold no Baſon under your Chin as with us, but have their Water in a Cup, about the Bigneſs of a little China-Diſh: After they have ſhaved a Man, they cut the Nails of his Feet and Hands, with a little Iron Inſtrument like a Bodkin, ſharp at the End; then they ſtretch his Arms, and rub and chafe his Fleſh, which is an Amuſement, that the *Europeans* as well as the Natives are pleaſed with, in theſe hot Countries. But notwithſtanding this, theſe Artiſts are nothing comparable in their Way to thoſe of *India*, and theſe again fall as ſhort of the *Chineſe* Barbers.

8. We are now to proceed to the more material Parts of the *Perſian* Commerce, from whence their national Riches flow, and by which they draw to themſelves the Wealth of other Countries; for as we before obſerved, Gold and Silver are no longer the Produce of *Perſia*, but are brought thither in Payment for their Commodities. Silks are the principal Manufacture of the Country, ſuch as Taffaties, Tabbies, Sattins and Silk mixed with Cotton or Camel and Goats-hair, Brocades and Gold Tiſſue: of the ſingle Brocade there are a hundred Sorts, the double are called Duroy or Two-faces, becauſe both Sides are equally good; they are the richeſt that are to be met with any where; and the Gold Velvet which is wrought in *Perſia* is admirable; all their rich Stuffs are very durable; the Gold or Silver does not wear off or tarniſh while the Work laſts, but keeps its Colour and Brightneſs. The fineſt Looms for theſe Stuffs are at *Iſpahan*, *Caſhan* and *Yeſd*. Thoſe for Carpets are chiefly made in the Province of *Kirman*, what are commonly called *Turkey* Carpets are indeed *Perſian*, but obtained that Name from being brought to us by Way of *Turkey*.

The Camel Hair Stuffs are made in *Carmania*; it is mighty ſoft and ſmooth, and almoſt as fine as Beaver Wool, but the Stuffs they make with it are not very ſtrong. Camblets and Silk, and worſted Druggets are made in the ſame Province. Goats-hair Stuffs are made in *Hyrcania*, and near the Gulph of *Baſſora*. There is ſome Callico-Cloth made in *Perſia*, and they know how to paint and ſtain it, but it is not comparable to the *Indian* Callicoes. A Merchant is a very honourable Profeſſion in *Perſia*, and the more ſo, becauſe there is no ſuch Thing as hereditary Nobility, which deſcends from Father to Son; as to thoſe in great Poſts, their Honour and their Profits terminate with the Office; and their Lives and Fortunes are both in perpetual Hazards, eſpecially under a weak and cruel Prince. The Trader ſeems more independant than any other Subject, and notwithſtanding the Government be deſpotick, they are uſually encouraged, becauſe they bring in a conſiderable Revenue to the Crown; and another Thing is, the greateſt Miniſters do not think the Buſineſs of a Merchant beneath them; even the *Shah* himſelf, within our Remembrance, has had his Factors and Agents in the neighbouring Kingdoms, and exported Silks, Brocades, Carpets, and other rich Goods, and his Agents at the Mogul's Court, and elſewhere, have frequently had the Character of Ambaſſadors conferred upon them, when indeed their Buſineſs was chiefly Commerce.

All Buſineſs of Conſequence is carried on in *Perſia* by Brokers, who are very cunning; after they have agreed and talked over the Matter at the Sellers-houſe, they agree about the Price upon their Fingers, putting their Hands under a Cloth; the Finger's End it ſeems ſtands for one, the bent Finger for Five, and the ſtrait for ten, the Hand open for a hundred, and if ſhut a thouſand; and they keep ſo even a Countenance all the while they are tranſacting the Affair, that it is impoſſible for a Stander-By to gather any Thing from the Circumſtances. But notwithſtanding the *Mahometans* are the governing Part of the Country, they are not the greateſt foreign Traders. The *Armenian* Chriſtians and *Banians* of *India*, have much the largeſt Share.

The *Mahometan Perſians* trade from one Province of their own Country to another, and to *India* pretty much, but the *Armenians* manage the whole *European* Trade: One Reaſon whereof is, that the *Mahometans* do not care to go into Chriſtian Countries, becauſe they cannot there obſerve the Cuſtoms their Religion preſcribes; for their Law it ſeems forbids them to eat Fleſh killed or dreſſed by a Man of a different Religion, or drink out of the ſame Cup with him, and even prohibits the touching of Perſons in ſome Circumſtances, whom they look upon to be polluted. Another Thing, which is a Diſadvantage to their Trade is, that the taking up Money at Intereſt is unlawful, though they are at Liberty to make what Advantage they can in buying and ſelling. It appears from hence, that from the very Nature of their Religion, all *Mahometan* Powers ſtand excluded from Commerce, and this is the true Secret of the Declenſion of their Governments; for as Trade produces Shipping, as Shipping in Proceſs of Time begets Naval Power, and as it is a Maxim, juſtified by Experience, as well as founded in Reaſon, that naval Power will in the End get the better of all other Power; it follows that the *Mahometans* wanting this, can only prey upon each other by Land, from whence Revolutions in Power, but no Acceſſion of Power can ever ariſe. Whereas if Chriſtians ſhould turn their Arms upon the *Mahometans*, ſo as to make Conqueſts, and come into Poſſeſſion of their Countries, the Caſe would be altered, their Commerce would follow them, and the new erected Principalities would in a ſhort Space of Time acquire a Naval Power, and ſo be in a Condition to extend their Conqueſts at the Expence of their *Mahometan* Neighbours.

9. We are indebted to Mr. *Lockyer* for the beſt, indeed for the only tolerable Account we have of the Method Trade is carried on in *Perſia*, and therefore from him we muſt borrow what is neceſſary for the Reader's Information upon that Subject. Their great Weights are Maunds only, and theſe differ according to the Nature of the Commodities to be delivered by them. Sugar, Copper, Tutanague, all Sorts of Drugs, *&c.* are ſold by the Maund Fabrees; which in the Factory and the Cuſtom-houſe is near ſix Pounds and three Quarters, *Averdupois*; but in the *Bazar* it is not above ſix Pounds and a Quarter, which one ought to have Regard to in buying out of the Shops.

Eatables and all Sorts of Fruit, as Rice, Raiſins, Prunelles, Almonds, Onions, *&c.* are ſold by the Maund Copara of ſeven Pounds and three Quarters in the Factory, and from ſeven Pounds and a Quarter to ſeven Pounds and a half in the *Bazar*. Fine Goods, as, Gold, Silver, Muſk, Acheen, Camphir, Bezoar, Coral, Amber, Cloves and Cinnamon, Oils, dried China, Silk, *&c.* are ſold by the Miſcal, ſix of which are commonly counted an *Averdupois* Ounce; its juſt Weight is 2 dw. 23 gr. 24d. ps. *Troy.* The Maund Shaw is two Maund Tabrees, uſed at *Iſpahan.* All Bargains in *Gambron* are made for Shahees, and the Company keep their Accounts in them, reckoning them worth four Pence each, though that Coin is rarely met with, but in its Stead Coz and Mamooda's are current every where. Horſes, Camels, Houſes, *&c.* are generally ſold by the Toman, which is two hundred Shahees, or fifty Abaſſes, and they uſually reckon their Eſtates that Way; ſuch a one, they ſay, is worth ſo many Tomans, as we ſay, Pounds in *England.* The Laree is uſed about *Iſpahan,* nor are Abaſſes to be got without allowing ſeven or eight *per Cent.* for the Difference in Exchange, yet Returns to Fort St. *George,* and other Parts of *India,* are commonly made with them. Next to theſe, Chequeens are the moſt profitable; there are ſeveral Sorts of them, but the *Venetian* is better than the reſt by one and a half or two *per Cent.* at *Surat,* and ſeveral other Ports on the *Malabar* Coaſts whither vaſt Quantities are ſent every Year. When a Parcel of *Venetian* Ducats are mixed with others, the whole goes by the Name of Chequeens of *Surat*; but when they are ſeparated, one Sort is called *Venetians,* and all the others Gubbers indifferently.

The *Engliſh Eaſt-India* Company, as has been obſerved, do not only receive the Sum of three thouſand three hundred and thirty three Pounds ſix Shillings and eight Pence of the Government of *Perſia,* in Lieu of the Service the Company did them in taking the Iſland of *Ormus* from the *Portugueſe,* but they have an Exemption alſo from Cuſtoms, and whatever Ships trade under their Protection have the like Exemption, only paying the following Port Charges, *viz.* Two *per Cent.* on the Sale of Goods to the Company, one *per Cent.* Conſulage to the Agent, one *per Cent.* to the Broker. Boat or Franky Hire for landing Goods is thirty Mamooda's *per* 2000 Maund Tabrees. Hamalgae, or Cooly Hire at Weighing, one Coz of every twenty Maund Tabres. The Company do not meddle at all with the Trade between *Perſia* and *India*; this they leave altogether to their Factors and Servants, and to ſuch Country Ships and private Traders as put themſelves under their Protection, and are content to pay the Port Duties above-mentioned.

It is to be obſerved, that the *Turkey* Company having always had an Opportunity of ſending great Quantities in *Perſia* from *Aleppo,* abated much of the Commerce which the Agents of the *Eaſt-India* Company would otherwiſe have carried on in that Empire. Of late the *Ruſſia* Company have alſo interfered in this Trade, by tranſporting great Quantities of *Engliſh* Goods by the *Caſpian* Sea; and it is generally believed, that ſo long as we maintain an amicable Correſpondence with the Court of *Peterſbourg,* this Trade will not only go on, but increaſe, which muſt be attended with great Advantages to the Nation. As this appears to be a Matter of far greater Conſequence to us than any thing that has occurred in this Section, it is but reaſonable that the Point ſhould be fully explained, as well for the Advantage of the preſent Age, as for the Benefit of Poſterity.

10. In order to ſet this Affair in as clear a Light as it is poſſible, we ſhall obſerve, that all foreign Commodities are brought into *Perſia* by four great Routs; and that by each of theſe, more or leſs of *Britiſh* Commodities have been, or may be introduced into this Country, where there always has been, and, if we are true to our Intereſt, there always muſt be, a very high Demand for them. Of theſe Routs the firſt is that of *Balſora,* or *Baſſora,* a great City at the Bottom of the *Perſian* Gulph, ſubject to its own Prince, and a Kind of *Emporium* or Magazine of *Turkiſh, Perſian,* and *Indian* Commodities. The Goods that are brought hither for the *Perſian* Market, come by Land by the Caravan from *Aleppo,* in about thirty Days, and are tranſported from thence either to *Bandar Abaſſi,* or *Iſpahan.* It is by this Caravan that the *Turkey* Company tranſport *Engliſh* Cloths into *Perſia* in Exchange for Silk, which they purchaſe at *Aleppo,* and conſequently this Trade is either greater or leſs, according to the good Correſpondence between the two Empires of *Turkey* and *Perſia.* By this Means alſo we were led into Errors about Carpets, Leather, and other Commodities which paſs for *Turkiſh,* becauſe imported by the *Turkey* Company from *Turkey,* though really of *Perſian* Growth and Manufacture.

The next great Rout is that of *Gambron,* or *Bandar Abaſſi,* with reſpect to which we have already given a large Account from Mr. *Lockyer.* Goods are brought hither by Sea, but not directly, as many apprehend, from *England*; on the contrary, they come from ſome *Indian* Port, and conſequently are charged with a very high Freight, and with other incident Charges, which render them very dear; notwithſtanding which, in Times of Peace, and when Things were well ſettled in *Perſia,* the Shah keeping his Court at *Iſpahan,* there was large vent for them, and our Agent there lived with all the Pomp and Splendour of a Prince. The Reader will eaſily diſcern from hence, how great a Change muſt have been wrought in the Traffick carried on by this Canal, by the Diſturbances which laſted ſo many Years in *Perſia,* and by the Change of the Capital of that Empire, which is now removed to a prodigious Diſtance from *Bander Abaſſi*; and if he deſires any Proof of this Fact, the recalling the *Engliſh* Agents from *Iſpahan* and *Bandar Abaſſi,* may paſs for inconteſtable Evidence.

The third Rout is that through *India* to *Boſt,* which, as we have ſhewn in the Deſcription of the *Perſian* Empire, is the Eaſtern Magazine, as *Bandar Abaſſi* is the Southern, and *Baſſaro* is the Weſtern for all that enter into *Perſia.* By this Means it is very far from being impoſſible that the *Eaſt-India* Company ſhould introduce *Engliſh* Goods into this Empire; but whether they are actually carried thither by this Road, is more than I am able to ſay; and if they are, I preſume it is done by *Indian, Armenian* or *Jewiſh* Merchants.

The fourth or laſt Rout is by the *Caſpian* Sea, and the *Engliſh* Commodities that are ſent this Way, muſt of Neceſſity paſs through *Ruſſia.* For the carrying on this Trade Magazines muſt be erected at *Aſtracan,* and from thence the Goods are tranſported into the Provinces of *Gilan* or *Aſtarabat*; from which laſt Province the Caravans go in a Week to *Meſched,* which is the preſent Capital of *Perſia.*

It may be ſaid, that this is going a great Way about, and taking a vaſt Compaſs before our Goods arrive at Market. To this there are two Anſwers; the firſt is, that let the Inconveniencies that attend this Commerce be what they will, they muſt be born, for we have before ſhewn, that little or nothing can now be expected from tranſporting of Goods to *Bandar Abaſſi,* much leſs from *Aleppo,* which lies ſtill at a much greater Diſtance from *Meſched*; ſo that we are under a Neceſſity of taking this Compaſs, if we will not entirely loſe the *Perſian* Commerce, and therefore it is to no Purpoſe to complain, even ſuppoſing the Objection were well grounded. The ſecond is, that there is not either Truth or Force in the Objection, for Goods may be tranſported from *Peterſbourg,* from thence through *Ruſſia* to *Aſtracan,* croſs the *Caſpian* to *Gilan,* and ſo to *Meſched,* and the Returns made the ſame Way in half the Time that they could be made by the Way of *Gambron.*

We may add to this, that we now go to the Market and ſell our Goods, or rather barter them for *Perſian* Silk upon the Spot, whereas formerly we went a great Way about; and notwithſtanding this, the *Perſian* Factors went alſo a great Way to get at us, ſince before we could ſhip the *Perſian* Silk, it muſt either be carried by Land to *Aleppo,* which was three Months Journey, or to *Bandar Abaſſi,* which was above two. Beſides, it is highly probable, that when our Commerce at *Meſched* is as well fixed as it was at *Iſpahan,* we ſhall be able to tranſport *Engliſh* Cloths into the remoteſt Parts of *Tartary,* and thereby reap moſt of thoſe Advantages that were heretofore wiſhed for and expected from the Diſcovery of a North Weſt Paſſage. It was by this very Canal, and in ſpite of all the Inconveniencies with which it has been ſuppoſed to be attended, that the *Dutch* diſpoſed of prodigious Quantities of their Cloths in *Perſia,* which for that Purpoſe were bought up by the *Armenian* Merchants; and it was by this Way alſo, that the *French* were in Hopes of eſtabliſhing a Trade to *Perſia*, as appears by a very curious Memoir preſented to the *French* Miniſtry upon that Head, the Subject of which is inſerted in the Dictionary of Commerce, one of the beſt and moſt uſeful Works that was ever publiſhed. But there is ſtill ſomewhat behind with which the Reader ought to be acquainted, in order to frame a true Notion of the Value and Importance of this Trade, about which ſo many Diſputes have been of late Years raiſed in this Kingdom.

11. We have already enumerated the Commodities of *Perſia*, and ſhall not therefore pretend to meddle with them again; for in order to give the Reader a View of the Trade of this Empire, it will be ſufficient for our preſent Purpoſe, to inſiſt barely upon the Silk, of which there are four Sorts; the firſt is, that which in *Perſia* they call *Shirvan*, but which we in *Europe* call *Hardaſs*; the ſecond, is what they call *Karvary*, but we uſually ſtile it *Legee* or rather *Legy*, from the little Town of *Legiam* in *Gilan*, from whence the greateſt Part of it is brought; the third is in their Language called *Ked-Coda-penſend*, which is as much as to ſay, Tradeſmens Silk; the laſt is what they and we call *Sherbaſſe*, or, as the common People ſtile it, *Turkey* Silk, from the Miſtake which has been ſo often mentioned.

Of all theſe Kind of Silks, the Provinces of *Georgia*, *Gilan*, *Mezanderan*, *Shirwan*, *Choraſan* and *Kirman*, produce annually, about Twenty-two thouſand Bales, each of about two hundred and fourſcore Pounds Weight. Of theſe it is computed, that not above two thouſand Bales are wrought up in all the Manufactures of *Perſia*, from the coarſeſt Carpets, to the richeſt Brocades. At this Rate, there are between five and ſix Millions of Pounds of Silk yearly carried out of *Perſia*, and as it is worth about ten Shillings a Pound on the Spot, the Reader will eaſily apprehend, that raw Silk is a kind of Gold Mine to the *Perſians*, ſince it furniſhes them with between two and three Millions annually, above one half of which is receiv'd in ready Money.

In the next Place it is to be ſhewn, how the bringing in vaſt Quantities of Silk turns to the Advantage of this Nation. In reſpect to our Silk Manufactures, what we bring of this Sort ſerves only for the Shoote, for the Warp of all our raw Silks is, as we have elſewhere told the Reader, *Organzine* or *Italian* Silk, which is prodigiouſly dear. If therefore we can abate the Price of this, we may the better afford to pay for that; or if we can obtain the Quantities we want, in Exchange for our Manufactures, this will prove a very great Saving; and whatever can be ſaved in this Way, will enable us to work ſo much the cheaper.

It has been ſuggeſted, that it might be attended with Inconveniencies for our *Turkey* and *Ruſſia* Companies to interfere with each other in this Trade, which I confeſs, ſurpaſſes my Comprehenſion; and I am ſo far from believing that any bad Conſequences will reſult from thence, that I think it may be demonſtrated, this is the only, or at leaſt the moſt practicable and beſt Method of making Companies uſeful, by engaging them to vie with each other in exporting *Britiſh* Commodities and Manufactures, and provided this can be done, it is of no real Conſequence to the Nation who does it. But there is another Thing that, joined to this, would be of ſtill greater Conſequence, and that is, the *Eaſt-India* Companies, exerting themſelves in procuring of Silk from *China*, which would ſupply the Place of the *Piedmonteſe* or *Organzine* Silk; and thus by the united Efforts of theſe three Companies, it is very poſſible that twenty or thirty *per Cent.* might be ſaved in the prime Coſt of Silk to this Nation; and of what prodigious Benefit ſuch a Saving would prove in our Manufactures, and how much it would contribute to enable us to work cheaper than our Neighbours, I leave every ſenſible and ſtudious Reader to judge.

I know very well, that in order to bring ſuch a Project as this to bear, there muſt be ſome Application made to Parliament for an Alteration in the Duties; and I am perſuaded that no great Difficulty would be found in obtaining this, if the Reaſonableneſs of the Thing was fairly ſhewn, and, as it might be, fully made out. Our great Misfortune is, that Commerce is not ſufficiently explained or underſtood, the Reaſon of which I take to be, that none concern themſelves about the Theory, but thoſe who are engaged in the Practice; and as theſe muſt be always intereſted, it will very rarely happen that they can be impartial Judges. It is from this Motive that I have ſo often turned my Pen to this Subject, with a View, if poſſible, to excite a more general Attention to what is certainly in itſelf the moſt conſiderable and important Object of all political Conſiderations.

SECTION IV.

Containing an Account of the Government and Conſtitution of *Perſia*, the Nature of the *Shah*'s Power, the Diſtribution of Civil, Eccleſiaſtical and Military Offices, the interior Policy of the Empire, the regular Forces kept up there, both Horſe and Foot, and the Nature and Amount of the publick Revenues.

The whole digeſted into Order from the beſt Authorities.

1. *An Introductory Account of the Reaſon and Subject of this Section, in which the Conſtitution of arbitrary Monarchies is explained, and applied to the preſent Purpoſe.* 2. *Of the Power of the* Perſian *Monarch, how far abſolute and terrible; and how, notwithſtanding mild and equal enough, with Reſpect to the Bulk of the People.* 3. *Of the Conſtitution of the* Perſian *Court, the principal Officers therein, their Ranks and Subordination, and the Duties of their reſpective Offices.* 4. *Of the Eccleſiaſtical Conſtitution in* Perſia, *and the Difference between the Head of the* Mahometan *Church there, and in* Turkey. 5. *Of the Government of the Provinces, the ſeveral Checks contrived for the Safety of the Prince, and the Preſervation of his Subjects.* 6. *Of the regular Troops or old ſtanding Army of the* Perſian *Empire, how compoſed, under what Diſcipline, and the Methods by which it was ſubſiſted.* 7. *Of the new ſtanding Army introduced by the* Shah's, *intirely dependant upon them, how model'd and provided for, and how corrupted and rendered uſeleſs.* 8. *Of the Art Military among the* Perſians, *their Manner of making War, acting offenſively, defenſively, and particularly their Method for ſecuring themſelves againſt Invaſions.* 9. *Some further Obſervations on the military Affairs of this Empire, on the Advantages*

vantages enjoyed by, and the Diſadvantages under which the Perſians *labour, from the Regulations eſtabliſhed amongſt them in this Reſpect.* 10. *Of the State of Property in this Empire, whence the Imperial Revenues ariſe, how levied, and their Amount.* 11. *Obſervations and Remarks on ſeveral Particulars delivered in the Courſe of this Section.*

1. AS at this Juncture the *Perſian* Empire, by the Murder of the Shah *Nadir*, is in ſuch Confuſion, that it may be in ſome Meaſure conſidered as diſſolved and no longer a Government at all; ſo it might ſeem excuſeable, if we had paſſed by this Section altogether; yet conſidering that even in abſolute Monarchies, Revolutions are but convulſive Motions, and that as ſoon as they ceaſe the Body Politick recovers its natural Conſtitution, we could not but think it very requiſite, for the Reader's Information, that a View ſhould be given of the Form of the *Perſian* Government, and this for three Reaſons, Firſt, Becauſe we are very apt to confound all abſolute Monarchies one with another, and to ſuppoſe that there neither is, nor well can be, any Difference between them; whereas, in Truth, the Form of ſuch Governments may, and actually do vary, as much as any other of the milder Forms, as the Reader will ſee by this Inſtance. Secondly, Of all the abſolute Monarchies in the Eaſt, the Conſtitution of the *Perſians* was very juſtly held to be the beſt; and therefore it deſerves, of all others, to be repreſented to the View of the Reader, who from hence will learn by what Modification the arbitrary Power of a Sovereign may be rendred in ſome Meaſure beneficial to his Subjects. Thirdly, Becauſe, in all human Probability, the *Britiſh* Nation may hereafter have a cloſer Communication with, and enter into a more extended Trade amongſt the Inhabitants of *Perſia* than in Times paſt; ſo that it is highly requiſite we ſhould enter, at leaſt briefly, into a Subject that may, to us or our Poſterity, become of extraordinary Importance.

It is by no Means fit, that ſo large and ſo regular a Collection as this ſhould be governed by temporary Views, or that we ſhould take the Liberty, becauſe this Country is at preſent unſettled, to ſlip over its Government, which we have a moral Certainty will be re-eſtabliſhed, perhaps before this very Collection is compleated. Beſides all this, there are a great Variety of Articles which naturally fall within the Compaſs of this Section, that tend to give us a fuller and more perfect Notion of the State of this Empire and its Inhabitants, than can be obtained by the Peruſal of any ſingle Book of Travels, in which the State of the Country is repreſented, as it ſtood at the Time the Author viſited it. But notwithſtanding that, the Force of theſe Conſiderations have determined us to inſert this Section; we ſhall not forget the Obligation we are under to keep Things within their due Bounds, and ſhall therefore labour to deliver, as ſuccinctly as it is poſſible, without Prejudice to their Perſpicuity, the ſeveral Articles that we think ourſelves obliged to handle for the Reader's Inſtruction and Entertainment, and in order to render our Account of *Perſia* conſiſtent with the general Plan of this Work.

2. The Shah of *Perſia* is an abſolute Monarch, and has the Lives and Eſtates of his Subjects entirely a his Diſpoſal. There is no Prince in the World more implicitly obeyed; let his Orders be ever ſo unjuſt, or given at a Time when he is ſo little Maſter of his Reaſon that he knows not what he ſays, or does, nothing can ſave the greateſt Subject if he determines to deprive him of his Life or his Eſtate; neither Zeal for his Perſon, Merit, or paſt Services, will avail in the leaſt. If he be in a Humour to ruin them, it is done by a Word of his Mouth, or by a Sign, and executed in an Inſtant, without any Form of Law, or Evidence of Facts. The common People, who are at a Diſtance from the Court, have much the better of the Quality in this Reſpect; there are very ſeldom Inſtances of any Oppreſſion or ſevere Judgments executed upon theſe, but they ſeem to enjoy as much Security as in any Country in the World; and perhaps the Magiſtrates are the more inclined to govern equitably, in regard they know nothing can ſkreen them from the Reſentment of their Sovereign, if they are guilty of any ſiniſter Practices. The *Perſians*, out of Conſcience, it is ſaid, obey all the Commands of their Prince without Reſerve, and believe that his Orders ought to be obeyed againſt the very Laws of Nature, inſomuch that if the Son be commanded to be his Father's Executioner, or the Father the Son's, it muſt be complied with. But if he command any Thing in Prejudice of their Religion, they are not obliged to obey him, but ought to ſuffer any Thing rather than violate the Law of God.

Yet nothing makes the *Perſian* Government appear ſo tyrannical, as the Cuſtom of executing the Governors of Provinces, and great Officers of State, without giving them an Opportunity of making their Defence, or being informed of the Crime they are charged with; it is uſual for the *Shah* two or three Times in a Year to ſend every Governor the *Calaat* or Royal Veſt, and theſe are ſent by ſuch Perſons as the Court intends a Favour to, for the *Cham* or Governor, to whom they are ſent, always makes a conſiderable Preſent to the Meſſenger.

When he comes within two or three Miles of the Place where the Governor reſides, the Meſſenger ſends him Word to come and receive the *Calaat*, but inſtead of a fine Coat, the Governor is ſometimes preſented with a Halter, and is diſpatched without any farther Ceremony.

This makes the Governors very circumſpect in their Conduct, and they are always under diſmal Apprehenſions, when they hear the *Calaat* is arrived, knowing how common it is to have their beſt Actions miſrepreſented to their Prince. The *Perſians* ſay in Defence of this Practice, that the Court ſeldom proceeds with that Severity, but in extraordinary Caſes, where the Fact is notorious, and there is Danger of Rebellion, if they ſhould cite the Perſon accuſed to anſwer; that if it be otherwiſe, they always give him an Opportunity of anſwering his Charge.

As for thoſe about the Court, whom the *Shah* looks upon as Slaves he has purchaſed, he does not think himſelf obliged to obſerve theſe Formalities, but dooms them to be puniſhed, or put to Death, as he ſees fit. The *Shah* of *Perſia* has no Council of State, as in the *European* Governments, but he acts as he is adviſed by his Prime Miniſter and great Officers; that which moſt perplexes the Miniſtry, is the Cabals that are carried on by the Women in the *Haram*; the Reſolutions that are taken here, frequently thwart their beſt laid Schemes, and the Miniſters do not only run the Riſque of having their Counſels rejected, but they very often turn to their own Deſtruction, if they are not ſuitable to the Inclinations of the Ladies moſt in Favour. This is not an Evil peculiar to *Perſia*, but a kind of Curſe, throughout all Eaſtern Courts; and perhaps ſome in the Weſt are not altogether free from it.

3. The Royal Family of *Perſia* are, generally ſpeaking, more unhappy than the Princes of the *Ottoman* Blood, for though they are not put to Death ſo frequently as the former, yet they uſually have their Eyes put out, and live in that miſerable Condition many Years. They have the *Tartar* Title of *Mirza* added to their Names, which is equivalent to our Title of Highneſs, and is never given but to thoſe of the Imperial Line. The firſt Miniſter in the Empire is the *Atamadoulet*, a Word which ſignifies the Support of the Empire. In Petitions, or when they ſpeak to him, they ſtile him the Grand Vizir, or Vizir *Azem*. No Buſineſs of Conſequence is tranſacted in the State but by the Direction of this Miniſter, nor any Grant or Act of State of the *Shah*'s held to be valid, till counterſeal'd by him.

The Reaſon whereof is ſaid to be, that their *Shah*'s being bred up in the Women's Apartment, and perfectly ignorant in Affairs of State, it is neceſſary, for the Safety of the People, and the Preſervation of the Government, that their Orders ſhould be conſidered by ſome wiſe Miniſter, before they are put in Execution. The Grand Vizirs in *Turkey*, it is obſerved, ſeldom die a natural Death; on the other Hand, the Prime Miniſter of *Perſia*, if it be thought fit to diſcharge him, is uſually permitted to retire, and end his Days in Peace with his Family. The ſecond Poſt in the Government is, that of the *Divan Beghis* or *Bey*. This great Magiſtrate is the laſt Reſort in all Cauſes, Civil and Criminal, unleſs where the *Shah* in Perſon ſits in Judgment. The *Divan Bey* can command any Cauſe to be removed to his Tribunal, from any Court in the Kingdom; and during the late Reigns it has not been known that their *Shahs* have ever ſat in a Court of Juſtice, or concerned themſelves in examining the Decrees of the *Divan Beghi*.

In the third Rank come the Generals, and firſt the Generaliſſimo when there is one. The next Place is the General of the *Courtchis*, which are a Body of thirty thouſand Horſe, of *Turk* or *Tartar* Original. The third is the General of Muſqueteers, a Body which ſerve on Horſeback, but fight on Foot like our Dragoons. The fourth is the General of the *Coulars*, or Royal Slaves as they are called; and the laſt the Maſter of the Ordnance. After the Generals, the *Vacanaviſh* or Secretary of State, poſſeſſes the next Poſt. This Officer regiſters the publick Acts, and has the Care of the Records; he alſo appoints a Deputy in every Province of the Empire, who tranſmits all Affairs of Conſequence to him, to be laid before the Miniſtry. The laſt great Officer is the *Mirab*, or Lord of the Water. Every Province has its particular *Mirab*, who takes Care to diſtribute the Waters of the Rivers and Aqueducts in ſuch Proportion, that every Part of the Country may have an equal Share.

Theſe are all the principal Officers of State. Thoſe of the Houſhold are firſt the *Nazir*, who is both Lord Treaſurer and Steward, and it is with this Gentleman, that all Ambaſſadors and Foreigners tranſact their Affairs, but there is a Comptroller and ſeveral other Officers which are a Check upon him, as he is on the Prime Miniſter, and thoſe two have a very great Influence in the Court of *Perſia*. But to prevent the *Shah*'s Treaſury being miſapplied, no Sums are paid out of the Treaſury, but the Order paſſes under the Seals of the Prime Miniſter, the *Nazir*, the *Divan Bey*, and two other Officers of the Revenue. The next is the *Ichicagaſi Baſſa*, who commands all that attend in the outward Palace, and the Guards.

When the *Shah* goes out, this Lord marches before him with a great Staff, covered with Gold and precious Stones; he does not ſit, as ſeveral Officers do of inferior Quality, but ſtands always ready to obey his Imperial Majeſty's Orders, and ſee them executed. And after him is the great Huntſman, who has not leſs than a thouſand Huntſmen and Falconers under him. After this Officer, the principal Phyſician and principal Aſtrologer take Place, which are Poſts of great Honour and Profit.

4. As to Eccleſiaſtical Officers in this Empire, the Grand Pontiff is uſually ſtiled the *Sedre* in *Perſia*; they alſo give him the Titles of Prince, Head of the true Church, Subſtitute of *Mahomet*, and Lieutenant of the twelve *Imans*, or *Caliphs*, who ſucceeded their Patriarch *Haly*. The Churchmen and bigotted Part of the *Perſians* hold, that the Dominion of the Laity is an Uſurpation, and that the Government belongs of Right to the High-Prieſt; but that of the Majority is, that the Regal Power exerciſed by their Princes is derived from God, and that the High Prieſt and his Brethren ought not to meddle with Politicks, yet the *Sedre* and his Subſtitutes are the ordinary Judges in all civil as well as Eccleſiaſtical Cauſes; Lawyer and Divine are Terms of the ſame Signification in *Perſia*, their eccleſiaſtical and civil Laws being indeed the ſame. The temporal Judges have no written Laws to go by, but their Decrees are founded upon ancient Cuſtom, or the Equity of the Caſe, and the Judges in their temporal Courts are uſually Men of the Sword. The *Sedre* is the ſupreme Judge in the Eccleſiaſtical Courts, and takes Place in all publick Aſſemblies next to the *Atamadoulet* or Prime Miniſter.

The ſecond Eccleſiaſtical Judge, is the Ancient of the Law, whom the *Perſians* ſtyle *Cheik Iſlam*; his Juriſdiction is little inferior to the *Sedre*'s, and the People ſeldom appeal from one of theſe Courts to the other, but to the *Divan Beghi*, who is the ſupreme Judge in all Cauſes, eccleſiaſtical as well as temporal. The *Cadi* is the third Eccleſiaſtical Judge in *Perſia*, he takes Cognizance of the ſame Cauſes with the two former, but his Authority is confined to ſome particular Town or Diſtrict. The *Mufti* is the fourth, who has not that Authority here as in *Turkey*, for he cannot controul or reverſe the Proceedings of inferior Courts, but is reverenced however as a Perſon well ſkilled in the Eccleſiaſtical Laws, and his Opinion frequently demanded by the other Judicatures, who notwithſtanding act as they think fit. Theſe Judges do not ſit all in one Court, but have each their reſpective Tribunal, and the People apply indifferently to the one or other, as they are inclined.

5. There is in every Province of this Empire, a Chan and a Vizier; the Vizier has the Government of all thoſe Towns and Villages which are the King's Demeſne Lands, or which belong to the Crown in Propriety, and the Chan of the Province in general. This Word *Chan*, or *Caun*, as we pronounce it, and *Cham*, ſignify the ſame Thing, namely, *viz.* a puiſſant or mighty Prince; and this is the Title of all the *Tartar* Princes in *Aſia*; and the *Perſian* Provinces being of the Extent of Kingdoms, and formerly diſtinct Sovereignties, the *Perſian* Court have thought fit to give their Governors the Titles of ſovereign Princes; and the Shah of *Perſia* is frequently ſtiled now, as his Predeceſſors of old, *King of Kings*. Indeed the Chans in their reſpective Provinces, live almoſt in as much State as their Sovereigns, having exactly the ſame Kind of Officers as are in the Shah's Court with the ſame Titles, there being ſcarce any Difference but in Numbers and Penſions. The Chan commands the Militia of the Province, and aſſigns Lands for their Maintenance; he reviews them at certain Times, and ſees that they are fit for Service, their Arms and Horſes in good Order, and that they all perform their Exerciſes well; but every Soldier is permitted to live in his own Houſe in Time of Peace.

The Chans or Governors of Provinces have their Poſts for Life, and if they behave well, their Children after them. There are two Degrees of theſe Chans, the greateſt is called *Beglerbeg*, or Lord of Lords; the other is ſtiled *Coulembeg*, or Lord of Slaves. The Governors of the Frontier Provinces are for the moſt Part *Beglerbegs*, as the Chan of *Armenia*, from whom the Chans of *Churs*, *Marega*, and other Diſtricts, in Time of War, receive their Orders, and are obliged to march under his Standard. Sometimes theſe inferior Governments are made independent of the Chan of the Province. In every Province there are three Officers put in by the Government, who are independent of the Chan, namely, the *Janitchim* his Lieutenant, the Vizier or Receiver General of the Shah's Revenues, who hath alſo the Management of the Lands belonging to the Crown, and the Government of all Places where the Crown Lands lie; and the *Vacanaviſh*, or Secretary, whoſe Buſineſs it is to take an Account of all Tranſactions of Moment in the Province, and tranſmit them to Court.

One principal Deſign of placing theſe Officers about the Chan, is to obſerve his Conduct, and oppoſe him if he ſhould undertake any Thing againſt the State. Beſides theſe, the Governors of Cities and Caſtles, who are called *Daregas*, are put in directly by the Shah, and have their Lieutenants and *Vacanaviſh* alſo independent of them; and the ſame Perſon who is Governor of the City is never made Governor of the Fortreſs which belongs to it. The Miniſters of State, and Generals of Armies, have alſo their Lieutenants and Comptrollers, to ſuperintend their Conduct, with ſecret Orders how to act on certain Emergencies; but it is obſerved, that unleſs in Matters where the Safety of the State is concerned, thoſe Officers have a very good Underſtanding, and agree ſo well together, that the Shah is no leſs

cheated

vantages enjoyed by, and the Diſadvantages under which the Perſians *labour, from the Regulations eſtabliſhed amongſt them in this Reſpect. 10. Of the State of Property in this Empire, whence the Imperial Revenues ariſe, how levied, and their Amount. 11. Obſervations and Remarks on ſeveral Particulars delivered in the Courſe of this Section.*

1. AS at this Juncture the *Perſian* Empire, by the Murder of the Shah *Nadir*, is in ſuch Confuſion, that it may be in ſome Meaſure conſidered as diſſolved and no longer a Government at all; ſo it might ſeem excuſeable, if we had paſſed by this Section altogether; yet conſidering that even in abſolute Monarchies, Revolutions are but convulſive Motions, and that as ſoon as they ceaſe the Body Politick recovers its natural Conſtitution, we could not but think it very requiſite, for the Reader's Information, that a View ſhould be given of the Form of the *Perſian* Government, and this for three Reaſons, Firſt, Becauſe we are very apt to confound all abſolute Monarchies one with another, and to ſuppoſe that there neither is, nor well can be, any Difference between them; whereas, in Truth, the Form of ſuch Governments may, and actually do vary, as much as any other of the milder Forms, as the Reader will ſee by this Inſtance. Secondly, Of all the abſolute Monarchies in the Eaſt, the Conſtitution of the *Perſians* was very juſtly held to be the beſt; and therefore it deſerves, of all others, to be repreſented to the View of the Reader, who from hence will learn by what Modification the arbitrary Power of a Sovereign may be rendred in ſome Meaſure beneficial to his Subjects. Thirdly, Becauſe, in all human Probability, the *Britiſh* Nation may hereafter have a cloſer Communication with, and enter into a more extended Trade amongſt the Inhabitants of *Perſia* than in Times paſt; ſo that it is highly requiſite we ſhould enter, at leaſt briefly, into a Subject that may, to us or our Poſterity, become of extraordinary Importance.

It is by no Means fit, that ſo large and ſo regular a Collection as this ſhould be governed by temporary Views, or that we ſhould take the Liberty, becauſe this Country is at preſent unſettled, to ſlip over its Government, which we have a moral Certainty will be re-eſtabliſhed, perhaps before this very Collection is compleated. Beſides all this, there are a great Variety of Articles which naturally fall within the Compaſs of this Section, that tend to give us a fuller and more perfect Notion of the State of this Empire and its Inhabitants, than can be obtained by the Peruſal of any ſingle Book of Travels, in which the State of the Country is repreſented, as it ſtood at the Time the Author viſited it. But notwithſtanding that, the Force of theſe Conſiderations have determined us to inſert this Section; we ſhall not forget the Obligation we are under to keep Things within their due Bounds, and ſhall therefore labour to deliver, as ſuccinctly as it is poſſible, without Prejudice to their Perſpicuity, the ſeveral Articles that we think ourſelves obliged to handle for the Reader's Inſtruction and Entertainment, and in order to render our Account of *Perſia* conſiſtent with the general Plan of this Work.

2. The Shah of *Perſia* is an abſolute Monarch, and has the Lives and Eſtates of his Subjects entirely a his Diſpoſal. There is no Prince in the World more implicitly obeyed; let his Orders be ever ſo unjuſt, or given at a Time when he is ſo little Maſter of his Reaſon that he knows not what he ſays, or does, nothing can ſave the greateſt Subject if he determines to deprive him of his Life or his Eſtate; neither Zeal for his Perſon, Merit, or paſt Services, will avail in the leaſt. If he be in a Humour to ruin them, it is done by a Word of his Mouth, or by a Sign, and executed in an Inſtant, without any Form of Law, or Evidence of Facts. The common People, who are at a Diſtance from the Court, have much the better of the Quality in this Reſpect; there are very ſeldom Inſtances of any Oppreſſion or ſevere Judgments executed upon theſe, but they ſeem to enjoy as much Security as in any Country in the World; and perhaps the Magiſtrates are the more inclined to govern equitably, in regard they know nothing can ſkreen them from the Reſentment of their Sovereign, if they are guilty of any ſiniſter Practices. The *Perſians*, out of Conſcience, it is ſaid, obey all the Commands of their Prince without Reſerve, and believe that his Orders ought to be obeyed againſt the very Laws of Nature, inſomuch that if the Son be commanded to be his Father's Executioner, or the Father the Son's, it muſt be complied with. But if he command any Thing in Prejudice of their Religion, they are not obliged to obey him, but ought to ſuffer any Thing rather than violate the Law of God.

Yet nothing makes the *Perſian* Government appear ſo tyrannical, as the Cuſtom of executing the Governors of Provinces, and great Officers of State, without giving them an Opportunity of making their Defence, or being informed of the Crime they are charged with; it is uſual for the *Shah* two or three Times in a Year to ſend every Governor the *Calaat* or Royal Veſt, and theſe are ſent by ſuch Perſons as the Court intends a Favour to, for the *Cham* or Governor, to whom they are ſent, always makes a conſiderable Preſent to the Meſſenger.

When he comes within two or three Miles of the Place where the Governor reſides, the Meſſenger ſends him Word to come and receive the *Calaat*, but inſtead of a fine Coat, the Governor is ſometimes preſented with a Halter, and is diſpatched without any farther Ceremony.

This makes the Governors very circumſpect in their Conduct, and they are always under diſmal Apprehenſions, when they hear the *Calaat* is arrived, knowing how common it is to have their beſt Actions miſrepreſented to their Prince. The *Perſians* ſay in Defence of this Practice, that the Court ſeldom proceeds with that Severity, but in extraordinary Caſes, where the Fact is notorious, and there is Danger of Rebellion, if they ſhould cite the Perſon accuſed to anſwer; that if it be otherwiſe, they always give him an Opportunity of anſwering his Charge.

As for thoſe about the Court, whom the *Shah* looks upon as Slaves he has purchaſed, he does not think himſelf obliged to obſerve theſe Formalities, but dooms them to be puniſhed, or put to Death, as he ſees fit. The *Shah* of *Perſia* has no Council of State, as in the *European* Governments, but he acts as he is adviſed by his Prime Miniſter and great Officers; that which moſt perplexes the Miniſtry, is the Cabals that are carried on by the Women in the *Haram*; the Reſolutions that are taken here, frequently thwart their beſt laid Schemes, and the Miniſters do not only run the Riſque of having their Counſels rejected, but they very often turn to their own Deſtruction, if they are not ſuitable to the Inclinations of the Ladies moſt in Favour. This is not an Evil peculiar to *Perſia*, but a kind of Curſe, throughout all Eaſtern Courts; and perhaps ſome in the Weſt are not altogether free from it.

3. The Royal Family of *Perſia* are, generally ſpeaking, more unhappy than the Princes of the *Ottoman* Blood, for though they are not put to Death ſo frequently as the former, yet they uſually have their Eyes put out, and live in that miſerable Condition many Years. They have the *Tartar* Title of *Mirza* added to their Names, which is equivalent to our Title of Highneſs, and is never given but to thoſe of the Imperial Line. The firſt Miniſter in the Empire is the *Atamadoulet*, a Word which ſignifies the Support of the Empire. In Petitions, or when they ſpeak to him, they ſtile him the Grand Vizir, or Vizir *Azem*. No Buſineſs of Conſequence is tranſacted in the State but by the Direction of this Miniſter, nor any Grant or Act of State of the *Shah*'s held to be valid, till counterſeal'd by him.

The Reaſon whereof is ſaid to be, that their *Shah*'s being bred up in the Women's Apartment, and perfectly ignorant in Affairs of State, it is neceſſary, for the Safety of the People, and the Preſervation of the Government, that their Orders ſhould be conſidered by ſome wiſe Miniſter, before they are put in Execution. The Grand Vizirs in *Turkey*, it is obſerved, ſeldom die a natural Death; on the other Hand, the Prime Miniſter of *Perſia*, if it be thought fit to diſcharge him, is uſually permitted to retire, and end his Days in Peace with his Family. The ſecond Poſt in the Government is, that of the *Divan Beghis* or *Bey*. This great Magiſtrate is the laſt Reſort in all Cauſes, Civil and Criminal, unleſs where the *Shah* in Perſon ſits in Judgment. The *Divan Bey* can command any Cauſe to be removed to his Tribunal, from any Court in the Kingdom; and during the late Reigns it has not been known that their *Shahs* have ever ſat in a Court of Juſtice, or concerned themſelves in examining the Decrees of the *Divan Beghi*.

In the third Rank come the Generals, and firſt the Generaliſſimo when there is one. The next Place is the General of the *Courtchis*, which are a Body of thirty thouſand Horſe, of *Turk* or *Tartar* Original. The third is the General of Muſqueteers, a Body which ſerve on Horſeback, but fight on Foot like our Dragoons. The fourth is the General of the *Coulars*, or Royal Slaves as they are called; and the laſt the Maſter of the Ordnance. After the Generals, the *Vacanaviſh* or Secretary of State, poſſeſſes the next Poſt. This Officer regiſters the publick Acts, and has the Care of the Records; he alſo appoints a Deputy in every Province of the Empire, who tranſmits all Affairs of Conſequence to him, to be laid before the Miniſtry. The laſt great Officer is the *Mirab*, or Lord of the Water. Every Province has its particular *Mirab*, who takes Care to diſtribute the Waters of the Rivers and Aqueducts in ſuch Proportion, that every Part of the Country may have an equal Share.

Theſe are all the principal Officers of State. Thoſe of the Houſhold are firſt the *Nazir*, who is both Lord Treaſurer and Steward, and it is with this Gentleman, that all Ambaſſadors and Foreigners tranſact their Affairs, but there is a Comptroller and ſeveral other Officers which are a Check upon him, as he is on the Prime Miniſter, and thoſe two have a very great Influence in the Court of *Perſia*. But to prevent the *Shah*'s Treaſury being miſapplied, no Sums are paid out of the Treaſury, but the Order paſſes under the Seals of the Prime Miniſter, the *Nazir*, the *Divan Bey*, and two other Officers of the Revenue. The next is the *Ichicagaſi Baſſa*, who commands all that attend in the outward Palace, and the Guards.

When the *Shah* goes out, this Lord marches before him with a great Staff, covered with Gold and precious Stones; he does not ſit, as ſeveral Officers do of inferior Quality, but ſtands always ready to obey his Imperial Majeſty's Orders, and ſee them executed. And after him is the great Huntſman, who has not leſs than a thouſand Huntſmen and Falconers under him. After this Officer, the principal Phyſician and principal Aſtrologer take Place, which are Poſts of great Honour and Profit.

4. As to Eccleſiaſtical Officers in this Empire, the Grand Pontiff is uſually ſtiled the *Sedre* in *Perſia*; they alſo give him the Titles of Prince, Head of the true Church, Subſtitute of *Mahomet*, and Lieutenant of the twelve *Imans*, or *Caliphs*, who ſucceeded their Patriarch *Haly*. The Churchmen and bigotted Part of the *Perſians* hold, that the Dominion of the Laity is an Uſurpation, and that the Government belongs of Right to the High-Prieſt; but that of the Majority is, that the Regal Power exerciſed by their Princes is derived from God, and that the High Prieſt and his Brethren ought not to meddle with Politicks, yet the *Sedre* and his Subſtitutes are the ordinary Judges in all civil as well as Eccleſiaſtical Cauſes; Lawyer and Divine are Terms of the ſame Signification in *Perſia*, their eccleſiaſtical and civil Laws being indeed the ſame. The temporal Judges have no written Laws to go by, but their Decrees are founded upon ancient Cuſtom, or the Equity of the Caſe, and the Judges in their temporal Courts are uſually Men of the Sword. The *Sedre* is the ſupreme Judge in the Eccleſiaſtical Courts, and takes Place in all publick Aſſemblies next to the *Atamadoulet* or Prime Miniſter.

The ſecond Eccleſiaſtical Judge, is the Ancient of the Law, whom the *Perſians* ſtyle *Cheik Iſlam*; his Juriſdiction is little inferior to the *Sedre*'s, and the People ſeldom appeal from one of theſe Courts to the other, but to the *Divan Beghi*, who is the ſupreme Judge in all Cauſes, eccleſiaſtical as well as temporal. The *Cadi* is the third Eccleſiaſtical Judge in *Perſia*, he takes Cognizance of the ſame Cauſes with the two former; but his Authority is confined to ſome particular Town or Diſtrict. The *Mufti* is the fourth, who has not that Authority here as in *Turkey*, for he cannot controul or reverſe the Proceedings of inferior Courts, but is reverenced however as a Perſon well ſkilled in the Eccleſiaſtical Laws, and his Opinion frequently demanded by the other Judicatures, who notwithſtanding act as they think fit. Theſe Judges do not ſit all in one Court, but have each their reſpective Tribunal, and the People apply indifferently to the one or other, as they are inclined.

5. There is in every Province of this Empire, a Chan and a Vizier; the Vizier has the Government of all thoſe Towns and Villages which are the King's Demeſne Lands, or which belong to the Crown in Propriety, and the Chan of the Province in general. This Word *Chan*, or *Caun*, as we pronounce it, and *Cham*, ſignify the ſame Thing, namely, *viz.* a puiſſant or mighty Prince; and this is the Title of all the *Tartar* Princes in *Aſia*; and the *Perſian* Provinces being of the Extent of Kingdoms, and formerly diſtinct Sovereignties, the *Perſian* Court have thought fit to give their Governors the Titles of ſovereign Princes; and the Shah of *Perſia* is frequently ſtiled now, as his Predeceſſors of old, *King of Kings*. Indeed the Chans in their reſpective Provinces, live almoſt in as much State as their Sovereigns, having exactly the ſame Kind of Officers as are in the Shah's Court with the ſame Titles, there being ſcarce any Difference but in Numbers and Penſions. The Chan commands the Militia of the Province, and aſſigns Lands for their Maintenance; he reviews them at certain Times, and ſees that they are fit for Service, their Arms and Horſes in good Order, and that they all perform their Exerciſes well; but every Soldier is permitted to live in his own Houſe in Time of Peace.

The Chans or Governors of Provinces have their Poſts for Life, and if they behave well, their Children after them. There are two Degrees of theſe Chans, the greateſt is called *Beglerbeg*, or Lord of Lords; the other is ſtiled *Coulembeg*, or Lord of Slaves. The Governors of the Frontier Provinces are for the moſt Part *Beglerbegs*, as the Chan of *Armenia*, from whom the Chans of *Churs*, *Marega*, and other Diſtricts, in Time of War, receive their Orders, and are obliged to march under his Standard. Sometimes theſe inferior Governments are made independent of the *Chan* of the Province. In every Province there are three Officers put in by the Government, who are independent of the Chan, namely, the *Janitelim* his Lieutenant, the Vizier or Receiver General of the Shah's Revenues, who hath alſo the Management of the Lands belonging to the Crown, and the Government of all Places where the Crown Lands lie; and the *Vacanaviſh*, or Secretary, whoſe Buſineſs it is to take an Account of all Tranſactions of Moment in the Province, and tranſmit them to Court.

One principal Deſign of placing theſe Officers about the Chan, is to obſerve his Conduct, and oppoſe him if he ſhould undertake any Thing againſt the State. Beſides theſe, the Governors of Cities and Caſtles, who are called *Daregas*, are put in directly by the Shah, and have their Lieutenants and *Vacanaviſh* alſo independent of them; and the ſame Perſon who is Governor of the City is never made Governor of the Fortreſs which belongs to it. The Miniſters of State, and Generals of Armies, have alſo their Lieutenants and Comptrollers, to ſuperintend their Conduct, with ſecret Orders how to act on certain Emergencies; but it is obſerved, that unleſs in Matters where the Safety of the State is concerned, thoſe Officers have a very good Underſtanding, and agree ſo well together, that the Shah is no leſs cheated and deceived than if the Management was in one Hand. Beſides, the *Daroga* or Governor, the Vizier and *Vacanaviſh*, there are alſo in every Town the *Cadi*, or Civil Judge, before whom all ordinary Cauſes are heard; the Head Officer among the Trading People, the Provoſt or Sheriff; and every particular Trade has a Warden or Maſter. There is an Officer alſo who has a Watch, and is principally concerned in keeping the Peace in every great Town in the Night-time.

The Governor of every Town is the Judge in the laſt Reſort in criminal and civil Caſes too, if he pleaſes to interpoſe, and may inflict any Pains on Offenders ſhort of Death. Capital Puniſhments are very rare in *Perſia*, and the Sentence is, in moſt Caſes, paſſed by the Shah himſelf. The uſual Puniſhment is a Fine, which always goes to the Shah, or rather to the Governor of the Province, who generally brings the Crown indebted to him in his Accounts. When a Governor or Vizier is ſent into any Province, he has his Inſtructions in Writing; wherein are contained the Extent of his Government, of the Revenues, and the Manner in which he is to treat the People; and Inſtructions, in like Manner, are given to every Officer of State when he enters on his Poſt. On the other Hand, when a Governor or other Officer returns from his Command, which he never does but by expreſs Order of the Court, he waits without at the Gate of the Palace, and gives Notice by ſome of his Friends of his Arrival, and that he begs to throw himſelf at his Imperial Majeſty's Feet; whereupon Orders are uſually given for his Admittance; but ſometimes, if the Perſon has miſbehaved in his Poſt, inſtead of an Anſwer in the ordinary Stile, Orders are iſſued to take off his Head.

6. The *Perſians* are naturally a brave People, but the Sloth and Inactivity of their Princes had of late render'd them not ſo formidable as they uſed to be. In the laſt Century, under *Abbas* the Great, they make conſiderable Conqueſts on the Side of *Turkey*, as well as *India*, though their Troops were always much inferior in Number to the Armies either of the Grand Signior or Great Mogul; but they ſunk in our Time ſo much below what they were in that Reign, that every little *Tartar* and *Arabian* Prince inſulted their Frontiers, and robbed them of ſome Part of their Territories, before the late Shah *Nadir* aſſumed the Government.

The Forces of *Perſia* are divided into the Troops of the State and the Shah's. The Troops of the State are entertained by the Governors of the reſpective Provinces, and paid out of certain Lands appropriated for that Purpoſe, and are divided into Militia and regular Troops. The regular Troops are called *Courtchis*; they were originally of *Tartary*, a ſtout hardy Race of People who lived in Tents. Theſe are the Soldiers which are properly called *Cooſelbaſhes*, or Red-heads, ſo ſtiled when they came to the Aſſiſtance of *Cheic Sefi*, the Founder of the late Imperial Family, for which Service he allowed them the Honour of wearing red Caps or Turbants, of a particular Form, like that he wore himſelf. Theſe *Cooſelbaſhes* remained in their Tents, as well in Time of Peace as War, and employed themſelves in feeding, buying and ſelling of Cattle, from whence they were called *Courtchis*, or Shepherds.

The Service they did to *Cheic Sefi*, and their Zeal for the Religion of the *Imans*, procured them great Reſpect, and they poſſeſſed the chief Poſts both in the Court and Army; and from theſe the *Perſian* Soldiery, and afterwards all the *Perſians* in general, obtained the Appellation of *Cooſelbaſhes*, a Name formidable to the *Indians*, *Turks* and *Tartars* in the laſt Age; and it was by this Generation that the *Turkiſh* Language was introduced into the Court of *Perſia*, and the Northern Parts of that Kingdom, where they ſpeak it much more than the *Perſian*. The *Cooſelbaſhes* held the firſt Rank in the Kingdom till the Reign of *Abbas* the Great, who endeavoured to ſuppreſs them upon account of the unreaſonable Influence he obſerved they had in all Affairs of State, depoſing and ſetting up what Princes they thought fit, like the *Turkiſh Janizaries*. He was ſo jealous of his own Son, on account of the Reſpect he had obſerved they paid him, that he cauſed him to be put to Death, and diſperſed the *Cooſelbaſhes* in ſmall Detachments through all the Provinces of the Empire. Theſe Troops ſerve on Horſeback, carrying a Bow and Arrows, a Sword, Poinard, and Lance, with a Hatchet at the Saddle-ſkirts; and for Defenſive Arms have a Shield and Helmet; they are commanded always by their own Officers, and their General is called *Courtchibathi*, or Commander of the *Courtchis*.

Both the *Courtchis* and *Militia* have their Pay out of the Lands of the State of the reſpective Provinces, and enjoy it as their Inheritance, from Father to Son, if they do not refuſe to bear Arms: They are obliged to march to the Place of Rendezvous on twelve Hours Notice, and every Year paſs in Review before a Commiſſary ſent from Court, or before the Governor of the Province.

7. The Troops of the *Shah* are two Bodies, which *Abbas* the Great inſtituted. One conſiſts of twelve thouſand Men, and are called the Muſketeers, becauſe inſtead of Bows and Arrows they carry Muſkets, and though they march on Horſeback, yet like our Dragoons they fight on Foot. *Shah Abbas* uſed to oppoſe them to the *Turkiſh Janizaries*, of whom he had obſerved the Enemy made great Advantage in their Engagements with him. Before this Time neither Foot-Soldier or Fire-Arms were ever heard of in *Perſia*, and their Neighbours the *Tartars* have no Foot among them to this Day. The other Body conſiſted of Ten thouſand Horſe; theſe were called *Coulars*, and carried Fire-Arms alſo inſtead of Bows. They were called *Coulars* or Slaves, to ſignify their Devotion to their Sovereign, or as ſome ſay, becauſe they come from thoſe Countries from whence the *Perſians* had their Slaves, as *Georgia*, *Circaſſia*, &c. Part of them are ſent as Preſents to the *Shah* when they are young; and the reſt are deſcended from the People of thoſe Countries, who are ſettled in *Perſia*. They almoſt all profeſs the *Mahometan* Religion, though deſcended from Chriſtian Parents. *Abbas* the Great had a particular Affection for this Body, and uſed to call them his Horſe *Janizaries*. They are tall well-made Fellows, in whoſe Courage and Fidelity the Shah has a particular Confidence; for as they ſcarce know the Country or Relations from whence they ſprang, and can have no other Views, than to recommend themſelves to their Maſter by their Services, they are entirely devoted to the Crown, and obey every Order without Heſitation; and from among theſe, the Court uſually prefers Men to the higheſt Poſts; ſo that conſidering the Number of *Georgian* Women which are married into *Perſia*, and the Poſts the Men who derive themſelves from thence poſſeſs, the *Perſian* Court may, one half of them, probably be of *Georgian* Extraction.

It is obſerved, that in *Perſia*, as well as *India*, the Word *Slave* is an honourable Title, and preferable to that of Subject; nay, a certain *French* Author tells us, that the Word *Koulam Shah*, or King's Slave, is equal to that of Marquis in *France*, becauſe all that have that Denomination are ſure to be preferred to ſome Poſt if they behave well. Beſides theſe, there are two other ſmall Bodies, the one called *Sophi*'s or *Sephi*'s, inſtituted for a Guard to the King's Perſon by *Cheik Sefi*; theſe are not above two hundred Men, and wear the Sophi's Cap on their Heads, and for their Arms have a Sabre, a Poinard, and an Ax, which they carry on their Shoulders. The ſecond, called the *Zirzari*, or the Six hundred, who are all of the Size of Grenadiers, ſtout young Fellows, inſtituted by *Abbas* the Second for a Guard to his Perſon, *Anno* 1654. The Monarchs of *Perſia*, before that Time, had no Guards in the Palace, or when they went abroad, for the *Sephies* only ſerved to make a Show at Feſtivals, and on publick Occaſions; they wear long red Caps of the Form of a Sugar-loaf, and their Arms are a Muſket, Sabre, and Poinard, which are adorned with Silver, and exceeding fine; they are under the Command of the General of the Muſqueteers, and a ſmall Party of them do Duty at the Palace Gates.

All the Troops of *Perſia* are comprehended under theſe two Names, of *Courtchis* and *Coulars*, that is, Shepherds or Slaves, by which they underſtand the Soldiers of the old or new Eſtabliſhment. The Shah finds all the Troops with Horſes, Arms, and Accoutrements, but every Man provides himſelf with Cloaths according to his Fancy, the Soldiers having no particular Livery, any more than the Servants of the King's Houſhold, or of any great Man. There was in the Reign of *Abbas* the Great, a Body of twelve thouſand Men, that belonged to the Artillery, but they were diſcharged in the Reign of *Abbas* the Second, and the *Perſians* had no Artillery, unleſs ſome uſeleſs Guns in the Front of the Palace at *Iſpahan*, and in ſome other great Towns, which are more for Show than Service, till they were new diſciplin'd of late Years by *Shah Nadir*.

8. Their Armies were never large, conſidering the Extent of the Empire: *Abbas* the Great, who made ſuch conſiderable Conqueſts, had never more than a hundred and twenty thouſand Men in his Service in all the Provinces; and the Soldiers have been ſo ill paid in the late Reigns, that they have deſerted, and gone into foreign Service, or applied themſelves to other Employments, which the Courtiers winked at, putting their Pay in their Pockets, and never filling up their Places. The *Perſian* Troops not being troubled with Artillery or Baggage, make prodigious ſwift Marches, and fall upon an Enemy frequently in his Camp or Quarters, with incredible Fury, when he leaſt ſuſpects ſuch a Viſit. At other Times they cut off his Proviſions, and turn the Waters from their uſual Courſe, and having ſufficiently harraſſed him in a long March through a deſert Country, when he is fatigued and diſpirited, fall upon him. When an Enemy makes Head againſt them, they will fly till they have drawn him into ſome diſadvantageous Ground, and then return to the Charge again.

In their Retreat, as has been obſerved, they ſhoot more Arrows than when they advance, as Hiſtory acquaints us was the Practice of the ancient *Parthians*. The *Perſians* never throw up any Intrenchments about their Camps, their Fortification is ſome Mountain or difficult Paſs; but in Sieges they intrench, and uſually take a Place by undermining it; and it is thought that no People underſtand Mining and ſubterraneous Works better than the *Perſians*. It was thus they took *Erivan*, the Capital of *Armenia*, from the *Turks* the laſt Time. This City, in a very ſhort Space, found almoſt every Part of it undermined. But as the *Perſians* do not trouble themſelves with Artillery, ſo neither have they any Bread-waggons or Sutlers amongſt them, and yet their Camp is generally as well ſupplied as a Camp need to be, the Country People continually following them with Proviſions. Indeed, as Rice and Fruit is almoſt all they want, it can be no difficult Matter to ſupply ſuch ſmall Bodies as take the Field in *Perſia*, eſpecially as they are perpetually in Motion, and ſeldom ſtay long in a Camp.

When they are apprehenſive of an Invaſion, their conſtant Method is to withdraw all the People on the Frontiers, and deſtroy the Country in ſuch a Manner as the Enemy may find Nothing to ſubſiſt on, not leaving ſo much as a Spire of Graſs, or a Tree upon the Ground; but they give the Huſbandmen Time to ſecure their Grain, Fruits, and Forage, by burying them, with moſt Part of their Utenſils, in deep Pits, which they will do in ſuch a Manner that it is almoſt impoſſible to diſcover them; and as the Earth is very dry, they receive no Manner of Damage. The Army having thus deſtroyed the Country for eight Days Journey together, they encamp near it in ſeparate Bodies, and as they ſee Occaſion, fall upon the Enemy and diſtreſs him in his March; ſometimes they fall upon one Quarter of his Camp, and ſometimes on another, in the Night-time; and if they cannot by this Means put a Stop to his March, they retire farther into the Country, driving the People ſtill before them, and deſtroying every Thing as before; and by theſe Means they have defeated the greateſt *Turkiſh* Armies.

When the Enemy are retired, every Man returns to his Lands again. As for the Houſes, thoſe of the common People are no great Loſs, they are ſoon run up with Clay or ſuch Materials as they find upon the Place. The *Perſians* are ſaid to found their Conduct upon this *Dilemma*, either the Enemy will invade us with great Numbers, or but few; if he brings great Numbers, conſidering the Extent of deſart Ground he muſt march over, it is impoſſible he ſhould ſubſiſt; if their Numbers are but ſmall, we ſhall harraſs them in their March till they come to Nothing, without running the Hazard of a Battle.

9. The *Perſians* are excellent Markſmen, as well with their Fire-Arms, as their Bows and Arrows. Their Colours are made of rich Silks, in much the ſame Manner as our Horſe Standards; for a Device, they write ſome Paſſage of the *Alcoran*, or part of their Confeſſion of Fath, and ſometimes have a Lion, with the Sun riſing over his Back, wrought in them. The great Standard-Bearer, whom they call *Alemdar Baſſa*, is one of their principal Military Officers. The Management of the Soldiers Pay is much commended, becauſe they do not ſuffer it to paſs through their Officers Hands, but every Man receives it of the Farmers of ſuch Lands as are appropriated for that Purpoſe; the Officers Pay is very good; the General of the Muſketeers, and the General of the *Coulars*, have each of them above three thouſand Pounds a Year; and as the Lands aſſigned for the Payment of it are valued mighty low, it is thought to amount to four Times as much.

In time of Peace, they uſually keep a Body of ſix or ſeven thouſand Men in *Chaldea* towards *Babylon*, to prevent the Incurſions of the roving *Arabs*. The Governor of *Armenia* has about five thouſand Men under his Command, and the Governor of *Georgia* a like Number. In *Choraſſan* they have uſually eight thouſand Men to bridle the *Uſbeck Tartars*, and ſuch another Body in the Province of *Candahar*, towards *India*, and theſe Troops being the Outguards of the Empire, and almoſt in conſtant Action, were eſteemed pretty good; but as for the reſt, who are cantoned in the Inland Country, they enjoyed ſo long a Peace, that even Travellers obſerve, they had not the Air of Soldiers.

In thoſe Parts of the Country, where they have Sea for a Boundary, they keep ſcarce any Troops, inſomuch, that in *Gilan*, and *Mazendran*, which lie on the *Caſpian* Sea, the *Coſſacks* have landed ſmall Parties, and plundered the Country for ſeveral Days together; and here the *Muſcovites* very lately fixed themſelves with very little Oppoſition, though it be one of the richeſt and moſt fertile Countries in the Empire. The *Perſian* Generals are perplex'd with nothing ſo much as the ſtupid Conduct of the Court, in attending to the Predictions of their Aſtrologers. Theſe Men are ever averſe to War, becauſe they are obliged to take the Field with the Prince, and therefore ſeldom fail to pronounce it unlucky to enter into one on any Conſideration whatever; and if ever they are brought to approve of a War, they muſt prognoſticate the lucky Minute, when to encamp, and when to march, *&c.* So that the Generals loſe the great Advantages which might be made ſometimes, by waiting till they conſult the Stars. The favourite Women and the Eunuchs are no leſs averſe to War than the Aſtrologers; for in loſing their Prince, they loſe their all, and therefore they conſtantly fall in with the Aſtrologers, to divert their Lord from every Enterpriſe which carries a Face of Danger.

All this muſt be underſtood of the old Line, of which *Thamas* the Son of *Huſſein*, depoſed by *Mer-Weys*, and afterwards reſtor'd, depos'd again, and at laſt put to Death, by *Thamas Kuli Kan*, or with his Privity, who thereupon aſſumed the Title of *Shah Nadir*, was the laſt. It is a Thing ſurprizing, that conſidering the great Extent of Coaſt which they have upon the *Perſian* Gulph, and the Ocean on the South, and the Number of their Provinces bordering upon the *Caſpian* Sea, they ſhould never think in earneſt, or to ſpeak with the greater Propriety, ſhould never think at all of raiſing a Naval Force, which if they had done, would have rendered them ſecure at Home and reſpected Abroad.

The only Reaſon that can be aſſigned for this is, their Neglect of Trade, which Defect in their Conſtitution, if the ingenious Reader will attentively conſider, he will without Difficulty diſcover, that it is the ſole

Source of the frequent Troubles, Rebellions, and Revolutions, which have ſo often brought the *Perſian* Government to the Brink of Ruin. This will be the more obvious to the Reader, when we come to ſtate the Nature of Property among the *Perſians*, from whence it will appear, that the landed Intereſt in that Country is tolerably ſecured; but as the like Proviſion is not made for the Money'd Intereſt, People do not turn themſelves ſufficiently to thoſe Methods of Subſiſtance that would make the Government eaſy, and themſelves happy.

10. The Lands of *Perſia* are either ſuch as are cultivated, or ſuch as are uncultivated, and uninhabited, of which the latter are ten to one more than the former. The Lands in Occupation are of four kinds; the Lands of the State, the *Shah*'s demeſne Lands, the Lands of the Church, and laſtly, thoſe belonging to private Men. The Lands of the State contain much the greater Part of what is cultivated, and are in the Poſſeſſion of the Governors of the reſpective Provinces, who out of them take their own Revenue, and aſſign the reſt for the Payment of their Officers, and the Troops they are obliged to maintain; for every Soldier has his Pay aſſigned him upon ſome Village or Farm, in the ſame Manner as in *Sweden*. The Demeſne Lands are the *Shah*'s particular Eſtate, out of which are paid the Officers of the Houſhold, and the Troops he maintains over and above thoſe which are maintained at the Charge of the reſpective Provinces, and the Reſidue are given among the Courtiers and Favourites; or managed by the Viziers and Intendants, who remit the Produce of them into the Treaſury.

The Lands which belong to the Church, are the Donation of Princes, or private Men, and are accounted ſacred, ſo that they are never taxed or confiſcated for any Crime whatever, and after one Year's Poſſeſſion, the Title of them cannot be called in Queſtion, on any Account whatever. The Lands of private Men are held of the Crown for the Term of ninety nine Years, paying an inconſiderable Quit-rent; and at the Expiration of the Term of ninety nine Years, they are allowed to renew their Leaſe for the ſame Number of Years on advancing one Year's Income. As to the uncultivated Lands, if any Perſon deſires to build upon them, or to convert any Part of them into plowed Fields or Gardens, the King's Officers procure him a Grant for ninety nine Years, under a ſmall Rent, which Terms are renewed as other private Eſtates; ſo that all Ranks of Men derive their Eſtates immediately from the Crown, and by this Method have a Perpetuity, on Payment of their Fines and accuſtomed Rents.

The Officers of the Shah, as well as private Owners, let out their Lands to Huſbandmen, upon Condition of receiving a third Part of the Produce uſually; but the Rent is more or leſs, according to the particular Agreements of the Parties; and the Grain in *Perſia* being ſubject to be deſtroyed by Hail, Drought, Locuſts, and other Inſects, the Tenants never fail to inſiſt on an Abatement in theſe Caſes. When the Deſtruction is very great, the Huſbandmen take the withered Branches of Trees, and the damaged Ears of Corn, and reſort to the Shah's Officers, complaining of the Seaſon, and their Inability to pay their uſual Rent; if they have received never ſo little Hurt, their Complaints are very loud, and they frequently make an Advantage of the Misfortune.

Private Landlords are leſs ſubject to be impoſed upon in theſe Caſes, having the Lands under their Inſpection, but then their Tenants are not ſo much oppreſſed, and ſubject to ſuch Hardſhips as the Tenants of the Crown. The Shah's Officers frequently pretend they have no Authority to make Abatements, and thereupon whole Villages go up to Court, and deliver their Petitions to the Shah in Perſon, inſomuch that there is ſeldom leſs than ſeven or eight thouſand People attending at *Iſpahan* on theſe Occaſions. The Court uſually ſends Orders hereupon to the Provinces to make ſuch Allowance as the Nature of the Caſe requires, or depute Commiſſaries to enquire into the Truth of the Complaint, but in either Caſe the Crown is uſually defrauded; for the Countrymen ſo well underſtand the Force of Bribes, that they commonly make a Purſe, and procure a favourable Repreſentation of the Caſe from the Officers ſent to check them.

The Shah and private Owners have the like Profits of the Huſbandmen's Cattle, as they have of their Corn, as the third Fleece, and the third Part of the Breed; and of Fruit, the Crown has ſtill a greater Share, there being not that Charge of manuring and cultivating Fruit-trees, as there is of the Grounds which produce Grain.

The Governors of Provinces receive the ſame Profits out of the Lands of the State, towards the Payment of the Officers, and Troops of the Province, as the *Shah* does out of his own Lands, and every Province beſides makes large Preſents, from Time to Time, to the Court, of the beſt the Country affords, whether Silk, Grain, Fruits, Cattle, or whatever is in Eſteem among them; and theſe are ſent up in ſuch Quantities, as are ſufficient to ſupply the *Shah*'s Houſhold, and therefore may be accounted a conſiderable Part of the Revenue. The *Shah* has alſo the ſeventh Fleece, and the ſeventh of the Breed of the Cattle, in thoſe Lands which are not appropriated to his Uſe, and this is a great Addition to his Revenue, for the Shepherds of *Perſia*, like the ancient Patriarchs, poſſeſs vaſt Flocks and Herds, on which they continually attend, living in Tents, and removing from one Place to another, as they can meet with Paſture for them; for thoſe Lands which are not the Property of particular Perſons, are at Liberty for all Men to graze upon, though the *Shah*'s; and this Payment of the ſeventh Beaſt ſeems to be an Acknowledgment of his Property in them. Theſe wealthy Shepherds the People of the Eaſt call, *Saranetchin*, from whence we have the Word, *Saracen*, that is to ſay, an Inhabitant of the Fields, for they live in Tents, far from Towns, two or three hundred together, and ſometimes you ſee a thouſand or two encamped in one Place; they perfectly cover the Plains with their Flocks and Herds, that ſometimes you may be two or three Hours in paſſing through them; and the *Shah* has an Officer called *Ichemban Baſhi*, or chief of the Shepherds, reſiding in every Province, who takes the ſeventh of the Cattle for the *Shah*'s Uſe, *viz.* of Sheep, Aſſes, Mules, Camels and Goats; as to Horſes, it ſeems the *Shah* is entitled to every third Colt; of Silk and Cotton alſo, it is ſaid the *Shah* has a third Part over the whole Kingdom.

Minerals and precious Stones belong to the Shah only, and he has Two *per Cent.* of all Money. The Money that is raiſed by the Waters is another conſiderable Part of the Revenue, for every Perſon pays for their being let into his Fields or Gardens; nothing will grow in that parched Country without it. A Tribute is alſo paid to the Crown by all People who are not of the Religion of the Country, whether Natives or Foreigners, and this amounts to a Ducat a Head; and there is a Tax of ten Pence on every Shop of the handycraft Trades, and twenty Pence on the reſt. The Cuſtoms and Port Duties are another Branch of the Revenue, but theſe do not amount to much here, for they have no conſiderable Port except *Gambron*. As for the Merchandize carried into *Perſia*, or out of it, by Land, they only pay a ſmall Sum for a Camel's Load, and proportionably for every Mule or Ox, without examining what the Packs contain. But that Part of the Revenue which is merely caſual, exceeds all the reſt, *viz.* what ariſes by the confiſcated Eſtates, and the Preſents which are made by the great Lords, Governors of Provinces, *&c.* and particularly thoſe which are made on New Year's Day. They preſent the Shah with wrought Silks, Horſes, Aſſes, beautiful Boys and Girls, Gold, Silver, precious Stones, Perfumes, and every thing which is rich and curious, and may ſerve for Uſe, Ornament, or the Pleaſures of Life; and as there are ſeveral handicraft Trades which pay no Duties to the Crown, as Carpenters, Maſons, and ſome others, theſe are obliged to work for the Shah when he requires it, without Pay; whatever Buildings or Palaces the Shah erects or repairs, he has only the Materials to find, the Warden or Chief of the Trade is obliged to ſend a certain

Number of Workmen, which ſaves the Treaſury a great deal of Money, and therefore the Labour of thoſe People may well be eſteemed Part of the Revenue. The Maintenance of Ambaſſadors, and the providing them with Carriages, is done alſo at the Charge of the Country, and coſts the Shah Nothing. When he has a Mind to reward any Perſon for any ſignal Piece of Service, this is done alſo at the Expence of another; he ſends him perhaps to one of the Chans or great Courtiers, with the *Calaat* or Royal Veſt, for which the Chan makes the Meſſenger a Preſent uſually of ten times the Value or more, according to the Poſt he is in. The Shah ſometimes expreſſes the very Sum he expects ſhould be paid, which is commonly exceeded out of Reſpect, and as a Proof the Perſon values the Prince's Favour. But notwithſtanding the Impoſitions above-mentioned, the People do not ſeem to be oppreſſed or impoveriſh'd; even the Tradeſmen and Huſbandmen appear to be in eaſy Circumſtances, and few of them but have Rings on their Fingers and Arms. One great Advantage to the Subject is, that ſcarce any of the Duties are farmed, and in Times of Scarcity the Court is very indulgent and ready to make Abatements of their Rents and Taxes in Proportion to the Occaſion. As to Poll or perſonal Taxes, there are none in *Perſia*, unleſs that which is levied upon thoſe of a different Religion; nor are neceſſary Proviſions of any Kind taxed.

What the Revenue of the Crown may amount to in the whole, is very uncertain, depending ſo much as it does upon Caſualties; thoſe who have attempted to compute it, ſay, that one Year with another the Revenue amounts to four Millions of our Money; which, conſidering their Troops are moſt of them paid out of the Lands of the State, that are not reckoned into this Account, is very conſiderable; but as the Splendor and Magnificence of the *Perſian* Court is much beyond any thing we have in *Europe*, poſſibly very little of it may remain in the Treaſury at the Year's End. The Court, whether it remains at *Iſpahan*, *Meſched*, or any other Capital, or removes from one Province to another, as it uſed to do during the Summer, if we conſider the Women, the Eunuchs, and other Officers and Servants, ſeldom conſiſts of leſs than ten thouſand Perſons which belong to the Houſhold, not including the Troops, or the great Men and their Dependants, which it muſt require an immenſe Sum to maintain. The Officers of the Revenue ſend every Year up to Court the State of their Province, and what every Town and Village produces, examined and atteſted by the principal Inhabitants of the reſpective Places, which are looked upon as ſo many Debentures; and theſe given in Payment to thoſe who are entitled to Penſions or Salaries from the Crown. In like Manner every Governor pays all the Officers and Soldiers of his Province, with Aſſignations on the Lands belonging to the Province; there is very little Money diſburſed on thoſe Occaſions, and where the Pay is ſmall, as that of the common Soldiers, and inferior Servants, one Man is deputed from the Troop or Company to receive the Wages of the reſt, and the Reſidue, after all Demands are ſatisfied, is remitted into the Imperial Treaſury.

It may not be amiſs to add a few Words concerning the Seals under which Acts of State are paſſed in *Perſia*; they have five Seals which are uſed in five ſeveral Branches of Buſineſs, one in all ſuch Affairs as concern the demeſne Lands. A ſecond for Commiſſions, Letters Patents, *&c.* The third only in Military Affairs. The fourth about the Revenue; and the fifth in Things relating to the Houſhold. There are no Arms engraven upon them, but on one there are the Names of the twelve *Imans* or Patriarchs, on the others, a Scrap of the *Alcoran*, or ſome pious Expreſſions, ſhewing their Dependance on God, and his Prophet *Mahomet*. The Form of one of the Seals is round, two others are ſquare, and the other two are of an irregular Form. The largeſt are about the Bigneſs of a Crown-piece, and the others about half that Bigneſs. They are made of Turquoiſes, Rubies, Emeralds, or ſome other precious Stones. The principal Seal the *Shah* always wears about his Neck, and on every *Friday* all Inſtruments which require theſe Seals, are carried to the Palace, and ſealed in the *Shah*'s Preſence. The Impreſſion is made on the Paper, with a kind of thick Ink, and not on Wax, as with us; the ſame Uſage prevails in moſt of the *Eaſtern* Courts.

11. The Generality of the World will agree from this View of the *Perſian* Policy, that there is no Reaſon, ſo long as their Government continues in a ſettled Condition, to look upon the whole Nation as Slaves and Beaſts of Burthen. It is very certain, that there are great Errors in this, as well as in all the Conſtitutions founded on the *Khoran*, and it muſt be ſo, for that Book itſelf is a mere Syſtem of Tyranny; and which is worſt of all, it is pretended that this Syſtem came from God. It is upon this Principle, that the abſolute Power of their Princes is built; for as to all the Qualifications beſides, they are brought in from the Remains of the old *Perſian* Government, which by their apparent Wiſdom, and natural Rectitude, have continued in Uſe through all Invaſions, and in Spite of all Changes of Government. Thus the Governors, Treaſurers, and Secretaries of Provinces, are preciſely mentioned, both by ſacred Writers, and by the *Greek* Hiſtorians, as well as modern Travellers. The profound Reſpect born to the *Shah*, is the Remains of that Reverence paid to their Emperors of old, of which the Heathen Writers are full, which *Alexander* would have transferred to himſelf, and for which chiefly the *Romans* looked upon the *Parthians* as a barbarous Nation.

But above all, the new-Years Gifts are the ſtrongeſt Teſtimonies of the Difficulty there is in extirpating ancient Cuſtoms amongſt any Set of People. This was the Practice in the moſt early Times, and the *Perſian* Emperors with all their Pride were then very humble to and familiar with their People. They eat and drank with them in Publick; they gave Audience to all who deſired it, and as they received Preſents even from the meaneſt, ſo they received every Man's Petition, and granted almoſt every Man his Requeſt.

There are many other Things, in which the modern *Perſians* reſemble very much their remoteſt Anceſtors, but in nothing more than in their natural Inclination to and wonderful Genius for Poetry. This is ſo univerſal, that every *Chan*, and indeed every rich and powerful Man, keeps a Poet in his Houſe, to whom occaſionally they give Themes, and it is wonderful how well and how ſuddenly they execute them. Theſe Sort of People alſo frequent Coffee-houſes, and other publick Places, where, for the Amuſement of idle People, they repeat their Performances with infinite Spirit, and with inimitable Grace. It is certain, that the *Perſians* are very nice in their Rhime, but ſomewhat looſe in their Numbers, that is to ſay, they regard Cadence more than Quantity. Yet no Nation in the World has more of that Enthuſiaſm, which is the Eſſence of Poetry; the very ſound of their Verſes ſufficiently diſtinguiſhes the Subject, even to the Ears of thoſe who are little acquainted with their Language; ſo that Foreigners are never at a Loſs to know, whether their Poems are merry or melancholy, humourous or grave, intended to inſtruct, or calculated only to divert.

In ſhort, almoſt all their Learning conſiſts in Poetry, for their *Proverbs* are in Rhime, ſo are their Fables, and they have Hiſtories in Verſe of a great Length, which, though ſufficiently crouded with Fable, are ſeldom or never without a Ground of Truth. It is true that their modern Writers, many of them, make Uſe of Proſe, but even this is intermixt with Verſe, and they are alſo very apt to quote Verſes in Converſation, which they are obſerved to do with great Propriety. But it is worth our Notice, that no kind of Writing is here ſo much in Faſhion, as Satyr, which is moſtly national, and falls, generally ſpeaking, upon their Neighbours. As for Example, they repreſent the *Turks* as Brutes and Barbarians; and whenever they have a Mind to repreſent a Blockhead, they are ſure to paint him in a *Turkiſh* Dreſs. The great Indolence, Effeminacy, and Luxury of the *Indians*, are likewiſe common Topicks of Raillery, and ſo are the Faults and Follies of the *Tartars*; the Pride and Self-ſufficiency of the *Georgians*; the Cunning

ning and Self-intereſtedneſs of the *Ruſſians*, and the Covetouſneſs of the *Europeans*, are frequently expoſed by their Wits.

They are far from being ignorant of Muſick as a Science; they learn by Rule, and they play by Note, though in a Manner ſo different from ours, that it is a long Time before it becomes pleaſant to a Stranger's Ear. There is no ſuch Thing as Singing in Parts, but they ſing one after another, and they generally ſing to ſome ſtringed Inſtruments, like the Lute or Viol: Their Men ſing better than the Women, but there are not many of them that practiſe it, Singing being look'd upon as a ſcandalous Employment in *Perſia*, as well as Dancing. People of Condition will not ſuffer Children to learn either the one or the other, but it is left almoſt entirely to the common Wenches and Proſtitutes, as it is indeed all over the Eaſt. It is reckoned an Indecency in People of any Reputation to ſing, and it would render a Man contemptible who ſhould attempt it in Company. The *Perſians* call their Singing-women *Caine*, intimating that they derive their Skill from the Daughters of *Cain*, who they pretend were the firſt Inventors of Singing and Muſick in the Eaſt.

They have a great Number of Inſtruments both of String and Wind Muſick, ſome in Shape like our Hautboys and Flutes, others like the Viol, Harp, Virginals, Kettle-drums, and Trumpets; but ſurely their Trumpet is the moſt monſtrous Inſtrument for Size and Sound that can be met with; it is commonly ſeven or eight Foot long, and proportionably wide at the great End, and as much as a Man can hold up; theſe and their Drums, in a Manner, drown all other Sounds, though the leſſer Inſtruments, as has been obſerved, have no great Harmony in them: And indeed their Muſick, as it is called, ſerve chiefly inſtead of Clocks, to let People know the Time of Day or Night, ſounding conſtantly at certain Hours, for Bells they have none; and when the Shah or any great Man goes out of his Palace, you have always Notice of it by theſe Drums and Trumpets, who ſtand over the Palace Gate, or in ſome Balcony or Gallery, and play upon ſuch Occaſions, being heard at a vaſt Diſtance. In ſome Places the Muſick and Dancing Girls make Part of a great Man's Equipage, and run before him when he goes abroad.

It is obſervable, that the Strings of their Inſtruments are never made of Gut, the touching of any thing belonging to a dead Animal, eſpecially the Entrails, being held a Pollution; they make them therefore of twiſted Silk, or Braſs Wire, and it is not only indecent, as has been obſerved, for People of Condition to play upon a muſical Inſtrument, but it ſeems alſo to be prohibited by their Religion, and therefore their Eccleſiaſticks and Devotees will not ſo much as be preſent at ſuch Entertainments.

Aſtronomy is ſtudied in *Perſia* purely for the Sake of Aſtrology, which laſt they term the Revelation of the Stars. The People of the Eaſt look upon Aſtrology as the Key to Futurity, and they have an inſatiable Curioſity for prying into Things to come. This ſeems to be the principal End of their Studies, and they look upon a Perſon to be ſtupid and ignorant to the laſt Degree, who ſpeaks ſlightly of this Science. The Aſtrologers of *Perſia*, at leaſt the moſt celebrated, are all Natives of the Province of *Charaſan* or *Bactria*, and the moſt noted among them of the Town of *Genabed*. The Shah never entertains an Aſtrologer who is not of that Town. The Reaſon that the Aſtronomers here have more Skill in their Art than elſewhere, it is ſaid, is becauſe the Air is drier and purer, by which Means they have a better Opportunity to obſerve the Motions of the Stars. If we conſider the Number of Aſtrologers that are found in *Perſia*, the Rank they hold, and the large Penſions they receive from the Crown, we may eaſily gueſs at the Confidence that People put in them; they are paid by the Government no leſs than four hundred thouſand Pounds *per Annum*.

To the Poſt of chief Aſtrologer to his Imperial Majeſty there is annexed a Penſion of ten thouſand Pounds *per Annum*, and to the ſecond Aſtrologer five thouſand Pounds *per Annum*, and to the reſt according to their Skill. They have alſo in Preſents annually two hundred thouſand Pounds, and yet they are ſometimes arbitrarily puniſhed, and put to Death for the moſt trivial Offences, and even for Actions the moſt innocent in themſelves, according to the Caprice of their Prince. Sir *John Chardin* relates, that in the Reign of *Sefi*, when the Shah and all the great Men were aſſembled to ſee ſome Criminals of State cut in Pieces, and the Chief of the Aſtrologers was there among the reſt; the Shah viewing attentively the Countenances of his Courtiers, obſerved that the principal Aſtrologer ſhut his Eyes at every Stroke of the Sabre, as not able to behold ſo horrid a Slaughter; he thereupon called to the Governor of a Province who ſat near him, and bid him put out the Eyes of that Dog who ſat at his Left Hand, ſince he did not uſe them; which was executed in an Inſtant on the unhappy Aſtrologer, which Part of his Deſtiny the Stars never revealed to him.

There are conſtantly a certain Number of Aſtrologers in Waiting at the Royal Palace, and always ſome of the chief of them about the Shah's Perſon, except when he is in the *Haram* with his Women, who advertiſe him of the lucky or unlucky Moments. Every one of them carries an Aſtrolabe hanging at his Girdle, in a neat little Caſe not bigger than the Hollow of one's Hand; they are conſulted not only in Affairs of Importance, but frequently upon the leaſt Trifles; for Inſtance, if his Imperial Majeſty ſhall go abroad; if it be an auſpicious Hour to enter the *Haram*; if it be a proper Time to eat, or to give Audience, *&c.* When theſe Queſtions are aſked, the Aſtrologer immediately takes out his Aſtrolabe, obſerves the Situation of the Stars, and by the Aſſiſtance of his Tables makes his Aſtrological Concluſions, to which they give entire Faith as to an Oracle, offending againſt which would be dangerous.

Their Aſtronomers obſerve pretty juſtly the Eclipſes of the Sun and Moon, and often foretel the very Moment wherein thoſe Luminaries will be obſcured; but there are Inſtances of their being miſtaken half an Hour, and eſpecially in Eclipſes of the Sun; but they differ from us in Nothing more than in the Calculation of the Vernal Equinox, there being ſometimes an Hour's Difference between them and the *Europeans*. Comets, they apprehend, always portend ſome great Calamity, but generally ſuppoſe their malign Influences are directed againſt ſome other Empire than their own. They had neither Celeſtial Globes, or Charts, or Teleſcopes, to obſerve the Conſtellations, till the *Europeans* imported them; they have ſince indeed endeavoured to imitate their celeſtial Globes, and had only ſome Repreſentations of the Conſtellations before in a Book called, *The Schemes of Abdal Rhamen*. It is obſervable however, that the Figures were much the ſame as on our Globes; the Longitudes and Latitudes of the Stars are alſo marked, but a little different from ours. The *Perſians* generally make forty eight Conſtellations, and the Names of them, for the moſt Part, are the ſame we give them; but ſome of them are different. The only Inſtruments they uſe in any of their Operations, are the Aſtrolabe and *Jacob*'s Staff; and as it is with theſe alone they take the Elevation of the Pole, it cannot be ſuppoſed that their Latitudes are very exact; their Aſtrolabes, it is true, are very curiouſly made, and commonly by thoſe who uſe them.

The *Perſian* Almanack is called *Takumi*; it is properly a Mixture of Aſtronomy and judicial Aſtrology, containing an Account of the Conjunctions, Oppoſitions, Aſpects, Longitudes, Latitudes, and, in ſhort, the whole Diſpoſition of the Heavens. It contains alſo Prognoſticks of the moſt notable Events, as War, Famine, Plenty, Diſeaſes, and other Accidents of human Life, with the lucky or unlucky Times for tranſacting all Manner of Affairs, directing the People to regulate their Conduct accordingly. The Feſtivals alſo are marked, as in our Almanacks, but whereas we divide the Year into four Parts, they make only two, Winter and Summer. What is moſt obſervable is, that though there are great Numbers of theſe Almanack-makers, and though they frequently diſagree even in their Aſtronomical Calculations, as well as their Predictions,

dictions they are nevertheleſs looked upon as infallible; a Thing ſcarce to be credited, if we had not ſome Examples of the ſame Kind nearer Home.

Their Prognoſtications are generally taken from the Moon, their Artiſts believing that this ſublunary World, as it is called, is much more influenced by this Planet, than by the Sun. And theſe Aſtrologers, like other Oracles, endeavour conſtantly to deliver themſelves in dubious and equivocal Expreſſions, which may bear various Meanings; ſo that if their Predictions prove true in any Senſe, or but in Part, they are ſure to meet with Applauſe, tho' they ſhould fail in ſome Circumſtances. They ſeem to regard the Earth more than the Heavens, and to be govern'd by the Conſideration of probable Circumſtances, rather than the Conſtellations, and their Predictions on that Account are frequently found true. For Inſtance, their Almanacks are always publiſhed in the Spring, when the Winter is paſſed, and according to the Weather they then had, it is no difficult Matter to foretel, whether they ſhall have good or bad Crops in the Summer, eſpecially in a Climate where it does not vary as in *Europe*; and from the ſame Premiſes they will be able to paſs a tolerable Judgment on the Health or Sickneſs of the enſuing Seaſons. But above all, as the Aſtrologers are always about the Court, and have ſo great a Share in the Adminiſtration of Affairs, and ſuch Credit with all the World, they may be ſuppoſed to make very ſhrewd Gueſſes in Relation to Politicks. They cannot but obſerve the Humours and Diſpoſitions of the Prince and his Favourites, the Likelihood there is that one will be reſtored, and another diſgraced. Nay they know very well what an Influence themſelves have in theſe Caſes, inſomuch that there very rarely happens a conſiderable Alteration in the State, but it is brought about, and is indeed the Effect of ſome of their own Predictions.

But Aſtrology is not the only Foible of this kind, for they have various other Sorts of Divination, which have grown into Uſe by Degrees, under the ſeveral Changes of their Government. It is true, that for the moſt Part their Aſtrologers practiſe theſe, but not excluſively, for there are others who practiſe them likewiſe, more eſpecially Geomancy, which is the favourite Method of Divining throughout all the Eaſt. Charms and Amulets againſt Diſeaſes and Enchantments, are another Part of their Superſtition; you will not find a *Perſian* without his Amulet, and ſome of them almoſt loaded with them; they put them alſo about the Necks of their domeſtick Animals; theſe Amulets have certain Inſcriptions on Paper, and ſometimes on precious Stones, and theſe Inſcriptions they wear in little Bags about them; they contain ſome Paſſages of the *Alcoran*, or Sentences of their Saints or Prophets, applicable to the Diſeaſe or Enchantment they would avert: The *Perſians* alſo are extravagantly ſuperſtitious in Relation to Days and Times. They depend in theſe Caſes, as much on the Diviners and Aſtrologers, as a Child upon its Nurſe; for Inſtance, when the *Shah* is upon a Journey, the Aſtrologers will make him riſe at Midnight, and begin his March in the worſt Weather that can happen, and perhaps out of the high Road, to avoid the unfortunate Hour, or his evil Stars, as from Ignorance or Knavery they moſt impudently call them.

We muſt not however imagine, notwithſtanding theſe Follies are very general, that there is not ſome kind of real and uſeful Learning amongſt this great Nation. Moral Philoſophy is in high Credit with them, and is not only taught but practiſed; they have many excellent and judicious Books upon this Subject, in which the Viciſſitudes of human Life, and the Folly of placing Happineſs in ſenſual Enjoyments, are very fully and very finely ſtated. As for the ordinary Parts of Education, and ſuch as may fit Youth for common Buſineſs, they have as many Conveniencies as other People. There are abundance of Schools in every Town, where, beſides the *Perſian*, is taught the *Arabick*, which is their learned Language; the Alcoran, and their other ſacred Writings, are all in this Language, and the Alcoran is looked upon as the Standard of good Language both for Grammar and Rhetorick. People of Condition chuſe to have private Tutors for their Children, rather than ſend them to theſe publick Schools; and no Nation, it is ſaid, is more intent on the Education of Children, and breeding them up to manly Exerciſes, than the *Perſians*. Their Schools are called *Mekteb*, which ſignifies an Entrance; this being, ſay they, the Gate by which Lads enter into the Sciences.

There are, as has been ſaid, many in every Town, and the Expence of Schooling is very ſmall. They learn the *Perſian* and *Arabian* Languages, with Writing and Accounts, which when they are arrived at ſome Perfection in, they are removed to ſome College, or *Medres*, as they call them, which ſignifies a Place where their Doctrine or Principles of their Religion are taught. Their Colleges are all endowed and ſome of them very richly; the largeſt have fifty or ſixty Apartments, and to each of them belong two Chambers. In thoſe Colleges that are beſt endowed, every Scholar has about two Shillings a Day allowed him, which he lays out as he thinks fit, for they do not common together.

There are ſome Colleges where the Students have no more than a Penny a Day, and yet Intereſt is made to get into one of theſe, on account of having a Lodging *gratis*, and ſome other caſual Advantages. Many here are, who get in without any Deſign to ſtudy, and live and grow old in thoſe Houſes, and are allowed to have their Wives and Children with them, whoſe principal Deſign ſeems to be in Eaſe and Idleneſs. There are abundance of Colleges in the great Towns of *Perſia*, and ſome in the Villages. The *Perſians* lay out the greateſt Part of their Charities in publick Foundations. In the firſt Place, they uſually build a Caravanſera for the lodging of Travellers *gratis*; afterwards a Bagnio, a Coffee-houſe, a Bazar or Market-place, and they purchaſe alſo a Garden, and theſe they let out, and apply the Revenues ariſing from them towards the building and endowing of a College. The Founder and his Heirs have the Appointment of the Head and Governors of the Society, and if the Founder's Eſtate happens to be forfeited to the Crown, the Shah has the Nomination. In *Iſpahan* there are fifty ſeven Colleges, moſt of them of Royal Foundation, or which have devolved to the Crown; there are Profeſſors who teach the Sciences in every College, to whom the Scholars make an annual Allowance for their Trouble; but as there are ſeveral who read Lectures *gratis*, the Scholars frequently reſort to theſe, and forſake their proper Tutors.

Thoſe Students who are Men of Parts and Learning, may have a handſome Salary in any great Man's Houſe for inſtructing his Children; for theſe never ſend their Children either to Schools or Colleges, but have them educated in their own Houſes. The Head of the Houſe admits or excludes whom he ſees fit, and pays the Students their Penſions monthly, ſo that they ſhew him abundance of Reſpect. Beſides their Colleges, there are in every Town thoſe who teach the Liberal Arts *gratis*, and theſe are frequently great Officers who have been diſcarded, or have voluntarily retired from Court. Theſe frequently allow their Diſciples Books and Paper, and entertain them at their own Expence certain Days in the Week, and ſometimes cloath their Pupils and give them Money, and by this Means they endeavour to recover their Reputation with the People, for nothing gives a Gentleman ſuch a Reputation in *Perſia*, as the inſtructing great Numbers of Scholars at their own Expence, and the being Patrons of Learning and Learned Men. Theſe are Circumſtances that muſt effectually prove, that the *Europeans* have no Right to treat the *Perſians* as a rude and barbarous People.

As the Cuſtoms and Manners, ſo the Reading and Learning of all Nations muſt differ, and the wider and more remote theſe Differences are, the readier the Vulgar on both Sides ſeem to be in deriding and contemning each other; but as this Humour proceeds from the ſame Principle in both Caſes, *viz.* that of preſuming themſelves to be the Standard by which the Wiſdom and Civility, the Learning and Politeneſs of all other Nations are to be determined; and as this is a Point not to be defended, it ought to be given up as no better than a popular Error in both. It has been already obſerv'd, that a great Part of the modern Conſtitution of *Perſia* is derived from the ancient Form of Government that prevailed under their old Emperors, that is, the Series of Princes, who governed that which is ſo well known to the learned World, by the Title of the ſecond general Empire, allowing the *Aſſyrian* to be the firſt. It is therefore well worthy our Notice, that Conſtitutions judiciouſly ſettled, are of ſo permanent a Nature, and have ſuch an interior Strength and Solidity, as not only to reſiſt the Power of Time, but even of repeated Invaſions, to which it is certain, that no Country in the World has been more ſubject than this of which we are ſpeaking. We may from hence diſcern, that though Nations waſte away, and are loſt, as well as all the Monuments of their Power and Greatneſs, yet the Effects of their Wiſdom remain, and the Conquerors themſelves are content to receive and ſubmit, for their own Sakes, and from a Conviction of their Excellence, to the Laws of the Conquer'd.

We know that this has been heretofore obſerved of the *Egyptians*, we know that in much later Times it has been confeſſed in Reference to the *Chineſe*, but I do not remember to have ſeen this Remark made before as to the *Perſians*. Yet I arrogate nothing to myſelf upon this Head, for whoever reads Dr. *Hyde*'s learned Book, and compares it with the modern Accounts of *Perſia*, muſt diſcover it at firſt Sight. At this Day the whole Plan of the *Perſian* Conſtitution, except the Eccleſiaſtical Part of it, which is changed by the Introduction of *Mahometaniſm*, is very near the ſame that it was three thouſand Years ago; and yet the *Perſees*, who are the Remains of the ancient People of *Perſia*, to whom that Conſtitution belonged, are now reduced to ſo inconſiderable a Remnant, that it is doubted whether there may be ten thouſand Souls left in *Perſia* of this Race. Thoſe that are left indeed preſerve their primitive Cuſtoms, and are authentick Witneſſes of the Truths reported of them by the moſt learned Writers. It is indeed true, that there is another ſmall Colony of theſe People in the *Indies*, and it may not be amiſs to put the Reader in Mind of a Conjecture, mentioned in Commodore *Roggewin*'s Voyage, that ſome Iſlands, diſcovered by him in the *South-Seas*, are actually peopled by the Relicts of theſe ancient *Perſians*.

I had myſelf an Opportunity of converſing for ſeveral Years with a very ſenſible Phyſician, who went that Voyage, to whom I was indebted for many of the Particulars publiſhed therein, and who is dead ſince they were publiſhed. Of this Gentleman I very carefully enquired what the Reaſons were which induced him and his Companions to advance that Notion, which at firſt Sight is none of the moſt probable. He told me the Cauſes were chiefly three, Firſt, that their Complexions, in the Sentiments of thoſe who had ſeen ſome of the *Gubers* in *Perſia*, very much reſembled them, and were very unlike either the Inhabitants of *Africk*, or of *India*; for whereas the former are of a black, and the latter of a reddiſh or Iron Colour; theſe were of a light Olive, and yet their Aſpects differed abſolutely from the *Chineſe* and *Tartars*. The ſecond Cauſe he aſſigned, was their worſhipping the Sun and Fire, turning towards the Eaſt when they prayed, and uſing a low or whiſpering Voice, all of which are ſuitable enough to the *Gubers*, or *Gaurs* as the *Turks* call them. The third was the Innocency of their Manners, the quiet and peaceable Life they lead, the Pains they took in cultivating their Lands, and their great Induſtry in ſeveral ingenious Manufactures. I ſhall not take upon me to determine what Credit is due to theſe Conjectures, but ſhall content myſelf with obſerving, that they are worth remembring; and conſidering perhaps, our Poſterity may have an Opportunity by converſing with theſe People, to enter into them more minutely.

One thing more I recollect that paſſed upon this Subject, and it was this, that ingenious Gentleman obſerved to me, that though we had various Travels through and Accounts of *Perſia*, yet we had no general or correct Hiſtory of it, by which a curious Perſon might ſee in a little Time, what changes had happened therein, from the earlieſt Ages down to the preſent, which he thought might be of very great Uſe, even though it were digeſted into a very narrow Compaſs. Upon mature Deliberation, I ſaw the Truth and Expediency of this in the ſtrongeſt Light, and that nothing diſabled us ſo much in this Part of the World, from forming a right Judgment of Affairs in thoſe Parts, as the not having diſtinct and correct Views of the Succeſſions of their Princes.

The famous Preſident *Briſſon*, ſo barbarouſly murdered by the Leaguers, in the Reign of *Henry* III. of *France*, was long ago ſatisfied of this; and to remedy an Evil, the Conſequences of which he judged of very truly, he compoſed a large Hiſtory of *Perſia*, which he publiſhed in *Latin*, and digeſted therein an Account of the Affairs of that Nation from the earlieſt Ages to his own. This without doubt was a very curious and a very uſeful Work, with reſpect to Men who occupy the higher Forms in Learning; but to the Bulk of the People, I mean of that Sort of People who believe themſelves to make a Part of that learned World, it was in Reality of no Service at all. In the firſt Place, the Book itſelf is very large, written in a learned Language, and in a harſh and perplexed Stile even in that Language; for it is obſervable of him and of *de Thou* his Contemporary and Countryman, that they brought the Stile of the Bar into the Narration of Hiſtory, and generally ſtated Caſes, or as the *French* Lawyers term it, wrote *Factums*, inſtead of giving us a natural and eaſy Detail of Facts. Beſides, Preſident *Briſſon*'s Book was chiefly grounded on the *Greek* and *Latin* Hiſtorians; what he derived from the *Perſian* Writers, he had thro' the Canal of ſome *German* Pedants, which inſtead of the beſt, rendred it the worſt Part of his Book, in which there are large Chaſms; ſo that, notwithſtanding what the Title promiſes, it is nothing leſs than a compleat Hiſtory; though I believe at the Time it was wrote, it would have been impoſſible for any to have given us a better; and it is plain, that before him, none had thought it worth his Time and Pains to give us one ſo good.

After making theſe Reflections, I became more ſenſible of the extreme Difficulty of repreſenting the Scheme of the *Perſian* Hiſtory within ſo narrow Bounds as I am tied to in this Work; and yet I was ſenſible, that without this, all I had done was imperfect, and that the Reader muſt neceſſarily have Recourſe to other Books in order to underſtood mine; which Inconveniency perhaps I had ſubmitted to, if I could have told him where to have ſought for better Information; but that being alſo out of my Power, I found myſelf under an abſolute Neceſſity of trying what might be done for his Relief; this produced what follows, ſo that all I have ſaid is not calculated to inhance the Value; but to excuſe the Imperfection of the enſuing Section, which being the firſt Attempt of its kind, may be allowed ſome Degree of Merit, though it falls, as I am very ſenſible, extremely ſhort of Perfection.

SECTION V.

A Succinct View of the *Perſian* Hiſtory, from the earlieſt Accounts down to the preſent Time; in which is contained a conciſe Repreſentation of the ſeveral remarkable Revolutions in that Empire, ancient and modern, the Conqueſts thereof by ſeveral Nations, and the Succeſſion of their reſpective Monarchs, ſo far as is neceſſary to illuſtrate what has been delivered in the foregoing Sections.

Collected as well from the Oriental Writers, as from the Greek *and* Latin *Hiſtorians.*

1. *An Introductory Account of the Nature and Deſign of the following View of the* Perſian *Hiſtory, and of the State of that Nation in the earlieſt Times, according to their own Hiſtorians.* 2. *Of the* Perſian *Empire, conſidered as the ſecond of the four great Monarchies, from the Origin thereof under* Cyrus, *to its Deſtruction by the* Greeks. 3. *Of the Invaſion and Conqueſt of* Perſia *by the* Macedonians, *and of the Situation of Affairs after the Death of* Alexander the Great. 4. *Of the Revival of the* Perſian *or* Parthian *Empire by* Schapour *or* Sapores, *to the intire Deſtruction of the ancient* Perſians, *under the Reign of* Jeſdegerde Shehriar, *the laſt of their Monarchs.* 5. *The Conqueſt of* Perſia *by the* Arabs *or* Saracens, *under their Caliph* Moavia; *and of the Time they poſſeſſed this great Country, down to the laſt Khalif of* Bagdad. 6. *The Conqueſt of* Perſia *by the* Mogul Tartars, *and the Succeſſion of their Princes, ſo long as they poſſeſſed or claimed this Country.* 7. *The great Irruption of that Tribe of* Turcomans, *diſtinguiſhed by the Title* Kara Kuyonlu, *i. e. of the* Black-Sheep, *and of the Time they remained in Poſſeſſion of* Perſia. 8. *Of another Tribe of* Turcomans, *ſtiled* Aku Kuyonlu, *i. e. of the* White-Sheep, *and of their Dominion in this Country.* 9. *Of Shah* Iſhmael Sefi, *the Founder of the late Imperial Family, and the Succeſſion of his Deſcendants down to Shah* Abbas III. *who was crowned in his Cradle by* Thamas Kuli Kan. 10. *A brief Account of the Hiſtory of Shah* Nadir, *from his firſt Appearance in the World to the Time of his being murdered.* 11. *An Account of* Ali Kuli Kan, *now ſtiled* Adl Shah, *the preſent Poſſeſſor of the* Perſian *Monarchy, with ſome Remarks on the principal Events that fall within the Compaſs of this Section.*

1. THE ancient Hiſtories of all Nations are, generally ſpeaking, intermix'd with Fables, notwithſtanding which the Knowledge of them is of great Uſe, becauſe the Antiquities of every Country are grounded upon theſe traditional Hiſtories, and without being competently verſed in them, even modern Relations are full of Doubts and Difficulties; and this we know experimentally, not only by the Peruſal of *Greek* and *Roman* Authors, but from our own Hiſtory, which, how obſcure ſoever in its Original, has notwithſtanding been eſteemed worth knowing, and even worth the Pains of being ſifted thoroughly by the moſt learned and intelligent Perſons. It is very true, that the modern *Perſian* Hiſtorians are of a very late Date, in Compariſon of thoſe Times to which their Hiſtories refer; but then it is to be conſidered, that they tranſcribe from their Neighbours the *Tartars*, who though it may ſound harſh in our Ears, have always had amongſt them very ancient and authentic Records, and from the Books of the *Perſees*, or primitive Inhabitants of *Perſia*, whoſe Writings deſerves as much Credit as thoſe of any *Eaſtern* Nation whatever. According to them the moſt ancient Monarchy of this Country began in the Province of *Aderbeijan* or *Media*, where the People, weary of enduring thoſe Evils that are inſeparable from *Anarchy*, made choice of *Kayomars* for their Sovereign. This *Kayomars*, if we may depend upon their Accounts, was the Son of *Aram*, the Son of *Shem*, the Son of *Noah*, and conſequently his Monarchy began at no great Diſtance of Time from the Flood. If there was nothing in their Hiſtory more extravagant than this, it might perhaps be well enough defended; but all that they relate afterwards of the Succeſſion of his Deſcendants, whom they reckon Eleven in Number, is ſo fictitious, that little or no Credit can be given to it; they ſtile this their firſt *Dynaſty*, the *Piſhdadians* from *Houſchenk*, the ſecond Monarch, Grandſon of *Kayomars*, who from his ſtrict Regard to Juſtice, had the Sirname of *Piſhdad*, which is to ſay, the Juſt, or rather the great Diſtributer of Juſtice. The laſt Monarch of this Line was *Guſtaſh*, which is the ſame Name that the *Greeks* call *Hyſtaſpes*; it is not eaſy to give any Account of theſe ancient Monarchs, ſo as to reconcile them with other Hiſtories, but in general it may be affirmed without Prejudice to the Truth, that under this firſt Race of their Monarchs, the ancient *Perſians* comprehended all the Princes that ruled in their Country before the Age in which *Cyrus* was born; ſo that this may be properly ſtiled, the fabulous or obſcure Age in the *Perſian* Hiſtory, taking in all the Time from the Flood to the Empire of the *Medes*, who, as other Hiſtories better known to us record, had once the Sovereignty over *Aſia*.

2. The ſecond Race of the *Perſian* Monarchs is, by their Hiſtorians, called the *Dynaſty* of the *Kanites*; and this is, ſtrictly ſpeaking, that Race of the *Perſian* Kings, recorded by the *Greek* Hiſtorians, who reckon up twelve, and allow them to have reigned all together two hundred and ſix Years, that is from *Cyrus*, who began his Reign five hundred thirty ſix Years before Chriſt, to *Darius Codomanus*, who ended his three hundred and thirty Years before Chriſt. It muſt be allowed, that there is a very wide and almoſt irreconcileable Difference between the *Greek* and *Perſian* Hiſtorians, with regard to this Period of Time, and the Actions of theſe Princes, as the inquiſitive Reader may diſcover, by peruſing their Accounts diſtinctly ſtated in the Univerſal Hiſtory, the nobleſt and moſt comprehenſive Work of its Kind, that has appeared in our own, or in any other Language.

The only Fact in which theſe two Hiſtories ſeem tolerably to accord, is in the Appearance of the great *Perſian* Legiſlator, whom in their Language, they call *Zerduſht*, and whom the *Greeks* ſtile *Zoroaſter*: He flouriſhed, according to both Hiſtories, under the Reign of *Guſtaſh* or *Darius Hyſtaſpes*, who began his Reign in the Year before Chriſt Five hundred and twenty two. It was this great Man *Zerduſht*, who modelled and reduced into Order the Religion of the *Magi*, the fundamental Maxim of which was the Worſhipping only one God under the Symbol of Light; and becauſe they in a particular Manner reverenced the Sun, and paid their Devotions before a Fire, which was kept continually burning upon an Altar, the *Greeks* meaſuring the Religion of others by their own, took it for granted that they worſhipped the Sun and the Fire; and according to that remarkable Facility they had of ſupplying by Fiction the Want of better Authority, they have given us very large Accounts of the *Perſian* Religion, which have only ſerved to miſlead and deceive ſuch as truſted to their Relations; for beyond all Queſtion, what they have ſet down of human and other Sacrifices offered by the *Perſians* to ſeveral of their Divinities, is one continued Chain of Fables, utterly repugnant to the fundamental Principles of their philoſophical and theological Syſtems.

The *Perſian* Hiſtories relate the laſt War between their Monarchs and the *Greeks*, in a Manner very differently from what is contained in the Writings of the laſt-mentioned Nation; the former ſtile the laſt Monarch of their Second Dynaſty *Darab al Aſgar*, which is as much as to ſay, *Darius the Leſſer*, or *Darius the Second*; whereas the *Greeks* reckon him the Third of that Name. The *Perſians* alſo ſay, that he was a cruel and tyrannical Prince, and that by his Male-Adminiſtration he ſo eſtranged the Hearts, and loſt the Affections of his Subjects, that ſome of the great Men about him privately called in *Alexander* of *Macedon*, with a Promiſe to betray their Maſter into his Hands. To us this appears wild and incredible, but that *Nadir* Shah was actually ſo called in by the Miniſters of the Mogul, paſſes for true Hiſtory; which very poſſibly may appear ſtrange in the next Age, and ridiculous to Poſterity. The *Perſian* Hiſtorians ſay, that *Alexander* found *Darius* yet alive, when he fell into his Hands; that he bequeathed to him his Daughter *Rouſchenk*, which Name the *Greeks* have changed into *Roxana*, for a Wife, and adviſed him to leave the Government of the Provinces of his new Empire to the *Perſian* Grandees, which *Alexander* promiſed and performed. They add farther, that repenting of this ſome Time after, he reſolved to remove them to make Way for *Greeks*; but that he was diſſuaded from this Meaſure by *Ariſtotle*, who ſuggeſted to him, that the latter would not be able to maintain themſelves againſt the general Confederacy of the *Perſian* Princes; and that the only Way to prevent ſuch a Confederacy was to allow ſeveral of thoſe Princes a greater Meaſure of Power under his Government, than they could hope for under a Monarch of their own Nation.

3. The *Perſians* ſtile *Alexander* the Great, *Eſkender al Roumi*, that is, *Alexander* the *Greek*; *Eſkender ben Philicous*, that is, *Alexander* the Son of *Philip*; and *Eſkender Dhulcarnein*, that is, *Alexander* with two Horns, and give a very different Account of his Expedition into and Conqueſt of *Perſia*, from what we meet with either in the *Greek* or the *Latin* Hiſtorians; wherein as in many Things they err, ſo in ſome perhaps they are in the right, and probably it might furniſh a learned Man, perfectly well acquainted with the *Greek* and Oriental Tongues, with an Opportunity of writing a very uſeful and entertaining Diſſertation, by way of Compariſon between theſe Hiſtories, as it would afford him an Opportunity of clearing up a Multitude of Paſſages in both, that ſeem at preſent either very dark or abſolutely unintelligible. Something of this Kind, with reſpect to the laſt mentioned of his oriental Titles, has been attempted with Succeſs by the very learned Dean *Prideaux*, out of whoſe excellent Performance Mr. *Rollin*, in his Ancient Hiſtory, has borrowed whole Sheets at a Time, and his Authorities from the Ancients into the Bargain, which is a new Way of writing Univerſal Hiſtory, in which I am afraid he will have but too many Followers.

The *Perſian* Writers tell us, and I believe very truly, that not long after the Death of this great Conqueror, many of their Princes ſet up for Petty Sovereigns in the Provinces which were committed to their Government, and that the *Perſian* Empire was ruled in this Manner for ſeventy two Years. Theſe Princes they ſtile in general *Moluk Thaovaif*, that is, the Princes of the Provinces, and make a diſtinct *Dynaſty* of them, which is their Manner of diſtributing their Hiſtories, and a very perſpicuous Method it is, as the learned Reader will eaſily diſcern, by conſulting *Abul Ferrajius*, who has digeſted his Work in this Manner, and from thence has given it the Title of the Hiſtory of *Dynaſties*; nor do I know any Univerſal Hiſtory extant, in any Language, that, conſidering its Conciſeneſs, ought to be compared to his. We need not wonder that there is a good deal of Confuſion in that Part of the *Perſian* Hiſtory which relates to the Time immediately after the Death of *Alexander the Great*, and we are the leſs able to rectify it, becauſe neither the *Greek* nor the *Latin* Hiſtorians treat of it clearly, but mention it only incidentally, contenting themſelves to mention it from Time to Time as it falls in their Way; and from Hiſtory thus wrote by Starts, it is a very difficult Thing to collect ſuch a Number of Facts, as may enable one to reduce it under any certain Method, and yet this is abſolutely neceſſary, in order to preſerve the Thread of our Diſcourſe.

4. The *Greeks* ſay, that under the Reign of *Ptolemy Philadelphus*, an *Armenian* Prince revolted and formed a new Empire in the Eaſt. This *Armenian* Prince was *Arſaces*, the Founder of the *Parthian* Empire; the Oriental Writers call him *Aſcheck*, and make him the firſt Prince of their *Dynaſty* of *Aſkaniens*, and they likewiſe reckon him amongſt the *Moluk Thaovaif*, or the Princes that ruled after *Alexander*; ſo that he ſeems to have acquired a Dominion over ſeveral petty Princes, who were once his Equals, and his aſſuming this Dominion ſeems to be by the Concurrence both of the *Perſian* and *Greek* Writers, well enough fixed to the Year 250 before Chriſt. It may not be amiſs to obſerve, that *Mirkond* and ſome other *Perſian* Writers, appear to be very much at a Loſs in regulating the Succeſſion of theſe Princes, for which the true Reaſon ſeems to be this, that they found no regular Memoirs concerning them in the old *Perſian* Writers, who did not conſider them in the Light of their natural Princes. It was however under this Race, that the *Parthians* became known to, and capable of making Head againſt the *Romans*; and therefore in their Hiſtories we find the Names and principal Circumſtances of the Reigns of moſt of theſe Princes. The laſt of this Race was *Ardevan*, who was Cotemporary with the *Roman* Emperor *Commodus*, and with him the *Parthian* Empire fell, or rather the Sovereignty of the Eaſt was reſtored to the *Perſians* in the Perſon of *Artaxerxes*, after it had laſted upwards of four hundred and thirty Years.

This great Prince the *Perſian* Chronicles ſtile *Ardſchir Babegan*, and make him the Founder of their fourth *Dynaſty*, called the *Saſſanians*; he was not only the Revivor of the *Perſian* Empire, but the Legiſlator of it alſo, and left behind him a famous Book, intitled, *Adab alaiſcb*, i. e. *The Rule of Life*, which is ſtill preſerved, admired, and reverenced throughout the Eaſt, as the moſt complete Syſtem of Government and Morals that was ever publiſhed. It would not in all Probability be much eſteemed in this part of the World, even if we had it; being penned entirely in the *Eaſtern* Manner; as for Inſtance, one of the Capital Maxims, which he lays down for a Prince to follow, is this, *Never employ a Sword, where a Cane will do as well*; by which he meant, that a Monarch ſhould never reſort to Capital Puniſhments for light Offences.

I mention this particularly, to ſhow, that there was a great Difference between the Genius of the *Parthian* and *Perſian* Governments, and that the latter were naturally mild, even though their Monarchs carried their Claim to abſolute Power, as high as the former. The Laws of the *Medes* and *Perſians* were indeed no other than the Will of the Prince, but they were irrevocable and immutable even by their Princes; and therefore *Ardeſhir Babegan* having reſtored the Empire, thought himſelf at Liberty to lay down Rules for his Government, which were no leſs binding on his Succeſſors than his Subjects. He it was that fixed the Tenure of the Lands, the Modus betwixt the Farmer and Tenant, the Rights and Revenue of the Crown, and diſtinguiſhed all the Artificers and Tradeſmen in his Empire into different Companies, over whom he appointed Maſters and Wardens; with many other Regulations, moſt of which ſubſiſt to this Day.

The Deſcendants and Succeſſors of this Prince, were thoſe famous and powerful Emperors of *Perſia*, who conteſted the Dominion of the Eaſt with *Conſtantine* the Great, and the following *Greek* Emperors, till by Degrees, and chiefly by the long and bloody Wars they carried on againſt each other, both Empires were much weakened, and at laſt brought ſo low, as to be overrun and ruined by a Race of Barbarians, that had been taught the Art of War by ſerving as Mercenaries in both their Armies. The *Perſian* Writers reckon twenty three Monarchs of this Dynaſty down to *Jeſdegerde Shehriar*, who was the laſt, and in whom not only his Family, but his Nation ended. Long before his Time the Empire began to decline, Princes became Tyrants, their Subjects, and even their Sons, conſpired againſt them, their Religion grew corrupt, and the People diſſolute; this encouraged their Neighbours to invade them on all Sides, and a prodigious Multitude of *Turks* breaking in on the North Eaſt, *Jeſdegerde* marched againſt them into the Province of *Choraſan*, but before he came to a Battle, he had Intelligence that the *Arabs* had invaded *Perſia* on the other Side; upon which he determined to march againſt them; but whilſt Things were in this Situation, and before he could aſſemble Forces ſufficient to act againſt ſo formidable a Power, Grief and Diſtraction of Mind brought him to his End when he had reigned about nineteen Years. His Death is, by the beſt Authors, referred to the thirty firſt Year of the *Hegira*, and conſequently to *Anno Domini* 650. It may not be amiſs to obſerve, that the famous Æra, which is denominated from this Prince, does not commence, as one would imagine, with his Death, but from the Beginning of his Reign, and therefore anſwers to the eleventh Year of the *Hegira*, and to *Anno Domini* 632.

5. As we have already marked the preciſe Time when the *Arabs* became Maſters of this Country, we ſhall only obſerve, that the firſt of their Khaliffs was *Mowavia*, the Fourth lawful Succeſſor of *Mahomet*, who reigned twenty Years; it would lead us into a vaſt Field, if we ſhould pretend to give even a ſhort Account of the Succeſſion of theſe Prieſts and Princes; for under Pretence of being Succeſſors to the Prophet, or, as the Word *Khalif* literally ſignifies, *Lieutenant*, they aſſumed the Supreme Power in ſpiritual as well as temporal Affairs, and executed it for the moſt Part with great Severity. It was this that led them to treat with unrelenting Cruelty, the unhappy Race of the ancient *Perſian* Nation, whom they were bent upon extirpating, from a ridiculous Notion of their being Infidels and Idolaters; whereas it is very difficult to ſay, whether their Religion is not as near the Truth as that of *Mahomet*; but without entring into this Diſpute, it is ſufficient for our Purpoſe to ſay that they ſucceeded ſo far therein, as to reduce that numerous People to a very handful, and even theſe were forced to take Shelter in Woods, in Mountains, and in Deſarts, to ſecure themſelves from the Effects of their religious Fury.

At length, after a Succeſſion of fifty four Princes who bore this Title, though in that Space there happened many Revolutions, the Power of the *Arabs* or *Saracens* ſunk and grew weak, in the ſame Manner as all other Nations do; that is to ſay, their Monarchs grew drunk with Power, and the People were debauched by Luxury. In this melancholy Situation they were continually diſturbed either by Invaſions from Abroad, or by Conſpiracies at Home, till at laſt the Strength of the Empire, unable to ſupport ſuch continual Fatigues, ſunk under them. *Moſtadhem*, or *Moſtazem Billah Ben Moſtanſer Billah*, the thirty ſeventh Khalif of *Bagdat*, or *Babylon*, ſaw the End of that Empire; he ſucceeded to the Government in the Year of the *Hegira* 640, and from the very Beginning of his Adminiſtration was unfortunate in all his Undertakings. *Holokou* was at that Time Kan of the *Tartars*, a Prince ſo powerful, and whoſe Dominions were ſo extenſive, that he for ſome Time deliberated whether he ſhould puſh his Conqueſts through *Poland* into *Germany*, or turn them againſt this Khalif, and he was determined to the latter by the Advice of *Naſſireddin*, a famous Aſtrologer, who being diſobliged at the Khalif's Court, went to the *Tartar*, and adviſed him to fall upon his old Maſter. It fell out that this unfortunate Prince had ſtill a Traytor about him greater and more dangerous than this Aſtrologer. The Name of this perfidious Monſter was *Mowaddedin*, who was Vizier to the Khalif, but was of the oppoſite Sect in Point of Religion; he perceived the Deſign of the *Tartars*, and adviſed his Maſter to diſband his Forces, under Pretence that he was ſo much reverenced by his Neighbours, that there was no Fear of his being diſturbed, if he did not open a Pretence for it by appearing armed. The Khalif, who naturally loved Money and Pleaſure, ſwallowed the Bait, applied himſelf ſolely to the heaping up Wealth, and taking his Diverſion, till of a ſudden the News came that the *Tartars* had invaded a diſtant Part of his Dominions; upon which, by the Advice of this truſty Miniſter, he ordered all the Forces in his Service to march againſt them. By this Means his Capital, the glorious City of *Bagdat*, the faireſt and richeſt of the Eaſt, and perhaps of the whole World, was left in a Manner unguarded. The *Tartar* Khan, who foreſaw and expected this, marched immediately with a choice and powerful Army to inveſt it; and as ſoon as that was done, the Vizier, under Pretence of propoſing Terms of Peace, went to the Camp of the Enemy, from whence he never returned. The City was ſoon after taken by Storm; the Khalif, who was then forty ſix Years of Age, was made Priſoner, together with his Conſort and an only Son, his eldeſt being killed in the Attack. The *Tartar* Prince behaved towards him with great Inhumanity; he cauſed him to be dragged through the Streets till he died, and put his Son alſo to Death; this happened in the Year of the *Hegira* 656, *Anno Domini* 1258. At the ſame Time the City was deſtroyed, and almoſt all its Inhabitants, without reſpect to Sex, Age, or Rank, put to the Sword.

6. In this Manner the *Saracens* or *Arabs* loſt Poſſeſſion of *Perſia*, after they had kept it ſix hundred Years; and as for this *Tartar* Prince *Holokou* or *Olaku Khan*, he was the Grandſon of that mighty Conqueror *Jengiz Khan*, and raiſed in a very ſhort Space one of the moſt powerful and extenſive Empires the World ever had, though moſt of the *Tartar* Hiſtorians affirm, that when he conquered *Perſia*, he acted only as Lieutenant to his Brother *Manchu Khan*, whom he afterwards ſucceeded. He had the Reputation of being a juſt and good Prince, and though he returned into *Tartary* to quiet ſome Diſturbances that broke out there, yet he was ſo pleaſed with the Country of *Media*, that he quickly came back thither, and ſpent the Remainder of his Days. He left his Dominions to his Son *Abkay Khan*, who was ſucceeded by his Brother *Hamed Khan*, the firſt of this Race who became a *Mahometan*; after whom there followed a Succeſſion of ſix Princes of this Family, the laſt of whom was *Abu Said Bahudar Khan*, who deceaſed in the Year of *Hegira* 736, *Anno Domini* 1335, in whom this Race ending, the Government fell into great Confuſion, which continued till *Perſia* fell under the Power of the Succeſſors of the great *Timur*, whom we call *Tamerlane*. This celebrated Prince having, in the Courſe of his glorious Reign, added the greateſt Part of *Perſia* to his other Dominions, left them to his Family, among whom continual Wars and Diſſentions reigned; ſo that in the Space of about forty Years, there were no leſs than twelve of his Race who ſtiled themſelves Monarchs of *Perſia*, and actually poſſeſſed *Choraſan*, and ſome other Provinces of that Empire. In the mean Time, another Hord of *Turcomans* grew very powerful in *Diarbeck*, and made *Bagdat* the Capital of their Dominions, from whence they made Incurſions into *Perſia* for many Years with various Succeſs, till at laſt they defeated *Mirza Abukeker*, the

Grandſon of *Timur*, and the laſt of his Race that reigned in *Perſia*, whom they flew in the Year of the *Hegira* 811, *Anno Domini* 1408.

7. By this Victory *Kara Iſuph*, that is, *Joſeph the Black*, who was Chief of the Tribe of *Kora Koyunli*, or the *Black Sheep*, ſo called from their bearing this Figure in their Standards, became Sovereign of *Perſia*, which he governed fourteen Years, and died in the Year of the *Hegira* 823, *Anno Domini* 1421. He was ſucceeded by *Amir Scander*, who reigned in *Tauris*, and was all his Life long engaged in various Wars with great Diverſity of Fortune, till he was killed by his own Son in the ſixteenth Year of his Adminiſtration. He was ſucceeded by his Brother *Joon Shah*, who, though one of the lewdeſt and wickedeſt Princes that ever ſat upon a Throne, extended his Dominions by his Succeſs in War, and ruled *Perſia* thirty two Years, till ſurprized in a March againſt his Enemies, when drunk and aſleep, he was cut to Pieces. His Succeſſor was his Son *Haſſan Ali*, the laſt of his Family, who being defeated by *Ozun Acen Beck*, who had killed his Father, loſt his Dominions, which fell under the Power of the Conqueror in the Year of the *Hegira* 872, *Anno Domini* 1467.

8. This *Ozun Acenbek* is the ſame that in moſt of our Hiſtories is called *Uſun Chaſan*, and was the firſt of the Family of *Ak Kuyonli*, or the White Sheep, another Tribe of *Turcomans*, who reigned in *Perſia*; he engaged in a long War with Sultan *Mahomet*, the *Ottoman* Emperor, with very bad Succeſs; however, he held the Government for eleven Years, and then left it to his Son Sultan *Kalil*, who, after a ſhort Reign of ſix Months, was killed by one of his Brothers. He was ſucceeded by *Yacub Beg*, another Brother, who was a Prince of great Learning and Moderation, and governed his Dominions for twelve Years with much Lenity and Wiſdom, till at length he was taken off by Poiſon; and then followed a Scene of Blood-ſhed and Confuſion under a Succeſſion of five Princes, either Deſcendants of or allied to this Family, till Sultan *Morad*, whom ſome Eaſtern Authors make the Son of the laſt mentioned Prince, was entirely defeated, and driven out of *Perſia* by *Iſhmael Sefi* in the Year of the *Hegira* 914, *Anno Domini* 1508, and in him ended the Line of the *White Sheep*, which gave Place to that Imperial Family, which continued to govern *Perſia* to our Times.

9. It would take up too much Room for us to enter into the Hiſtory of this Prince's Family, which is beſides ſo well known, that it would be needleſs; we therefore think it ſufficient to obſerve, that he gave himſelf out to be a direct Deſcendant from *Mortis Ali* the Son-in-Law of the Prophet *Mahomet*, and made his Way from a private Station to the Empire of *Perſia*, by very high Pretences to Sanctity, and ſetting up for a Kind of Prophet himſelf. He it was that introduced the new Sect into *Perſia*, and changed that Sort of Men to whom his Father had given Red Caps, as a Mark of their being his Diſciples, into a regular Militia, from thence called *Kuzzlebaſhes*, that is, Red Heads, who under his Succeſſors became the Janizaries of *Perſia*. He was certainly a Man of great Parts and extenſive Genius, as appears plainly from the Manner in which he proſecuted his Wars, ſharing every Thing with his Soldiers till he had made himſelf Maſter of the whole Empire of *Perſia*, and then, under Pretence of Care for their Intereſt, introducing thoſe Sorts of Military Tenures, which have been before deſcribed. He preſerved, as long as he lived, the Confidence and Eſteem of his Subjects, who looked upon him as one ſuperior to the ordinary Race of Men, in Point both of Piety and of Wiſdom; to which his great Victories againſt the *Tartars* on one Side, and the *Turks* on the other, contributed not a little; ſo that the *Perſians* always conſidered him as one, through the Favour of God, invincible. He died at the Age of Forty-five, *Anno Domini* 1525, in full Poſſeſſion of one of the greateſt Empires, and of the Character of one of the ableſt Princes in the Eaſt.

He was ſucceeded by the eldeſt of his four Sons, Shah *Thamas*, who was then about eighteen Years of Age. We have very different Characters of this Prince from different Authors, and yet it is not at all impoſſible that they may be true. In Time of Peace he led a quiet, lazy, inactive Life, and left Things pretty much to his Miniſters, which gave an ill Impreſſion of his Capacity; but when he came to be engaged in a War againſt the *Turkiſh* Emperor *Solyman*, he convinced thoſe, who had taken up this Opinion, that they were abſolutely miſtaken, for he managed that War with great Addreſs, and forced the *Turk* to quit his Country, notwithſtanding that he attacked him with very unequal Forces, and haraſſed him ſo much in his Retreat, that of five hundred thouſand Men that *Solyman* brought into the Field, he ſcarce carried fourſcore Thouſand back to *Conſtantinople*. This War enabled Shah *Thamas* to rid himſelf of two of his Brothers; for one revolting to the *Turk*, he attacked, defeated, and cut him to Pieces; and, ſuſpecting the other had the like Deſign, he cauſed him to be taken off by Poiſon. As to the Third, he died a natural Death; ſo that all the Countries, which had been aſſigned them by their Father, were again united to the Empire. This Shah *Thamas* removed the Capital of his Dominions, and inſtead of the City of *Tauris*, reſided at *Caſbin*. The worſt Action of his Life was the putting to Death Sultan *Bajazet*, the Son of the *Ottoman* Emperor *Solyman*, who had fled to him for Protection; which, however, procured him an advantageous Peace with the *Turks*, that laſted all the reſt of his Reign. He died in 1556, in the Sixty-eighth Year of his Age, and the Fortieth of his Reign, and bequeathed the Empire to his third Son.

The great Officers of State having more Regard to their Conſtitution than to the Will of their deceaſed Monarch, ſent to his eldeſt Son *Mahomet Codabende*, who was Governor of *Khoraſan*, and deſired him to take the Title of Shah; but he ſignified to them, that the Empire was a Weight too great for his Shoulders to bear, and adviſed them to ſet his Brother *Iſhmael* upon the Throne. This Prince was about Forty-three Years of Age, twenty of which he had ſpent in Priſon, where his Father had confined him out of Jealouſy. *Iſhmael* II. was one of the braveſt Men, as well as one of the greateſt Captains of his Age, but ſuſpicious and cruel. His Father cauſed him to be treated very gently in his Confinement, and ſent him ſeveral fine Women; but he would never touch them, alledging, that it was enough to be miſerable himſelf, without begetting a Race of Wretches. His Severity was ſo great, and his Views to the Prejudice of his Family ſo apparent, that it is ſaid his Siſter, at the Requeſt of the Nobility, poiſoned him, when he had reigned only two Years.

His elder Brother *Mahomet Codabende* was forced to take the Title of *Shah*, upon his Deceaſe, againſt his Will. He loved Privacy and Retirement, from a particular Turn in his Temper, and not from any Want of Parts or of Vigour. He uſed his three Brothers very well upon his firſt coming to the Crown; but finding that they were inclined to revolt to the *Turks* who invaded his Dominions, he put them to Death without Mercy. In the firſt Year of his Reign, he gained a ſignal Victory over the *Turkiſh* Forces on the Frontiers of *Armenia*, and in 1578, he beat them again near *Babylon*, in which Battle they loſt fourſcore thouſand Men upon the Spot. The Year following he gave them another Blow, for having ſent twenty-five thouſand Horſe, and five thouſand Camels to forage in the Spring, under an Eſcort of thirty thouſand Foot, the *Perſian* Monarch by long Marches came upon them in the Night, and took his Meaſures ſo effectually, that neither Man nor Beaſt eſcaped. This *Perſian* Prince, who notwithſtanding all theſe Victories, is ſaid ſtill to have regretted his ever leaving his Station in *Khoraſan* for a Crown, and who treated all the Pomp and Grandeur of it with the utmoſt Contempt, died in 1585, leaving behind him three Sons, the eldeſt of which, *Emir Hemſe*, ſucceeded him; but was ſoon after killed by the Intrigues of his Brother *Iſhmael*, who had not been long ſeated upon the Throne, before he had his Throat cut by his Barber, which made Way for the third Brother.

This was the famous *Shah Abbas*, who, by the many glorious Actions of his Life, juſtly acquired the Title of *Great:* He was Governor of *Khoraſan* during the Life of his Father, and at the Time he was called to the Imperial Dignity, was about eighteen. He began his Reign with ſome Acts of Severity, which he thought neceſſary to fix his Government on a ſtable Foundation. When this was done, he took a Reſolution of recovering all that had formerly belonged to the *Perſian* Monarchs, and with this View marched into the Province of *Khoraſan*, the greateſt Part of which had been conquered by the *Uſbeck Tartars.* This War laſted three Years, and was terminated at laſt by the total Defeat of *Abdallah Khan*, the Sovereign of thoſe *Tartars*, who with his Brother, and three Sons, was taken Priſoner. *Shah Abbas* cauſed their Heads to be ſtruck off, that he might have the more Leiſure to turn his Arms againſt the *Turks.* They were much more powerful and troubleſome Enemies, for at that Time they were in Poſſeſſion of a Track of Country of 150 Leagues, from South to North, to which *Shah Abbas* had a juſt Claim from his Predeceſſors. All this he not only recovered, but puſhed his Conqueſts as far as the *Black Sea*, made himſelf Maſter of the City of *Balſora*, a great Part of *Arabia*, and, by the Help of the *Engliſh*, recovered *Ormus* from the *Portugueſe.* He was beyond all Queſtion one of the ableſt Princes that ever reigned in *Perſia*, but withal ambitious beyond Meaſure, and cruel to the laſt Degree. He found the Nobility very powerful, and the *Kuzzlebaſhes* not a little inſolent; he humbled the former, and weakened the latter, by introducing, as has been ſhown elſewhere, a new Militia of his own Forming, and entirely depending upon the Crown. He conceived an unreaſonable Jealouſy of his only Son *Sefi Mirza*, on Account of the great Qualities with which he was endowed, and the high Reſpects paid him by his Subjects in general, and the Soldiers in particular. To free himſelf from theſe groundleſs Apprehenſions, he cauſed his Son to be put to Death, and repenting the Crime, as ſoon as it was committed, paſſed the reſt of his Days in Sorrow and Regret. He built the City of *Ferabat*, on the Coaſt of the *Caſpian-Sea*, where he died in the Year 1629, at the Age of Sixty three, after he had governed the Empire forty five Years.

He was ſucceeded by his Grandſon *Sefi Mirza*, who was but a Child; as he grew up he diſcovered all the bad Qualities of his Grandfather, and none of the good ones, for which his Father had been ſo much beloved. He put out the Eyes of his only Brother, and murdered almoſt all the old Servants of his Grandfather. His Severities were ſo great, and the Murders he committed ſo frequent, that the Women in his *Haram* conſpired againſt his Life, and gave him a Doſe of Poiſon, under which he ſtruggled for two Months, and at laſt recovered. The Pains he took to reach the Bottom of this Conſpiracy were ſo great, that at Length he diſcovered all who had any Concern therein, and in one Night cauſed forty four Ladies to be buried alive in his Garden, amongſt whom, it was ſaid, were his Mother and his Aunt. He was brave in his Perſon to a Degree of Raſhneſs, but never fortunate in War, and the two ſtrongeſt Fortreſſes in the Empire were loſt in his Reign, *viz.* *Khandahar* and *Bagdat*, chiefly through his own Fault. Amongſt many Vices, he had hardly any Virtues to compenſate them; but in Excuſe of this, it is ſaid, that his Grandfather being afraid he might prove as great a Man as his Father, had cauſed ſo much *Opium* to be mingled with his Food, while a very Child, that it affected his Brain. To abate that Coldneſs which this occaſioned, he was adviſed by his Phyſicians to drink Wine, to which he took ſuch a Liking, that in the latter Part of his Life, he was almoſt always drunk, and in one of theſe Debauches he ended his Days, in 1642, after a Reign of twelve Years. His exceſſive Cruelty cauſed a Suſpicion that he was poiſoned.

He was ſucceeded by his Son *Abbas* II. who was his only Child, and yet it was by the Virtue of an Eunuch, that this young Prince was in a Condition to ſucceed him. In one of his drunken Fits, he ordered that Eunuch to paſs an Iron before his Son's Eyes, by which he meant a Plate of Iron red hot in order to blind him, but making Uſe only of the Word Iron, the Eunuch very charitably fulfilled his Maſter's Command literally, but at the ſame Time, directed the Child to counterfeit Blindneſs, which he did ſo effectually, that his Father had not the leaſt Suſpicion of his Seeing, even when he lay upon his Death-bed. It was then that he deplored the Cruelty that he had been guilty of in ſuch moving Terms, that the Eunuch, who was by his Bed-ſide, told him, he had a Secret for reſtoring the young Prince's Sight, which rejoiced him ſo much, that it kept him alive till the next Day. As *Shah Abbas* II. was barely thirteen when he ſucceeded his Father, and had been till then conſidered as blind, and conſequently incapable of the Imperial Dignity, we may eaſily conceive, that he could not take very early any Share in the Government, the Care of which devolved upon his Mother and the Prime Miniſter, who was a Creature of her's.

Things continued in this Situation during the three firſt Years of his Reign, when the Miniſter having unluckily, from the Peeviſhneſs incident to old Age, let fall an Expreſſion ſomewhat diſreſpectful towards his Maſter, *Jehean Khan*, one of the moſt powerful Lords of the Court, followed him to his Houſe, and put him to Death as if it had been by the Order of the Shah. This exceedingly alarmed the Princeſs his Protector, who demanded Juſtice of her Son with all the Impetuoſity natural to her Sex and to her Character; but *Abbas*, inſtead of diſavowing what had been really done without his Conſent, gave to *Jehean Khan* the Poſt of Prime Miniſter, the vaſt Eſtate of the Deceaſed, and ſoon after made him Generaliſſimo of all his Forces. The wiſeſt of Monarchs has ſaid, *That the Hearts of Kings are deep.* One would have imagined, that in ſo young a Prince, theſe high Favours had been either the Marks of Confidence, or the Effects of Timidity, but they were neither; Shah *Abbas* had a Mind to ſee whether this Lord had acted out of a true Zeal for his Service, or from other Motives; he had alſo a Mind to diſcover how far his Intereſt reached, and to what his Views tended. It was not long before he diſcovered all. *Jehean Khan*, knowing how much he was hated by the Shah's Mother, formed a Deſign of killing her in the *Haram*, which being made known to the Shah, he in a great Council gave him the firſt Stroke with his own Poinard, and with the Aſſiſtance of his Guards cut off him and all Friends at once. This neceſſary Severity diſcovered his true Character, and made him feared by his Miniſters, and reverenced by his Subjects.

He was very far from being free from Vices, being much given both to Wine and Women; but was, for all that, a very great Prince. He retook *Khandahar*, which had been loſt by his Father, and recovered ſeveral Places from the *Turks*, and was preparing to have attacked them with all the Forces of his Empire, when he was taken off by Death. There is one Point of his Conduct which ought not to be paſſed in Silence: He was a conſtant Protector of the Chriſtians, and when the *Sedre*, or Chief of the Eccleſiaſticks in *Perſia*, remonſtrated againſt it, he made him this remarkable Anſwer, *The Dominion of the* Mind *belongs to that* Supreme Being *who has given me Power over the Perſons of* my Subjects, *yet he allows them* Freedom *of* Sentiment, *and has thereby taught me, that it is* not *my* Duty *to force it. While they are good Subjects, whatever their Religion be, I ſhall conſider them as good Men.* I will not ſay, as others have done, that this Maxim ſhould be written in Letters of Gold, but I will ſay more, that it ought to be writ in nobler Characters, I mean, in the Hearts of Princes. Shah *Abbas* II. died in the thirty eighth Year of his Age, on the 25th of *September*, 1666, in the 23d Year of his Reign.

He left behind him two Sons, *Sefi Mirza*, and *Hamzeh Mirza*. In a great Council held by his chief Officers after his Deceaſe, it was reſolved to raiſe the youngeſt to the Throne, becauſe he was the moſt likely to be governed; but to give this a colourable Pretence, thoſe who gave into this Opinion, ſuggeſted that Shah *Abbas*, when he ſet out for *Tabreſtan*, had returned ſuddenly to *Iſpahan*, when he was a Day's Journey from it, and that he came back melancholy; from whence they preſumed he had put out his eldeſt Son's Eyes; the rather, becauſe he had brought the younger Prince along with him. The Governor of the young Prince, who was thus preferred from an unparallel'd Virtue and Integrity, was the only Man that oppoſed this Reſolution; he ſaid it was injurious to the Conſtitution, and to the Memory of the late Shah; he undertook, on the Peril of his Life, that the Fact was falſe, and as there is often an irreſiſtible Force in Truth, he brought over all the reſt to his Sentiments, and was deputed by them, who hitherto concealed the Death of Shah *Abbas*, to go to *Iſpahan* and preſent their Duty to his Succeſſor. The Mother of that young Prince was alarmed at his Arrival, and at his demanding to ſee her Son; it was an Hour before he could be torn from her Embraces; but her Sorrow was ſoon turned into Joy, when ſhe was informed, that by the Death of his Father he was become the Sovereign of *Perſia*.

He became ſo, as his Subjects believed, in an ill Hour, for after he had reigned two Years with little Capacity and leſs Succeſs, he was ſolemnly crowned a ſecond Time, in Hopes of removing the malignant Influence of the Stars at his firſt Coronation; and then it was that he changed his Name from *Seſi* to *Solyman*, as we are informed by Sir *John Chardin*, who was an Eye Witneſs of this ſecond Coronation. If it ſerved for any Thing, it was to ſhew the Folly and Abſurdity of theſe Aſtrological Precautions; for notwithſtanding all the Pains they took to fix upon a lucky Hour for this important Ceremony, his Adminiſtration was not a Grain more fortunate than before. In ſhort, under him the *Perſian* Empire began to decline, which ſunk and crumbled to Pieces under his Son. Shah *Solyman* had Vices, which, no doubt, were prejudicial to him, but his Follies were more ſo; he loved Wine and Women to Exceſs, Faults in themſelves very great; but another, which might ſeem more excuſable, was more fatal. He was indolent to the laſt Degree; he confided not only the Care of his Perſon, but of his State, to his Eunuchs, and out of theſe half Men formed a Council for governing a great Empire.

The Conſequences that attended this ſcandalous Management, were ſuch as might well be expected from it, that is to ſay, his Councils were ill taken and worſe executed, few able Men were raiſed either to Poſts in the Government or in the Army, and as ſoon as theſe few were diſcovered, they were conſtantly removed. When weak and bad Men are at the Helm, Calms are more dreadful than Storms, for theſe naturally fright them from their Poſts, and call thoſe to Power who know how to employ it. Shah *Solyman* reigned twenty eight Years, dying on the laſt of *July*, 1694, at the Age of forty eight Years, leaving behind him the Character of one of the weakeſt, meaneſt, and bloodieſt Princes that ever diſgraced the *Perſian* Diadem.

His converſing ſo much with Women and Eunuchs made him ſuſpicious; his being often drunk, and always half drunk, rendred him cruel, as the Want of Underſtanding cauſed him of Neceſſity to be capricious. His Character was admirably drawn by one of his Courtiers; *I never leave the* Shah's *Preſence*, ſays he, *without feeling my Neck, that I may be ſure my Head is ſtill upon my Shoulders.*

He left behind him two Sons, *Mirza Abbas* and *Mirza Huſſein*. The Council of Eunuchs were to be the Judges which was the fitteſt to wear the Crown; the late Shah made them ſo by his Management; but what is ſtill ſtranger, he made them ſo by his Will. The Approach of Death commonly gives unuſual Force of Mind; it did ſo to Shah *Solyman*; but it was a left-handed Senſe, for after reigning like a Fool he died a Knave. *You have it in your Power*, ſaid he to his Eunuchs, *to live under what Government you like beſt, when I am gone*; *your Choice, if you would have a martial Prince, muſt fall upon* Abbas; *if you would rather have a pacifick Reign, you muſt raiſe* Huſſein *to the Throne.* One need not, even at this Diſtance from *Perſia*, be at a Loſs about the Reſolution formed in this wiſe Council; weak Men know well enough that they can never hold their Places but under a weaker King; and therefore the ſagacious Diſpoſers of a Crown moſt unanimouſly fixed upon the Prince that was unworthy of it. The Character of *Mirza Abbas* was truly given by his Father; he had all the great Qualities, and wanted none of the good ones neceſſary to a Monarch; he was brave, but not fierce, and affable without Falſhood. As to the Character of *Huſſein*, it may be very truly deſcribed in a very few Words; there never lived a better Man, or a worſe Prince.

He had been bred in the ſevere Study of the Alcoran, and at the ſame Time that he was very knowing in the *Mahometan* Religion, he was very ſincere in the Belief of it.

He gave a ſtrong Teſtimony of the Uprightneſs of his Diſpoſition in refuſing to put out the Eyes of his Brother *Mirza Abbas*; he was content at firſt to ſay it was inhuman, but finding himſelf continually excited thereto, by ſuch as directed him in all other Things, he told them fairly, that when his Brother and he firſt read the Law together, they had ſworn upon that holy Book, never to put out the Eyes of each other, which ever came to the Throne; and he would not incur the Guilt of Perjury. Indeed his Nature was ſo tender, that firing a Piſtol among his Ducks, which by Accident had Shot in it, he cryed out when he ſaw them wounded, that he was defiled with Blood, and gave a large Sum, in Alms to the Poor, to wipe out the Stain. His Miniſters ſaw his Indolence with Pleaſure, and his Weakneſs with Delight; but his Integrity and Rectitude of Mind gave them infinite Concern. It was therefore for ſome Time their ſole Buſineſs to ſtudy how they might corrupt him; they thought at laſt of a proper Method, and they made Choice of his Mother to carry it into Execution. That Princeſs pretended to be at the Point of Death, and that the Phyſicians had declared nothing could ſave her Life but drinking Wine. The *Shah*, out of Piety, had forbid the making it in any Part of his Dominions, and out of Reſpect to the Law of *Mahomet*, had never taſted it himſelf. He cauſed it to be got however to ſave his Mother's Life, and becauſe ſhe would not drink unleſs he drank to her, he took off a large Glaſs, which left ſuch a Reliſh on his Palate, as gave him an Inclination to it ever after.

By Arts like theſe Shah *Huſſein* was drawn to become the great Inſtrument of his own Ruin, and that of his Subjects. The Eunuchs, firſt admitted into Council by his Father, contrived under him to ſhut out all others. The Prime Miniſter himſelf was excluded; and thus *Perſia*, for the firſt Time, was bleſs'd: But why ſhould I not ſpeak plain? was curſed then, let me ſay, with a Cabinet-Council. It is true, the ancient Form was kept up, the great Officers of State met, the Aſſembly was as regular as numerous, and to the Populace appeared for ſome Time as auguſt as ever: But it was a mere empty Show, for only the White and Black Eunuchs had the Power, and, which ſure never happened in any Country but this, dictated their Orders through the Mouth of their Sovereign. We cannot dwell upon this extraordinary Subject; we cannot enter into the Detail of the Steps by which this Monarchy fell to Ruin; we leave thoſe to the Imagination of the Reader, and eſteem ourſelves happy, that by ſo reaſonable an Excuſe, we can diſcharge ourſelves of ſo diſagreeable a Taſk.

Let it ſuffice then to ſay, once for all, that through this looſe and ſcandalous Adminiſtration the Conſtitution was diſſolved, and the whole Frame of Government fell to Pieces. The Eccleſiaſticks were noted for irreligious Notions and Depravity of Manners; the Governors of Provinces had as little Power as Will to protect, but were allowed to plunder, that others might ſqueeze them; the Viziers fleeced the People for ſome Years, and were then fleeced themſelves; the Soldiers were robbed of their Pay, which forced them to work for a Subſiſtence; and as this furniſhed them with Money, Part of it was given to their Officers to wink at their Neglect of Diſcipline; which was the more readily complied with by Men truſted with Commands, tho' they knew little or nothing of martial Diſcipline themſelves. In ſuch a State of Things one would think there muſt be Complaints, more eſpecially in a Country where the Law not only tolerates, but encourages ſuch Complaints. But what then? The Shah ſhut himſelf up in his Palace, and would not hear them. Memorials and Petitions might be drawn, and Means might be found to get them preſented. All this was done, but the Shah would never trouble any Body but his Eunuchs to read them; and when Felons are Judges, Virtue is the only Thing that is thought a Crime.

Affairs being thus in a State of Depravity, and the Empire, in a Manner, ripe for Deſtruction, we are next to ſee how this was brought on; and indeed it happened in a Manner, which, for any Thing that has occurred to me, there is nothing in Hiſtory can parallel. At the Time *Georgia* ſubmitted to Shah *Abbas*, it was agreed, that the Princes of that Country ſhould be dependant only upon the *Perſian* Emperors, in the ſame Manner that *Crim Tartary* does upon the *Turks*; and this Capitulation was ſtrictly obſerved till this wiſe Miniſtry thought fit to violate it more than once, which induced the reigning Prince to take ſuch Meaſures as he thought requiſite to ſet him beyond the Reach of their Power. The Council of Eunuchs were too cunning for him; they were informed, that his Army conſiſted of ſeveral ſmall Bodies of Troops commanded by their reſpective Chiefs; to theſe they offered large Sums of Money, and by Degrees drew the greateſt Part of them to quit the Service of the Prince; upon which he retired with his Family and his Riches into the Mountains. Upon a little Reflection, he conceived an Opinion, that thoſe who bribed with Money, might be bought with Money; and therefore ſending an Agent to *Iſpahan*, he cancelled his Crime with Gold, and got himſelf reſtored. Some Time after, the Mogul ſent an Embaſſy, in which he demanded the City and Principality of *Khandahar*, in Terms that aſtoniſhed the Cabinet-Council of Shah *Huſſein*. If they were attacked by the Mogul, it was requiſite to have a General and an Army; and therefore like great Politicians, becauſe they knew this Prince of *Georgia* would fight, they ſent him to command in *Khandahar*, and allowed him to name a Lieutenant to command in his own Principality. This reſtoring a Man after a Rebellion, and giving him a ſecond Principality for the Courage he had ſhown in his Rebellion, was a Policy ſo refined, that none but theſe great Men could ever have found it out.

The Prince of *Georgia* was ſent to *Khandahar*, in the Year 1704, and he had not been long there, before he diſcovered a Perſon as capable of making that Principality revolt, as he was of raiſing an Inſurrection in his own Country. The Name of this extraordinary Perſon, was *Mîr Vaez*, whom our Gazettes call *Miriweis*, and whom they repreſent as ſprung from the Dregs of the People; this however is an Untruth: He was a Man of great Quality in that Country, and a Kind of Receiver-General of the Shah's Revenue, in which Poſt he behaved with ſuch Honour towards the Court, and ſo much Tenderneſs towards the People, as gained him Credit with the one, and procured him the Affection of the other. The new Khan was by no Means pleaſed with him, and repreſented therefore to his Friends at *Iſpahan*, that this Man muſt be ſent for. If either he or they had ſtruck off his Head, for preſuming to be wiſe and honeſt under ſuch an Adminiſtration, there had been an End of the Matter, but they brought him to *Iſpahan*, and there he ſoon ſaw that his Wiſdom was much ſuperior to that of the Cabinet-Council; but that as for Honeſty, it was become a uſeleſs and dangerous Thing; ſo he parted with it immediately, and became as arrant a Courtier as the beſt of them.

In 1709, he made a Journey to *Mecca*, with much Show of Religion, one of the beſt Cloaks in the World for a bad Deſign. His Countrymen were not of the eſtabliſhed Church, but of the Sect of *Sunnis*, which is the ſame Religion with the *Turks* of *Mecca*; therefore he got a *Feſta* or ſolemn Deciſion of the Head of the Law, importing, that his Countrymen might very lawfully take up Arms againſt their Sovereign, as a Heretick, and break all their Oaths to him without Perjury. Upon his Return to *Iſpahan*, he contrived a Story of an Attack that was to be made upon the *Perſian* Empire by the *Muſcovites* and by the *Mogul*, ſuggeſting, that it was highly probable, that the Prince of *Georgia*'s Lieutenant would Revolt to the former, and himſelf go over to the latter. Upon this the Eunuchs ſent *Mîr Vaez* to watch over the Prince's Conduct, at *Khandahar*, and it is certain, that he took Care the Prince of *Georgia* ſhould do them no Hurt, for under Colour of a Reconciliation, he aſſaſſinated him in his own Palace, and by the Aſſiſtance of his Countrymen, maſſacred moſt of his Troops; ſending up a very formal Excuſe to *Iſpahan*, that the Prince was an Oppreſſor, and his Soldiers obſerved no Diſcipline, and therefore they had been tempted only to take the Liberty to knock their Brains out, but hoped they would believe that, notwithſtanding this, they were as good Subjects as ever.

At this very Moment *Mîr Vaez* had declared himſelf Prince of *Khandahar*, and upon producing the *Feſta* beforementioned, all his Countrymen adhered to him; it was however two Years before they were thoroughly perſuaded at *Iſpahan*, that the Thing was really ſo, and that they had no more to do with *Khandahar* as Sovereigns, than with any Province in *China*. This forced them to riſe an Army under the Command of the new Prince of *Georgia*, to which they added a Body of *Perſians*, and ſent them againſt *Mîr Vaez*; but partly through the Diſpute between the two Nations, and partly through the Treachery of ſome of the Council at *Iſpahan*, who held a Correſpondence with *Mîr Vaez*, this Army was routed, and their Commander killed. Some other Attempts were made, but made in a more feeble Manner, and at laſt the Thing was no more thought of, ſo that *Mîr Vaez* lived and died an independent Prince at his Capital of *Khandaſar*, in 1717, after a Reign of about ſeven Years.

His Countrymen made Choice of his Brother to ſucceed him, and that Brother was inclined to Peace, but *Mîr Mahmud*, the Son of *Mîr Vaez*, then about ſeventeen, conceiving that this would be prejudicial to his Intereſt, ſlipt into his Uncle's Room one Night when he was aſleep, and cut off his Head. He then ſummoned the People, charged his Uncle with being a Traitor to them, and produced Papers under his Hand, to prove his Deſign of ſubmitting to the *Perſians*. This had the deſired Effect, the People approved his Conduct, and declared him their Prince. But it is neceſſary to inform the Reader, who theſe People were, becauſe till about this Time their Names were never heard of in *Europe*. The *Afghans* are a Nation who inhabit *Khandahar*, and moſt of the mountainous Countries on the Frontier; we meet with large Deſcriptions of them in the *Perſian* Authors, but they may be all reduced to a ſingle Word, which will convey the Idea of them diſtinctly; they are Highlanders; their Dreſs, their Manners, their Clans, their Diſcipline, and their Hardineſs are preciſely the ſame; they only differ in Religion, for the *Afghans* are *Mahometans*, moſtly of the *Turkiſh* Sect, and zealous to the laſt Degree.

Mahmud was firſt for drawing in the reſt of the *Afghans* in the adjacent Countries to be his Confederates; but their Chiefs thought themſelves as good Men as he; upon which he reſolved to bring that to a Trial, and by beating them, made them ready to do what he would have them. When this was brought about, he reſolved to invade *Perſia*, though all the Men in his Country were not capable of furniſhing an Army any Way equal to ſuch an Undertaking. He executed it however with the Forces he could get together, advanced into the Province of *Kirman*, and ſurprized the Capital. Thus far Things went well, but the Shah having caſt his Eyes upon the Brother of his firſt Miniſter, *Luft Ali Kan*, and made him General of his Forces, he advanced with a numerous Army againſt the *Afghans*, defeated them totally, and drove them back to *Khandahar*. The Cabinet Council, apprehenſive that ſo great a Service might free the Prime Miniſter from his Dependance upon them, alarmed the *Shah* in the Night, pretended that Miniſter was coming to murder him, and obtained an Order to ſeize and put out his Eyes, and another Order for ſecuring his Brother. Both theſe were executed; and as ſoon as *Mir Mahmud* was informed of it, he reſumed his Deſign, and entered *Perſia* a ſecond Time with a much greater Army.

This ſecond Invaſion was in the Month of *January*, 1722, and was not at firſt attended with Succeſs. He was baffled in the Siege of *Kirman*, his Forces being no Way fit for Sieges; but borrowing Courage from Deſpair, though many of his People returned home, he marched on towards *Iſpahan*. In his Paſſage he met and fought the *Perſian* Army, and by the Diſagreement between the Generals, defeated them, and afterwards laid Siege to the Capital; which, however, he had never taken but for the Miſunderſtandings in the Place, and the Intrigues he entered into with ſome about the Shah, who at laſt betrayed him into his Hands, in Conſequence of a ſcandalous Treaty, by which he agreed to reſign the Empire to *Mahmud*, and to give him his Daughter, which he performed, and by this Means that Captain of *Banditti* came to have the Title of Sultan *Mahomet*, *Oct.* 22, 1722.

His Conduct, after this unaccountable Succeſs, appeared very unequal; ſometimes he behaved with ſuch Moderation and Prudence, that he ſeemed to deſerve all that he had acquired; at others, he acted with ſuch Fierceneſs and Barbarity, as diſgraced the very Nation from whence he came; but the Murders he committed, and more eſpecially his inviting three hundred of the *Perſian* Nobility and Gentry to a Feaſt, and then cutting their Throats, was ſuch an Act of Baſeneſs and Cruelty, as ought for ever to ſtigmatize his Character, as the Reflection of it afterwards turned his Head. The Eſcape of *Mirza Sefi*, the eldeſt Son of Shah *Huſſein*, increaſed his Fury; and on the 27th of *January* 1725, he cauſed moſt of the Princes of the Royal Blood to be maſſacred in his Preſence, except two Infants, the Sons of Shah *Huſſein*, whom that unfortunate Prince covered with his own Body, and had his Hand run through by parrying a thruſt made at them, before he could place them behind him; which ſo mollified the Heart of the Uſurper, that he ſuffered them to live. Not long after this he was ſeized with a Leproſy, and his lucid Intervals grew ſhorter and leſs perfect; upon which the *Afghans* ſent for his Couſin *Aſhruff*, whom he kept in Priſon at *Iſpahan* for Conſpiracy, and made him their Prince.

He was the Son of that Uncle by cutting off whoſe Head *Mir Mahmud* made himſelf Prince of *Khandahar*, and in Return he ordered his Couſins to be cut off in the ſame Manner, which put an end to a turbulent Reign of about two Years and a half. *Aſhruff*, who was now Maſter of *Iſpahan*, is ſaid to have put to Death a Son that *Mahmud* had by Shah *Huſſein*'s Daughter; but it is certain that he married another Daughter of his himſelf, and treated the old Shah with much Lenity for ſome Time, though afterwards he cauſed him to be put to Death; but when or where, the Accounts we have hitherto had from this Country does not enable us to mention with Certainty.

About the Time that the *Afghans* beſieged *Iſpahan*, it was reſolved to ſet up one of the young Princes as his Father's Lieutenant-General. *Mirza Sefi*, the eldeſt of them, had been tried before, and after having been at the Head of a ſmall Body of Troops for about a Month, he declared himſelf incapable of publick Affairs, and retired again, of his own Accord, into the *Haram*. The ſecond Prince had diſobliged the Eunuchs, and they perſuaded the old Shah to confine him; ſo that it was now reſolved, that his third Son *Mirza Thamas* ſhould be ſent out to make an Experiment of his Fortune. He marched accordingly at the Head of five hundred Men, and had the good Luck to make his Eſcape. He ſhowed ſome Bravery, but very little Judgment; for when he had got a few Troops about him, he differed with, and even attacked the Prince of *Georgia*, the only Perſon from whom he could have expected any Aſſiſtance.

We have no very diſtinct Account of his Actions while *Mir Mahmud* held the ſupreme Power; but it is certain that his Succeſſor Sultan *Aſhruff* drove him into *Mazenderan*, from whence, with ſome Difficulty, he got into *Khoraſan*, and there he took the Title of Shah, on Account of his Father's abdicating the Government. His Affairs wore a very indifferent Aſpect, till ſuch Time as he placed *Fatteh Allah Khan Kajar* at the Head of his Army, who brought his Concerns into ſome Order. In 1726, he took *Nadir Kuli*, afterwards known to the World by the Name of *Thamas Kouli Khan*, into his Service, who inſinuated himſelf ſo into his good Graces, that in the Spring of the Year 1728, he prevailed upon him to put his old General to Death, and to give him the ſole Command.

His Affairs were then in a very indifferent Situation, the *Turks* were Maſters of all the Weſtern Provinces, *Aſhruff* and his *Afghans* were in Poſſeſſion of the Middle of the Empire, and the *Abdolee Afghans* had actually invaded *Khoraſan*. His whole Army conſiſted only of twenty thouſand Men, with which *Nadir Kuli* engaged and defeated the *Abdollees* totally. This awakened the Attention of *Aſhruff*, who in *September* 1729, marched from *Iſpahan* in order to attack him. *Nadir Kuli* poſted himſelf with ſixteen thouſand Men in a very advantageous Camp, and there waited for the *Afghans*, who attacked him with great Fury; but, after an obſtinate Diſpute, were entirely routed. This raiſed his Reputation highly; and, as the greateſt Reward the Shah could then give him, he beſtowed his Name upon his General, who thence forward was ſtiled *Thamas Kouli Kan.*

The Fame of this Victory enabled him to increaſe his Army ſoon after to forty thouſand Men, with which he defeated *Aſhruff* a ſecond Time; and this ſo much diſpirited the *Afghans*, that they reſolved to plunder, burn and abandon *Iſpahan*; but the Shah did not give them Time to put this barbarous Deſign in Execution, but marched with ſuch Vivacity towards the Capital, that they were obliged to leave it with great Precipitation, in the Month of *November* 1730. This great Stroke, that in all outward Appearance ſeemed to ſet him above the Reach of Fortune, was very ſoon followed by a Step that made Way for his Ruin. He thought that his General was ſlow in purſuing the *Afghans*, he therefore preſſed him to uſe more Expedition. Upon this *Kouli Kan* told him roundly, that he was well informed of the Manner in which his Father's Generals had been treated; that when they were in the Field, they were ill ſupplied; and that he was reſolved to lay down his Command, unleſs he would give him the Power of raiſing Money in what Manner he thought fit: To this, though with much Reluctance, the Shah conſented; and, in Hopes of uniting his General more cloſely to him, gave him his Aunt in Marriage.

Kouli Kan then followed the *Afghans* to *Shiras*, tho' it was in the Depth of Winter, defeated them totally, took all their Baggage and Treaſure, and *Aſhruff* endeavouring to make his Retreat towards *Khandahar*, was ſurprized by a Body of the *Balluches*, who cut him and the few Troops he had about him to Pieces. *Shah Thamas* then turn'd his Arms againſt the *Turks*, but was unluckily defeated by *Achmet Baſhaw*, who, ſoon after his Victory, offering reaſonable Terms of Peace, the Shah accepted them. In the Month of *Auguſt*, 1732, *Thamas Kouli Kan*, having ſettled all the Eaſtern Provinces of the Empire, returned to *Iſpahan* with an Army of ſixty thouſand Men, and inſiſted upon breaking the Peace with the *Turks*; to which the Shah ſhowing ſome Unwillingneſs, *Kouli Kan* ſoon after ſeized his Perſon, and ſent him Priſoner to *Mazenderan*. He next took his Son, though a Child in his Cradle, and declared him Shah by the Title of *Abbas* the IIId.

By this Means having ſecured the Tranquillity of *Perſia* for the preſent, he turned his Arms againſt the *Turks*, whom, in the Space of two Years, he defeated in various Battles, and at laſt diſpirited them to ſuch a

Degree, that they no longer kept the Field; upon which he determined to lay Siege to *Bagdat*.

While he was before this Place, he received Advice, that *Mahommed Kan Balluche* had revolted, and declared for *Shah Thamas*, and made himſelf Maſter of *Shiras*. Upon this he raiſed the Siege immediately, marched directly againſt this General, whom he treated as a Rebel, had the good Luck to defeat him; after which he plundered the City of *Shiras*, and put Numbers of People to Death. He then returned to *Iſpahan*, from whence he ſoon after marched into *Georgia*, reduced the City of *Teflis*, which is its Capital; over-run *Armenia*, and by the very Terror of his Name, frighted the *Ruſſians* out of *Gilan*, which Province they had ſeized during the Troubles in *Perſia*.

After all theſe Victories, he ſummoned the Chief of the *Perſian* Nobility to his Army, which then conſiſted of 150,000 Men, and there, partly by Fear, and partly by Promiſes, made them conſent to the total Subverſion of their Conſtitution, both in Church and State, by agreeing to make the Crown hereditary in his Family, to renounce for ever the ancient Line of their Princes, and to admit an Union between the two Sects of the *Sunni*'s and the *Schia*'s, which being oppoſed by the *Mullah Baſhi*, in a ſet Speech, he anſwered his Arguments, by ſtrangling him upon the Spot, and on the 21ſt of *March*, 1736, he cauſed himſelf to be proclaimed Sovereign of *Perſia*, by the Title of *Nadir Shah*. The firſt publick Act of his Adminiſtration was to ſeize, or, as he was pleaſed to call it, reſume all the Church Lands in *Perſia*; but finding that the Clergy were irreconcileable to him, he thought the Diſpute would be leſs dangerous, if they were ſtript of their Property, which was very conſiderable, their Revenues amounting to a Million of *Tomans*, which is upwards of three Millions Sterling.

In *June* following he was crowned at *Caſbin*, and from thence he marched to *Iſpahan*, where he ſtaid about ſix Months, during which Time he was acknowledged by the Grand Signior and the Great Mogul. He ſpent his Time in preparing for his Expedition againſt *Khandahar*, and marching thither in the Beginning of 1737, he appointed his eldeſt Son *Reza Kuli Mirza*, to govern *Perſia* in his Abſence, who fixed his Reſidence at *Meſched*, whither *Shah Thamas* was afterwards conducted, and, as it is ſaid, by Order of the young Prince, who no doubt acted therein by his Father's Direction, was there put to Death, to prevent, as far as poſſible, any future Revolts in his Favour, or in Support of any of his Family. *Nadir Shah* was as fortunate in his Expedition againſt *Khandahar*, as in any of his former Undertakings, reducing it much ſooner than could have been expected, conſidering the great Strength of the Place. And it was while he lay before this Place, that he received an Invitation from ſome of the Mogul's Miniſters, to invade that Empire. As we have given a very large and full Account of this Tranſaction in our former Volume, in ſpeaking of the Succeſſion of the Deſcendants of *Timur Bek*, in the Empire of *Indoſtan*, we ſhall not inſiſt farther upon it here, but content ourſelves with firſt giving the Reader a ſhort View of the Life of this extraordinary Perſon, and then reſuming the Hiſtory of his Reign, at his Return from the *Indian* Expedition.

10. We have had various Reports in *England* concerning the Birth of this famous Conqueror, and tho' they are now grown ridiculous, there was a Time when they were better received. It muſt be allowed, that on one Hand, it is extremely difficult for us to obtain any true Accounts from Places at ſo great a Diſtance, and it is no leſs true, on the other Hand, that we are extremely careleſs in our Endeavours to procure them. The *Dutch* at *Batavia* require their Factors at different Forts throughout *India*, to ſend them Intelligence, and it is from theſe Letters, that they judge of the Abilities of the Perſons they employ, ſo that by this Method they are able to give their Maſters in *Holland*, a tolerable View of the whole State of Affairs in the Eaſt, once in the Year. It is but very lately, that we have had any diſtinct and true Account of this Hero, who was the Son of the Chief of one of the Clans of the *Afshars*, a *Turcoman* Tribe divided into three Families, of which his was the ſecond, and inhabited a Diſtrict of the Province of *Choraſan*. He was born in the Year 1688, and as he was the eldeſt Son of his Father, was conſidered, according to the Laws of that Nation, as his apparent Succeſſor. In order to form a right Notion of this, the Reader is to be told, that there are ſeveral Tribes of the *Turcomans*, who inhabit this and other Provinces of *Perſia*, where they live after their own Manner, in Conſideration of certain Services that from Time to Time they are called upon to render to the Government of *Perſia*; and the particular Service of his Family was to defend a Fortreſs commanding the Valley which they inhabit, againſt the *Uſbeck Tartars*. As to his Father's Name, we know it not; but that which he beſtowed upon his Son at the Time of his Circumciſion, was *Nadir Kuli*, which ſignifies literally, the Slave of the Wonderful, but the true Senſe of it is, the Servant of God.

His Father dying in his Minority, his Brother, the Uncle of *Nadir*, became, according to the Cuſtom of the *Turcomans*, the Tutor of his Son, and the Chief *pro tempore* of the Clan. He took Care of the Education of the young Man, whom he bred up a zealous *Mahometan*, according to the Sect of the *Sunni*'s, who are looked upon by the *Perſians* as Hereticks, and who, on their Side, conſider that whole Nation in the ſame Light; he cauſed him likewiſe to be taught his Exerciſes, and ſhowed him, for ſeveral Years, a great deal of Kindneſs and Reſpect. But when he came of Age, and would have taken upon him the Command of the Fortreſs and of his Clan, his Uncle did not care to reſign; and being a Man of great Art, he had brought the People into ſuch a Dependance upon himſelf, that his Nephew found they were little inclined to do him what he called Juſtice; and the Spirit of the young Man was ſuch, that ſcorning to live in Subjection, in a Place where he conceived it his Right to rule, he reſolved to put himſelf into the *Perſian* Service. It was for this Reaſon he went to *Meſched*, which has been conſidered as the Capital of *Choraſan* ever ſince Shah *Abbas* the Great inſtituted Pilgrimages thither, on Purpoſe to hinder his Subjects from viſiting the Tomb of their Prophet at *Mecca*, before which Time the City of *Herat* had that Title. *Nadir Kuli* was well received by the Governor, who gave him a ſmall Poſt in his Family, and another ſmall Poſt in the Army. His Behaviour here was very regular, and very inſinuating; he ſhowed all poſſible Reſpect for his Superiors, was very kind and condeſcending to his Inferiors, and very exact in the Diſcharge of every Branch of his Duty.

By Degrees he gained the Confidence of the Governor to ſuch a Degree, that he was raiſed to the Rank of a *Mim Baſhi*, a Command equivalent to that of a Colonel of Horſe in our Service; and then it was that he began to diſplay the extraordinary Qualities he received from Nature. He affected a very different Conduct from that of his Brother Officers, for he was as attentive to Diſcipline as they were negligent in it; he deſpiſed Perquiſites, kept his Corps conſtantly full, and by doing ſtrict Juſtice to Merit, made his Soldiers not only content with their Lot, but pleaſed with their Profeſſion. He was often employed in Service, and was always ſucceſsful, which was chiefly owing to two Things, the ſtrict Diſcipline of his Troops, and his keeping them complete, which gave him a vaſt Advantage of the *Tartars*, and diſtinguiſhed him from all other Officers, who for that Reaſon hated him heartily. The Confuſion in the latter Part of the Reign of *Shah Huſſein*, as it encouraged the *Uſbecks* to make frequent Incurſions into *Choraſan*, ſo it gave him many Opportunities of raiſing his Reputation, by repreſſing their Inſolence, and obliging them often to retire, notwithſtanding their Superiority of Numbers. But in 1720, the *Uſbecks* invaded the Province with a numerous Army, to which the Forces of the Governor were ſo unequal, that in a great Council of War, the Officers were unanimouſly of Opinion, that it was impoſſible for them to look the Enemy in the Face; and therefore they adviſed the Governor to retire into the Heart of the Province, and act wholly upon the defenſive. *Nadir Kuli* oppoſed this, he magnified the Spirit and Courage of the *Perſian* Cavalry, and inſiſted, that notwithſtanding their Superiority of Numbers, if they marched and attacked the *Tartars*, inſtead of waiting for them, there was the greateſt Probability of their giving a Check to their Expedition in its Beginning; which might ſtop their Progreſs, and ſave the Country from Ruin. The Governor, who was a Man of Spirit, cloſed with his Sentiments, gave him the Command, and he very fortunately executed, even more than he had promiſed; for he totally defeated the *Tartars*, and purſued them with ſuch Vigour in their Retreat, that not one half of them eſcaped into their own Country.

The Governor promiſed to uſe all his Intereſt at Court to procure *Nadir Kuli* a Recompence from the *Shah* equal to his Service; but the reſt of the general Officers repreſenting to the Miniſtry, that this new Hero was no Friend of theirs, an Order was procured to the Governor for diſpoſſeſſing him of his Command, and giving it to that Nobleman's Nephew, who had never ſeen Soldiers in his Life but at a Review. *Nadir Kuli* was at this Time thirty two Years of Age, and yet his Reſentment was ſo much ſtronger than his Reaſon, that taking Things according to their firſt Appearance, and without ſtaying to enquire how far the Governor had been juſt to him, he went and expoſtulated with that great Man, in ſuch rough Terms, that he ordered him to be baſtinadoed on the Soles of his Feet, and turned him out of his Service. He was now totally undone, without Fortune, without Friends, and without Hopes. In theſe diſmal Cirumſtances he picked up a Couple of Fellows as deſperate as himſelf, and with them robbed a ſmall Caravan, which put them in Poſſeſſion of a conſiderable Sum of Money; with this they bought Horſes, Arms and Ammunition, and in a ſhort Time, they aſſociated twenty daring and undone Fellows, with whom they committed many Robberies, and in the Space of a few Months, encreaſed their Number to five hundred Men. At the Head of theſe, he not only committed Depredations through the greateſt Part of the Province, but laying hold of the Confuſion of the Times, encreaſed his Forces to ſuch a Degree, that the Government, inſtead of being in a Condition to puniſh him, really ſtood in Awe of him.

Things were in this Situation, when a Commander of Shah *Thamas*'s Army being traduced to his Maſter, and in Danger of his Life, fled to *Nadir Kuli* with fifteen hundred Horſe. His Uncle having Intelligence of this, thought it was high Time to take ſome Method to reconcile himſelf to his Nephew; in order to which, he made Uſe of his Intereſt with the Shah to procure his Pardon; which was no ſooner intimated to *Nadir Kuli*, than he promiſed his Uncle to repair to him, in order to make ſuch Submiſſions as were neceſſary to cancel the Memory of his former Offences. This, however, was all Artifice; for being of an implacable Nature, he ſurprized his Uncle's Caſtle the firſt Night he lay in it, and put him to Death; notwithſtanding which barbarous Action, he was now become ſo formidable, that the Shah, to ſave himſelf the Trouble of reducing him, confirmed his Pardon, and took him into his Service.

We have already ſhewn, how grateful and loyal a Return he made for this undeſerved Favour, and in what Manner he aſſumed the Title of *Shah* in 1736; as alſo the principal Tranſactions that followed till ſuch Time as he invaded the Mogul's Territories. He returned from hence in the Year 1739, contenting himſelf with the Ceſſion of all the Countries to the Weſt of the River *Attock*. He knew very well, that it was impoſſible for him to have preſerved his Conqueſts in *India*, if he had intended it; and he knew as well, that if he did not keep them, it was impoſſible for him to provide better for his own Security, than by leaving them in the Hands of their own Poſſeſſor Sultan *Mohammed*, a weak, inactive Prince, and conſequently leaſt likely and leaſt able to incommode him. Shah *Nadir*, on his Return to *Perſia*, meditated ſeveral great Deſigns, but executed none of them effectually, except that of transferring the Capital to *Meſched*; for though he carried on the War againſt the *Turks* ſucceſsfully, defeated them in ſeveral Battles, and wintered with his Army in their Dominions; yet he found himſelf ſo often diſturbed with Inſurrections, that he was never in a Condition to proſecute or improve his Victories.

He turned his Arms ſometimes againſt the *Leſgis*, the *Curds*, and the *Georgians*, but without any Succeſs, and theſe Diſappointments increaſing the natural Haſtineſs and Severity of his Temper, he began to make himſelf odious by a continual Series of Cruelties, ſome of which he exerciſed upon his own Family, cauſing his eldeſt Son *Riza Mirza* to be put to Death, at the Age of thirty two; and ſome Accounts ſay, that his ſecond Son met with the ſame, or a worſe Fate, that of having his Eyes put out. He grew inſatiable alſo in Reſpect to Money, oppreſſing his Subjects to the laſt Degree.

He was always partial to his own Country, and to his own Nation. His little paternal Caſtle of *Calot* he endeavoured to render impregnable, and there he laid up all his Treaſures; the Guard about his Perſon was entirely compoſed of *Aſſhars*, as ſuppoſing nothing could corrupt their Fidelity to their Chief. In this however he was miſtaken, for his Nephew, who revolted againſt him, who is the Son of that Uncle he ſo baſely murdered, had ſuch an Intereſt among them, that he engaged them to make *Shah Nadir* Priſoner, and this occaſioning a Diſturbance, thoſe who had ſeized him, to put an End to it, and to ſecure themſelves, cut his Throat when he was in the twelfth Year of his Reign, and the fifty ninth of his Life. He had the two Sons that have been already mentioned, by Wives whom he married while he ſerved as a *Mim Baſhi*, under the *Beglerbeg* of *Khoraſan*; by the Siſter of *Shah Huſſein*, whom he married at the Time that *Shah Thamas* declared him Generaliſſimo, he had only one Daughter; but by other Ladies in his *Haram* he left three Sons that were very young at the Time of his Deceaſe, and of whom we ſhall have Occaſion hereafter to make Mention.

11. When his Oppreſſions and Cruelties had rendered the very Name of *Shah Nadir* odious in all *Perſia*, and when it was viſible, that even his Soldiers rather feared him than loved him, many of the great Men began to conſider whether it might not be poſſible, under Colour of Attention to the publick Good, to pluck the Crown from his Head. Theſe Intrigues could not be ſo ſecretly carried on, but that he diſcovered ſome, and was informed of others; which produced ſuch bloody Executions, that at Length, the Diſaffection to him became ſo general, as to induce *Ali Kuli Kan*, his Nephew, to think of ſetting up for himſelf; to which he was chiefly moved by three Conſiderations; the firſt, that the Diſcontent was become general amongſt the Army, as well as the People; the ſecond, that he was himſelf at the Head of a conſiderable Corps of Troops, on whoſe Fidelity he knew he might depend; the third, that his Uncle was grown ſuſpicious of him, ſo that Submiſſion was to the full as dangerous as Rebellion. Excited by theſe Conſiderations, about the latter End of laſt Year he began to recruit and increaſe his Army, to pay no Regard to the Orders that came from *Shah Nadir*, and to carry on a cloſe Correſpondence with ſome of the Officers that were near the *Shah's* Perſon.

Amongſt theſe was *Mahomet Kouli Kan*, *Kourtſchibachi*, to whom, when he was in Readineſs to march towards *Meſched*, he ſent Orders to make himſelf Maſter of the Perſon of the *Shah*, which he performed; but finding that there was no keeping him with Safety, and that there began to be great Cabals amongſt the Officers who commanded under him, he took a Reſolution of putting him to Death, which he executed without Delay, and immediately diſpatched an Expreſs to *Ali Kouli Kan*, intreating him to haſten his March to *Meſched*.

On his Arrival there, that Prince was immediately ſaluted *Shah* by all the great Officers of the Crown, and the chief Commanders of the Army: He took Care to make himſelf Maſter of the Fortreſs of *Calot*, where he found all the immenſe Treaſure of his deceaſed Uncle, by raiſing of which he had made himſelf ſo many Enemies, and by a wiſe Diſtribution of which, his Succeſſor has made a Multitude of Friends.

The new Monarch, at the Time of his Inauguration, took the Name of *Adil Shah*, which ſignifies the juſt Prince, and one of the firſt Acts of his Reign was to publiſh a Manifeſto, from whence we have taken moſt of theſe Particulars, and in which, after inveighing bitterly againſt the Mal-Adminiſtration of his Predeceſſor, who, he ſays, received the juſt Reward of a Tyrant, he remits to the People all Arrears of the extraordinary Taxes impoſed upon them, exempts them from every Impoſition for two Years, and promiſes ample Reſtitution to ſuch as have had their Eſtates confiſcated under the former tyrannic Government. He is ſaid however to have thought it neceſſary to his own Security, firſt, to put out the Eyes, and then to poiſon his three Nephews. Time will ſhew whether this was an Act of Neceſſity, or whether it flowed from a Blood-thirſty Diſpoſition: In the mean Time he has given the ſtrongeſt Aſſurances to the Grand Signior, and to the *Czarina*, of his Intention to maintain the Peace and Friendſhip, ſubſiſting between their Empires and his own, and is at preſent exerciſed in ſettling his new acquired Sovereignty upon the only ſolid Baſis, that of the Zeal and Affection of all his Subjects.

CHAPTER III.

A Deſcription of the *North-Eaſt* Parts of *Aſia*, and the extenſive Empire of *China*, with the Countries dependent thereon, and the Manners and Cuſtoms of the ſeveral Nations that inhabit them.

SECTION I.

The Travels of his Excellency E. YSBRANTS IDES, Aambaſſador from *Peter* the *Great* to the Emperor of *China*, through *Great Uſtiga*, *Siriana*, *Permia*, *Siberia*, *Daour*, &c. to the Frontiers of *China*; containing an exact Deſcription of the Extent and Limits of thoſe Countries, the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet, daily Occupations, *&c.*

Faithfully tranſlated from the Author's Original Journal, printed under the Direction of the Burgo-maſter Witzen, *the greateſt Critick of his Time in* Holland, *and dedicated to the late Czar* Peter *the* Great.

1. *An Introductory Account of the Author, and of the Character and Credit of his Work; with the Reaſons for inſerting it in this Collection.* 2. *The Manner of his ſetting out from* Moſcow; *his Voyage down the River* Dwina, *with a curious Account of the Inhabitants of the Province of* Sirene. 3. *His Paſſage from thence to* Solikamſkoi, *with a large Account of the Salt-works in the Neighbourhood of that City.* 4. *The Author enters* Aſia, *and viſits the Country of the* Wogulſki Tartars, *whoſe Manners and Cuſtoms he deſcribes.* 5. *That Subject continued and concluded.* 6. *He continues his Journey through the Country of* Tumeen, *the Woods of which abound with a Kind of Animal that furniſh the richeſt Furs in* Ruſſia. 7. *A Deſcription of the City of* Tobolesk, *the Extent of the Country of* Siberia, *and the Manner in which it was reduced under the Power of the* Ruſſians. 8. *The River* Irtis *deſcribed; the Manner of training Dogs to draw Sledges, and a Deſcription of that Kind of Carriage over the Snow.* 9. *The Author's Arrival at the City of* Surgut; *an Account of the adjacent Country, and of the Foxes, Beavers, and other wild Beaſts.* 10 *The Courſe of the River* Oby *deſcribed; an Account of the* Oſtiacks *who inhabit its Banks, their Cuſtoms and Manner of Living.* 11. *The Author viſits one of their Princes, and gives a large Detail of the miſerable State of him and his Family.* 12. *The difficult and dangerous Paſſage of the River* Keta, *and the extraordinary Riſk the Author ran of periſhing thereon.* 13. *A very copious and curious Relation of the Manner of finding* Mammut's *Teeth, with Conjectures concerning the Nature of that Beaſt, which is inviſible during its Life-time.* 14. *An Account of the* Skammanſkoy *or* Negromantick *Water-Fall, and of the Manner in which Ships paſs down and are towed up it.* 15. *Our Author makes a Viſit to the* Schaman *or* Necromancer; *a large Account of him, and of the Methods he makes uſe of in deceiving the* Tunguſians, *with a Detail of the Manners and Cuſtoms of theſe People.* 16. *The Author's Arrival at* Buratſkoy; *the* Burattians, *a Pagan People, deſcribed, and a particular Account of their ſtrange Ways of Living.* 17. *A very large and diſtinct Account of the* Yehiam *or* Muſk-goat, *with the different Manners uſed in preparing that rich Perfume.* 18. *An Account of the Lake of* Baikol, *and a ſingular Inſtance of the Author's good Senſe and Courage.* 19. *He continues his Journey to the City of* Telimba; *his Adventures in that Journey, with an Account of the Country he travelled through, and the People he met with.* 20. *His Journey to, and a Deſcription of the City of* Nerzinſkoy, *the adjacent Territories deſcribed, as alſo the two Nations of* Tunguſians, *their brutal Manners and barbarous Cuſtoms.* 21. *Our Author proceeds to the utmoſt Limits of the* Ruſſian *Dominions in* Aſia; *of the Frontiers of which Empire he gives a very curious and copious Deſcription.*

1. AFTER giving an Account of the *Perſian* Empire, it was requiſite, that as we had deſcribed that of the *Mogul* in the former Volume, and given the Succeſſion of Princes down to our Times, to proceed to the fourth great Sovereignty of *Aſia*, the moſt extenſive and moſt celebrated Empire of *China*. But at the ſame Time we had this in View, it ſeemed alſo no leſs requiſite to give ſome Account of the Countries that lie between *Ruſſia* and *Perſia*, and the Frontiers of that vaſt Empire, the Omiſſion of which would have left a great Part of *Aſia* unſurvey'd. In order to attain this End, there ſeemed to

to be no Method ſo proper, as giving the Travels of a Perſon who had paſſed through theſe Countries with a publick Character, who ſurvey'd them at Leiſure, had very extraordinary Opportunities of examining every Thing that was curious and worthy of Notice, and who afterwards compoſed his Work for the Information and Satisfaction of the Czar *Peter* the *Great*, of glorious Memory, to whom it was dedicated, and who was ſo well pleaſed therewith, that he teſtified his Reſpect for the Author, by honouring him with the Office of a Privy Counſellor. It is however requiſite to obſerve, that in 1699, there was printed at *Amſterdam* an Account of this Embaſſy, and the Travels of the Ambaſſador, by one Mr. *Adam Brand*, who accompanied him in his Journey as one of his Domeſticks; but whether it happened through Want of Care in keeping an exact Journal, from a natural Incapacity in the Author, or from his entring into too great Liberties, grounded upon the Licence that Travellers take, more eſpecially ſuch as paſs through unknown Countries, or from whatever Cauſe it fell out, ſo it was, that this Relation contained a Multitude of Things equally inconſiſtent with Probability and Truth; notwithſtanding which, it gained Credit for a Time, and paſſed current for a true Relation of this celebrated Embaſſy. But when our Author's own Work appeared, the Folly and Weakneſs of this ſurreptitious Account became manifeſt to the whole World, and *Brand*'s Romance has been ever ſince as much decried as the following Performance has been univerſally eſteemed. There is no Need of ſaying any Thing more, either by Way of Introduction or Recommendation of a Piece that has been long in Poſſeſſion of the higheſt Character from the propereſt Judges. All therefore that we ſhall add is, that the Reader has it here entire in the Author's own Words, compared with the laſt and beſt Edition of the Original.

2. The moſt illuſtrious Czars, *John* and *Peter Alexowitz*, having reſolved to ſend a ſplendid Embaſſy to the *Great Bogdaichan*, or Sovereign of the famous Kingdom of *Kitai*, by *Europeans* commonly called *China*; this obliged me with a favourable Opportunity of travelling through Part of the famous, but hitherto unknown *Siberian* and *Kitaian* Countries, and informing myſelf by credible Witneſſes of the Remainder of thoſe Lands, as well as obtaining certain Knowledge of ſeveral Things with which the World hath not been hitherto truly acquainted. For by God's paternal Providence, and the particular Favour of their Czariſh Majeſties, I obtained the great Honour of being diſpatched their Envoy to the *Chineſe* or *Kitaian* Court, furniſhed with ſufficient Credentials and other Neceſſaries.

The Preparation of my Retinue and Equipage took me up ſo much Time, that I did not ſet out before the 14th of *March*, 1692, when I went from *Moſcow* in a Slead. The Beginning of my Journey proved very uneaſy by the violent Rain which accompanied us from *Moſcow* to *Vollogda*, and occaſioned ſuch an Inundation, that our Sleads almoſt ſwam over the remaining Ice of the Rivulets and Brooks, and deep Roads. However, by the Divine Aſſiſtance, though not without Difficulty, we reached the City of *Vollogda*, where I reſted three Days in Expectation of better Weather, which happened according to my Wiſhes; for within two Days it froze ſo hard, and ſnowed ſo violently, that all the Water was froze up in four and twenty Hours; ſo that we could eaſily paſs all the Rivulets and Ditches in our Sleads, without any Apprehenſion of Danger. The 22d of the ſame Month, I ſet forwards from *Vollogda* to *Suchina*, where I arrived on the 23d, and without ſtopping, advanced to the City of *Great Uſtiga*, where the River *Suchina* and *Irga* unite, and thereby compoſe the famous River *Dwina*; the Name of which imports a double River.

The Courſe of the *Suchina* is almoſt full North, thro' a fertile Country, and its Banks on each Side are adorned with well inhabited Villages, beſides *Totma*, an indifferent City, ſituated on its left Shore; and ſeveral Travellers annually paſs this River, going from *Vollogda* to *Archangel*, in ſmall Ships well laden, as long as the River is open: But the Stream running in a ſtony Channel, thoſe Ships which paſs it muſt be provided with good Plank at both Ends, by reaſon of the hidden Rocks, and the Rapidity of the Stream, which would otherwiſe ſink them to the Bottom. At the Mouth of this River is ſituated the City of *Great Uſtiga*, where I was obliged to ſtay about twenty-four Hours. Leaving that Place, I came the 29th of *March* to *Solowitzjogda*, a very large City, inhabited by many conſiderable Merchants and curious Artificers, eſpecially in Silver, Copper, and Bone. Here are alſo a great many Salt-pits that yield vaſt Quantities of Salt, which are tranſported to *Vollogda*, and all over the adjacent Countries.

I ſet out from this Place on the firſt of *April*, and the ſame Day reached the Province of *Sirene* or *Wolloſt Uſgy*; the Inhabitants of which ſpeak a Language that has not the leaſt Affinity with the *Muſcovite*, but is ſomewhat like the barbarous *German Livonian* Language; for ſome of my Retinue who underſtood that, could underſtand a great Part of the Speech of theſe People. They are of the *Greek* Church, and ſubject to his Czariſh Majeſty, to whom they pay their Tribute; though they are not under the Juriſdiction of any Viceroy or Waywode, but chuſe their own Judges amongſt themſelves, and important Cauſes which cannot be decided before them, are removed to the foreign *Poſolſche* or Miniſters Court at *Moſcow*, to be determined. The Stature and Habit of both the Men and Women are not very different from thoſe of the *Ruſſian* Peaſants; all which conſidered, I cannot but think that theſe People might anciently tranſplant themſelves hither from the Borders of *Livonia* or *Coral*. I aſked ſome of them out of Curioſity, concerning their Original; but they were not able to give me any Account, whether their Anceſtors came thither out of foreign Countries, or not; nor could they give any Reaſon why their Language has no Affinity with the *Ruſſian*. They generally live by Agriculture, except that Part of them which are employed in the Manufacture of Grey Furs, near the River *Zizol*. They inhabit a conſiderable Tract of Land, which extends to the City of *Kaigored*, and is about ſeventy *Sumkas* long, each *Sumka* being a large *German* Mile. Theſe People do not live in Cities or Towns, but for the moſt Part in ſmall Villages built in the large Woods, and their Houſes are like thoſe of the *Ruſſians*.

This Country terminating in a great Foreſt, we were again infeſted with a violent Rain, and ſuch a Thaw, as in the Space of one Night ſwelled the Waters to that Degree, that I could not paſs them without great Difficulty. In this uneaſy Condition I remained four Days, during which Time I was obliged to ſtruggle with all the incident Inconveniencies; our Sleads ſwam continually, and the Rivulets and Brooks on each Side of the Woods poured in upon us, ſo that, as though we had been in a Sea, we could neither proceed forwards, nor return backwards: Nor would the Ice of the great Rivers bear any longer; notwithſtanding which, by the Help of Bridges and other proper Means, at laſt, on the 6th of *April*, I reached *Kaigorod*, an indifferent large, but very ſtrong City, on the River *Kama*.

3. From thence I deſigned to have ſet forwards immediately to *Solikamſkoi*, the chief City of *Great Permia*, in order to proſecute my Journey to *Siberia* over the Mountains of *Werchaturia*; but the Thaw at the End of Winter continuing, forced me to alter my Reſolution, and ſtay there ſeveral Weeks, till the opening of the River *Kama* favoured my Departure by Water; during which Time I made all neceſſary Preparations for my Journey. Another Thing which occaſioned my Stay, was the great Damage that the City of *Kaigored* had ſuffered lately by Robbers.

This Misfortune, which fell upon the Commandant of the Place who had that Poſt when I was there, happened in the following Manner: On a *Sunday* about Noon, ſeveral well mann'd Barks, with flying Colours, Drums and Hautboys, came ſailing on the River *Kama* to the City; the Men leaped on Shore, whilſt the innocent Inhabitants ſuſpected no Harm in Time of Peace, and in a quiet Country, but took them for Friends and Acquaintance from the neighbouring Villages, met together to divert themſelves; but the Robbers ſet the South Part of the City on Fire, and falling upon the Inhabitants of the North Quarter, cut all of them to Pieces that came in their Way, and at laſt went to the *Waiwod*'s Apartment, which they plundered, and committed all Manner of Inſolences and Outrages on his Servants; after which, carrying off whatever they pleaſed, they returned to their Boats, and ſailed down the *Kama*. But diligent Search being made after theſe Birds of Prey, they were found to be a Rabble of runaway Servants got together, ſome of which were at laſt taken, tortured, and puniſhed according to their Crimes. I cauſed Wood for Firing to be brought to warm me, and kept ſtill upon my Guard, appointing ſtrong Watch by Water and by Land.

After my Veſſel was equipped, and the *Kama* free of Ice, on the 23d of *April* we ſet forwards, and ſafely arrived on the 27th in the City of *Solikamſkoi*, from whence I ſhould have gone over the Mountains of *Werchaturia*, which is only practicable in Winter; the Multitude of the Moraſſes, and Deepneſs of the Roads, rendering that Way utterly impaſſable in Summer; for which Reaſon all Officers, as well as Merchants, are obliged to lie ſtill the whole Summer in *Solikamſkoi*, till they meet with hard Winter Roads. It is true indeed, that it is poſſible to ſail round theſe Hills; but for certain Reaſons that Paſſage is abſolutely forbidden, neither Commanders nor Merchants being allowed to go that Way. Notwithſtanding which, the Governor of *Solikamſkoi* knowing that my Embaſſy would admit of no Delay, ordered me to be ſupplied with as many ſmall Barks as were requiſite to paſs the River *Suzawaia*.

Solikamſkoi is a very fine large and rich City, where ſeveral very conſiderable Merchants reſide. Here are alſo many Salt-works or Pits, and very near fifty *Saline* Springs, from twenty-five to thirty-five Ells deep, out of which great Quantities of Salt are taken and boiled, and thence ſhipped off in great Tide-ſhips built for that Purpoſe; each of which will eaſily ſtow from one hundred to one hundred and twenty thouſand *Poeds*, that is, from one thouſand ſix hundred to two thouſand Tun; mann'd with about ſeven or eight hundred Sailors, and Labourers, and furniſhed with Kitchins, Bagnio's, and all Sorts of Conveniencies. Theſe Veſſels are from thirty-five to forty Ells long, and carry a Maſt; to which is fixed a Sail of thirty Fathom broad, which they make uſe of to ſail up the River when the Wind is good; but when they go down, they only row, and that chiefly to keep the Ship's Head right, which the Rudder alone is not ſtrong enough to do. They are flat bottomed, and have no Nails, or other Iron-work in them, but are made entirely of Wood. They float along the *Kama* with the Tide, till it falls into the famous River *Wolga*, where they are forced to be towed up againſt the Tide, or ſail up if the Wind be favourable; but the Salt is unladen from *Kaſan* to *Niſna* on the *Wolga*, and at ſeveral convenient Places.

The 14th of *May* I ſet forwards from *Solikamſkoi* by Water, and paſſed on the *Uſolkat*, a ſmall River about half a Mile from the City, again into the *Kama*: On which River we drove entirely out of *Europe* into *Aſia*. So on *Whitſunday* I went on Shore, and upon a high and beautiful green Hill eat my laſt Dinner in that Part of the World on the Graſs. And after I had drank a Glaſs of Wine, as a Farewel to dear *Europe*, I immediately returned on Board, in order to proceed on our Voyage along the River.

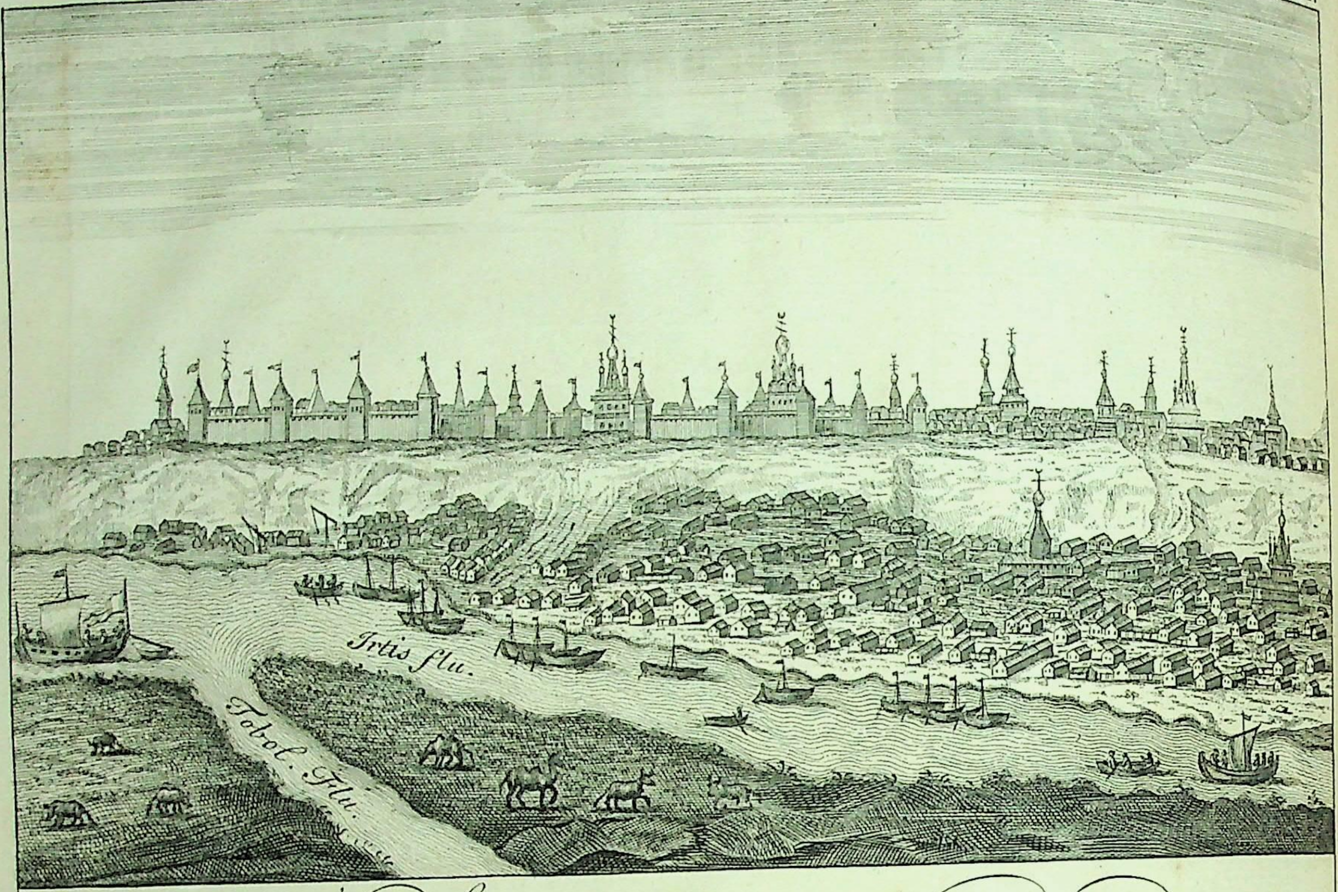
4. Having thus entered the *Aſiatick* River *Suzawaia*, we found it far leſs agreeable than the beautiful *Kama*; which is a fine River, abounding with all Sorts of Fiſh, and from *Solikamſkoi* to this Place, adorned with very fine large Villages and Towns, ſeveral very expenſive Salt-works, fertile Corn Grounds, fruitful Lands, ſpacious Fields beautified with all Sorts of Flowers, Woods, &c. all wonderfully pleaſant. But tho' the Banks of the *Zawaja*, which falls weſtward into the *Kama*, are not leſs beautiful and fruitful; yet we found our paſſing this River very tedious; for by the high Water we made but a very ſmall Progreſs in ſeveral Days, being obliged to be towed along with a Line; however, at laſt, after twelve Days, and tireſome tugging againſt the Stream, we came to, and touched at a pleaſant Shore on the 25th of *May*, amongſt the firſt *Siberian Tartars*, called *Wogulſki*. I muſt acknowledge, that the well-peopled Countries on the Sides of this River, deſerve to be reckoned amongſt the moſt charming in the World. And when in the Mornings or Evenings I ſtepped on Shore to divert myſelf, and went within Land towards the Hills, I every where found the moſt beautiful Flowers and Plants, which emitted a moſt agreeable fragrant Scent, and all Sorts of wild Beaſts running about in great Multitudes. But the *Wogulſkian Tartars*, to which this River led us, are ſtupid Heathens, which induced me to pry more narrowly into their Religion, Manner of Living, and other Circumſtances; and for this End I went on Shore, and lodged a Night amongſt them.

They are naturally robuſt, and have remarkably large Heads. Their whole Worſhip conſiſts in making an Offering once a Year; when they go in Crowds into the Woods, and kill one of each Species of Beaſts, of all which they prefer the Horſe and Tyger as beſt; they flea off the Skins, hang up the Carcaſs on a Tree, and fall proſtrate to the Earth, and in their Way pray to it; after which, they eat the Fleſh together, and return Home; which done, they are free from the Trouble of praying for that Year. What Need of praying any oftner than once a Year? ſay they. They are not able to give the leaſt Account of the Original or Import of their Faith, but only that their Forefathers did ſo, and they think good to follow their Example.

I aſked them concerning their Knowledge of God; Whether they did not believe that there was a God and Lord in Heaven above, that had created, preſerved and governed all Things, and gave Rain and fair Weather? To which they replied; we may very well believe that, for we ſee, that the Sun and Moon, thoſe two bright Lights which we worſhip, and the Stars alſo are in Heaven, and there is one which rules them. They would not in the leaſt hear of the Devil, becauſe he never appeared, or revealed himſelf to them. They acknowledge a Reſurrection of the Dead, but are ignorant what Sort of Rewards to expect, whether corporal or not. When any of them die, they bury the Carcaſe without any Grave-ſtone; and be it Man or Woman, all his or her beſt Apparel and Ornaments, beſides ſome Money, according to the Ability of the Deceaſed, are buried with the Corps; to the End that he may have ſome Cloaths on, and ſomething to ſpend at the Time of the Reſurrection. They cry over the dead Corpſe in a diſmal Manner, and the Huſband is obliged to continue a Widower a Year after the Death of his Wife. If a Dog dies, that in Hunting or any other Way has been ſerviceable to them, they erect in Honour of him, a ſmall wooden Hut, on four Props of Earth; in which they lay the dead Dog, and ſuffer him to continue there as long as the Hut laſts. They take as many Wives as they can keep, and when any of theſe is pregnant, and near her Delivery, ſhe is obliged to retire into a Hut in a Wood, erected for that Purpoſe, where ſhe is delivered; and the Huſband and ſhe are not permitted to come near each other for the Space of two Months after.

5. When a Man deſires to marry, he is obliged to buy the Bride of her Father. They have very few Marriage Ceremonies beſides treating the neareſt Relations; after which the Bridegroom goes to Bed to the Bride. They have no Prieſts, nor marry any nearer than the fourth Degree of Conſanguinity. Amongſt other Diſcourſe I admoniſhed them, that it was Time to acknowledge Chriſt the Saviour of the whole World, and turn to him; which would ſecure their temporal and eternal Welfare. To this they anſwered; As for what concerns Temporals, we daily ſee vaſt Numbers of Poor *Ruſſians*, that can hardly get a Piece of dry Bread, and nevertheleſs ſome of them believe in Chriſt; and as for the eternal Things, they left them to themſelves; and at the ſame Time declared, that they would live and die in the Opinion of their Forefathers, whether right

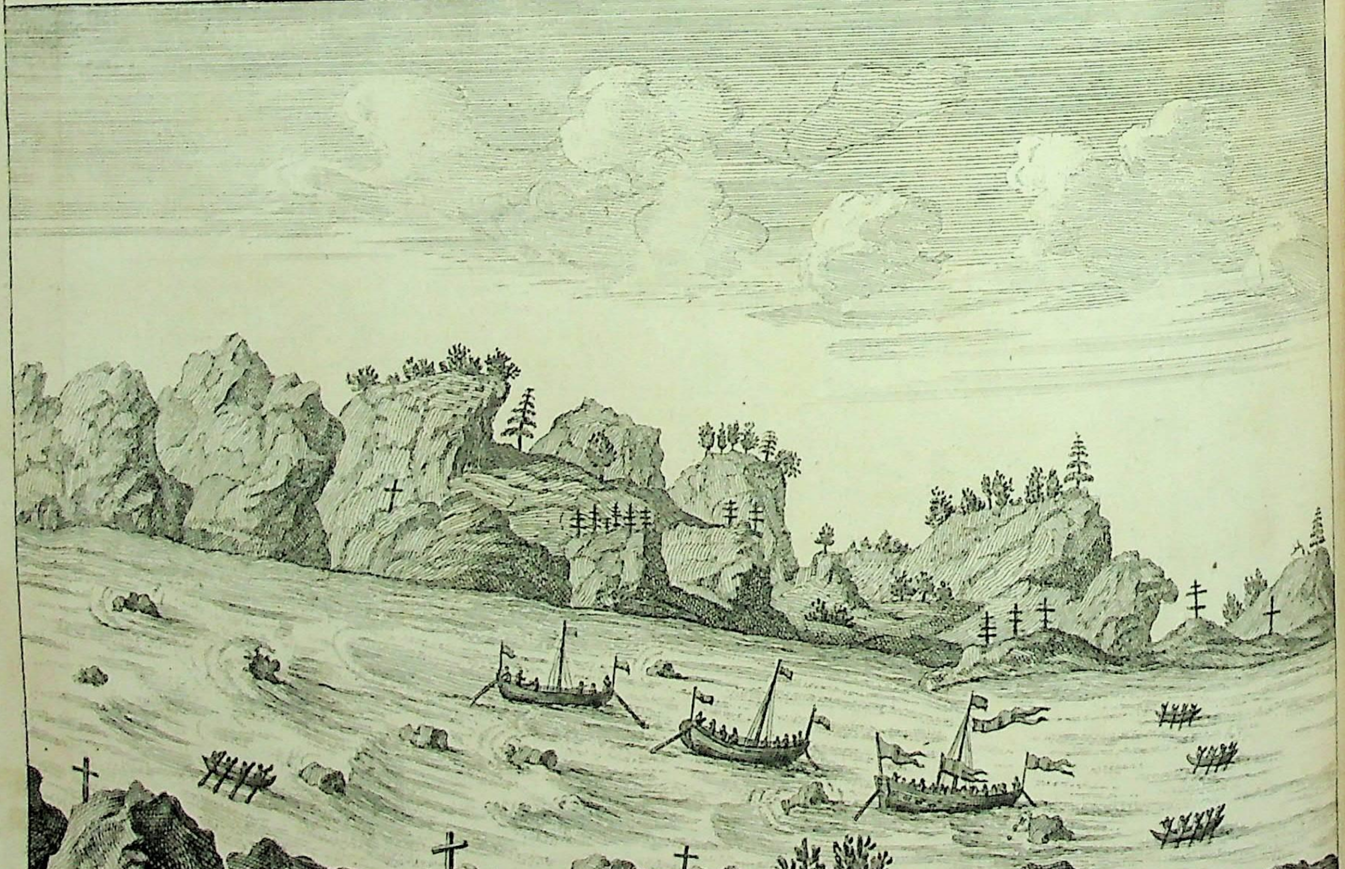
Vol. II. pa. 921.



Irtis flu.
Tobol. Flu.

Toboleski The chief City of SIBERIA.

pa. 928.



The Great rocky Waterfall call'd Skamanskoy right or wrong. The Habits of Men and Women, as well as theirs and their Childrens Shape, are expreſſed by the annexed Cut, which ſhews they are neither extravagant nor ridiculous.

Their Dwellings are quadrangular wooden Rooms, like thoſe of the *Ruſſian* Peaſants; only inſtead of Ovens they uſe Hearths, on which they burn Wood, and dreſs their Victuals. The Smoak-hole which is in the Roof, is covered with Ice, as ſoon as the Wood is burnt to a Coal; which keeps the Warmth in the Room, and the Light ſtrikes through the clear Ice. They have no Chairs, but inſtead of them a broad Bench round the Room, about an Ell high, and two Ells broad, on which they ſit like the *Perſians*, with their Legs acroſs under them, and ſleep on them at Night. They live upon what their Bow and Arrows furniſhes them. Their chiefeſt Game are *Elks*, whole Herds of which are found here; theſe they cut in Pieces, and hang in the Air round their Houſes to dry; if it happens to rain upon them, and they begin to ſtink abominably, they dry them again, and eat them as a Delicacy. They do not eat either Cocks, Hens, or Hogs. They have a pleaſant Way of catching wild Beaſts, for they place a Sort of great Bows in the Woods, faſtning a String to them, to which they fix ſome Corn, or other Bait, leaving only a Place for the Game to enter, ſo that the *Elk*, or any other Beaſt that comes in there, cannot paſs by without touching this Snare; and when the Bow lets fly, the Arrows enter the fore-part of the Body, and he preſently falls down. They alſo dig great Pits in the Woods, which they cover with Reeds and Graſs, ſo that if any Beaſt comes thither, he falls in and is taken. Theſe *Tartars* live in their Villages all along the River *Iuzawaia* to the Caſtle of *Utka*, and are under the Protection of his *Czariſh* Majeſty, to whom they pay Tribute, and live in Security and Peace. The Extent of Land, which they inhabit, reaches about 800 *German* Miles in the North part of *Siberia*, and even to the North *Samojedes*.

6. After leaving theſe Heathens, we arrived at the Caſtle of *Utka* on the firſt of *June*. This Place is a Frontier Fortification againſt the *Baſkirian* and *Uſſimiſchian Tartars*. When I was there, an *Uſſimiſchian Tartarian* Gentleman, an Inhabitant in his *Czariſh* Majeſty's Dominions, came thither in Search of his Wife, to whom he had been long married, and who had eloped without any Provocation. But when he could not find her amongſt the Peaſants, he comforted himſelf, ſaying, that he was the ſeventh Huſband ſhe had left, who were all alive; by which it ſeems that the Lady was lucky enough to meet often with new Lovers.

On the 20th of the ſame Month, ſetting forwards from *Utka* in Waggons drawn by Horſes, we paſſed the Caſtle of *Ajada*, and croſſed the River *Neuia*, which runs round it. After which we proceeded by the River *Reeſch* to the Caſtle of *Arſamas*, and from thence to the Caſtle of *Neuianſkoi*, on the above-mentioned River *Neuia*. This Journey by Land to *Neuianſkoi*, proved one of the pleaſanteſt in the World, ſince I met therein with moſt charming Fields, Woods, Brooks, and ſtanding Waters, as alſo extraordinary fertile and well tilled Grounds, perfectly well inhabited every where by *Ruſſians*, and furniſhed with all Neceſſaries at a very cheap Rate. At *Neuianſkoi* I again took Water, and we drove with the Tide, betwixt two populous Shores, adorned with well built Villages and Caſtles, inhabited by *Ruſſian* Chriſtians, down to the River *Tura*, which terminates Weſtward in the River *Tobol*.

On the 25th of the ſame Month we reached the City of *Tumeen*, which conſidering its Situation is ſtrong and populous, moſtly inhabited by *Ruſſians*; and the Remainder being about one fourth Part, with *Mahometan Tartars*, who drive a conſiderable Trade to the *Kalmick* Countries, *Bucharia*, *&c.* Great Numbers of theſe live diſperſt all round in the Country, ſubſiſting on Agriculture and Fiſhing. This and the neighbouring Places do not afford any Quantity of other Skins, than thoſe of red Foxes, Wolves and Bears; but a few Miles diſtant is a Wood called *Heetkey-Wollok*, which abounds with the very fineſt Grey Squirrels, that keep their Colour both Summer and Winter; they are as large as the common Squirrels, beſides which the Leather prepared from them is very ſtrong, and they are not to be found any where in the whole *Muſcovite* Empire beſides. It is forbidden under a great Fine, to ſell them to Merchants; for they are ordered to be preſerved for the Uſe of the Czar. Theſe Beaſts are ſaid to have the ſtrange Quality of killing and eating all other Species of Grey Squirrels, that come into their Wood.

Whilſt I was in this City, its Inhabitants and all their Neighbours were in great Fear of the *Kalmakian* and *Koſack-Orda Tartars*, who had joined and made an Irruption into *Siberia*, laid ſeveral Villages waſte, cut the Inhabitants in Pieces, and alſo threatned this City, from which they were not above fifteen Miles diſtant. But the Governor very expeditiouſly raiſed a conſiderable Force out of *Tobolſka* and other Cities, and ſent them againſt theſe roving *Tartars*, whom they ſoon drove back with great Loſs.

For this Reaſon, I was not willing to ſtay any longer here, but as ſoon as I had obtained freſh Rowers, and Soldiers for Convoy, I left that Place on the 26th of the ſame Month, and went farther down the River *Tobol*, the Shores of which on each Side are low and moiſt Ground, which in the Spring is under Water, ſo that it is ſcarce, if at all inhabited; though for ſeveral Miles farther in Land on each Side, it is abundantly peopled, partly by *Mahometan Tartars*, and partly by *Ruſſians*; and the River produces all Sorts of excellent Fiſh.

7. On the firſt of *July*, I arrived ſafe at *Toboleſk*: Which City is ſurrounded with a large Stone Cloyſter, with high Watch-Towers, which may paſs for a Fortification. This Place is ſituated on a high Hill of a vaſt Circuit about, the Bottom of which, along by the River *Rhitiſch*, is inhabited by the *Mahometan Tartars*, and *Buchars*, who drive a great Trade up the *Rhitiſch* or *Irtis*, into the *Kalmakian* Territories, and carry their Goods to *China*; ſo that if it were ſafe to travel the *Kalmakian* Country, the moſt expeditious Way to *China* would be to paſs the *Jamuſchowa Oſera*, or *Jamuſchian Lake*.

Tobolеſk, *Tobolſka*, or *Tobolſkoi*, is the chief City of *Siberia*, whoſe Juriſdiction extends Southward beyond *Baraba*, from *Werchaturia* to the River *Oby*; Eaſtward to *Samojedia*, Northward to *Oſtiaſki*, and Weſtward to *Uſſa* and the River *Zuzawaja*. This Province is every where very well peopled, as well by *Ruſſians* who depend on Huſbandry, as by all Sorts of Nations, particularly *Tartars* and Heathens, which pay Tribute to his *Czariſh* Majeſty. Corn is ſo very cheap there, that 100 *German* Pounds of *Rye* Flour may be bought for ſixteen *Cops*; and as for Fleſh, the Price of an *Ox* is commonly from two *Rixdollars*, to two and a half, about eleven Shillings *Engliſh* Money; and that of an indifferent large *Hog* is from thirty to thirty five *Styvers*. Beſides, the River *Irtis* produces ſuch a prodigious Quantity of Fiſh, that a Sturgeon, weighing forty Pounds, may be there bought for five or ſix *Styvers*; and theſe Fiſh are ſo far from being lean, that when they are boiled, their Fat appears of the Thickneſs of a Finger. Here are great Plenty of all Sorts of wild Beaſts, as, Elcks, Stags, Deer, Hares, *&c.* and of wild Fowl, *viz.* Pheaſants, Partridges, Swans, wild Geeſe, Ducks, and Storks; all which are cheaper than Beef. This City is defended by a ſtrong Garriſon, which upon Order from the Czars, can bring 9000 Men into the Field; beſides which are ſeveral Thouſands of *Tartars*, who ſerve all on Horſeback on Occaſion.

Incurſions into the Weſt Frontiers, are very frequently made by the *Kalmucks*, the *Koſack Orda*, and the Subjects of the *Teſtickam* or Governor of the *Bucharian Tartars*: Beſides which the *Uſſimur* and *Bakirian Tartars* commit ſuch like Inſolences ſometimes; but theſe are immediately oppoſed and repulſed by the *Tobolеſkians*. This City is alſo the Place of Reſidence of the Metropolitan or chief Eccleſiaſtick, who is ſent from *Moſcow* hither, and exerciſes ſpiritual Juriſdiction over all *Siberia* and *Dauria*.

About an hundred Years ago, this City and the whole Province of *Siberia* became ſubject to the Czar, by the following Accident. *Jeremak Timeſeiewitz*, a very famous Robber in the Reign of Czar *Ilam Waſilewitz*, having plundered theſe and all the adjacent Countries, had greatly injured the Subjects of his *Czariſh* Majeſty; when he was purſued, he and his Companions fled up the River *Kama*, and from thence into the River *Iuzawaja*, which falls into the *Kama*, where lie the Lands of *Stroginoff*, famous for his vaſt Eſtate and Iron Works, which take up the greateſt Part of the Shore, and ſtretch to the Length of ſeventy *German* Miles. It was this rich Man's Grandfather that he applied himſelf to for Protection, and begged his Intereſt in obtaining his *Czariſh* Majeſty's Pardon, offering at the ſame Time by Way of Attonement, to reduce the whole Province of *Siberia* to be ſubject to the Czar. Purſuant to which he alſo obtained from the above-mentioned *Stroginoff*, Aſſiſtance of Barks, Arms, and neceſſary Workmen; and thus provided and accompanied with his Fellow Robbers in light Barks, he paſſed up the River *Serebrenſkoy*, which runs by the North-eaſt Part of the *Werchaturian* Hills, and falls into the *Iuzawaja*; thence he conveyed his Equipage by Land to the River *Tagin*, on which he ſailed into the *Tura*, took the Fort of *Tumeen*, ſituate thereon, razed it to the Ground, and advanced up the River *Tobol* to *Tobolſka*, where then reſided a *Tartarian* Prince, aged about twelve Years, whoſe Name was *Altanai Kutzjumowitz*, whoſe Deſcendant is ſtill honoured with the Title of the *Siberian Czarewitz*. This City he likewiſe attacked and took with ſmall Loſs, after which he carried the Prince Priſoner to *Moſcow*, and put the conquered City into a better Poſture of Defence.

After this Succeſs he proceeded down the River *Jetiſch*; but was ſet upon in the Night by a Party of *Tartars*, not far from *Tobolſki*, who cut off a great many of his Men, and he himſelf endeavouring to ſtep from one Bark into another, leaped ſhort, and by Reaſon of his heavy Armour, ſunk to the Bottom; his Body was carried away by the Force of the Stream and never found. In the mean while *Stroginoff* had obtained the Czar's Pardon for *Jeremak*, and ſeveral hundred *Muſcovite* Officers and Soldiers came and garriſoned the Places which he had taken; and from this Juncture the Czar's Sovereignty over *Siberia* is to be dated.

The *Tartars* that live round *Tobolſka*, for ſeveral Miles, are all *Mahometans*. I being ſomewhat curious to ſee their religious Worſhip, the *Waiwode* went with me, and by Virtue of his Authority, gave me an Opportunity which they will not allow another Perſon. Their Metſchets, called by other Authors Moſques, or Churches, had large Windows round them, all which were ſet open: The Floor was covered with Tapeſtry, beſides which there was no other Ornament. All Perſons at their Entrance leave their Shoes or Slippers at the Door, and ſet themſelves down in Rows, with their Legs under them: The Chief-prieſt ſat there in a white Callico Habit, and a white *Turkiſh* Turbant on his Head. Then I obſerved one behind the People cry with a hoarſe loud Voice, and after he had ſaid ſomething to them, they all fell on their Knees; then the Prieſt uttered ſome Words, and afterwards cried out, *Alla*, *Alla*, *Mahomet*, which the whole Aſſembly roared out after him three Times ſucceſſively, proſtrating themſelves on the Ground. This done, the Prieſt looked into both his Hands, as though he deſigned to read ſomething there, and repeated *Alla*, *Alla*, *Mahomet*: Then he looked firſt over his right Shoulder, then over his left, which all the People did after him, and ſo their ſhort Devotion was ended.

The *Mufti* or *Chief Prieſt* is an *Arabian*, whom they highly reverence; and they very much eſteem any Perſon that can either read or write the *Arabick* Language. This Prieſt invited us to his Houſe, which was near the *Metſchet*, and treated us with a Diſh of Tea. There are alſo in this *Calmackian* Country great Numbers of *Tartars* that are uſed for Slaves; as alſo ſome long impriſoned *Calmackian* Princes; all which are the Conſequences of Wars, which one Tribe of theſe barbarous Nations have carried on againſt another, and this in a deſert Country, more than wide enough for them all.

8. After I had provided myſelf with Barks, Soldiers for Convoy, and other Neceſſaries, I ſet forwards in the Name of God, on the 22d of *July* from the City of *Tobolſki*, falling down the River *Irtis*; paſſing *Tartarian* and *Oſtackian* Villages, and the Towns *Demionſkoy*, *Jamin*, &c. all on the South-ſide, where *Pennonka*, a ſmall River, falls into the *Irtis*. On the 28th of the ſame Month, we arrived ſafe at *Samaroſky-Jam*, where I took in freſh Rowers, and ordered the Maſts to be erected in our largeſt Veſſels, in order to ſail up the River *Oby*, if the Wind proved favourable; for the *Irtis* diſcharges itſelf into the *Oby*, not far from this Town of *Samaroſky-Jam*.

The River *Irtis* appears to be a white light Water; it riſes from the Hills into the *Kalmackian* Country; its Courſe is from the South to the North-Eaſt; and it paſſeth down through the two Lakes of *Kabako* and *Saiſan*. Its whole South-Eaſt Shore, from Beginning to End, is all high Hills, on which grow ſome Cedars diſperſed here and there. The North-Weſt Shore is low Paſture Ground, and on this Side are a prodigious Number of great Black Bears, Wolves, and Red and Grey Foxes. Not far from *Samaroſkoy-Jam* is a Rivulet, called *Kaſunka*, which runs into the *Oby*, and upon its Banks affords the beſt Grey Squirrils in all *Siberia*, (except only the Wood of *Heetkoy Wollock*) which are called from the River, *Kaſunka*.

Here I am to relate what the Inhabitants told me as a Truth: That laſt Year, in Harveſt-Time, early in the Morning, an extraordinary large Bear broke into one of the Cow-Houſes in this Town, ſeized a Cow, held her faſt by the Shoulder with his two fore Feet, and carried her off, going on his hinder Feet only. Upon the Lowing of the Cow, the Owner and ſeveral of the Neighbours came out, ſaw it, and all run at the Bear with Fire-Arms and Clubs; notwithſtanding which, he would not part with his Prey till they fired and killed the Cow.

Moſt of the Inhabitants here are *Ruſſian Jemſkicks*, who are in the Pay of his *Czariſh* Majeſty, for which they ſupply the *Waywodes* that are ordered this Way, and all other Perſons who travel on the Czar's Affairs in *Siberia*, with free Carriages and Men to work; and are obliged to carry them by Water in Summer, and over the Ice in Winter, as far as *Surgut*, ſituate on the *Oby*, at a very reaſonable Price. Theſe People keep great Numbers of Dogs, which they make uſe of to travel with in Winter, for it is utterly impoſſible to paſs this Country with Horſe Sleads, by Reaſon that ſometimes the Snow on the *Oby* is above a large Fathom deep, ſo that no Horſe could travel.

Theſe Dogs are yoaked two to each Narta or Slead, which is for that Purpoſe made very light and thin; and carry from two to three hundred *German* Weight. The Slead nor the Dogs are not hurt by the Snow, but both run very ſwiftly over, leaving a Trace only of the Depth of a Finger's Breadth. Some of theſe Dogs know beforehand, whether there is like to be any Work for them, as we were vainly told; and if they are likely to be employed, they herd together in Crouds, and howl in a diſmal Manner, whence their Maſters draw their Preſages. If when they are on the Way, they are inclined to hunt, the Maſter takes his Gun on his Shoulder, and puts on his long ſliding Shoe, with which he goes over the Ice, takes his Dogs with him, and ſteps a little Way into the Wood, turns up all Manner of wild Game, perhaps a fine black Fox; and then they divide what is taken fairly, for the Skins of the Game are the Maſters, and the Fleſh belongs to his Dogs. Thus they make a very profitable Uſe of theſe draught Dogs; which are middle ſized, ſharp noſed, with long erected Ears, and carry their Tails crooked; ſome of which are very like Wolves or Foxes, inſomuch that as they lie aſleep in the Woods, they are ſometimes by Miſtake ſhot for one of thoſe two Species: To countenance which, it is alſo affirmed, as a Thing certain, that theſe Dogs mix their Strain, by a promiſcuous Copulation with that of Wolves and Foxes;

Foxes; whence, as our Informer aſſerted, whenever a Courſing Match happens among the Inhabitants, they find a great Number of both Species near the Villages, as has been frequently obſerved.

Having all Things prepared by the *Samaroſiſchian Jemſkicks* in order to advancing on my Journey, I departed thence on the 29th of *July*, and with my two large *Doſchenicks* or Tide Ships, I drove down the moſt convenient Arm of the *Irtis*, to the celebrated River *Oby*, which I reached early the next Day. I found her Eaſtern Shores abounding with Hills; but the Weſt intirely flat Land, as far as was viſible to us. The *Oby* was half a Mile over at this Place.

9. On the 6th of *Auguſt* we reached the City of *Surgut*, ſituate on the Eaſtern Shore of the *Oby*: The inland Country for ſome Diſtance Eaſtwards of *Surgut* as alſo farther up the *Oby*, about or near the City of *Narun*, produces Sables, ſome of which are pale, and others as black as Pitch, the fineſt and largeſt Ermines in all *Siberia* and *Ruſſia*, and above all black Fox-Skins, which are the very fineſt and richeſt any where: Among the beſt of theſe Fox Skins, which are reſerved for his Czariſh Majeſty, there are ſome which are valued from two to three hundred *Rubles* a Skin, that are ſo very black, that the blackeſt *Daurian* Sable is not comparable to them. Theſe Foxes are caught by Dogs; of which the Inhabitants related the following very remarkable Accident, in ſtrong Terms, but let the Reader believe as he pleaſes.

Laſt Year, near a Village adjacent to *Surgut*, by Day-light, an extraordinary fine Fox diſcovered himſelf, upon Sight of which a Boor let looſe his Dogs: The Fox was within Sight of the Peaſant, and the Dogs ſoon got up to him; but when this ſubtle Animal ſaw that it was impoſſible to eſcape the Hounds by Flight, he fawning run to meet them, tumbled on his Back before them, and licked their Mouths, run backwards and forwards and played with them; the unexperienced Dogs ſoftned by his fawning Treatment, did the ſly Fox no Manner of Hurt, but ſuffered him to eſcape into the Wood; ſo that the poor Peaſant having no Fire-Arms at Hand, notwithſtanding all his Vigilance, did for that Time loſe Sight of this rich Booty.

But two Days afterwards the ſame Fox returned to the ſame Place; which the Peaſant was no ſooner aware of, but he took another, and his beſt Dog with him, which was white haired; and full freight with freſh Hopes of this rich Game, he runs this Dog at the Fox, but the black Dogs flew towards him, and while he was fawning on them, the white Hound was ſo cunning as to fawn at firſt, but being come within Reach, he took a good Leap at him, and had certainly ſeized him, if he had not, by leaving a Piece of his Side behind him, ſprung nimbly from him, and eſcaped into a thick Wood, where it was in vain to look for him.

The Boor was at laſt however too hard for this ſubtle Fox, for he coloured his white Dog all over black, that the Fox who was become ſhy of him, might not know him; which done he went the third Time on this Courſe with his dy'd Dog, and was ſo fortunate that his Hound ſmelt him out; upon which the Fox ſeeing the diſguiſed Dog, fawn'd on him without the leaſt Fear, taking him for one of the firſt black Hounds, with whom he deſigned to play again; and in this Poſture they approached each other, when the Dog watching his Opportunity, graſped the careleſs Fox, and ſo caught this ſly Beaſt with his fine Skin, which proved very well worth the Peaſant's Trouble, he ſelling it for an hundred Rubles.

Here are great Numbers of thoſe which are called Croſs-Foxes, whoſe Skins are of a mixt black and grey, but very few perfect black. Red Foxes and *Hyæna's*, as alſo Beavers are very plentiful in this Country; but the *Hyæna's* are very miſchievous and live on Prey.

They, like the *Linx's*, place themſelves in the Trees, lie very ſtill and cloſe, till a Hart, an Elk, a Doe or an Hare runs under the Tree; from which they leap upon him, eat a Hole in his Body, and continue gnawing, till the Beaſt by Force of Pain falls down, and conſequently comes to their Share. One of the *Waiwods* kept a Hyæna alive for his Diverſion, which he put into the Water, and let two Water Dogs looſe at him; but he immediately leaped upon the Head of one of them, and held him ſo long under Water till he drowned him; after which he ſwam to the other, whom he had treated in the ſame Manner, if he had not been interrupted by throwing Wood at him, till the Dog, taking his Opportunity, ſwam out.

But with Regard to the Beavers, which herd here in great Numbers, ſome very ſtrange Particulars are related as Truths, though they ſeem ridiculous; wherefore I take it to be worth my Pains to touch a little on their Properties, of which the following are all ſeriouſly averred to me. The greateſt Part of their Food being Fiſh, they harbour on the Shores of thoſe Rivers which abound moſt with Fiſh, and which are not much troubled with Paſſengers. In the Spring they not only herd together, but aſſemble themſelves into a Society, and pick out ſome, and ſeize others as Priſoners, whom they carry to their Holes, and oblige them to ſerve as Slaves. They fell Trees with their Teeth, carry them to their Dwellings, and there hack out their Wood to a certain Length, which they artificially fix together like Joyners-work, and Cheſts, and there they lay up ſeparately all their Summer-ſtore of Proviſions. And about the Seaſon of this Preparation, the Time of the Female Beavers Bringing-forth approaches; upon which the Inhabitants told me improbable Things of their Practices. They ſay, that againſt that Juncture the whole Neighbourhood go together, and frequently gnaw a Tree of above an Ell Circumference, for the Length of above two Fathom, even to the inner Pith, till it falls down; that they are expert enough to bring it to their Holes by Water, and that they can rear it upright before the Entrance of their Holes, ſo artificially, that the Tree ſtands perpendicularly in the Water above an Ell deep, and yet touches no Ground; and that ſo firm and immoveable in its Line or Centre, that though the Wind blow ever ſo hard, the Tree remains firm in its Place. All which ſeems unnatural; and yet all the *Siberians* that I ever diſcourſed unanimouſly affirmed it; and added ſeveral other Things concerning theſe Beaſts, which ſeem rather the Effects of human Reaſon, than within the Compaſs of that Inſtinct which guide irrational Brutes; all which I ſhall not trouble myſelf to deſcribe at large.

At the ſame Time, ſome aſcribe this Erection of the Tree before the Beaver-holes, to the Conjuration of the *Oſtiacks*, and other Heathens, who live in all Parts thereabouts. Whether it is ſo or not, God knows; but it is certain, that theſe Beaſts have Slaves amongſt them, which in all Parts here are known to the Peaſants, by reaſon they are lean, and their Furr worn off by Labour.

The *Ruſſians*, as well as the *Oſtiacks*, which go out a Beaver Hunting, always avoid the Deſtruction of a whole Neſt or Kennel; for if they kill or ſhoot all the reſt, they leave a Couple, Male and Female remaining, in order to furniſh them with freſh Game in the ſame Place the next Year.

10. Having paſſed ſeveral Miles up the *Oby*, Part of which we ſailed, and towed the reſt with a Line, on the 13th of *Auguſt* we paſſed by the Mouth of the *Wagga*, which riſeth out of the *Truganian Mountains*. This is a large River, its Water is brown, and its Courſe North-North-Weſt into the *Oby*, on this Side of *Narun*, at which City we arrived on the 24th of the ſame Month. It is ſituated on the Side of the River in a fine Country, and is provided with a Fortreſs or Caſtle, and an indifferent Garriſon of *Coſſacks*. All the Country around this City abounds with Croſs and Red Foxes, Beavers, Ermines, Sables, &c. which afford fine Furs.

The Banks of the *Oby* to this Place are inhabited by a People called *Oſtiacks*; who worſhip Terreſtrial Gods, but acknowledge, that according to Nature there muſt be a Lord in Heaven, that governs all; nevertheleſs, they do not pay any Worſhip at all to him, but have their own Gods made of Wood and Earth, in ſeveral human Shapes. Some of the richeſt amongſt them dreſs theſe Deities in ſilken Cloaths, made after the Faſhion of thoſe of the *Ruſſian Women*. All of them have theſe Idols placed in their Huts, which are made of Barks of Trees, ſewed together with Harts Guts. On one Side of the God hangs a Bunch of human and Horſe Hair, and next that a wooden Veſſel with Milk Pap, with which they daily ſupply their Idols, and thruſt it into their Mouths with a Spoon made for that Purpoſe; but in as much as theſe Idols cannot ſwallow this their Milk Diet, it runs out again at both Sides of their Mouth, down their whole Bodies, in ſuch a filthy Manner as is ſufficient to diſguſt one from eating of that Food. When this nice God is to be worſhipped or prayed to, his Adorers ſtand bolt upright, and toſs their Head up and down, without bending their Backs in the leaſt; beſides which, they chirrup or whiſtle thro' the Lips, as we do when we call a Dog; and in theſe Fooleries conſiſt their Devotion.

They call their Gods *Saitan*, and might indeed very well ſay *Satan*. Once ſeveral *Oſtiacks* came on board the Ship in which I was, to ſell us Fiſh, and one of my Servants had a *Nurenburgh* Bear in Clock-work, which, when wound up, drummed and turned his Head backward and forward, continually moving his Eyes till the Work was down. Our People ſet the Bear at play a little; and as ſoon as ever the *Oſtiacks* ſaw it, all of them performed to it their cuſtomary Religious Worſhip, and danced exceſſively to the Honour of the Bear, nodding their Heads, and whiſtling at a great Rate. They conſidered our Bear as a right *Saitan*, crying out, What are our *Saitans* which we make? If we had ſuch a *Saitan*, we would hang him all over with Sables and Black Fox Skins. They alſo aſked, whether this Clock-work was to be ſold; but I ordered it out of their Sight, to avoid adminiſtring any Occaſion to Idolatry.

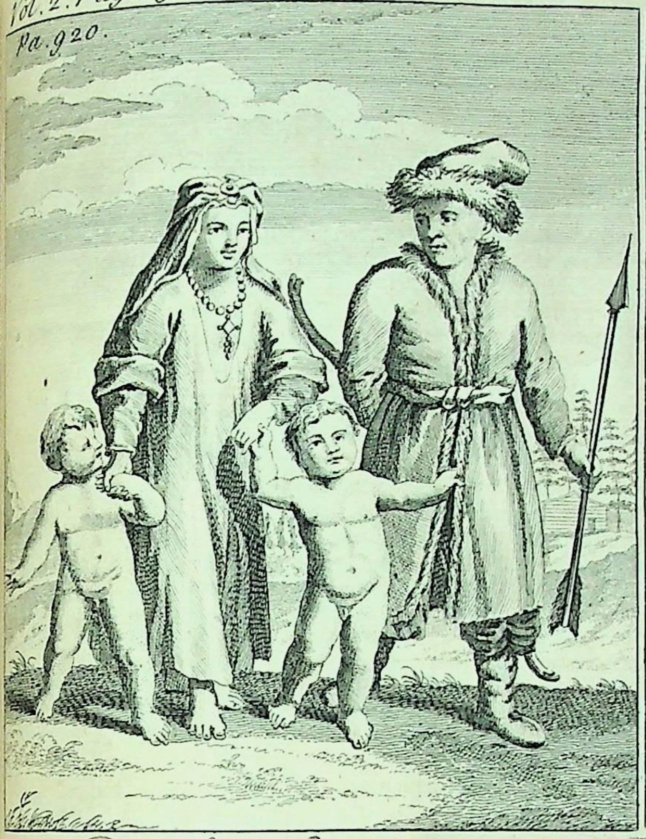
As for what farther concerns theſe Heathens, they have as many Wives as they can maintain, and marry their near Relations without any Scruple: If a Relation dies, they cry inceſſantly for ſeveral Days, covering their Heads, and ſitting on their Knees in their Huts, and will not ſuffer themſelves to be ſeen; but they carry the Corps on Poles to the Ground to be buried. They are a poor People, and live very miſerable in ſorry Huts. They might, indeed, live very happily and well, ſince all Parts near the *Oby* abound with great Quantities of rich Furrs; beſides that, there is extraordinary good Fiſhing in that River, in which are very fine Sturgeons, Jacks, *&c.* inſomuch that twenty great Sturgeons may be bought of them for three Penny-worth of Tobacco; but they are ſo horrid lazy, that they do not deſire to get any more than will barely ſuffice them annually for the Winter: For when they travel, they eat moſtly Fleſh, eſpecially when they are on the Water fiſhing, for then they live on nothing elſe. They are all of a middle Stature, moſt of them yellowiſh or red hair'd, and their Faces and Noſes diſagreeably broad; they are weak and unable to labour hard, not at all inclined to Wars, and unfit for Military Exerciſes. Bows and Arrows are their Weapons, with which they ſhoot wild Beaſts, tho' they are not much addicted to this neither. Their Cloaths conſiſt of Sturgeon and other Fiſh Skins; they uſe neither Linnen nor Woollen; their Shoes and Stockings are faſtened together, and they wear a ſhort Coat with a Cape and Hood, which in Caſe of Rain they pull over their Heads. Their Shoes are alſo made of Fiſh-ſkins, and are ſowed faſt to their Stockings, but not cloſely; ſo that their Feet muſt neceſſarily be always wet, when they are upon the Water. Notwithſtanding the Thinneſs of their Cloathing, they will bear extraordinary great Cold; for if it be but a common Winter, they are no better clad than has been mentioned; but if the Winter prove hard, thoſe who are thus clad are compelled to put another Coat of the ſame Sort of Fiſh-ſkins over that; and they expreſs this ſevere Weather amongſt one another, by ſaying, *Do you like the Winter that forces one to wear two Coats of Skins?* They ſometimes go a Hunting in the Winter with a ſingle Coat only, and their Breaſts bare, depending upon warming themſelves quickly with ſliding and running over the Ice in their Schaits or ſliding Shoes; but if, as it ſeveral Times happens, they are overtaken by an extraordinary ſevere Froſt, and it ſeems utterly improbable to eſcape it, or ſave their Lives, they with the utmoſt Haſte throw off their Fiſh-ſkin Coat, fling themſelves into the deep Snow, and voluntarily freeze to Death; the Reaſon why they pull off their Coat is, only that they may die the ſooner, and with leſs Pain.

The Womens Cloaths are almoſt like the Mens; the Mens greateſt Diverſion is Bear-hunting, to which Sport they gather together in Crowds, armed with no other Weapon than a ſharp Iron like a large Knife, fixed to a Stick about a Fathom long. As ſoon as they have put up a Bear, they run at him with theſe ſhort Spears, and having killed him, they cut off his Head, ſtick it upon a Tree, run round it, and pay the profoundeſt Reſpect to it: After which, they run to the dead Body with repeated Cries, aſking the Bear, *Who killed you?* The *Ruſſians*, they anſwer, themſelves. Who cut off your Head? *A* Ruſſian *Ax.* Who cut up your Belly? A Knife which a *Ruſſian* made. And more ſuch-like Follies. In a Word, the *Ruſſians* bear all the Blame, and they are entirely innocent of the Murther of the Bear.

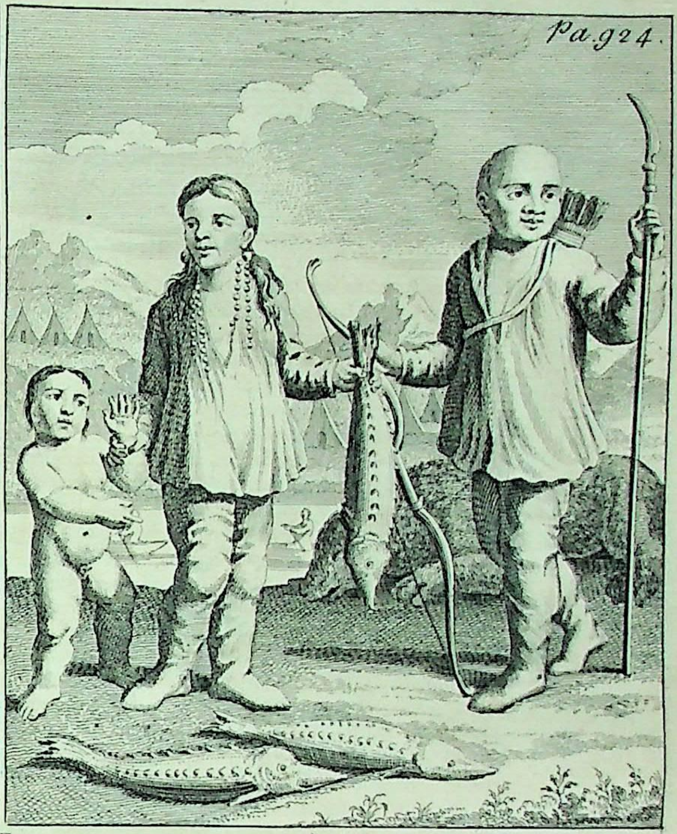
11. They have a Sort of Petty Princes amongſt them, one of which is called *Kneſka*, or Prince *Kurza Muganak*, whoſe Authority extends over ſome Hundreds of Huts; and he lays on and collects the Tribute which they are obliged to pay to the *Waiwodes* of his Czariſh Majeſty. This Potentate came with all his *Princely* Family and Servants on board me, paid his Compliment, and brought me a Parcel of freſh Fiſh as a Preſent; which I requited by preſenting him with ſome Brandy and Tobacco, with which he went on Shore very well contented; but returned immediately, and invited me to his Princely Palace. I being very curious to ſee this great Lord in his ſumptuous Place of Reſidence, went thither, though I had no great Appetite to his Entertainment. Coming on Shore, the introductory Ceremonies were not very particular. He acted the Maſter of the Ceremonies himſelf, and without much Solemnity brought me to his magnificent Apartment, which, like the other Huts of the *Oſtiacks*, was compoſed only of Barks of Trees ſlightly ſewed together. I found here four of his Wives, two old and two young; one of the young ones had a red Cloth Coat on, and was ſet off with all Sorts of Glaſs Corals about her Neck and her Middle, and in the Curls of her Hair, which hung down on both Sides of her Head in two Rows; ſhe had alſo in her Ears great Thread-wrought Rings, with long Strings of Coral hanging at them. Each of theſe Princeſſes preſented me with a Barrel made of Birch-Bark ſewed together, and full of dry Fiſh; but the youngeſt gave me a Barrel of Sturgeon Fat, which was as yellow as Gold. After I had received theſe Preſents, I cauſed them to be treated with Brandy and Tobacco, which is a great Delicacy amongſt them. In this whole Princely Building, I ſaw no other Furniture than ſome Cradles and Cheſts made of Barks of Trees ſewed together, in which the Bed-Cloaths lay, being of planed Wood-Shavings, which yet were almoſt as ſoft as Feathers. Theſe Cradles ſtand at one End of the Hut, to avoid the Fire which is kindled in the Middle, and the Children lie naked in them. I alſo ſaw a Copper Kettle there, and ſome other Veſſels compoſed of Barks of Trees ſewed together, in which they boil their Victuals on the live Coals or Embers, for in the Flame they cannot do it.

To ſmoke Tobacco, (to which all, both Men and Women, are very much addicted) inſtead of Pipes they uſe a Stone Kettle, in which they ſtick a Pipe made for that Purpoſe, and at two or three Drawings, after they have taken ſome Water in their Mouths, can ſuck out a whole Pipe; and they ſwallow the Smoak, after which they fall down and lie inſenſible, like dead Men, with diſtorted Eyes, both Hands and Feet trembling for about Half an Hour. They foam at the Mouth, ſo that they fall into a Sort of Epilepſy; and we could not obſerve where the Smoak vented itſelf, and in this Manner ſeveral of them are loſt. For as they

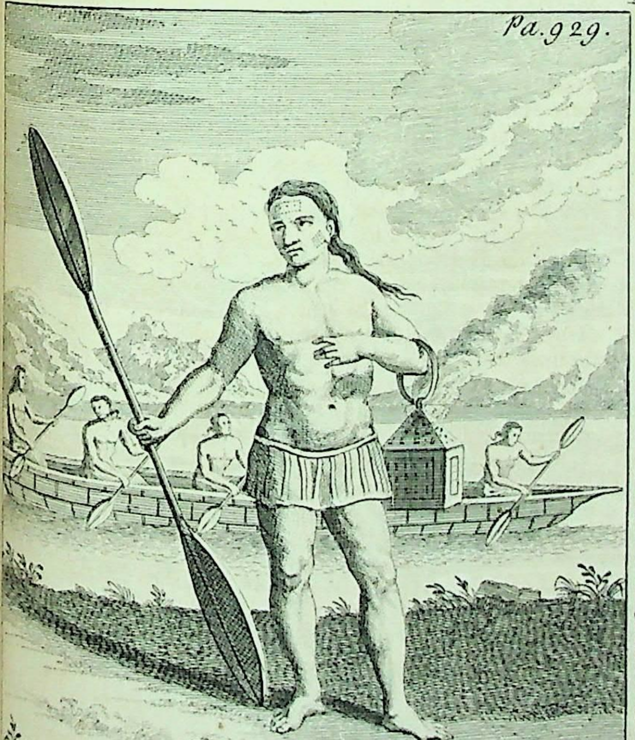
Vol. 2. Page 920.



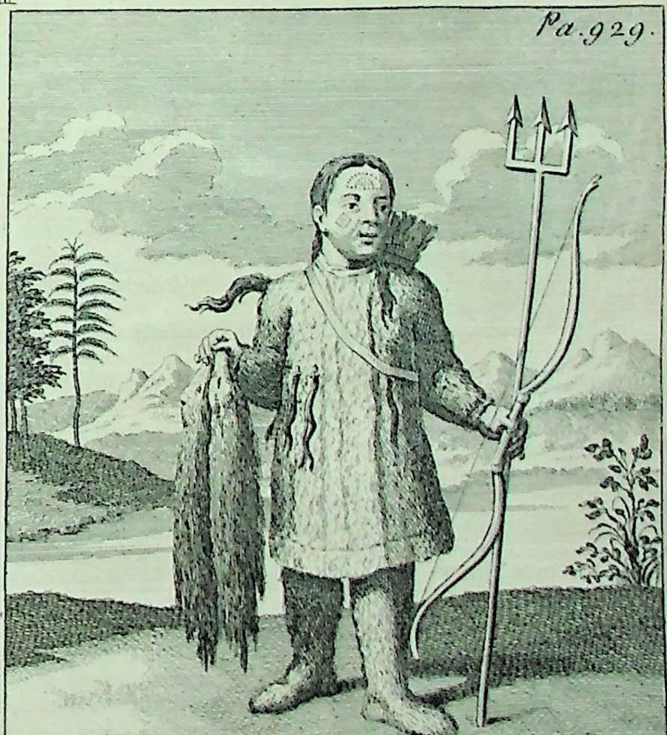
Wogulski Tartars on the Frontiers of Siberia



Ostiacks on the Banks of the River Oby



Nisovian Tunguzians in their Summer Dreſs



A Nisovian Tunguzian in his Winter Habit

they are upon the Water travelling, or ſitting by the Fire, ſome of theſe violent Smoakers fall into the Water and are drowned, or into the Fire and are burned; but ſome, after they have ſucked in the Smoak, let it out at their Throats again, and theſe are in a better Condition than the other, tho' ſome weaker Conſtitutions are ſometimes ſuffocated even thus with the Smoak which they let down into their Bodies.

It is further obſervable, that they are very angry, if any of their Relations, though long dead, are named or mentioned. They are utterly unacquainted with all Things before their own Life-time, and do not pretend to give any Relation of them; nor can they either write or read; and though they are very fond of Bread when they meet with it, they never trouble themſelves with the Tillage of Land, or Culture of Gardens.

They have neither Temples nor Prieſts. Their Shipping or Boats, on the Outſide, are Barks of Trees ſewed together, and the Inſide Ribs of very thin Wood; theſe are two or three Fathom long, and but an Ell broad; and yet they can ſecure themſelves in them in great Storms till they get on Shore. In Winter-time theſe *Oſtiacks* live entirely under Ground, there being no other Entrance to their Caves, but a Hole left open on the Surface of the Earth to let out the Smoke: If, as is frequent, a great Snow falls, and it happens that, as (according to their Cuſtom) they lie aſleep naked round the Fire, Part of their Body which lies a little diſtant from the Fire, is two or three Fingers thick covered with Snow; when they perceive themſelves cold, they turn about to the Fire, and beſtow the beſt Place on the cold Part of their Body a little while, and ſo take no more Notice of it, being a very hardy People in reſpect to the Variation of Weather.

When an *Oſtiack* is jealous of one of his Wives with another Man, he cuts ſome Hair from the under Part of a Bear's Skin, which he carries to the Man whom he ſuſpects: If he be innocent, he then accepts it, but if he be guilty, they believe he dare not venture to touch it, but muſt acknowledge the Truth, and then amicably makes up the Buſineſs with the Huſband, and the Wife is ſold; for if any ſhould preſume to be ſo raſh as to take the Hair though he was guilty, they tell us they are aſſured, that the Bear's Skin from whence that Hair was cut off, will again become a living Bear, which, after the Expiration of three Days, will appear in the Wood, and tear the perjured Wretch to Pieces. On this Occaſion they invoke Bows, Arrows, Axes, and Knives, and firmly believe that if the guilty Perſon takes any of theſe, he ſhall certainly be killed by thoſe individual Inſtruments which he accepts, within the Space of a few Days; which is not only averred by themſelves, but unanimouſly vouched alſo by the *Ruſſians* who live in the Neighbourhood of theſe Parts. But enough of theſe *Oſtiacks*. The Shore of the River *Oby*, on which they live, is all untilled Land from the Sea to the River *Tom*, by reaſon of the extreme Cold; ſo that no Corn, Fruit, or Honey, is here produced; there being only a few Nuts which grow on the Cedar-trees.

12. After having paſſed ſome Weeks on the River *Oby* amongſt the barbarous *Oſtiacks*, we went by the City of *Keetſkoy*, ſituate on the River *Keta*, which falls North-weſt into the *Oby*. On the 28th following, I paſſed by the Cloiſter of St. *George*, and the 3d of *October* I went by the Village of *Worozeikin*; and on the ſame Day died *John George Weltſel*, a Painter, one of my Retinue, who was born at *Steſwick*, after he had kept his Bed fourteen Days on Account of a Swelling juſt above his Heart, which was aggravated by a Fever.

On the 7th of *October*, I ſafely arrived at the Village *Makofſkoi*, and there cauſed *Weltſel's* Corps to be buried on a Hill near the River, in the Middle of the Village. I muſt own that this Voyage upon the River *Keta* was more irkſome and melancholy than all the whole Way before; we were obliged to labour for five Weeks againſt the Stream, without ſeeing ſo much as any Man, beſides now and then an *Oſtiack* that appeared, and immediately hid himſelf in the Woods. This Sort of *Oſtiacks* ſpeak a different Language from thoſe on the *Oby*; but their Idolatry is the ſame.

In this tedious uneaſy Paſſage, I was expoſed to much Care and Anxiety; for our Proviſions, and eſpecially the Meal, grew very low, by reaſon I had not recruited otherwiſe than with Fiſh ſince my Departure from *Tobolſka*, and had been too charitable to the *Oſtiacks* on board our Ship, who, when we found it requiſite, were obliged to tow us along with a Line; by which continual Fatigue they were become ſo weak, that we were obliged to keep a perpetual Watch over them to prevent their Deſertion.

Notwithſtanding all this Care, no Day paſſed in which ſome did not run away. And at laſt the Coldneſs of the Seaſon, and their perpetual Labour, render'd them perfectly unſerviceable; and if I had not before-hand written to the Governor of *Jenizeſkoy* for Men to aſſiſt me, which he diſpatched away to meet me with the firſt Opportunity, I and my Retinue had been probably loſt; for not being within thirty Miles of the Village when the Aſſiſtance came, we had been certainly frozen up in the River, and had periſhed by Famine, and the deep Snows which fall there; for this River is utterly unnavigable in Winter.

I was ſcarce got from *Makoſſkoi* before the River froze up. The Courſe of this River is, for the moſt Part, through an even Country, abounding with Woods and ſmall Shrubs; the Water in ſome Places runs in ſuch a crooked Channel, that where we dined at Noon, we were obliged to ſup at Night, or at leaſt not far from thence. Here are great Quantities of Woodcocks, Pheaſants, Partridges, and other Wild fowl; and it was a very diverting Sight to ſee great Flocks of Woodcocks and Pheaſants come to the Brink of the River to drink, which gave us an Opportunity of ſhooting as many as we pleaſed in our Paſſage, and when our Proviſions grew ſcarce, afforded us no ſmall Aſſiſtance. Here grow alſo Strawberries, black and red Currants and Black-berries; but the River doth not yield great Quantities of Fiſh.

13. Amongſt the Hills which are ſituate North-eaſt of, and not far from hence, the *Mammuts* Tongues and Legs are found, as they are alſo particularly on the Shores of the Rivers *Jenize*, *Trugan*, *Mongamſea*, *Lena*, and near *Jakutſkoi*, even as far as the *Frozen Sea*. In the Spring, when the Ice of this River breaks, it is driven in ſuch vaſt Quantities, and with ſuch Force by the high ſwollen Waters, that it frequently carries very high Banks before it, and breaks off the Tops of Hills, which falling down, diſcover theſe Animals whole, or their Teeth only, almoſt frozen to the Earth, which thaw by Degrees. I had a Perſon with me, who had annually gone out in Search of theſe Bones; he told it to me as a real Truth, that he and his Companions found the Head of one of theſe Animals, which was diſcovered by the Fall of ſuch a frozen Piece of Earth. As ſoon as he opened it, he found the greateſt Part of the Fleſh rotten, but it was not without Difficulty that they broke out his Teeth, which were placed in the Fore-part of his Mouth, as thoſe of the Elephants are; they alſo took ſome Bones out of his Head, and afterwards came to his Fore-foot, which they cut off, and carried Part of it to the City of *Trugan*, the Circumference of it being as large as that of the Waiſt of an ordinary Man. The Bones of the Head appear'd ſomewhat red, as though they were tinctured with Blood.

Concerning this Animal there are very different Reports. The Heathens of *Jakuti*, *Tunguſi*, and *Oſtiacki*, ſay that they continually, or at leaſt, by Reaſon of the very hard Froſts, moſtly live under Ground, where they go backwards and forwards; to confirm which they tell us, that they have often ſeen the Earth heaved up when one of theſe Beaſts was upon the March, and after he was paſſed, the Place ſink in, and thereby make a deep Pit. They further believe, that if this Animal comes ſo near to the Surface of the frozen Earth as to ſmell the Air, he immediately dies, which they ſay is the Reaſon that ſeveral of them are found dead on the high Banks of the River, where they unawares came out of the Ground.

This is the Opinion of the Infidels concerning theſe Beaſts, which are never ſeen.

But the old *Siberian Ruſſians* affirm, that the *Mammuth* is very like the Elephant, with this Difference only, that the Teeth of the former are firmer, and not ſo ſtraight as thoſe of the latter. They alſo are of Opinion, that there were Elephants in this Country before the Deluge, when this Climate was warmer, and that their drowned Bodies floating on the Surface of the Water of that Flood, were at laſt waſhed and forced into ſubterraneous Cavities; but that after this univerſal Deluge, the Air, which before was warm, was changed to cold, and that theſe Bones have lain frozen in the Earth ever ſince, and ſo are preſerved from Putrefaction till they thaw, and come to Light; which is no very unreaſonable Conjecture. Though it is not abſolutely neceſſary that this Climate ſhould have been warmer before the Flood, ſince the Carcaſſes of the drowned Elephants were very likely to float from other Places ſeveral hundred Miles diſtant, to this Country, in the great Deluge which covered the Surface of the whole Earth. Some of theſe Teeth, which doubtleſs have lain the whole Summer on the Shore, are entirely black and broken, and can never be reſtored to their former Condition: But thoſe, which are found in good Caſe, are as good as Ivory, and are accordingly tranſported to all Parts of *Muſcovy*, where they are uſed to make Combs, and all other ſuch like Things, inſtead of Ivory.

The abovemention'd Perſon alſo told me, that he once found two Teeth in one Head that weigh'd above twelve *Ruſſian* Pounds, which amount to 400 *German* Pounds; ſo that theſe Animals muſt of Neceſſity be very large, though a great many leſſer Teeth are found. By all that I could gather from the Heathens, no Perſon ever ſaw one of theſe Beaſts alive, or can give any Account of its Shape; ſo that all we heard ſaid on this Subject, ariſes from bare Conjecture only.

But to return to my Travels, in which I durſt not venture to proceed any farther by Water, but was obliged to go by Land from the abovementioned Village of *Makofskoy*. After I had advanced ſixteen Miles, on the 12th of *October* I ſafely arrived at the City of *Jenizeſkoy*, where I reſted for ſome Time, being obliged to wait till the Roads were ſufficiently frozen to be paſſable with Sleads; though in the Interim, I prepared to proceed on my Journey as ſoon as I ſhould be informed that the Rivers *Tunguſka* and *Jenizea* were intirely frozen up. This Delay furniſhed me with an Opportunity of thoroughly obſerving the City of *Jenizeſkoy*.

It is ſo called from the River, and in Order to make the adjacent Country the more diſtinctly known. The River which runneth by and below the City, is called *Jeniza*, ariſeth out of the *Calmackian* Mountains, and takes its Courſe Northwards, almoſt in a direct Line, to the *Tartarian* or *Frozen Sea*; very different from the *Oby*, which diſcharges her Water out of her Boſom, which is afterwards conveyed to the Sea by indirect Branches. Below the City the River is a full third part of a Mile over; its Water is white and light, but doth not much abound with Fiſh. Somewhat above ſeven Years paſt the Citizens of *Jeniz ſkoy* fitted out a Ship, and ſent her on the Whale Fiſhery; but the Enterpriſe did not ſucceed, and they never yet heard where their Ship was loſt. Wherefore they imagine that it was ſwallowed up in a violent Inundation of Ice. But from the City of *Fuganai*, ſituated lower down this River, ſeveral Perſons go out yearly on the Whale-Fiſhery; but they carefully watch their Opportunity, when the Wind blows from the Land, and the Ice drives towards the Sea, at which Seaſon they purſue their Fiſhing very ſucceſsfully, and without Danger. The City of *Jenizeſkoy* is large and populous, and the Fortreſs indifferently ſtrong. Several Villages and Cloiſters extend themſelves for the Space of ſome Miles round the City: And the Land is very proper for Agriculture. Corn, Fleſh, Cattle, and wild horned Beaſts, and Fowl are very plentiful here. Subject to the Juriſdiction of this City are ſeveral *Tunguzian* Heathens, who moſtly live on the *Jenizea*, *Tunguſkay*, and the Inland Neighbouring Country. Theſe pay a Tribute of Furs to the Czar for every Bow, taking that to be a Man and Woman reckoned together. No large Fruit-Trees grow here, by Reaſon of the extream Cold, and the only Fruits are black and red Currants, Strawberries, Gooſeberries, and ſuch like.

14. After a long Stay at this Place for the Sake of Refreſhment, I ſet forwards in a Slead, and on the 20th of *January* reached the Iſland *Ribnoy*, which ſignifies *Fiſh-Land*. This Iſle is ſituated in the Midſt of the River *Tanguſka*, which is plentifully ſtored with Fiſh: Here are Sturgeon, Jacks, and Roach of an extraordinary Size. The Iſland is chiefly inhabited by *Ruſſians*. On the 25th of the ſame Month we came to the City of *Ilinſkoy*, ſituate on the River *Ilni*, which runneth from the South South-Weſt to the North North-Weſt, and falls into the *Tunguſka*. Thus far the River *Tunguſkoy* is a little inhabited by *Tunguzians* as well as *Ruſſians*.

Some Days Journey from hence is the great rocky Waterfall, called *Schaman Schamanſkoy*, or the Necromantick Fall, becauſe of a famous *Schaman* or *Tunguſchian* Conjurer who lives there. This Waterfall is a Deſcent of half a Mile long. Its Shore is covered with high Rocks, ſo that the whole Ground of this Water is pure Stone, which indeed affords a hideous Proſpect, and makes ſuch a diſmal loud Noiſe, that its rapid Courſe over both viſible and inviſible Rocks, may in ſtill Weather be heard at the Diſtance of above three *German* Miles. The *Doſchanicks* or Ships which are obliged to come up againſt the Stream, require five, ſix or ſeven Days, though empty, to tow up this dangerous Water, by caſting of Anchors and the Help of ſeveral Men; nay farther in ſome ſhallow Places where the Water is very low, and the Rocks lie high, they are obliged to tow a whole Day before they can get forwards ſo much as a Ship's Length, and the Ship frequently ſtands an End on the Stem; a Thing incredible almoſt except to Eye Witneſſes.

The Ships which paſs up and down, are always unladen, and their Cargoes carried by Land till they get paſt this dangerous Place, when they are again loaded. I have myſelf ſeen the Ships which ſailed down this Torrent, perform it in twelve Minutes; ſo prodigious rapid is this Deſcent: And there are very few either *Ruſſians* or *Tunguzians* that know how to bring down the Ships, which muſt be provided with a Rudder fore and aft, and Rowers on both Sides; the Pilots give their Orders very dexterouſly to the Rowers by a Handkerchief; for no Voice can be heard, by Reaſon of the Noiſe of the Water. The Ships are alſo cloſe ſhut every where, that the Waves which frequently fly over them, may not find Entrance into, and conſequently ſink them. Several Ships, notwithſtanding theſe Precautions, are caſt away here every Year, eſpecially when unexperienced Pilots undertake the bringing them down, being very often ſhattered to Pieces againſt the hidden Rocks. And the Men are in ſuch Caſes inevitably loſt, and immediately ſtifled by the rapid Stream, or daſhed to Pieces by the Rocks; wherefore their Bodies are very rarely found; and the Shores are full of Croſſes, erected in Remembrance of thoſe drowned there. In the Winter Seaſon, the Water of this River is ſo high that it ſtands almoſt level with the Flood, and it hath been ſo overflowed from the Icy-Sea, that ſeveral have paſſed over it with Ice-Sleads: But in the Summer the Water is very low, as we have already hinted.

Some Miles from hence live ſeveral *Tunguzians*, amongſt others, their famed *Schaman* or *Diabolical Artiſt*. The Reports which paſſed concerning this Cheat made me very deſirous to ſee him. Wherefore, in order to gratify my Curioſity, I went to thoſe Parts, to viſit him and his Habitation. I found him a tall old Man, that had twelve Wives, and one who was not at all aſhamed of the Art he pretended to: He ſhewed me his Conjuring Habit, and the other Tools which he uſed. Firſt I ſaw his Coat, made of joined Iron-work, conſiſting of all Manner of Repreſentations of Birds, Fiſhes, Ravens, Owls, &c. beſides ſeveral Beaſts and Birds Claws, and Bills, Saws, Hammers, Knives, Sabres, and the Images of ſeveral Beaſts, &c ſo that all the Parts of this Diabolical Robe, being fix'd together by Joints, might

Yehiam or Musk Deer

might at Pleaſure be taken to Pieces. He had alſo Iron Stockings for his Feet and Legs ſuitable to his Robe, and two great Bears Claws over his Hands. His Head was likewiſe adorned, with ſuch like Images, and fixed to his Forehead were two Iron Bucks Horns. When he deſigns to conjure, he takes a Drum made after their Faſhion in his Left-Hand, and a flat Staff covered with the Skins of Mountain-Mice in his right Hand; thus equipped he jumps croſs-legg'd, which Motion ſhakes all theſe Iron Plates, and makes a great Clangor; beſides which, he at the ſame Time beats his Drum, and with Eyes diſtorted upwards, and a ſtrong beariſh Voice, makes a diſmal Noiſe. Theſe were the Prologues: But his Conjurations were performed in the following Manner.

If the *Tunguzians* have any Thing at any Time ſtole from them, or deſire to be informed of any Thing, in the firſt Place, he muſt be paid before Hand: After which he plays ſuch Tricks as are already related, jumps and roars till a Blackbird comes and ſits on the Top of his Hutt, which is open above to let out the Smoak: As ſoon as he gets Sight of the Bird, he falls into a Swoon, and the Bird vaniſhes immediately: After he hath remained bereft of his Senſes for about a Quarter of an Hour, he comes to himſelf, and tells the Queriſt who hath robb'd him, or anſwers his Queſtion of what Sort ſoever; and they tell us, that all that he ſays proves true. His Robe was ſo heavy, that I could ſcarce lift it with one Hand. This Conjurer had a great Quantity of Cattle, which Crouds of People that flock to him from very diſtant Places had preſented him, they always giving him his full Demands.

Theſe Heathens are called *Niſovian Tunguſians:* They are tall and ſtrong Men, and have long black Hair, which being bound up in the Shape of a Horſe's Tail, hangs upon their Backs: They are broad-faced, but their Noſes are not ſo flat, nor their Eyes ſo ſmall as the *Calmackians.* Both Men and Women go naked in the Summer, except only a leather Girdle of three Hands Breadth, that they moſtly cut in the Shape of Ribbands, which they wear about their Waiſt, and cover their Privities. But the Women adorn their Hair with Coral and Iron Figures. Both Men and Women carry a Pot on their left Arms, continually furniſhed with old ſmoaking Wood; which preſerves them from the Biting of the *Moſchitoes*, or *Gnatts*, with which the Country along the River *Tunguſky* and the Woods are ſo abundantly peſtered, that if not only the Face, but the Hands and Legs are uncovered, their biting becomes inſupportable; which however the Natives do not feel ſo much as Strangers, becauſe their Skin being all over bitten by them becomes thereby hardened. Theſe People are Admirers of Beauty, according to their Notion of it. To improve which, they adorn their Foreheads, Cheeks and Chins in the following Manner: They with a Needle run Threads greaſed with black Greaſe through the Skin, in Repreſentation of ſeveral Figures, and leave the ſaid Threads therein for ſeveral Days; after which they draw out, and leave their Traces behind them, and very few of them are without this Embelliſhment.

Their Winter-Habit is a Coat made of Doe-ſkins, which is bordered at the Extremities with Dog-ſkins, beſides which they have alſo a Breaſt-piece hung with Tails of Horſe-hair. They are wholly unacquainted with either Linen or Woollen Cloaths; but to ſupply their Neceſſities, they make Nets and ſowing Thread of Fiſh-ſkins. Inſtead of Caps on their Heads, they wear a Roebuck's Skin, with the Horns ſticking upon the Crown of their Heads, eſpecially when they go a Buck-hunting; by which Means they eaſily deceive their Game, which they creep cloſe to in the Graſs, and the unwary Animals miſtaking them for their own Species, void of Fear, never remove their Station, whilſt they having their Bow and Arrow ready, and being gotten ſo near, are ſure to ſhoot him down. When they are inclined to divert themſelves together, they form themſelves into a Ring; and one of them ſtands in the Middle, having a long Staff in his Hand, with which, in turning round, he ſtrikes at the Legs of one of the Company, who ſo nimbly lifts them up, and ſo dextrouſly avoids the Blow, that it is very ſeldom that any of them are hit; but if any one is touched, he is duck'd till he is all over wet.

They lay their Dead upon the Trees, and after they are rotten, their Bones are buried in the Earth.

They have no other Prieſts but their Conjurers. They have in their Huts carved wooden Idols, about half an Ell long, with the Repreſentation of human Faces, which they feed as the *Oſtiacks* do, with their beſt Sort of Food, which runs out of their Mouths over their Bodies. Their Huts are hung round with Horſes Manes, Tails, and other Baubles, and are made of Birch-Bark: Before which they hang their Bows and Quivers, and very few of them are found without ſeveral dead young Dogs hanging near them. Their Boats or Canoes are made of Birch-Bark ſewed together, which notwithſtanding will carry ſeven or eight Perſons; they are long, ſlender, and without any Benches; they ſit in them upon their Knees, and make uſe of a Sort of Oars broad at both Ends; which they hold in the Middle, and row or paddle, firſt with the one, then with the other End; and when they row all together, the Boat goes at a great Rate. With theſe ſlight Canoes they can bear up againſt violent Storms without any Danger. They generally ſubſiſt themſelves in Summer by Fiſhing, and in Winter by hunting all Sort of furred Game, Bucks, Does, *&c.*

16. I left theſe People without any other Occurrence remarkable, and arrived on the 1ſt of *February* at the Fort *Buratz*; which Place, and all along to the Lake *Baikal*, is watered by the River *Angara*, and inhabited by the *Burattans*, a *Pagan* People.

On the 11th of the ſame Month we reached the Fortreſs of *Bulaganſki* in this Country, ſituate between the Hills and the Vallies, in a Champion Ground, on which live ſeveral *Burattians*, who are ſtocked with Cows, and a hairy Sort of Bulls. They all live in low Dwellings made of Wood joined together, and covered with Earth; on the Tops of which a Hole is left to let out the Smoak. Their Fires are made in the Midſt of theſe Apartments. They are utterly ignorant of all Sorts of Agriculture, or the Management of Gardens: Their Houſes, as in Villages, ſtand next each other, and are commonly ſituated near the River; but they do not change their Habitations like the *Tunguzian*, and other *Heathens.* Cloſe by their Doors ſeveral Poles are ſtuck into the Ground, on ſome of which are ſtuck Bucks, on others Sheep, and ſome faſten Horſe-hides on them. In Spring and Autumn they go out by Hundreds in a Troop on Horſeback, to hunt Stags, wild Sheep, and Roebucks, which they call *Ablavo.* When they have found a Place where there is Game, they range themſelves in a circular Order, ſo that they can eaſily come near one another, by which in ſuch a Ring they will hunt together and encompaſs ſome hundred of Beaſts; and having once got them within the Reach of their Bows, every one lets fly, ſo that very few eſcape, each Hunter being ſo well provided as to make thirty Shot ſucceſſively.

After the Hunting, each Sportſman eaſily finds his own Arrows by their peculiar Mark; but there is a very great Misfortune which attends this Way of Hunting, which is, that in ſuch a confuſed Mixture, they unawares frequently ſhoot one another, and ſeveral Horſes are wounded. They flea their Game, cut the Fleſh from the Bones, and dry it in the Sun; on which Proviſion they live as long as it laſts, and when it is done, go out a Hunting again. Here are vaſt Quantities of wild Beaſts, and I have for the Diſtance of a Quarter of a Mile been able to ſee nothing elſe but wild Sheep, which like Snow covered all the Hills; but in the Country for five or ſix Miles round hereabouts, very few furred Beaſts are found, except only a few Bears and Wolves, which ſometimes appear, but very rarely.

Thoſe who want Oxen or Camels of an extraordinary Largeneſs for their travelling to *China*, are obliged to buy them of theſe People, who will not deal for Money, but receive in Exchange of the Buyers, pale Sables,

bles, Pewter, Copper Baſons, red *Hamburg* Cloths, Otters-Skins, *Perſian* ſhaggy Silk of all Colours, and Gold and Silver Bullion: In which Commodities the Price of an Ox that weighs from 800 to 1000 *German* Pound Weight, is not above four or five Rubles, and a Camel is not valued at more than ten or twelve Rubles. Both the Men and Women of this Country are robuſt, large, and, according as Beauty goes here, have handſome Faces, being a little like the *Chineſe Tartars*. In the Winter both Sexes wear long Coats made of Sheeps-ſkins, with a broad Girdle tipped with Iron. They have a Sort of Caps that they call *Malachaves*, which they can draw over their Ears in cold Weather. In Summer ſeveral of them wear Coats of ſlight red Cloth. Comparatively ſpeaking, their Faces and their Bodies look like young Devils, by Reaſon that they know, or at leaſt practiſe, Nothing of Waſhing at any other Time than when they are born; nor ever cut the Nails of either their Hands or their Feet.

The Virgins whole Head of Hair ſticking faſt together in Plaits, ſtands on End, and makes them look juſt as Envy is repreſented by the Painters. The Women have only two Plaits, which hang down on each Side of their Heads, adorned with all Sorts of Tin Figures. When any of them die, they are buried with their beſt adorned Cloaths, Bows and Arrows. Their Religion conſiſts in the worſhipping dead Bucks and Sheep, which are ſpitted upon the Poles before their Doors, at ſeveral Times in the Year, as long as they continue unputrified. Their Adoration of them is performed by bowing the Head, whilſt they ſit on their Knees with claſped Hands, without either Prayers or ſo much as ſpeaking one Word. This is the only divine Service that they are acquainted with, nor will they ever hear of any other: They have indeed ſeveral Prieſts, which, when they think fit, they kill firſt, and afterwards bury them, together with Cloaths and Money, alledging, that it is neceſſary to ſend them before to pray for them, and that, leſt they ſhould be driven to Neceſſity, they ought to have Money to ſpend, and Cloaths to wear.

If they are obliged to the taking of any Oath amongſt themſelves, they go to the Lake *Baikol*, near which is a Hill that they eſteem ſacred, to which they can ride in two Days. Upon this high Mountain they take their Oath, and firmly believe the falſe Swearer ſhall never come down alive. To this Hill they frequently offer up all Sorts of ſlaughtered Cattle, and have paid a Veneration to it for many Years. But upon what Tradition this Reverence is built is not known.

17. In this Neighbourhood *Muſk-Cats* are alſo found, which are ſhaped more like a Goat. This Animal is almoſt like a young Buck, without Horns, with this Difference, that its Hair is a little black, and the Head inclines more towards that of a Wolf. The Muſk is contained in a certain Swelling at the Navel, like a little Purſe, which is compoſed of a thin Skin, covered with a very fine Hair. The *Chineſe* call this Animal *Yebiam*, which is *Muſk-Hart*, by Reaſon of its Likeneſs to a Stag; but beſides the Diſſimilitude of the Head, it hath alſo two Tuſks like thoſe of a wild Boar, which ſtick out of its Mouth.

Philip Martinus, in his *Chineſe Atlas*, reports, that this Animal is chiefly found near the City of *Leao*, in the Province of *Xanxi*; as alſo in that of *Xenxi*, and more eſpecially in that of *Hanchungfu*; and that there are alſo ſome in the Province of *Suchuen*, the ſecond Diviſion of *Paoningfu*, about the City of *Kiating*, near the ſixth fortified City *Tienciven*; in ſeveral Parts of the Province *Junnan*, and ſeveral other Places Weſtward. He further gives us the following Deſcription, which may contribute to the Satisfaction of the curious Reader. "The Muſk Cat, ſaith he, is almoſt like a young Hart or Doe, only that he is ſomewhat browner, and ſo ſlow and unactive, that the Hunter's greateſt Difficulty is to put him up; for that once done, he is immediately ſhot, for he ſuffereth himſelf tamely to be killed, without either defending himſelf or ſtirring. The Muſk, of which there are various Sorts of different Value, is prepared from this Beaſt in the following Manner;

"After he is taken, all his Blood is drawn off and reſerved; and from under his Navel is taken off a Bladder, that is filled with Blood, or ſome other odoriferous Liquor there concreted; after which the Animal is flea'd and cut to Pieces.

"When the *Chineſe* deſign to make the beſt Sort, they take the hinder Part of the Animal, beginning from the Kidneys, which they ſtamp and bruiſe to a Jelly, which they dry, and therewith fill the ſmall Bags, which they make of the Skin of the Beaſt.

"But if they deſire a ſlighter Sort of Muſk, which ſhould yet be very good, and not at all ſophiſticated, they then beat all the Parts of the Animal together, without any Diſtinction, to a Jelly, with a little of his Blood, in a Mortar, with which, as before, they fill up the Bags made of the Hide.

"Beſides theſe two, there is another Sort of Muſk, which is alſo highly valued, though not ſo good as the precedent. This is prepared from the Fore-part of the Animal to the Kidneys, which they particularly lay by the reſt of his Body in order to make the common Muſk; ſo that none of this Creature is thrown away, but all Parts of it are good; whence it is ſaid to be better dead than alive." Thus far *Martinius*; but whether theſe Barbarians make the ſame Uſe of the Muſk-Cat as the *Chineſe*, is not certainly known.

After travelling ſome Days amongſt this Nation, I arrived at *Jektuſkoi*, a City ſituate on the River *Angara*, the Courſe of which is from the North to the South, but its original Source is the *Baikol-Meer*, about eight Miles diſtant from this Place. This City not long ſince was rebuilt and ſtrengthened with very ſtrong Fortifications. The Suburbs are very large: All Sorts of Grain, Salt, Fleſh, and Fiſh are very cheap here, a hundred Pound (*German* Weight) of Rye not yielding above ſeven Kopties or Styvers; for round about this City, and to *Wergolenſko*, ſome Miles diſtant from thence, the Land is very fruitful, and Corn grows in great Abundance; beſides great Numbers of *Ruſſians* have ſettled here, and taken up ſome hundreds of Villages, all which with great Induſtry and Succeſs promote Agriculture.

Oppoſite to the City on the Eaſt-ſide is a *Burning-Cave*, which for ſeveral Years burnt very violently, but now ſeems extinct, very little or no Smoak iſſuing out at preſent. It is a large Cleft in the Earth, whence the Flame formerly aſcended vehemently, which now ceaſes; but if a long Pole be put into it, it feels very warm.

Over againſt this City, where the River *Jekut* falls into the *Angara* and ſo runs to the *Meer*, is a very fine Cloyſter. Earthquakes are here frequent in Autumn, which yet don't prove very prejudicial. Here reſided a *Taiſſcha* or *Mongalian* Baron, who had put himſelf under the Protection of their Czariſh Majeſties, and embraced the *Greek* Chriſtian Religion.

He had a Siſter, which, according to the *Mongalian* Cuſtom, lived in the devoted ſpiritual State, and was almoſt enclined to receive the Chriſtian Faith. When ſhe was diſcourſed on that Subject, ſhe replied, "I am ſatisfied that the Chriſtians God muſt neceſſarily be a ſtrong God, ſince he hath beaten our God out of Heaven: But he will return thither, though he ſhall the ſecond Time be beaten down." When ſhe enters the Chamber, ſhe ſalutes no Perſon, as the *Mongalians* are yet accuſtom'd to do, but her Order doth not admit of it. She had a Roſary or String of Beads in her Hand, which ſhe continually paſſed round through her Fingers. I found a *Lama* or *Prieſt* with her, who had alſo ſuch a String of Beads in his Hand, according to the *Mongalian* and *Calmackian* Faſhion, which he very ſwiftly and inceſſantly turned over through his Fingers, continually moving his Lips, as though he were at his private Devotions; and with this perpetual telling of his Beads, his Thumb was worn through the Fleſh and Nail up to the Knuckle; which rubbing off by ſlow Degrees did not at all pain him.

After a ſhort Stay to reſt myſelf in *Jekutskoi*, on the firſt of *March* I ſet forward by Land in Sleads, to the Lake or *Meer* of *Baikol*, which I reached on the 10th of the ſame Month, and found it frozen up very hard.

I paſſed over this Lake and ſafely arrived at *Kabania.* This *Meer* is about ſix *German* Miles broad, and forty long: The Ice in it was full two Ells thick, and is very dangerous when the Paſſengers are overtaken by a great Snow, or a high Wind; and the Horſes which draw the Sleads muſt be very ſharp ſhod, by Reaſon the Ice is all over very ſlippery, and even on Land here is no Snow found to lie, but it is immediately driven away by the Winds. Here are ſeveral broken Places or Wind-holes, that are not frozen up, which prove very dangerous to Travellers when ſurpriſed with tempeſtuous Winds; for the Horſes, if not ſharp ſhod, by the Fury of the Winds are driven on ſo violently that they cannot tread ſure, but ſliding and falling on the glib Ice, are hurried on by the Wind, till they and the Slead too are ſwallowed up in one of theſe open Places; by which ſeveral Men and Horſes are loſt: Beſides, to augment the Danger, the Ice of this Lake is ſometimes torn open ſeveral Fathoms by ſudden Winds, which make a Noiſe as loud and terrible as Thunder-claps, but after the Expiration of a few Hours, the Ice joins again, and becomes quickly as cloſe as before.

The Camels and Oxen, which Travellers take with them for their Journey to *China*, are alſo obliged to go this Way from *Jekutſkoi*, in order to which the Camels have a Kind of Boot tied about their Legs, which is very ſharp at Bottom: The Oxen alſo are provided with ſharp Irons ſtruck through their Hoofs, without which it would be impoſſible for them to go forwards. The Water of this Lake taſtes very freſh, is clear, and yet of a deep Green, like that of the Ocean. Where the Ice was open we often obſerv'd a great many Sea-Dogs, all blackiſh, and not variegated, like thoſe in the white Sea. Here are alſo great Multitudes of Fiſh, as large Sturgeons and Jacks, of which I have ſeen ſome that weighed two hundred *German* Pounds. The only River that iſſues from this Lake is the *Angara*, whoſe Deſcent is to the North-North-weſt: But amongſt the Rivers which fall into it, is the *Silinga*, the principal River, the Source of which is in *Mongalia*; the Remainder are ſeveral Rivulets which fall from the Hills: There are alſo ſome Iſlands in this Water. Its Shore and adjacent Country is inhabited by *Burattians*, *Mongalians*, and *Outkotians*. In all Parts hereabouts there are very fine black Sables, and *Caberdines* are alſo frequently caught here.

I obſerved, that when I entered upon this Sea, and left the Cloyſter of St. *Nickolas*, ſituated at the Entrance of the *Angara*, on the Sea-ſhore, I was very zealouſly entreated by ſeveral Perſons, that when I came upon this dangerous Water, I ſhould not call it a ſtill Water or Lake, but a Sea; alledging, that formerly ſeveral conſiderable Perſons, who had been on this Sea, and ventured to call it an *Oſer* or ſtanding Water, were immediately overtaken by violent ſtormy Winds, and were in Danger of their Lives: But I could not help laughing at this wild Notion, that the Waters ſhould reſent Affronts, and ſtand up for their Honour. However I went forward in the Name of God, and being got to the Middle, I called for a large Glaſs of Sherry, and drank a Health to all ſincere honeſt good Chriſtians, and my Friends in *Europe*, adding, *which I take you* Oſera, *or ſtill Water, to witneſs*; and the Wine proved very refreſhing, and I obſerved, that the farther I went, the Wind, which before was ſomewhat rougher than ordinary, began to decreaſe; ſo that I landed with Sun-ſhine and clear Weather, at the Caſtle of *Kabania*, the firſt *Daurian* Fortification beyond the *Meer*, without having the leaſt Satisfaction taken of me. I heartily laughed at the Folly of thoſe, who gave Credit to ſuch ridiculous Superſtitions, and truſt not in God, who created and governs all Things, to whom the Sea and all the Winds are obedient, either to ſerve or deſtroy them for their Sins, or perhaps to chaſtiſe and terrify them to Righteouſneſs; ſince otherwiſe the Sea is deaf and ſtupid, and utterly incapable of reſenting or revenging.

19. Leaving the Caſtle of *Kabania* the following Day, on the 12th of *March* we arrived at *Ilinſkoy* or *Bolſoy Saimka*, a very large Town, moſt of whoſe Inhabitants are *Ruſſians*, which in the Winter go a Sable-hunting, not tilling any more Ground than Neceſſity requires; wherefore the Land is every where deformed with great barren Hills, which, by an induſtrious People, might be rendred pleaſant and fruitful.

Departing thence, on the 14th of the ſame Month, we reached the Caſtle of *Tanzienſkoy*, which was provided with a ſtrong Garriſon of *Coſſacks*, to cover this Country from the Incurſions of the *Mongalians* which border on it. Without any Delay I went forwards with the firſt Slead that went off, and on the 19th Inſtant came to *Udinſkoy*, which City or Fortreſs is ſituated on a high Hill; but moſt of its Inhabitants live below the Fortreſs, at the Foot of the Hill, on the River *Uda*, which falls into the *Silinga*, about a Quarter of a Mile Weſtward below the City, which bordering on the *Mongalians*, is conſtantly ſupplied with a ſtrong Garriſon of *Ruſſian Coſſacks*.

The City of *Udinſkoy* is accounted the Entrance of the Province of *Daur*, and in Summer-time the *Mongalians* frequently come hither, and carry off the Horſes of the Inhabitants, which are graſing in Sight of the City; and beſides a little Paſture, this Land, which is every where mountainous, is very improper for Tillage; tho' it plentifully abounds with Cabbages, Turneps, Carrots, and ſuch-like Vegetables, which belong to the Culinary Garden: But here is not a Tree to be ſeen.

After having reſted here ſome Days, one Night at Nine of the Clock happened a violent Earthquake, which terribly ſhook the Houſes of this City, thrice within the Space of an Hour, but went off without any Damage.

The River *Uda* yields very little Fiſh, beſides a few *Jacks* and *Roach.* But annually in *June* from the Lake *Baikol*, great Shoals of a certain Fiſh ſwim hither againſt the Tide: The Inhabitants call them *Omuli*; they are as big as Herrings, and proceed no higher up this River than the End of this City, by a fallen Mountain, where they ſtay ſome Days, and then return back. During which Time they ſwim ſo incredibly thick and cloſe, that the Commandant told me, he threw ſeveral Lime-ſtones into the Water, which did not ſink, but continued lying on the Shoals of Fiſh. When the Inhabitants are deſirous to catch them, they uſe no other Net than a Bag, a Shirt, or a Pair of Linen Stockings; with which they go to the Shore, and draw greater Quantities than they want of theſe Fiſh on Land. I was obliged to a tedious melancholy Stay here, before my Camels and Horſes were ready, and was indeed very glad, that at laſt I got from hence on the 6th of *April.*

On the 26th of the ſame Month we travelled by Land to the River *Ona*, which flows from the North-North-weſt, and falls into the *Uda.*

On the 27th I reached the River *Kurba*, which alſo proceeds from the North-North-Weſt, and falls into the *Uda*. We travelled hither upwards on the River *Uda*, at about half Flood, but were frequently obliged to go off from it, and ſometimes to ſuch a Diſtance, that we loſt Sight of it.

On the 29th of the ſame, I had the good Fortune to put an End to my Travels in this uncouth, uninhabited Road, and to reach the Fortreſs of *Jarauna.* I was not a little glad that I once more came within Sight of Towns, for from *Udinſkoy* to this Place is wholly uninhabited, and we were obliged to travel over high and diſmal Rocks. The Caſtle of *Jarauna* is garriſoned by *Coſſacks*, and alſo inhabited by ſeveral *Ruſſians*, who depend upon Sable-hunting. The Heathens, which poſſeſs this Country, are called *Konni Tunguzi*, being a Sort of *Tunguzians* which live along the Banks of the River *Angara*; though their Language is entirely different from all others. If any one of them die, he is buried with his Cloaths and Bows under Ground; upon his Grave, Stones are laid, and a Pole erected, to which is faſtened his beſt Horſe, being firſt ſhot to Death. They live entirely on Sable-hunting, and the

Furrs of theſe Animals are extraordinary black in this Place: Here are alſo very fine Linxes, and a Sort of Squirrels, the Furrs of which were formerly taken off by the *Chineſe*. On the North-ſide of this Caſtle are three large Lakes near one another, each of which is full two Miles in Circumference, and are plentifully ſtored with Fiſh, more eſpecially with Jacks, Carps, Pearch, and ſuch-like. From hence there are two Roads which lead to *Zitinſkoy* or *Platbiſcha*. I ordered Part of my Retinue to go one of theſe Roads; but the Caravan and Convoy went directly Southwards, along the Lake *Schackze-Oſer*, which plentifully abounds with Fiſh; and the other proceeded forwards over the *Jablusnoy* or *Apple-Mountains*, on which, though they bear that Name, there grow no Apples, but only a Sort of red Fruit on the Trees, which indeed taſte very like them. But I myſelf, accompanied with a Retinue of Forty Men, took the other Road, which proved very moraſſy, and lay betwixt high Rocks, which continue all the Way from *Jarauna* to the City of *Telimba*. In this laſt Fortification live ſeveral *Ruſſians*, who in Winter go out a Sable-hunting; and indeed this Country yields ſuch rich black Sables, that better are not to be found in the whole Province of *Siberia*.

Lodging here one Night, a *Tunguzian* Knezets or Prince, whoſe Name was *Lilulka*, came to viſit me; he had prodigious long Hair, which for that Reaſon he bound up in a Leathern Band, and wound three Times about his Shoulders. I was very curious to ſatisfy myſelf, whether his Hair was really ſo long as I was told; to which Purpoſe I cauſed him to be intoxicated with Brandy; by which Civility I obtained the Favour of having his Hair looſened, and I found it to be all his natural Hair only, for I examined it very narrowly, and meaſuring it with an Ell, to my great Surpriſe, was convinced that it was four *Dutch* Ells long. He had a Son of ſix Years of Age, whoſe Hair growing in Imitation of his Father's, hung down over his Back the Length of an Ell wanting an eighth Part. This Sort of *Tunguzian* Heathens live on the Hills in great Multitudes. Part of them grow rich by catching the moſt fine and beautiful Sables, for which they receive great Sums of Money.

We were obliged to travel two Days from hence over high rocky Hills, running North-Weſt and South-Eaſt. Very far Northward there riſes a Spring, from whence the River *Konela*, afterwards called the *Wittim*, proceeds, which runs North Eaſt, and falls into the River *Lena*, that empties itſelf into the North *Frozen-Sea*; and about half a Mile beyond the high Hills, the River *Zita* ariſes, which falls into the River *Ingoda* or *Amur*, and purſues its Courſe on to the *Amuriſchian* or *Eaſtern Sea*, into which it flows.

Arriving ſafely on the 15th of *May* at *Platbiſcha*, which Place the Caravan alſo reached the next Day, having run through ſeveral Dangers, by Reaſon that the withered dry Graſs was burned off the Fields every where, the Fire of which was very prejudicial to the Caravan, and often catched the Horſes Tails; beſides which, the Beaſts wanted Forage, and were frequently obliged to go a Mile out of the Way in Search of ſome Graſs, which was not yet burned on the Side of the Hills, to relieve the poor Cattle.

We were obliged to ſtay ſeveral Days in the Village *Platbiſcha*, ſituate on the River *Zita*, partly to refreſh our Beaſts, and partly to make Floats, to drive down the Rivers *Ingoda* and *Schilka*, to *Nerzinſkoy*, this being a very ſhallow Water, on which no other Sort of Shipping can be made uſe of. And even theſe Floats can ſcarce paſs over the rocky Places without Danger, two of ours being broken to Pieces in our Paſſage, ſo that we had Trouble enough to ſave our Goods.

20. All Things being ready, I cauſed the Camels, Horſes, and Oxen to go firſt over the Mountains for *Nerzinſkoy*; but I went from thence on the 18th of the ſame Month, and on the 19th reached the River *Onon*, which runs Northward, taking Riſe in the South out of the *Mongalian Pool*, and, after it is united with the *Ingoda*, takes the Name of *Schilka*. The Water of this River is very white, and its Shore is inhabited by great Numbers of *Mongalians*, who make frequent Incurſions over the *Schilka* to *Nerzinſkoy*, though not always with Succeſs; for ſometimes they are not only driven from their Prey, but catched themſelves, and puniſhed as Robbers; and the *Ruſſian Coſſacks* themſelves, by way of Repriſal, make Sallies up the *Onon*, deſtroying whatever comes in their Way.

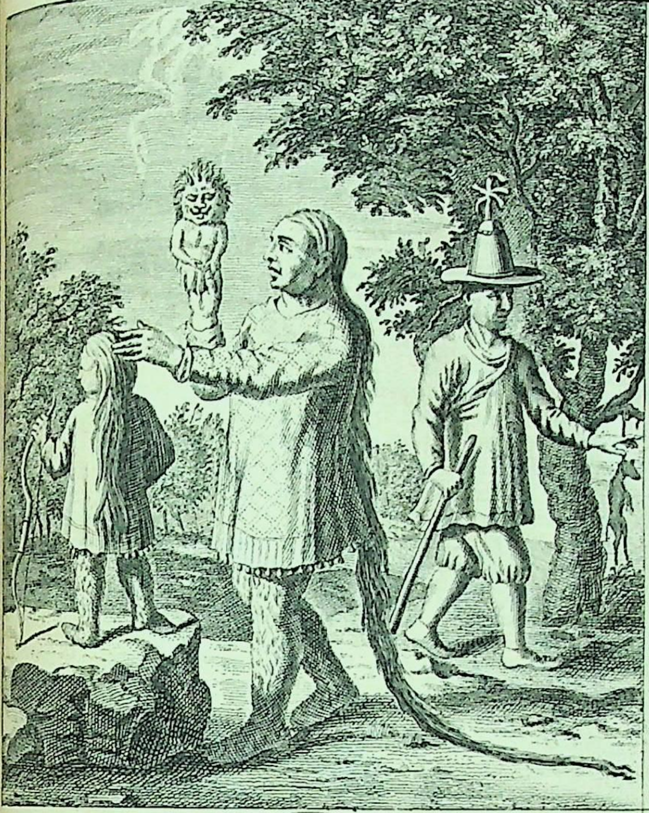
But through Divine Mercy we arrived, without being once attacked, on the 20th Inſtant at *Nerzinſkoy*, which lies on the River *Nerza*, that runs from North-North-Eaſt, and about a Quarter of a Mile from the City falls Southward into the *Schilka*. The City is tolerably ſtrong, provided with ſeveral Braſs Guns, and a great Garriſon of *Daurian Coſſacks* both Horſe and Foot. It is ſituate between high Mountains, notwithſtanding which it has Champion Ground enough for the Inhabitants to graze their Camels, Horſes and Cows; and ſome Parts of the Hills afford Spots of Ground a Mile or two over, that are very proper for Tillage, and afford Room to plant and ſow enough to ſupply their Neceſſities.

From four or five Miles upwards to ten, below on the River *Schilka*, live ſeveral *Ruſſian* Gentlemen and *Coſſacks*, who ſubſiſt on Tillage, Grazing of Beaſts, and Fiſhing: Amongſt theſe Hills, and round the City, are likewiſe ſeveral very fine Garden-Trees and Plants, as alſo *Rhaponticum* or *Baſtard Rhubarb*, of an extraordinary Thickneſs and Length, and very fine white and yellow Lillies. Here are vaſt Quantities of red, and alſo of Snow-white *Pæonies*, which diffuſe an extraordinary fragrant Scent, and ſeveral other Flowers, with which I was unacquainted. Here are Roſemary, Thyme, Marjoram, Lavender, and ſeveral other odoriferous Plants unknown to me, which grow ſpontaneouſly in great Abundance: The Fruits here are only red and black Currants, *&c.* agreeable to the Climate.

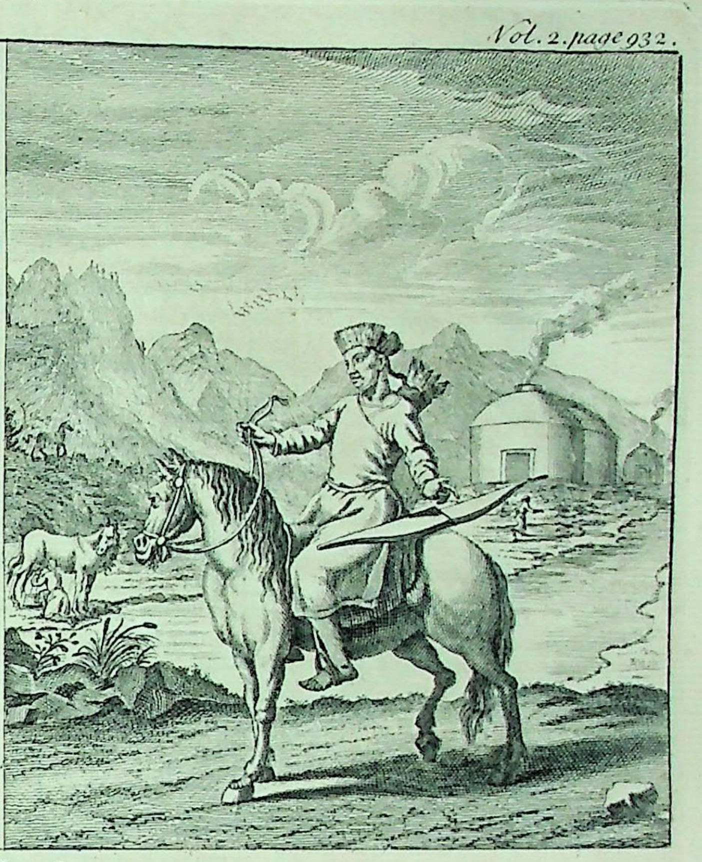
Here are two Sorts of Heathens which have for a long Series of Years lived in Subjection to the Czar; the *Konni-Tunguzians*, and *Olenni-Tunguzians*: The former of which are obliged to be ready on Horſeback, at the Command of the *Waywode* of *Nerzinſkoy*, or whenever any Incurſions are made on the Frontiers by the Roving *Tartars*. And the *Olenni-Tunguzians* are obliged on all Occaſions to be ready on Foot, and appear armed on any Exigence in the City. The Chief of the *Konni-Tunguzians* is the *Knees Paul Petrovitz Gantimur*, whoſe *Tunguzian* Name is *Catana Gantimur*, born in the Country of *Nieuhcu*; he is an old Man, that was formerly a *Taiſcha* or Baron there, ſubordinate to the Emperor of *China*; but falling into Diſgrace, and being diſplaced, he, attended with his entire *Horde* or Clan, retired to *Dauria*, put himſelf under the Protection of their Czariſh Majeſties, and embraced the *Grecian* Religion. This *Knees Paul Catana* can on any grand Occaſion in one Day raiſe three thouſand Horſemen, well equipped and provided with good Bows, all which are valiant and fearleſs Soldiers, of whom it is frequently obſerved, that fifty of them attack four hundred *Mongalians*, and very frequently beat them. All of theſe Heathens which live near the City ſubſiſt themſelves by grazing, but thoſe on the River *Schilka* and *Amur* depend on Sable-hunting, becauſe the Beaſts in the Foreſts are there very black, and their Furrs valuable.

They all live in Huts, called in their Language *Jurten*, the Inſide of which is compoſed of wooden Poles jointed together, that whenever they are willing to remove their Dwellings, as they frequently do, they may conveniently pack them up and carry them altogether.

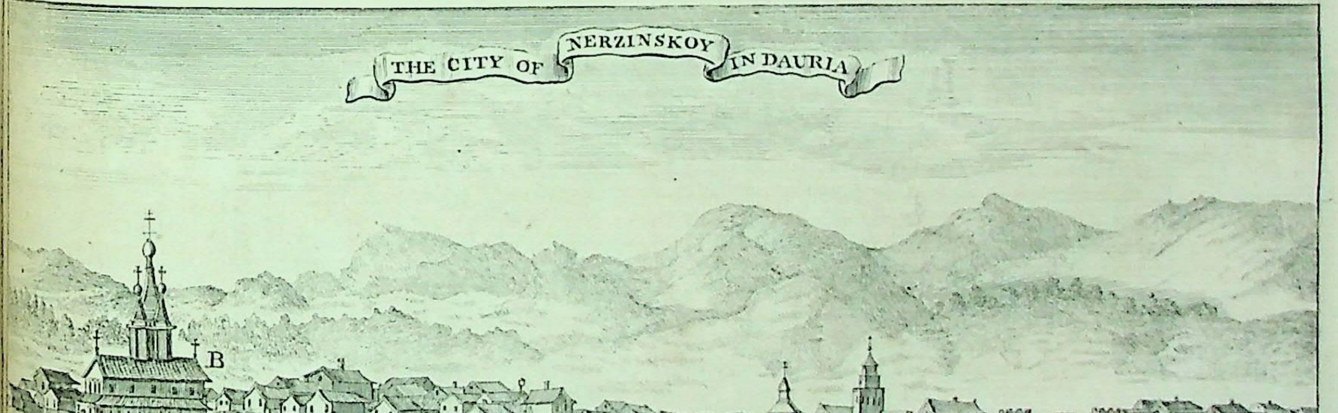
This wooden Work when ſet up is thatched all over with Hair and Rubbiſh, except only the Smoak-hole left open at the Top. They place their Fire in the Midſt of their Huts, and ſit round it upon Turves. Their Religion is the ſame with that of the *Dacra* or *Daurians*, from whence they pretend to be deſcended: So that indeed throughout all Great *Tartary*, to the Beginning of the *Mongalian Tartars*, there is a very great Similitude in Religion, as I ſhall hereafter evince. Both Men and Women in this Country are very ſtrong, broad faced, and both Sexes, not excepting the young Girls,



A Tunguzian Prince whoſe Hair was Four Dutch Ells long and his Son's near an Ell long.



The Knez Paul Petrowitz Gantimur Chief of ye Konni Tunguzians Subject to the Czar.



THE CITY OF NERZINSKOY IN DAURIA
B
A
River Nerza

A *The* Wooden Caſtle *Inhabited by the* Governor. B. *The Church*

The Inhabitants of this City are all Soldiers who trade to China & have great Immunities.

ride on Horſeback, and are equally armed with Bow and Arrows, in the Uſe of which they are very expert. The Female Dreſs is the ſame with the Male; of both which our Print drawn from the Life is an accurate Repreſentation. Their common Drink is Water; but the better Sort drink *Kara't Za*, or Black Tea, which is a particular Species of that Plant, the Infuſion of which, inſtead of greeniſh, tinctures the Water blackiſh. They boil it in Mares-Milk and Water, to which they alſo add a little Lard or Butter. They alſo draw off a Sort of Brandy from Mares-Milk, which they call *Kunnen*, or *Arak*, and is diſtilled in the following Manner. The new Milk is firſt boiled, then put into a Fat, to which is added ſome ſtale Milk, and this Mixture is ſtirred every Hour: After which this ſoured Milk is put into a Pot, and cloſely covered with another Pot which ſhuts tight upon it, into which a Reed is ſtuck, and the Pot firmly luted, and ſet over the Fire to diſtill as in *Europe:* But the Spirit muſt be twice drawn off; then it is fit to drink, being as clear, and ſtrong, as Malt Spirits, and very ſoon intoxicates. It is really very ſurpriſing that none of the Cows in *Siberia* and *Dauria*, as long as their Calves ſuck them, will ever permit themſelves to be milked, nor will they after the Calf is removed from them give any more Milk: Which is the Reaſon why Mares-Milk is ſo much uſed by theſe People, which is alſo richer and more agreeable than Cows-Milk.

In Spring and Autumn theſe Heathens go a Hunting, like the *Burattians*, in order to provide themſelves againſt Summer and Winter with ſufficient Store of Fleſh, which they alſo as well as that Nation dry in the Sun. Inſtead of Bread they gather the Pods of yellow Lillies, which they call *Sarana*, and having dried and beaten them to Meal, they dreſs them ſeveral Ways to eat. They are very expert at Shooting Fiſh in the Water with a Sort of Arrows, which are round, ſolid, and about three Fingers thick at the Head; at the End of which, under the Iron Point, is a Ball of Bone bored through, which occaſions a loud whiſtling Noiſe in its Flight. Theſe Arrows are ſo heavy that they do not ſhoot them farther at moſt than fifteen or twenty Fathom, and chiefly at large Fiſh, as Jacks and Trouts, which harbour in clear Water on the rocky Ground near the Shores. And when theſe Arrows hit, they make a ſurprizing large Orifice, which looks as if it were a Cut given by a Hatchet.

Theſe Heathens have a very odd Cuſtom of taking ſolemn or teſtimonial Oaths: An Inſtance of which appears in the following Story of two noble *Tunguzian* Hoſtages at *Nerzinſkoy*. To illuſtrate which Relation, the Reader ought to be informed that it is uſual on theſe frontier Places (by Reaſon a great many Sorts of People put themſelves under his Czariſh Majeſty's Protection, which live diſperſed in *Siberia)* to keep ſome Children of the principal Men, and, if they are very great, themſelves, in the *Amandiver-atſkoy* or Hoſtage-Court for ſome time, all the while providing them amply with Eatables and other Neceſſaries; which is done by Way of Security that they ſhall not deſert, and that when they have ſtaid ſometime, others ſhall come in their Places. It happening that two of theſe *Tunguzian* Hoſtages falling out, one accuſed the other before the *Waywode*, of having conjured his deceaſed Brother to death. The *Waywode* aſked the Accuſer if he would, according to the *Tunguzian* Cuſtom, put the Accuſed to his Oath? To this he anſwered in the Affirmative; after which the Accuſed took a live Dog, laid him on the Ground, and with a Knife ſtuck him into the Body, juſt under his left Leg, and immediately clapped his Mouth to the Wound, and ſucked out the Dog's Blood as long as he could come at it; after which he lifted him up, laid him on his Shoulders and clapped his Mouth again to the Wound, in order to ſuck out the remaining Blood, as the Print expreſſes it. An excellent Drink indeed! And this is the greateſt Oath, and moſt ſolemn Confirmation of the Truth amongſt them; ſo that on Credit of this the Accuſed was ſet free, and the Accuſer puniſhed for his falſe Accuſation. Thus far concerning the Cuſtoms of theſe Heathens, which, barbarous and ridiculous as they are, plainly prove theſe People apprehend the Neceſſity of Oaths to determine Differences, and that Providence will interpoſe to preſerve Innocence, and puniſh Perjury. Thus we clearly diſcern, that the Brutality of this Nation does not ariſe from their Want of intellectual Faculties, but from their Supineneſs, Negligence and Nonuſage of thoſe Faculties.

21. I was obliged to ſtay ſome Weeks at *Nerzinſkoy*, and furniſh myſelf with Camels, Horſes, Oxen, Proviſion and all other Neceſſaries for the Proſecution of my Travels. All which being carefully performed, I ſet forwards from thence in God's Name, on the 18th of *July*, paſſed the following Day by the River *Borſchofska* over the *Schilka*, and after ten Days travelling, on the third of *Auguſt* ſafely arrived at the Caſtle of *Argunſkoy*; which is the laſt Fort and utmoſt Frontier of the Czar's Dominions, towards the Eaſt Country. This Fortreſs is waſhed by the River *Argun*, which flows from South-Weſt to North-Eaſt, and falls into the River *Amur*, and divides his Czariſh Majeſty's Territories from thoſe of the Emperor of *China:* And on the other, or Eaſtern Side of the River, the great uninhabited *Tartarian* Wilderneſs hath its Beginning. I was obliged to ſtay here ſome Days, to get a good Number of Carts with two Wheels, for the farther Purſuit of my Journey; and this was the firſt Time that this Way from *Argun* through *Tartary* was ever travelled with Waggons.

The Way from *Nerzinſkoy* hither was moſtly over high, ſtony, and mountainous Land, though in ſome ſcattered Places interſected by fine large Valleys, and little Rivulets, which Intervals are richly overſpread with all Sorts of fine Herbs, Flowers, Graſs, lofty Cedars, and Woods of Birch-trees. This Country is alſo very populous, by Reaſon the *Tunguzians* (which, though Heathens, are all ſubject to his Czariſh Majeſty) live in great Multitudes throughout all Parts of this Country where there are Rivers, and pay a voluntary Tribute to that potent Emperor.

In ſeveral ſcattered Places in the Valleys, I obſerved Hundreds of old, and, in Part, fallen Caſtles, built with Rock-ſtones, which, as the *Tunguzians* told me, were built by ſeveral Warriors long ſince, when the *Mungalian* and *Weſtern Tartars* made joint Incurſions into this Kingdom of *Nieucheu*. Which Monarchy, according to their Computation, comprehended the whole Land from *Nerzinſkoy* to *Nieucheu*, as the *Chineſe* call it, and from the River *Amur* down to the *Albanian* Mountains and *Leaoting*. And it is not long ſince that Waggon Wheels bound with Iron, and large Millſtones, were found in this Country; from whence I conjecture, that the *Nieuchbeuers*, which border on the ſaid Province of *Leaoting*, formerly followed their Trade and manual Employments in this *Ruſſian Dauria*, ſince they make uſe of theſe Waggon-wheels bound with Iron, which are no where elſe to be found amongſt the *Mongalians*, &c.

I alſo ſaw ſeveral *Tunguzian Tombs* covered with many Stones, by which great Stakes were placed, and ſeveral dead and putrified Horſes upon them. Beſides which, I obſerved that the River *Argun* ſeparates two very different Sorts of Lands. On our Way to this River, the Hills abounded with Woods, but on the other Side of it Nature varies, and very few or ſcarce any Woods are to be ſeen, but only inconſiderable Numbers of ſcattered dry Trees.

About eight Miles from *Argunſkoy*, from which I departed the 5th of *Auguſt*, the River *Zerebrenkoy*, or the Silver River, called in the *Mongalian* Dialect *Mongagol*, falls into the River *Argun*. This Silver River is ſo called, becauſe that formerly, about two Miles up that Water, there were Silver Mines, out of which the *Nieuchbeuers* and *Mongalians* dug immenſe Quantities of that Metal; and great Numbers of Pits, in which the Metal was melted, are at preſent to be ſeen; but theſe Mines, by the Courſe of Time, and lying unwrought for many Years, are now fallen in, and covered with the Hills which have tumbled upon them. Notwithſtanding all which, I brought a Proof of their Metal into *Muſcovy*, and doubt not but to reſtore them, if his Czariſh Majeſty would immediately order a Beginning to be made, it being very well worth the Pains, and they are very conveniently ſituated in a Place where there is no Want of Wood.

In the Year 1693, on the 8th of *Auguſt*, we were obliged to croſs the River *Argun*, and paſs two whole Days on our Way with the Merchants which were with us; and on the 9th at Night, we again travelled South Eaſtward, upwards in the great *Tartarian Wilderneſs*, all the Way betwixt Hills and Vales, and next Day reached the River *Calabu*; which being but a ſmall one, we eaſily forded it with our Horſes, Camels, and Waggons. This River ariſes out of the Hills, and falls Weſtward into the *Argun*. It was obſervable, that it was ſo cold this Night, that the Ice froze the Thickneſs of a Crown-piece.

On the 12th of this Month we reached the River *Terbu*, which is alſo but ſmall and ſhallow, and likewiſe falls Weſtward into *Argun*. On the next Day we came to the River *Gan*, which occaſioned us a very troubleſome Paſſage, it being ſo deep by reaſon of the ſwollen Waters, that no Camel could reach the Bottom; ſo that we were forced to ſearch for Trees, (in this deſolate uninhabited Wilderneſs, where no other Hope was left) which having felled, we bound in Couples, to carry over our Goods and travelling Proviſions: And for our own Paſſage we alſo made a Sort of Boats of ſmall Twigs, which we covered with Ox-hides ſewed together, which proved tolerable Barks, and would carry about a thouſand Pounds Weight. The Horſes, Oxen and Camels were ſwam over, which indeed the laſt did very eaſily; for as ſoon as they loſe Footing on the Ground, they turn themſelves on one Side, without ſtirring their Feet, like a floating Leathern Bag; no more Care being neceſſary, than to bind five or ſix of them faſt together by the Bridles and Tails, and let ſome body ſwim a Horſe before them, which is faſtened to the Bridle of the firſt, and conſequently towes him along, without which Precaution they would drive ſeveral Miles down the Stream before they got over; and even notwithſtanding this, they drove conſiderably downwards. This tedious, uneaſy Paſſage coſt us ſome Days Time, the River being broad, and the Tide rapid and ſtrong. This River comes out of the Eaſt, and falls Weſtward into the *Argun*.

Breaking up from thence on the 19th of the ſame Month, on the 21ſt we reached the River *Mergeen*, which admitted us without the leaſt Uneaſineſs or Interruption to ford it, being but ſmall and ſhallow. It alſo comes from the Eaſt, and falls Weſtward into the *Argun*; and thus we travelled to this Place off and on, betwixt Eaſt and South. On the 23d we came to another River called *Kailar*, the Water of which being low, we paſſed it without any Trouble. This River falls alſo from South-South-Eaſt, Weſtward into the *Argun*. On the 25th we as eaſily paſſed the River *Zadun*, which riſeth in the South-Eaſt, and falls North-Weſt into the *Kailar*.

Before this Book of our Author's was publiſhed, we had no diſtinct or clear Account at all of theſe Countries, the very Names of which were ſcarce mention'd in our Hiſtories, and the Countries themſelves appeared only as a vaſt Deſert in our Maps. Yet here we find, that theſe Parts are very far from being either uninhabitable or uninhabited, and that though their Cities are not very thick, yet ſome of them are pretty conſiderable Places, as for Inſtance, *Nerzinſkoy*, of which we have lately ſeen his Deſcription, and which, though the very Name of it may be new and ſtrange to us, is ſo well known notwithſtanding in thoſe Parts of the World, that there are few Places more famous. In this City was held a Congreſs for determining the Diſputes between the *Chineſe* and *Ruſſian* Empires, the laſt of which was in 1689, when Father *Gerbillon* ſigned a Treaty of Peace there, by which the Limits of both Empires were plainly ſettled, and the River *Amur* made the common Boundary on that Side.

As this River falls into the Eaſtern Ocean or Sea of *Japan*, the *Ruſſians* were always very deſirous of being entirely Maſters of it, and for that Reaſon they attempted, notwithſtanding the Treaty, to ſettle on the other Side of the River, ſuppoſing that the *Chineſe* would be ſometime before they had perfect Intelligence of this Infraction of the Treaty, and that they would not incline to commence a War immediately, but rather ſet on Foot a new Negociation, for amicably terminating their Differences. In this it ſeems the *Ruſſian* Miniſters were, however, ſomewhat miſtaken, for the *Chineſe* quickly made Complaints of the Progreſs of the *Ruſſian* Troops; and finding theſe Complaints made no Impreſſion, they ordered their Subjects the *Mongals* to take Poſſeſſion of the Country lying on the South of the River *Amur*; and as this intirely overturned the Schemes of the Court of *Peterſbourg*, they found the Taſk of Negociating turned upon themſelves, which was one of the principal Motives to their ſending our Author on this Embaſſy.

The Reader, perhaps, may not be diſpleaſed at meeting with theſe Remarks at the Cloſe of the Section, which we choſe to place here, rather than interrupt the Thread of our Author's Narration, who, in this Part of his Travels which we have already given, has deſcribed the *Ruſſian* Dominions lying in *Aſia*, with much more Accuracy than any other Writer whatever: The making ourſelves acquainted, at leaſt in ſome Meaſure, with theſe hitherto ſo little regarded Countries, will be very ſoon found to be both of great Uſe and conſiderable Importance, ſince it is on this Side that the *Ruſſians* are proſecuting thoſe Diſcoveries, upon which the Eyes of all *Europe* are turned at preſent. In theſe Countries likewiſe they have, within theſe few Years, diſcovered very rich Silver Mines, of which we have a Hint in our Author; and if theſe can be wrought, it will quickly change the Face of Things on this Side, and, in the Space of forty or fifty Years, our Poſterity will find ſome of theſe Countries repreſented in a Manner very different from that in which they have been heretofore ſet forth. But let us now return to our Author's Travels, and attend him in his Progreſs through the *Chineſe* Dominions.

SECTION II.

Travels through the Countries of the *Mongal Tartars*, lying between the *Ruſſian* and *Chineſe* Empires, the Paſſage thro' the famous Wall, and from thence thro' ſeveral conſiderable Places to the City of *Peking*, the Capital of all *China*; with Obſervations Hiſtorical, Phyſical, Topographical, Critical, and Political, on the ſeveral Nations converſed with by our Author, and the Countries by them inhabited; with ſome Conjectures alſo as to their former Inhabitants.

Taken from the Original Journals of his Excellency Everard Yſbrants Ides.

1. *The Author's Reception at the firſt* Chineſe *Guard, an Account of the* Targaſinian Tartars, *their Cuſtoms and Manner of Living, with a brief View of the beautiful and pleaſant Country they inhabit.* 2. *He is met by a* Chineſe Mandaryn, *at the Village of* Xixigar; *the great Civility and Politeneſs of his Reception, and of the mutual Courteſies that paſſed between the two Miniſters.* 3. *A Deſcription of the Country of the* Mongals, *and of the Inhabitants, their Hoſpitality, reſpectful Behaviour, and the Manner in which they live under the* Chineſe *Emperors.* 4. *The Author, in Company with the* Chineſe Mandaryn, *paſſes through a Country in which there are ſeveral decayed and abandoned Cities, of which he gives a very curious and copious Account.* 5. *They arrive at a* Chineſe *Village inhabited entirely by* Lama's *or* Tartarian *Prieſts; a Deſcription of it, and of the Country round it.* 6. *The Manner in which the Emperor of* China *hunts annually in this Neighbourhood for ſome Weeks, with an Account of the Game, and other Particulars.* 7. *The Author's Arrival at the famous* Chineſe *Wall; a very curious and circumſtantial Deſcription of it, and of the Materials of which it is compoſed.* 8. *The Author's Arrival at* Galkan, *his magnificent Entertainment there by a* Chineſe Mandaryn, *the Cuſtoms of the* Chineſe *People of Quality on ſuch Occaſions, and an Account of a Play he ſaw acted.* 9. *The City of* Xantunnung *deſcribed, the Idol Temple of* Jugangu, *and a City which is inhabited entirely by the Emperor's Concubines.* 10. *He proceeds to the Cities of* Kixu *and* Tunxo; *a Deſcription of the latter, and of the famous Market for Porcelain or* China *Ware that is held there.* 11. *A Digreſſion in reference to the Excellency, Origin, and Hiſtory of that Manufacture; interſperſed with ſeveral new and curious Obſervations, by way of Supplement to the Author.*

1. THE Plainneſs and Simplicity of our Author's Relation gives us the greateſt Reaſon to believe, that he pays a ſtrict Regard to Truth; for it is worth obſerving, that he never magnifies his own Courage or Conduct, or talks loudly of the Dangers he has run through; but very modeſtly ſets down what occurred to him in his Journey, and very carefully diſtinguiſhes between what fell immediately under his own Inſpection, and what he received from the Report of others. What is contained in this Section, relating to that vaſt Tract of Country bordering upon *China*, appears to me extremely curious, becauſe out of this Country originally proceeded that famous Race of *Mongal Tartars*, which aſſumed the Empire of *Aſia*, and, after conquering *India*, *Perſia*, *Aſſyria*, and a conſiderable Part of *Europe*, threaten'd an Irruption into *Germany*; and had very probably conquered all *Muſcovy* and *Poland*, if they had not been diverted partly by their Civil Wars, and partly by the Invaſion of *China*. One cannot help therefore being pleaſed with our Author's Deſcription of the original Seat of theſe mighty Conquerors, at the ſame Time that it very much confirms what we meet with in the Writings of *Marco Polo* and other ancient Travellers, whoſe Relations we have inſerted in our former Volume. We may from hence be taught not to be too raſh in cenſuring what we cannot immediately reconcile either to our Reaſon or our Experience: One of the beſt Leſſons that the former teaches us is, its own Weakneſs; and there is nothing that we learn with ſo much Certainty from the latter, as that without due Care we may be eaſily deceived. All that has a plauſible Appearance is not therefore to be accounted Reaſon; nor is every Thing that we hear or read, to be looked upon as Experience. If there is nothing abſurd or impoſſible in what a Man of a fair Character relates as an Eye-Witneſs, his Teſtimony ought not to be ſlighted; and when we ſit down to learn what paſſes, or what has paſſed in Countries with which we have been hitherto unacquainted, it is irrational to expect, that all we meet with ſhould be ſmooth, clear, and intelligible. When we are Children, we read with Aſtoniſhment of the great Actions of the *Greeks* and *Romans*, and theſe are impreſſed upon our Minds ſo, that as we grow up, they paſs for inconteſtable Proofs; yet read theſe Hiſtories to illiterate People, and they will make more Difficulty of believing them, than we do at receiving what is delivered concerning the Natives of theſe Eaſtern Countries, where Empires have riſen without our Notice; and, after flouriſhing for many Ages, have ſunk again before they came to our Cognizance. But let us dwell no longer on Reflections, it will be better to attend our Author on his Journey, who, in ſpeaking of the Proſecution of it towards *China*, proceeds thus.

On the 1ſt of *Sept.* I came to the *Jaliſchian Mountains*, lodged there, and found my Poſt-Meſſenger, who was a *Ruſſian* Gentleman that I had diſpatched to *Xixigar*, was returned and arrived here before me, and had already waited ſome Days for me. He was accompanied with a *Chineſe* Captain and ten Men, which were ſent to meet me. When I ordered him to be brought to me, he complimented me from his Lords, who had expreſsly ſent him to meet me; and in their Name preſented me with ſome neceſſary Refreſhments, as fifteen Sheep, ſome Tea, Loaf-Sugar, and twenty Horſes for my Uſe, which I thankfully accepted, and in Return made the Captain ſeveral Preſents.

Theſe Hills are called the *Jaliſchian Mountains*, from the River *Jalo*'s riſing amongſt them; its Source being united to ſeveral Rivulets which fall from the Hills; and the Head of this River being not above two Fathom broad. As we climbed up theſe high Mountains, on the North Side we found them not one third Part ſo ſteep as at our Deſcent on the South. Beſides which, we obſerved a very remarkable Alteration of the whole Country on the South-ſide of the Hills.

From the River *Kailar* to theſe Mountains, we travelled thro' ſteep Rocks and high Hills, with which the Valleys, which we paſſed thro', were encompaſſed on both Sides. There are alſo a few ſmall Thickets ſcattered up and down, beſides which the whole Way is void of all Trees or Wood; which ſometimes gave us the Trouble of carrying the Wood which we wanted for our Kitchen, from one Lodging-place to another.

Theſe Valleys are wholly covered with fine Graſs, as the Mountains are ſtocked with all Sorts of Herbs and Flowers; beſides which, this Country plentifully abounds with large Harts, Roebucks and wild Sheep, which frequently appear in great Herds of many Hundreds together. Here are alſo large Flocks of wild Geeſe, Ducks, wild Turkies, and Partridges; but none of the Rivers, which I paſſed from the *Argun* to this Place, abound with Fiſh, excepting only Roach and Jacks. The Air is temperate, or rather cool. But on the 2d of *September*, quitting the Hills and travelling along the Side of the River *Jalo*, we were entertained with the Sight of very fine Oak and Lime-trees, as well as a great many Hazel Buſhes, which did not grow above an Ell above Ground, and yet bore vaſt Quantities of Nuts. We proceeded two Days in ſuch an agreeable Road, and on the 4th Inſtant, to our mighty Satisfaction, reached the firſt *Chineſe* Guard, which was placed upon a high Mountain, that afforded them a very large View, and commanded the whole adjacent Plain. As ſoon as this Watch eſpy any Perſons, they ſummon them, and conduct them to their main Guard, under their Commanders on the *Mergeen*, as they alſo did by us.

Without any farther Interruption, we proceeded on our Journey, and on the 5th Inſtant got Sight of the firſt *Targazinian* Huts; and the next Day we paſſed by the laſt of them. The *Targazinians* are a ſeparate independent Hord or Clan, which are obliged to pay Tribute to the Emperor of *China*: They are governed by their own Chief, but obey thoſe who are moſt potent in *Tartary*. They are an Infidel Heathen Nation, and are ſaid to worſhip the Devil: They are of a middle Stature, and broad-faced like the *Mongalians*. Their Summer-dreſs is compoſed of Blue *China* Callicoe and Tanned Leather; but it being cold betwixt the Mountains here in the Winter, they wear Coats made of Sheep Skins. Their Language is very little different from the *Tunguzians*; and they live in Huts made of thin *Bamboes* or Reeds. They depend chiefly on the Tillage of Land for the Production of Barley, Oats, and Millet; the Remainder of what they do not conſume themſelves, they tranſport and ſell amongſt the *Xixigarian* Villages. Their Cattle are chiefly Horſes, Camels, Bulls, Cows and Sheep; the laſt of which are very fine and large, the Tail being a large Span thick, and two Spans long, all of which is fat, and they are ſo very heavy, that they cannot go faſt, much leſs run. Theſe People ride very commonly upon Oxen; and are very expert Archers; they make great Quantities of Bows, which are eſteemed the very beſt in all *Tartary*, and are therefore ſold very dear. We paſſed by theſe People on our Journey on the charming Banks of the River *Jalo* with the utmoſt Pleaſure; but now turned our Eyes from thence downwards towards the South. I cannot help owning, that the Side of this River is perfectly a Paradiſe, as conſiſting of beautiful Paſture-Grounds, Silver Streams, and the pleaſanteſt Woods in the World; and the moſt delicious Entertainment of the Eye is not a little improved by the Proſpect of the riſing Ground, and beautiful towering Hills, which offer themſelves to our View, at about a Mile and half Diſtance on each Side, and are a perfect Warren or Park of Wild Game; Great Numbers of Wild Swine, Harts, and vaſt Herds of Tygers and Panthers harbouring under theſe ſhady Mountains. Here are Multitudes of Wild Ducks; a ſmall Sort of Geeſe called *Turpani*, adorned with all Sorts of variegated Feathers, like thoſe in *India*; and a particular Sort of extraordinary beautiful Partridges, the Feathers of which are of ſeveral Colours, their Tails about an Ell long, which prove very delicate, being in Taſte, as well as Size and Shape, like Pheaſants: They harbour in plain Fields, in the long Graſs, and in low Nut-buſhes; and being ſprung, in their Flight clap their Wings with a Noiſe as loud as a Stork.

On the above-mention'd Day being obliged to leave this charming River, I turned off on the Left, from it to the South-Eaſt, and ſpent the 8th, 9th and 10th Days in Travelling betwixt Mountains and Rocks on each Side, where we were afflicted with the Want of Wood and Water, being obliged to content ourſelves with what the Pits yielded of the latter, which was of a deep brown Colour and almoſt ſtunk. But on the 11th we got out of the Hills, and came to a Plain, but ſo barren a Field, that nothing at all grew upon it; the beſt was that we had but one Day's Journey to *Xixigar*, to paſs in this deſert Field, ſo that we held our Night Encampment this Evening not above half a Mile from that Place.

2. Having under the Protection of Heaven reached the Borders of *China*, I immediately diſpatched away a Meſſenger Poſt to the *Adaganda* or *Mandaryn*, who had been ſent from *Pegu* to receive me, and on the 12th, early in the Morning, I ſet forwards, having ranged my Retinue in good Order; and was quickly informed by the Return of my Meſſenger, that the *Mandaryn* accompanied with eighty Men, would ride from the Town of *Xixigar* to meet me, and was already advanc'd on his Way.

We approached each other but ſlowly, and met about a Quarter of a Mile ſhort of the Town, where I was very civilly welcomed by the *Mandaryn*; and after mutual Compliments were paſſed, we rode forwards together in Order, (making a very good Appearance) till we reached the Town, where a very good Houſe was provided for me, and thoſe of my Retinue were well lodged ſuitable to their Characters, as well as the *Coſſacks* which I had with me, in the beſt Houſes in the Town.

This Province is ſituated in a very variable, and withal unwholeſome Climate. About Noon generally riſes a high Wind, that continues about two Hours; but otherwiſe the Sky is very ſeldom overcaſt, ſo that the Sun continues to ſhine very hot almoſt always, by Means of which, and the conſtant Wind the Earth is ſo dried, and driven upwards, that the ſubtile white Duſt is ſcarce ſupportable. I was very particular in my Obſervation of the Alteration of the Air, when I came from betwixt the Hills. About five Miles from *Xixigar*, I perceived the Air to be cloudy as far as the Mountains extended; but no farther; and particularly, where the Hills ended, the Air was clearly and viſibly ſeparated by a windy Arch, from the Weſt to the Eaſt, towards the *Albanian* Mountains; a very extraordinary Phænomenon, which I aſſert as an Eye-witneſs.

As for what happened to myſelf, the *Mandaryn*, who was an agreeable well bred Man, very civilly invited me to take a Meal with him on the 14th Inſtant, at which I was received with particular Expreſſions of Kindneſs, and ſplendidly treated: The Entertainment was compoſed of good Soops, ſavoury Herbs, roaſt and baked Meats, all which were followed with a Banquet of Sweet-Meats and *Chineſe* Fruit. His Men and Soldiers were all diſpoſed in the beſt Order, each as perfectly and reſpectfully knowing and taking his Station as is poſſible in *Europe*. What alone was very uneaſy to me, was, that I was obliged to ſit with him on the Tapiſtry, with my Leg acroſs and under me, which is to Strangers a very troubleſome Cuſtom.

On the 15th, I treated the *Mandaryn* in Return, having cauſed him to be invited the Day before. I entertained him in the *European* Manner, and put a Glaſs of good Sack briſkly about, cauſing the Trumpets and other Muſick to play; all which wonderfully pleaſed this Gentleman, ſo that he and his Company returned Home pretty mellow, and mightily ſatisfied with *European* Civility.

On the 25th, the ſame *Mandaryn* again entertained us,

us, and the following Day dined with me. During which Interval of Time, I cauſed all neceſſary Preparations to be made for me and my Retinue, in order to our Proceeding on our Journey to *Peking*. I informed the *Mandaryn* that I was ready, who immediately anſwered very civilly, that, purſuant to the Order of his *Amologda Chan* or King, as many Coachmen or Waggoners as were neceſſary were prepared to wait on me, if I pleaſed to accept of his Company, and ſet forwards on the 28th Inſtant. Before I invite the Reader to accompany me in this Journey, I think myſelf obliged in few Words to deſcribe what appeared to me remarkable amongſt the Inhabitants of this Province of *Xixigar*.

3. About a Quarter of a Mile from this Frontier Town, runs the River *Naun*, on which is ſituate the City of *Naunkoton*, lately built, and encompaſſed with earthen Walls, well lined, and covered on the Outſide with maſſy Timber. The Inhabitants of this City, and the ſix large Southern Villages ſubordinate to it, are call'd *Daori* or *Old Dauri*; and at preſent this Country is called *Dori*, by the *Tartars* which inhabit all along the River *Nauna* and *Jallo* to *Albazin*. Theſe People have very rich manured Lands, and all Sorts of Garden-Fruits, and ſeveral Tobacco Plantations; but their Religion is impious and Diabolical; for according to their own Report they are all *Schammans* or Conjurers, which invoke the Devil. Several Neighbours of both Sexes frequently aſſemble together about Midnight; one of them lies with his Body extended on the Earth, and the By-ſtanders with exalted Voices make a diſmal Howl: Others beat on a Sort of Drums; which ceaſing for a ſmall Interval, the Howl is renewed, and ſometimes laſts for two Hours, until he that lies on the Earth, ſeems returned to his Senſes, and after a tedious Howling, riſes up and relates where he hath been, and what he hath ſeen and heard; after which, whatever any of the Company are deſirous to be informed of concerning future Events, or other Particulars, is propoſed to him; and while I ſtaid there, no Night paſſed without this hideous Howling of theſe Diabolical Miniſters.

They keep their Dead three Days in their Houſes, then bury the Corps in a high-rais'd Grave in the Gardens or Fields; after which it is daily viſited by the Relations of the Deceaſed, a Hole being left open at the Head, to which Place they bring the Dead all Sorts of Victuals and Drink, conveying theſe Edibles by a Spoon made for that Purpoſe to the very Mouth of the deceaſed; but leave the Drink ſtanding in ſmall Tin Cups round the Grave: This Practice laſts for ſeveral Weeks; which ended, they bury the ſtinking Carcaſs a good Way deeper in the Earth.

They live in Houſes of Clay or Earth, covered with Reeds or ſmall Bamboes, ſomewhat like the Peaſants thatched Houſes in *Europe*. The Walls on the Inſide are partly white, being plaiſtered with Lime. The Middle of the Houſe is furniſhed with an erected Pillar, about which are wound the Entrails of Beaſts, by which hang a little Bow and Arrows, Pikes and other Arms; to all this they ſometimes, by bowing and Proſtrations, pay an idolatrous Sort of Worſhip. Their Houſes are not partitioned into Chambers, nor have they any Garrets; but almoſt one half of the Houſe cloſe to the Walls is taken up all round with a large Bench of an Ell high, and about two Ells broad, covered with red Matts; under theſe Benches paſs a Chimney, through which the Fire is kindled by the Door of the Houſe, and the Smoke goes out at the other Side of it. And this Chimney in Winter ſerves inſtead of a Stove, though the Habitation is not much warmed by it; but the Inhabitants which ſit on this Bench in the Day Time, and lie on it at Night, are indeed ſomewhat the better for it. There are conſtantly in theſe Dwellings two fixed Iron Kettles, in one of which is warm Water to make Tea, and the other is reſerved for Boiling of Victuals. The Houſe is all round provided with ſquare Windows, which are latticed with Paper inſtead of Glaſs, and in warm Weather they are ſet open with a Stick to make Way for the cool Breezes to paſs through the Apartment.

Theſe People are generally well-ſhap'd, but more eſpecially the Women. The Men, Women and young Girls, wear the ſame Habit as the *Manſiourian Tartars* in *China*. The Secretaries of the *Mandaryns*, which are in the Service of the *Chan*, and are ſent hither or to any other Place in *Tartary*, whenever they are inclined to Venereal Pleaſures, ſeize for their own Uſe as many Wives as well as young Virgins as they like, at Pleaſure; and I have frequently ſeen them carry off the moſt beautiful Creatures on Waggons, as to the Slaughter. Some Men being obliged to ſend their Wives after theſe Courtiers, boaſt of it as a very particular Favour, that they have the Honour to have ſuch a Lord for their Brother in Law; but others, though perhaps not very well ſatisfied with this Cuſtom, for Fear of falling into Diſgrace and being puniſhed, are obliged to bear it patiently, though a barbarous Practice, eſpecially amongſt a polite People.

Leaving this frontier Nation on the 28th Inſtant, and ſetting forward with the *Mandaryn* from *Xixigar*, by the Evening we reached a Village where we paſſed that Night. On the 29th we paſſed through ſeveral Villages, and arrived on the other Side of the *Jalo*, where it falls into the *Naunda*. We forded the *Jalo* without any Difficulty, it being but ſhallow, but the *Naunda* is very broad, ſtrengthened with a high Sand and Earth Bank on each Side. The Stream is not very rapid, by reaſon it is deep; its Water looks brown; it abounds with Sturgeon, Jacks, and ſeveral Sorts of ſmall Fiſh; and ſeveral Mother of Pearl Shells are found on its Shoars.

On the 30th we turned off from the River *Naunda*, and left it on the Left; its Courſe is farther extended downwards, Eaſt-South-Eaſt, between large Mountains; but we travelled over Mountains of Sand and Earth till the Evening, when we firſt reached the *Mongalian* Rivers. Theſe *Mongalians* are ſubject to the Emperor of *China*. Here we were obliged to content ourſelves with the Water we took out of Wells or Pits, which did not indeed look very well; and about twenty Huts were erected in the open Field, and covered with Felts, for me and my Retinue; in each of which Cottages an Iron Kettle was ſet on the Fire, and a *Mongalian* appointed for our Service.

Near this Place we found three *Ooſeres* or ſmall Lakes of ſtanding Water, which were utterly uſeleſs, by reaſon the Water was brackiſh in Taſte, and in Colour as white as Milk. Here the Land began to appear high and mountainous towards the Weſt, whilſt Eaſt and Southward the Low-downs preſented themſelves to our View; and we were forced to make ſhift with Well or Pit-water, which was very bad, there being no Rivers near.

4. After four Days travelling without the Sight of ſo much as one Houſe, we came to an old ruined City, encompaſſed with a Quadrangular Mud-Wall, about a *German* Mile in its Circumference. The Land appear'd hitherto both Eaſt and Weſt as before; and after ſix Days more travelling over a Hilly Country utterly deſtitute of Houſes, we reached another old deſolate City, called *Taimingzingh*, fortified with a ſquare Wall, and Bulwarks: There are in it two Towers or Turrets, one very high and the other leſs: The largeſt was an *Octagon*, the Front of which was built with Brick, and about ten Fathom from the Ground, there was, on each of the eight Sides, Stones placed, on which were carved ſeveral Hiſtories. Upon ſome of them are expreſſed ſome great Perſonages or Kings, as big as the Life, ſitting with their Feet under them, and Attendants on each Side of them: Others ſhew us ſeveral Figures which ſeemed to repreſent Queens folding their Hands together, with their Servants on each Side; the Queens having Crowns on their Heads, and the other being adorned with Rays or Luſtres, as Saints are commonly painted, and alſo folding their Hands; all which ſeems to hint that this Tower muſt be built by Chriſtians.

Other Parts of it repreſented Warriors with Pikes, after the *Chineſe* Manner, and the King bare-headed, in the middle with a Scepter in his Hand, and all the By-ſtanders appearing with hideous Diabolical Viſages, and the Proportion of all theſe Images ſo exactly obſerved, that they looked like the Works of *European* Maſters.

This Turret was perfectly cloſe on all Sides, with no Kind of Aſcent without, or Entrance into it. Several large Heaps of Bricks lay in the City, beſides a great many Stone Statues as big as the Life, in the Figures of Men and Idols, Grave-Stones, great Stone Lions, and Tortoiſes of an uncommon Largeneſs; by all which this ſeemed to have been a Place where ſome *Chan* or King had formerly reſided.

One Part of the City was divided from the other by an earthen Wall; the Bulwarks were extraordinary large and high, and this great City had but four Ports or Entrances, into which ran Multitudes of Hares, as far as the Graſs grew, there being ſcarce any Men in the Town, or rather Village erected within the Town of late by the *Tartars*.

The *Chineſe* relate, that many hundred Years paſt, *Utaichan*, or *Un-Chan*, a *Tartarian* King, governed here, but was conquered and driven out of his Country by a *Chineſe* King. The City, as near as I could gueſs, was above a *German* Mile in Circuit.

In ſeveral Places amongſt the Mountains we obſerved Brick Turrets ſtanding, which ſeemed to be ancient Burying-places of the *Tartars*. In theſe Hills I obſerved an infinite Variety of known and unknown Plants, extending for the Space of ſeveral Miles as thick with Thyme and Marjoram as Graſs.

After having travelled four Days farther, we came to *Burgan Koton*, or *Idol* City, as it is called, which is likewiſe utterly laid waſte: It takes its Name from being a Place where formerly only the principal Heathen Prieſts lived. It had a Mud-Wall, moſt of which is at preſent fallen down. In the Middle of the City is a high octangular Stone Turret, built in the *Chineſe* Manner, and hung with ſeveral hundreds of ſmall Iron Bells, which whenever the Wind riſes a little, chime with a Silver Sound, which is very agreeable. There was an Entrance into this Steeple, by which I ſent ſome of our People up, to ſee what was to be found in it: They informed me, that in ſeveral dark Holes, they ſaw many thouſands of *Chineſe* or Heathen Idols of ſeveral Shapes and that they were very glad they were got back again. On one Side of this Turret were ſeveral Holes, out of which the Stones had fallen by the Decay of Time; and theſe Holes were filled with Inſcriptions by the *Mangols*, in the *Eaſt Tartarian* Language, which were placed there by the Travellers that paſſed by that Way, particularly by their *Lama*'s or Prieſts; for others who cannot write ſatisfy themſelves with ſetting up Figures moulded in Clay.

5. Half a Mile from hence is a *Chineſe* Village, moſtly inhabited by *Lama*'s, (for where the Corps is, thither the Eagles flock) they entertaining all *Tartars* travelling this Way, and inſtructing them in the dark Errors of their ancient Idols. We paſſed on over ſandy and downy Land, on which was a low Hill, with ſome old Birch-Trees ſtanding on it: This Hillock is according to their Manner eſteemed ſacred by the *Mongalians* and the Neighbouring *Tartars*. And thoſe who travel by it, as a religious Offering in Honour of this Place, in order to obtain a good Journey, hang ſomething which they have about their Body here, either Caps, Cloaths, Purſes, Boots, Breeches, Shirts, Switches, *&c.* upon the Trees, which from the Top to the Bottom are ſo full charged with this Trumpery, that they ſeem to be Shops; and it is thought very ſcandalous to remove any of them, for they muſt hang and rot upon the Principle of their Religion.

At laſt we came to the River, which is called *Schara Murin* or *Yellow Horſe*; which proceeds from the Weſt, and falls Eaſtward into the River *Karga:* It is about thirty Fathom broad, and fordable with Camels and Horſes. Advancing farther we came to the River *Logaa*, which riſes in the South, and falls into the mentioned *Schara Murin*. The Land here on each Side is rocky, but in the Valleys are ſome fine Villages, and well cultivated Grounds. Proſecuting our Journey we came to a large Village, in which was an old fallen *Chineſe* Idol-Temple, without any *Idols* in it; as alſo another in which a great Lord lived, who was married to one of the reigning Emperor of *China*'s Daughters. After this we reached a ſmall City called *Kara-Katon* or *Black City:* Which is Quadrangular, and encompaſſed with Oaken Palliſadoes driven into the Ground; which ſerve rather to defend it from Tygers and Leopards than the Enemy: The Land all about being covered with high Rocks, on which grow Thickets of Oaks, and great Quantities of Graſs, where Multitudes of thoſe Beaſts harbour, as well as wild Swine and Harts; for which Reaſon, from hence to the great Wall, is thought ſo dangerous, that no Perſons venture to travel it by Night: And all the Horſes, Aſſes, Camels, and Cows have Iron Bells faſtened about their Necks, which ſomewhat frightens the Tygers. The Inhabitants told us alſo, that frequently, Men that have only gone amongſt the Hills in Day time, have been torn to Pieces: Wherefore the *Mandaryn* cautioned me to give Order that none of my Attendants ſhould venture to turn out of the Road, or go amongſt the Hills, that they might not be devoured by theſe wild Beaſts, who by Day harbour on the Mountain Tops, and by Night go in ſearch of their Prey, and are then exceſſively bold and ravenous.

6. The Emperor of *China* annually in *Auguſt* comes a Tyger-hunting to this Place, accompanied with two or three thouſand of the beſt Archers in *Tartary*, and a Party of Lancers. When the Tygers are to be put up, the Emperor himſelf goes to the Foot of the Hill along with the Men that attend him armed with Lances, Bows, and Arrows, who inveſt the Hill, and beſet it very well up to the Top; and when they find the Tygers there, they ſeeing themſelves beſet, endeavour by Leaping to break through the Croud, but are hunted with Drums and Bells till they come to the Place where the Emperor himſelf is, who ſhoots down the Game with Bow and Arrow, without any Hazard of his Perſon; for if there happen but the leaſt Danger, he is encompaſſed with ſo many Men, that they eaſily defend him from the wild Beaſt with their Lances. The Emperor paſſes ſome Weeks in this Sport; by Intervals putting up alſo ſome edible wild Game, as Swine, Harts, Roebucks, Hares, beſides Wolves and Foxes. And this I have heard not only from the Inhabitants, but from the Jeſuits, two or three of which were obliged to go this Progreſs with him.

We obſerved hereabouts, in the Fields and Trees, a Sort of Birds, in Size and Shape very like a Heron, the Feathers of which are very beautiful, their Neck and Breaſt being white, their Wings and Tail of a bright Scarlet, their Fleſh firm and very good Meat; we ſaw alſo another Bird which was as big as a Parrot, his Bill crooked, his Tail a full Ell long, and chequered with all Sorts of fine Colours, but he is ſo very wild that he will not ſuffer any to come near enough to take him: Here are likewiſe Partridges with long Tails and beautiful variegated Feathers.

Not far from hence we came to a ſteep Rock, the Aſcent of which was very crooked and winding, and was far above two hundred Fathom hewn through by Men, and a Way cut which was ſeven Fathom broad, probably for the Convenience of Travellers, the other Side of this Rock, by Reaſon of the deep Moraſs, being impaſſable. We paſſed hereabouts continually by ſteep Rocks, furniſhed with Oaks and Limes, and in the Vales Cheſnut and large Nut-trees as well as Vines grew Wild. From hence we went forwards and came to a very high Rock, ſharp-pointed at the Top, and, by reaſon of its Steepneſs, impoſſible to be climbed: On one Side of which, about half Way up, is an Idol Temple hewn out of the Rock: It hath four Windows, and inſtead of Idols, we ſaw four Stone Statues in a ſitting Poſture. It is not a little to be wondered how it was poſſible for Men to come there, and perform ſuch a great Piece of Work; the Rock on that Side being ſo extraordinary ſteep, that a Mouſe cannot get up it. This Temple, according to the Report of the Inhabitants, hath been built ſeveral hundred Years.

7. On the 27th of *October* we reached ſome Watch-Towers on the Pinacles of the Rocks, from whence we got Sight of the *Zagan Crim*, that is, the great Wall, which we came to on the ſame Day. This really ſeems to be one of the Wonders of the World. About five hundred Fathom from this famous Wall is a Valley, each Side of which was provided with a Battery of hewn Stone, from one of which to the other a Wall about three Fathom high is erected, with an open Entrance. Paſſing through this Fore-wall, we came to the Entry of the great Wall, through a Watch-Tower, about eight Fathom high, arched over with hewn Stone, and provided with maſſy Doors ſtrengthened with Iron: The Wall runs from Eaſt to Weſt, acroſs the Valley and up extraordinary high Rocks, and about five hundred Fathom diſtant from the other hath on the Rocks on each Side of it a Tower built on it. The Foot of this Wall was of large hewn Quarry-ſtone for about a Foot high, and the remaining upper Part was compoſed of Brick and Lime, but, as far as we can ſee, the Whole was formerly built with the ſame Stone. Within this firſt Port we came into a Plain full one hundred Fathom broad; after which we came to another Guard-Port, which had a Wall on each Side, and like the firſt Wall, was carried quite acroſs the Vale; and this, as well as the firſt Port, was guarded by a Watch of Fifty Men. On the firſt or great Wall ſtands an Idol-Temple, with the Enſigns of the Idol and the Emperor flying on the Top of it. The Wall is full ſix Fathom high, and four thick, ſo that ſix Horſemen may eaſily ride a-breaſt on it, and was in as good Repair as if it had not been erected above twenty or thirty Years ſince; no Part of it being fallen, nor annoyed by the leaſt Weed or Filth, as other old Walls are obſerved to be.

8. After this laſt Watch-Tower, we came into a Vale about three hundred Fathom over, on which grew ſome large Willows, and on the Weſt-ſide, at the Foot of the Rock, was a magnificent Temple; a Muſquet-ſhot from whence we came to the City of *Galchan*, which is encompaſſed with a high quadrangular Wall, but is not very populous. Here I was welcomed by the Diſcharge of three Iron Guns, and continued all Night in the Suburbs. The Streets were ſo beſet with the Concourſe of People, that it was difficult to paſs them, being drawn together by the Sound of our Trumpets and Bagpipes, which ſeemed very ſtrange to them, they never having heard any ſuch Muſick before. In the Evening the *Mandaryn* ſent to compliment me, and invited me to ſup with him at the Royal Palace, where the Emperor reſides when he paſſes this Way. Upon my coming thither, beſides the *Mandaryn*, I found there the Governor and the greateſt Officers of the City; and after we had drank ſome Diſhes of Tea, I was entertained with a noble Supper, all the Action of a Play, and a Specimen of Muſick, after their Faſhion, conſiſting of all Sorts of Kettle-Drums and ſtringed Inſtruments, which made a hideous, confuſed Noiſe; ſo that I could have rather wiſhed myſelf at a Diſtance, than near it. They ſate on Stools by Couples, no more than two at each Table. Theſe Tables were finely japanned, and covered with exquiſite Needle-work Silk Carpets. They uſe no Table-cloths, Napkins, Knives, Forks or Plates; but only two ſmall round Sticks of Ivory or Ebony were laid upon the Table, which was its whole Furniture; but indeed they are ſo wonderfully expert in the Uſe of theſe Sticks, that they can with them take up any Thing, though of the Size of a Pin's Head. They hold them in the Right-Hand betwixt the Thumb and the two Fore-Fingers. All their Victuals, whether Soops, Rice, ſtewed or roaſted Meats, are brought to Table in *China* Veſſels, and not in Diſhes: Each Sort of Roaſt is ſerved up alone, cut into ſmall Pieces; but the Banquet of Sweet-meats and Fruit was diſhed up in little *China* Baſins. Their Soops and Pottages are extraordinary grateful to the Taſte, as being enriched with very delicious Herbs and Spices, as Mace, Cinnamon, *&c.* The Herb they boil in their Soops grows on Rocks in the Sea, and, being boiled, appears ſlimy, and when dried is green, as it alſo looks in the Soops. This Plant hath no Leaves, but grows with interwoven Branches, and is of a very agreeable Taſte, and eſteemed very wholeſome; ſome think it to be abortive *Satyrion* or Birds-Neſt. They alſo dreſs ſtripped Shrimps, and Pigeons Eggs with the Whites tinged red and yellow; they have beſides fine Salleting, eſpecially Endive cut in ſmall long Slips, being very agreeable both to Taſte and Smell; this they lay uppermoſt in their former Diſh. Their Soops are not to be mended by our *German* Cooks, or perhaps any other.

Inſtead of Saltſellers, they have ſmall Saucers of Pickle or Brine, into which the Meat is dipped. By reaſon they uſe no Spoons, each Perſons takes the Cup of Soop ſet before him, and ſups it up; but that Part, which is too groſs, he guides to his Mouth with the round Sticks, that nothing may run beſides or foul their Cloaths, uſing no Napkins, though indeed their Handkerchiefs hang by their Sides, with which they only wipe their Mouths.

In the publick Eating-houſes or Ordinaries the Carver ſtands at the Table with the Roaſt-Meat before him, which, in Preſence of the Gueſts, he cuts into ſmall Bits, puts them into little Cups, and ſets them on the Table. This Carver makes Uſe of no Cloth to wipe his Hands, but cuts off what is beſt dreſſed round the Bone as long as he can, and tears off the Remainder with his Hands, which are greaſed up to the Elbows ſo plentifully, that the Sight of them alone is enough to give the Spectators a Meal, more eſpecially ſuch as have ſqueamiſh Stomachs.

Their Drinks are Brandy, which they call *Arakka*, and a Sort of Wine they drink warm, called *Taraſu*, which is a Decoction of green or half-ripe Rice; and after it hath been kept a Year or two, in Colour, Taſte, and Strength, is very like the beſt *Rheniſh* Wine.

Whilſt we were at Table, the Maſter of the Band of Players upon his Knees preſented the *Mandaryn* with a Book of red Paper, containing a Liſt of Plays written in black Letters; which the *Mandaryn* peruſing, told him which Play he choſe; after this, bowing his Head to the Earth, he aroſe and began the Performance immediately.

Firſt entred a very beautiful Lady, magnificently dreſſed in Cloth of Gold, adorned with Jewels, and a Crown on her Head, ſinging her Speech, with a charming Voice, and agreeable Motion of the Body, playing with her Hands, in one of which ſhe had a Fan. The Prologue thus performed, the Play followed, the Story of which turned upon a *Chineſe* Emperor long ſince dead, who had behaved himſelf well towards his Country, and in Honour of whoſe Memory the Play was written. Sometimes he appeared in Royal Robes, with a flat Ivory Sceptre in his Hand, and ſometimes his Officers ſhewed themſelves with Enſigns, Arms, and Drums, *&c.* and by Intervals a Sort of Farce was acted by their Lacqueys, whoſe antick Dreſs, and painted Faces, were as well as any I have ſeen in *Europe*; and, as far as was interpreted to me, their Farce was very diverting, eſpecially Part of it, which repreſented a Perſon who had in his Marriage been cheated by a debauched Wife, and fancying her conſtant to him, had the Mortification to ſee another make Love to her before his Face. They alſo, according to their Manner, danced to the Lute; and after three ſeveral Plays were acted, and it grew towards Midnight, I took my Leave, rid Home, ſet forwards on my Journey the following Day, and over a floating wooden Bridge paſſed the River *Lungo*, which comes from the Weſt, and flows South-Eaſtward into the Sea of *Corea*.

9. Upon my Arrival at the City of *Xantunnung*, near that of *Lania*, we were welcomed by the Diſcharge of ſeveral Guns, and lodged in the Suburbs. The *Mandaryn* ſent to compliment and invite me to Supper, a Compliance to which, in Company with the Governor and principal Officers of the City, I went accordingly, where I was ſplendidly entertained at the Emperor's Country Palace, and again diverted with Farces. On the ſame Day we paſſed the *Xungo*, which alſo riſes

in the Weſt, and flows Eaſtward near the City of *Lania*, and happily reached the City of *Xantunnung* Time enough to lodge there, where, as in the other Cities, I was entertained by the *Mandaryn* at the Imperial Apartment with a Supper and Play till Midnight. Next Day I went on, and paſſed a Moraſs, over which lay a very fine Stone Bridge, with numerous Arches, all of ſquare Stone, and adorned with all Sorts of Imagery, but eſpecially Figures of Lions. We paſſed through ſeveral conſiderable Towns and large Villages, all of which were very populous, and very conveniently provided with Horſes and all Manner of Neceſſaries for Travellers; here we obſerved more eſpecially great Numbers of Inns, Cooks-Shops, and Tea-Houſes. In the Evening we came to the City of *Xungunxa*, where the *Mandaryn*, as before, invited me to Supper; but being indiſpoſed, and very much tired with a tedious Day's Journey, I civilly refuſed him, and ſtaying at Home, refreſhed myſelf with the charming Fruits of that Country, ſuch as Grapes, Limons, Oranges, Apples, Pears, Cheſtnuts, large and ſmall Nuts, &c. all exquiſite in their reſpective Kinds.

The following Day we travelled up a high Rock, paſſing by the Temple called *Jugangu*, the Front of which appeared very beautiful, being all of ſquare Stone, and ſeemed to be a ſtrong Fort or Caſtle. Next Day we paſſed on the left Hand or Eaſt Side over a high Mountain, by a beautiful Cloyſter, and ſeveral Towns and Villages. This Temple is in the Province of *Peking*, and very famous, by Reaſon the Image of an ancient *Chineſe* King, or falſe God, is kept there, which induces ſeveral Huſbandmen, not only from the neighbouring Villages, but even as far as the great Wall, to come hither in Pilgrimage in the Spring to implore a fruitful Summer, and after Harveſt to thank their Deity for a good Crop; to perform which Office whole Villages and Families reſort hither with their Prieſts. The Women, being dreſſed in their beſt Apparel, ride on Aſſes in the Middle of the Proceſſion. The Prieſts carry painted and metallick Repreſentations or Images of ſeveral Idols; and ſome of the Men carry a Sort of long Trumpets, others Flutes, Drums and Kettle Drums, with which they make a horrid Noiſe. They are all followed by a *Lama* or Idolatrous Prieſt, with a Baſket faſtened to his Body, in which he carries triangular folded Papers, ſome gilded and others ſilvered over; theſe he ſcatters on the Way about 100 Fathom from the Cloyſter, in Honour of this *Wonder-worker* or *Idol*. Another carries burning perfum'd Tapers, which laſt till they come to their deſigned Place. Theſe Pilgrims ſtay ſeveral Days there, paſſing their Time in all Manner of Diverſions as well as Devotions.

Proſecuting our Journey we paſſed by a City inhabited only by the Emperor's Concubines, and their Retinue, where that Monarch ſtays ſeveral Days when he goes a Hunting. The City is not large, but hath a great many fine Stone Palaces covered with red Tiles; is full of Idol Temples, and encompaſſed with a high Stone Wall. About three Cannon Shot Weſt of this Place is a Spring of boiling hot Water, of which a hot Bath is made.

10. After having paſſed many Towns and Villages, we came the next Day to *Kixa*. Here the Hills on both the Eaſt and Weſt Sides of us began to diſappear; though on the Mountains, on the South-Eaſt and Weſtern Sides, we could yet ſee the great Wall. Going from hence we paſſed over a Stone-Bridge on the River *Xangu*, and repoſed that Night at *Xangole*.

On the 2d of *November* we paſſed through ſeveral Towns and Villages, and over a Stone Bridge over the River *Tungo*, which brought us to the City of *Tunxo*, which is fortified by a great Wall, and is ſituate cloſe to the River *Tungo*. About as far as the mentioned Bridge, the Governor of the City and principal Officers, with a great Train of Horſemen, came to welcome me. The *Mandaryns* told me that this Governor was a very great Nobleman, by Birth a *Mongalian*, or *Eaſt-Tartar*, and a very affable, well-bred Man. He invited me and the *Mandaryns* to Dinner, and gave us a noble Entertainment, ſuitable to his Quality and Character.

The City of *Tunxo* is very large, populous, and a Place of great Trade, by Reaſon of the Water-Carriage from thence to *Japan* and the Provinces of *Nanquing* and *Corea*. On this River, and haled on Shoar by its Sides, lie a great many Jonks; beſides ſeveral which belong to the Emperor, and are richly adorned with carved Work, Galleries, and Windows. In theſe Barges the Governors of Places are carried to their appointed Cities, landed, and afterwards brought Home again. Thoſe Jonks which are haled on Shoar are inhabited in Winter like Houſes, though there is indeed but very little Winter here, nor doth the River ever freeze up, though ſometimes Ice appears on the Shoar. Theſe Jonks or Barks are indifferent large, and built very ſtrong. When they lie on the Wharfs the Joints, inſtead of Pitch and Tarr, are ſtopped and ſmeared over with a Sort of Clay mixed with ſome other Ingredients, which once dried keeps faſter and firmer than any Pitch. The Maſts are a Sort of *Bamboes*, hollow within, but yet very ſtrong; and ſome of them are as thick as an ordinary Man's Waiſt. The Sails are a certain Sort of Ruſhes woven together, that when furled, fold up as pliable as Flags, which is ſomewhat ſurprizing. The Forepart of theſe Ships is very flat, being built Archwiſe from Top to Bottom, and very conveniently fitted for the Sea. Inſomuch that, according to the Report of the Inhabitants, with a good Wind, in one of theſe they can reach the *Koreæſchian Sea* in three or four Days; and ſuppoſing the Wind favourable, can in four or five Days Sail, gain from thence to the Kingdom or Empire of *Japan*; ſo little are they Novices in Sailing.

Paſſing thro' this City, I rode thro' the *China* Earthen Ware Market, where I ſaw vaſt Quantities of the fineſt *Porcelain* in the World. I alſo obſerved Abundance of *Pagods* or *Idol Temples* and Cloyſters; and after I had lodged a Night in the Suburbs, and got every Thing in good Order, departed next Day, and proceeded forward till I entred *Peking*, this being the laſt Lodging-Place in my Way to that celebrated Capital of this extenſive Empire.

As our Author contents himſelf with ſpeaking only of thoſe Things that he has ſeen, and ſays no more of them than what he has ſeen, I thought it would not be diſagreeable to the Reader, if, upon his mentioning ſo great a Market for *China* Ware, I took the Opportunity of inſerting a ſhort Memorial, that has lain ſome time by me, upon this Subject, as it may otherwiſe run the Hazard of being loſt; and as I am perſuaded, that, upon Peruſal, it will be thought worthy of a better Fate, the rather, becauſe at preſent we have nothing very diſtinct or very methodical upon this Subject, except in *Du Halde*'s Hiſtory of *China*, where it is ſpun to ſuch an exceſſive Length, that very few People will be at the Pains to read it, and I know ſome that have repented of their Perſeverance. Without farther Introduction then take this Memorial, which runs thus.

" There are very few Subjects that deſerve more Attention or Care to be beſtowed upon them, than " the Efforts of the human Underſtanding, in producing " and perfecting uſeful Arts. Amongſt theſe there are " but few that deſerve the Preference of Porcelain or " *China* Ware, ſo univerſally admired upon its firſt Ap" pearance, which has kept its Credit now for the Space " of two Centuries, and which is generally eſteemed, not" withſtanding the vaſt Quantities of it that are con" tinually imported, as much as when it was firſt known. " It is indeed true, that a great Part of its Value is " derived from the Opinion of the Ladies; neither can " I think that this is any Objection to it, for on the " one Hand, they are the moſt converſant with it, and " on the other they are the beſt Judges.

" Their Sentiments therefore ought to fix it in our " Eſteem; but while they conſider it in the Light of " a beautiful Curioſity, it may deſerve our Pains to " enquire into the principal Points that regard it, which " cannot be done without a tolerable Share of diffe" rent Kinds of Learning. I dare not therefore preſume " to hope I ſhall be able to ſet the Subject in the ful" leſt and moſt perfect Light; but if I lead the Way, " and trace out a proper Method of Handling it, " I conceive that I ſhall not loſe my own Time, and

" that

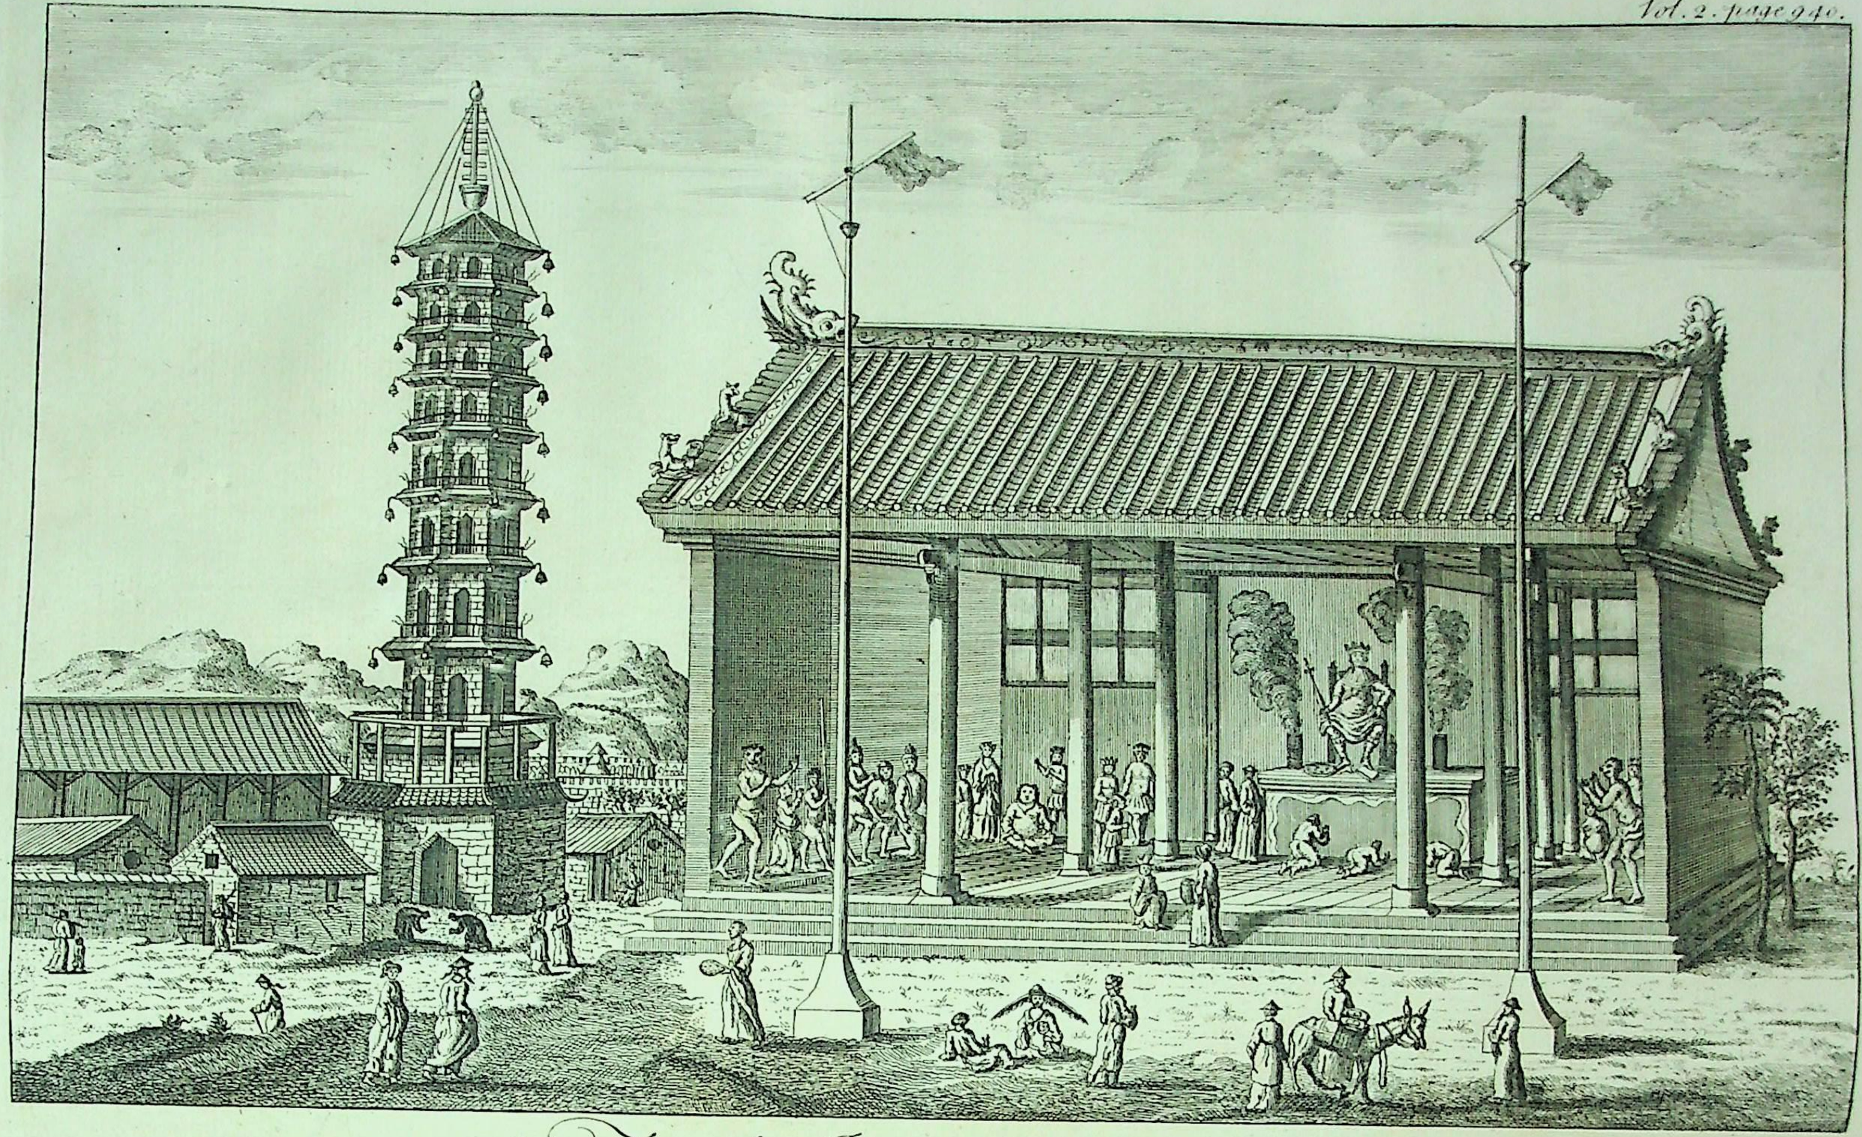
CHINESE Pilgrimage of a Whole Village to the Temple JUGANGU to obtain a fertile Year

Vol. 2. page 940.



Inside of the Temple Jugangu in the Province of PEKING.

“ that poſſibly I may excite ſome Maſter of a better Pen to do it that Juſtice which ſo entertaining and uſeful a Subject deſerves.

“ In the firſt Place, we will conſider the Excellency of *China* Ware, a Thing that has ſtruck ſome of the learned ſo much, that according to their uſual Cuſtom, they would needs entitle the Ancients to it, juſt as they have beſtowed upon them the Uſe of the Compaſs and of Teleſcopes, without conſidering that their leaving no clearer Teſtimonies of their Titles to ſuch admirable Inventions, does them infinitely more Diſcredit than the Notion of their Want of them. According to the Sentiments, or rather to the Whim of thoſe who doat upon Antiquity, the *Vaſa Myrrhina* ought to be tranſlated Veſſels of fine *Porcelain*. Theſe were firſt ſeen at *Rome* in the Triumph of *Pompey*, and were afterwards eſteemed valuable, I might ſay invaluable Curioſities.

“ This gives us indeed a very high Notion of the Excellency of *China* Ware, but I am very much afraid no very juſt one; for if *Pliny*, who with Reſpect to Things he had ſeen, was certainly a very juſt and a very exact Author, has given us a right Deſcription of theſe Veſſels, they were of a Kind of precious Stone, which had a white Ground, interſected with Veins of different Colours, which Stone was found, as the ſame Author tells us, in ſome Parts of *Perſia*; ſo that, except their being very fine, of a vaſt Price, and coming from the Eaſt, there are no Arguments to prove that they were *Porcelain*. But however that Matter may be, moſt certainly if the Ancients had any Knowledge of this Kind of Ware, they thought it inimitable, for as yet I have not met with any Antiquary that has ventured to aſſert the *Romans* themſelves made any Thing of this Kind, and yet they were not Novices either, in the Art of Earthen Ware.

“ It is true, that in *Perſia* they carried ſuch a Manufacture to a great Height, neither is it yet loſt among the Inhabitants of that Country, who make a very fine Sort of Earthen or Stone Veſſels, which would be imported, and highly valued in *Europe*, if, notwithſtanding their Beauty, they did not fall very far ſhort of *China*. In *America* alſo, and eſpecially in the very Heart of *Mexico*, they make extraordinary handſome Veſſels, of a Kind of red Earth, little, if at all inferior to that of the ſame Kind which we receive from the *Indies*; but ſtill this is nothing to the Purpoſe, for with Reſpect to the Fineneſs of the Grain, the perfect Tranſparency, the ſnowy Colour of the White, the wonderful Beauty of the other Colours, Blue eſpecially, the Dexterity with which they are laid on, or rather wrought in, and the Strength and Soundneſs even of the thinneſt Pieces, no Manufacture that has been hitherto ſeen, can be truly ſaid to vie in Excellency, if I may be permitted that Expreſſion, with the Ware of *China*.

“ The *French* indeed have boaſted, for what is there which they will not boaſt? that they have come up to it; but it is in their Eyes only. At preſent great Part of the World is perſuaded to prefer the *Dreſden* Manufacture, for which, the beſt Reaſon that can be given is, that it is more coſtly. But with regard to the Properties before-mentioned, for as to other Properties I conteſt not, *Chantilli* and *Dreſden* muſt both yield. Yet if we conſider what a Spirit of Imitation the bringing over this Ware has excited, what wonderful Advances our Potters have made, and what a new Field of Induſtry this has opened in *Europe*, I preſume there are few Politicians who will not agree with me, that we have no great Reaſon to regret the Silver it has coſt us. In this Light, when we conſider Luxury, we perceive that the Wiſdom of Providence continually extracts Good from Evil, and that Nicety, Elegance, and even Profuſion, are made the Parents of Labour, Diligence, and a comfortable Subſiſtence to the Poor, who at firſt Sight ſeem to be injured by thoſe Vices, which, in Reality, and without the Intention of the Vicious, turn to their Benefit and that of the Publick.

“ But not to dwell too long upon moral Reflections, which however have their Uſe, and ſerve to convince very well-meaning People, that the Notions they receive, under an Appearance of Truth, are at the Bottom frequently groundleſs. I ſay, to leave theſe Reflections, let us conſider next the Antiquity of *China*. It was firſt imported by the *Portugueſe*, and came from *Liſbon*, in very ſmall Quantities, to the ſeveral Courts of *Europe*. *Cavendiſh*, the famous Traveller in the Reign of Queen *Elizabeth*, is held to be the firſt that preſented his Royal Miſtreſs with Veſſels of that Ware, which came directly to *England*. Thus far our Journey is eaſy, but at the ſame Time, it is very ſhort: We have traced its Naturalization, but the Difficulty is to fix its Origin in its native Country, which is a Point of Difficulty indeed. Thoſe who pretend to be beſt acquainted with the *Chineſe* Story, cut the Knot which they cannot untie, and tell us very bluntly, that there are no Records of this Invention extant. Men of more Modeſty perhaps would have ſaid, that hitherto no ſuch Record had reached their Hands, for ſome other Accounts that they give us, leave us not altogether without Hopes, that this Tale may be one Day contradicted.

“ A Perſon, well verſed in *Chineſe* Learning, aſſures us, that there is not a Province, a Diſtrict, not even a City of *China*, where they have not a natural, a civil, and a political Hiſtory of the Place; in the former, they ſet down all that Nature produces, and all the Improvements made upon her Productions by Art. In the Second, they give Place to all the remarkable Perſons, Male and Female, that, in the Courſe of Ages, have dwelt therein, and the Acts for which they became famous. In the third, they preſerve the Succeſſion of their Governors, the moſt remarkable Events that happen, the Privileges they obtain, and the Misfortunes they ſuffer. Now and then, it is ſaid, that a Purſe of Gold dictates to the Scribe; but a ſpecial *Mandaryn*, who is a native of the Place, is ſent once in forty Years by the Emperor, who, in Conjunction with the Perſon then intruſted with the Adminiſtration, reviews theſe Memoirs, and ſtrikes out all the Paſſages that there is any Reaſon to ſuſpect ought to have been writ in Gold Letters.

“ In Records ſo curious, and written with ſo much Circumſpection, we might expect that a Line at leaſt ſhould have been ſpared to ſo eſteemed and ſo important an Invention. It may be, there is ſuch a *Memorandum* as this, tho' hitherto it has eſcaped the Curioſity of the Jeſuits, yet one of theſe Fathers, more happy than his Fellows, has come pretty near it, and aſſures us, that ſince *Anno Domini* 442, the *Chineſe* Emperors have taken this valuable Manufacture more immediately under their Care, and have appointed two *Mandaryns*, to inſpect all that is furniſhed for the Imperial Uſe. With this then we muſt reſt ſatisfied, till we receive ſome better Information.

“ But here I muſt have Leave to obſerve, that tho' *Porcelain*, and *China* Ware, are with us ſynonimous Terms, yet they are not ſo in that Empire, in all the Provinces of which they make Earthen Ware, but not in above two or three they make *Porcelain*, or what we call *China*. The Place where it is made in the greateſt Perfection, in the *Chineſe* Manner of Writing, is called *Kim te tchim*; the laſt of theſe marks only the Nature of the Place, and ſignifies, that tho' it is much beyond a Village, yet it is not a City. It would lead us too much out of the Road to explain this largely, and therefore it may be ſufficient to ſay, that it is a great Town, and, like *Mancheſter* in our own Country, owes the Figure that it makes to the Ingenuity and Induſtry of its Inhabitants. It ſeems there is ſomething peculiar to this Place, which renders it fitter for the Manufacture of the fineſt *China* than any other; for when many of the Inhabitants, for the Sake of Gain, removed to *Amoy*, then the only Port open to Strangers, in Hopes of carrying on their Trade to greater Advantage, they were able to make nothing of it; and when by

“ the Emperor's Command, they were removed to *Peking*, and all imaginable Care taken to furniſh them with proper Utenſils and Materials, to intitle the Capital to ſo valuable a Branch of Trade, the ſame Miſfortune happened to them, and the Emperor very wiſely determined thereupon, to leave the *Porcelain* Manufacture where Chance or Nature placed it.

“ Thus much may ſuffice in Regard to the Origin and Antiquity of this elegant Manufacture; for tho' more may be expected, yet I know not where it is to be found: Perhaps in Time, when the *Chineſe* Learning comes to be regularly ſtudied in *Europe*, we may come to have a clearer Inſight into this Affair; ſince though the beſt *China* be made at *Kim te tchim*; yet as Perfection is not attained at once, it is very highly probable, that the Art was invented elſewhere, and that the particular Hiſtory of the Place of its Invention may hitherto have eſcaped the Inquiries of the *Europeans*. We will now ſay a Word or two as to the Name of this Manufacture. Some have imagined that *Porcelain* was either a Derivation or Corruption of the *Chineſe* Appellation; but this is ſo far from being true, that the *Chineſe* have no ſuch Sounds in their Language, and conſequently no Characters to expreſs them. The Word is abſolutely *Portugueſe*, and in their Orthography is writ *Porcellana*. It ſignifies literally and ſtrictly ſpeaking a Cup, a Baſon, or a Saucer, and was firſt applied to thoſe Kind of Shells which we call Cowries, and which paſt for Money on the Coaſt of *Africa*. The Inſide of theſe Shells having a gloſſy, beautiful white Colour; when the *Portugueſe* firſt ſaw this admirable Earthern Ware, they beſtowed upon it the ſame Name, either becauſe they thought it would give their Countrymen an Idea of its Beauty, or poſſibly from a Perſuaſion that it might be made of ſuch Shells, or of ſome Compoſition that reſembled them. As for the *Chineſe* themſelves, the Word they commonly uſe to expreſs what we call *China*, is *Tſeki*, or rather, according to their Manner of Writing and pronouncing it, *Tſe ki*.

“ We will now come to the Ingredients of which it is compoſed. We had heretofore very ſtrange Notions in *Europe* upon this Head; ſome People were perſuaded that Egg-Shells were the principal, if not the only Matter of *China*, and that the *Chineſe* were extremely careful and ſecret as to the Method of preparing it. After this another Fable was invented, of a Kind of Clay, that was ſuffered to rot for one hundred Years, after which Time, and not before, it was fit to make *Porcelain*. This Story, it is thought, took Riſe from the ſuppoſed Difference between new and old *China*, which was to be accounted for thus; the former, for the Sake of Expedition, and to ſupply the increaſed Demand for this Kind of Ware, was made, if we may be allowed the Expreſſion, of half ripe Clay, and therefore, fell ſhort in Beauty of the latter, compoſed of Clay that had rotted its full Time. Some other Notions I have met with in *German* Writers, which are not worth repeating, as being founded, like the former, purely in Fancy and Conjecture.

“ What I have to offer as more ſatiſfactory, has never yet appeared in our own Language, and is taken from a ſhort Treatiſe written upon this Subject, by *Dennis Kao*, a *Chineſe*, converted to the Chriſtian Religion, and is the more likely to be true, becauſe it is very ſimple and intelligible. There are, excluſive of the Colours, three principal Ingredients in *China*; and not to trouble the Reader or myſelf with *Chineſe* Terms, which neither of us would underſtand, I ſhall tell him in plain *Engliſh*, that theſe Ingredients are a dry Earth, a moiſt Clay, and a ſtony Oil. It is very remarkable, that not one of theſe Ingredients is to be found in the Neighbourhood of *Kim te Tchim*, where the beſt *China* is made, but are brought thither from ſeveral Places; and it is thought that the Situation of that Place, ſurrounded, though at a moderate Diſtance, with Hills of a conſiderable Height, has ſomething ſo peculiar in the Temper of the Air, and in the Quality of its Waters, that theſe Ingredients, wrought with ever ſo much Diligence and Circumſpection in another Place, never ſucceed ſo well. Be this as it will, we will keep cloſe to our Subject, and ſpeak diſtinctly of each Ingredient.

“ That which is ſtiled a dry Earth, is in Reality a kind of Fire-Stone cut out of Quarries, and ſent by Water to the Place where the Manufacture is carried on.

“ There it is beat to Pieces, and reduced into a groſs Powder; then with an Iron Peſtle it is beat in a Braſs Mortar till it becomes as fine as poſſible; but they do not give themſelves the Trouble of Sifting, from an Apprehenſion that the fineſt Parts would fly off in the Operation. On the contrary, they throw it, thus beaten, into Water, and giving it Time to ſettle, ſkim off, with great Niceneſs and Dexterity, the Cream; and this, in their figurative Way of ſpeaking, they ſtile the Fleſh of the *China*. As for the moiſt Clay, it is undoubtedly a kind of Fuller's Earth, for they deſcribe it to be of a greyiſh white, very even, clammy, and, in ſhort, a Sort of natural Soap. This is likewiſe brought by Water, and is, generally ſpeaking, made up in the Form of Bricks; but as the *Chineſe* are, for the moſt Part, ſtrongly tinctured with the Spirit of Fraud, they very often adulterate this precious Clay, though it is not of a very great Price, with other Things that are however of leſs Price; and this obliges the Manufacturers to be at a great Deal of Trouble in refining it, which is done by the Help of Water; for it is a ſettled Rule, with Reſpect to theſe two Ingredients, never to make Uſe of Fire.

“ This moiſt Clay is intermixed naturally with a Sort of ſparry Subſtance, which, to the Eye, looks like the Inſide of Oyſter-Shells, and with which the whole Maſs is ſo thoroughly impregnated, that when it is purified and cleanſed from all other Mixtures, the ſmalleſt Particle of it, if broken, will diſcover Specks of this ſparry Matter. This ſecond Subſtance, when perfectly pure, they diſſolve in Water till it has acquired the Conſiſtency of the former, and this they call the Bones of the *China*. For the fineſt Sort theſe Materials are equally mixt and incorporated; for the middle Sort, there are three Parts of dry Earth to two of moiſt Clay; for the coarſeſt *China*, they mix three Parts of the former with one of the latter.

“ The third Ingredient is the Oil, which is drawn from the dry Earth or Stone, by a very curious Proceſs, and this they mingle with another Oil extracted from Lime ſeven times burnt. There is a very great Art in making this Mixture; for in certain Proportions theſe Oils will incorporate, but thoſe Proportions vary continually, according to the Nature of the reſpective Liquors. The great Point therefore is to hit this exactly, and when this is done, there reſults from theſe two Oils a third, which is the laſt Ingredient, and ſerves for a Varniſh to the *China*.

“ In the Manufacture the ſeveral Pieces go through different Hands, but the moſt troubleſome Part is preparing the Paſte, compoſed of the two firſt Ingredients, which are kneaded together upon Tiles, or rather upon Floors made of Tiles, till they become ſo cloſe and even, that, upon breaking, there does not appear the leaſt Vacuity; for a Hair, a Grain of Sand, the ſmalleſt Fragment of any Metal, if taken up in the Paſte, will infallibly ſpoil the Piece into which it happens to light.

“ When all this is performed, it comes into the Hands of the Potters, who firſt adjuſt the Weight of what they are to make, and then raiſing it in a rough Way, paſs it from Hand to Hand, every Man taking that Share of the Work, in which his particular Talent lies; ſo that one applies it to the Mold, another pares it with the Chiſſel to a proper Thinneſs, a third ſmooths its Edges, and, in this Manner, a Cup and Saucer ſhall ſometimes paſs through ſeventy Hands. When it is clear of the Potters, it comes to thoſe who give it the Oil or Varniſh, and with them it paſſes from Hand to Hand, according to their various Capacities, and their Addreſs in finiſhing different Sorts of Work.

“ The Body of Painters receive it next, and as ſlight as we make of them, for indeed they have no other Inſtructor than Nature, yet it is very wonderful how much Care and Pains they take. One traces the Border, another gilds it, he who draws the Outlines of a Flower never colours it, one Hand paints Clouds, another Water, a third Animals, a fourth Inſects, a fifth human Figures, and ſo on. Laſt of all it arrives at the Furnace, and is committed to the Care of the Bakers; neither are their Taſks leſs difficult than thoſe of the other Workmen, for an exact Knowledge of the Degrees of Fire, how to raiſe, how to diſtinguiſh, how to heighten, how to reduce them, are requiſite in theſe People, who poſſeſs wonderful Talents in their Way.

“ Beſides the five ſeparate Corps, which make up what may be ſtiled the regular Workmen in this Manufacture, there are a Variety of Branches belonging to it, that occupy as great a Number of People, ſuch as thoſe who prepare the ſeveral Ingredients, thoſe that make the ſeveral Inſtruments and Tools that are required in the Progreſs of the Work; thoſe that diſtil an Oil from tranſparent Flints for the ſuperfine *China*, of which none comes to *Europe*; thoſe that extract and prepare the Colours, who are alſo exceeding ſkilful in their Way, are incomparable in their Preparations of Blues and Reds, and underſtand perfectly the Art of compounding, ſo as by a judicious Intermixture of the primary Colours, to produce all the reſt with Truth and Beauty. After what has been ſaid, the Reader perhaps will not think it altogether incredible, when he is told, that in *Kim te tchim*, there are not fewer than one thouſand Furnaces or Laboratories; to each of which belong diſtinct Companies of Workmen; that the ſettled Inhabitants amount to eighteen thouſand Families; and that the Number of Souls maintained by, and depending upon this Manufacture in this Place, is computed to fall very little ſhort of a Million.

“ If this had been laid down ſimply, and as a direct Matter of Fact, without premiſing any Circumſtances, or bringing the Reader to reflect on the Method in which theſe kind of Works are carried on, it muſt neceſſarily appear a very improbable, if not a very incredible Aſſertion; whereas now, when the Thing is better underſtood, and we have ſome kind of Grounds for our own Computations, it will wear quite another Appearance, and the cloſer we look into it, the more we ſhall incline to believe that thoſe, who have affirmed this Fact, were neither impoſed upon themſelves, nor had any Inclination to impoſe upon others.

“ It is allowed, that vaſt Quantities of this Ware are exported annually to *Europe*, which, like moſt other Branches of their Commerce, muſt be extremely beneficial to the *Chineſe*, who in Point of Oeconomy, muſt be acknowledged the wiſeſt Nation upon the Face of the Globe: for tho' they love Magnificence, are no Enemies to Pleaſure, and indulge Softneſs and Luxury to a very great Degree, yet what the *French* call their *Police*, is ſo extremely well regulated, that theſe ſeldom or never create any Difficulties to the State. They encourage and work by *European* Patterns, from a very wiſe and judicious Notion of pleaſing their Cuſtomers; but beſides the *European* Market, they vend vaſt Quantities of *Porcelain* elſewhere; as for Inſtance, they ſupply the whole Empire of *Japan*, they ſend vaſt Quantities by the Caravans into different Parts of *Tartary*, they ſupply all *India* and *Perſia*; and the *Dutch* and *Portugueſe* take off very large Aſſortments for the *European* Settlements in the *Eaſt-Indies*, and for the other Countries with which they trade.

“ But notwithſtanding this, the fineſt, richeſt, and moſt valuable *China* remains in that Empire, and is not exported at all, or at leaſt very rarely; there is particularly a yellow *China*, which is deſtined to the Imperial Uſe, and is prohibited to all others, tho' we are told, that the Grand Signior always eats out of this kind of *Porcelain*; but how he comes by it, is a Secret I have not been able to penetrate. They have a kind of Crimſon *China*, which is very fine and very dear, becauſe great Quantities of it are ſpoiled in the Baking. They have another Sort of a ſhining White, purfled with red, which is done by dextrous blowing the Colour through a Gawſe, ſo that both the Inſide and the Out is equally beautified with Crimſon Spots, no bigger than Pins Points, and this muſt be exceſſively dear, ſince for one Piece that ſucceeds, a hundred are ſpoiled. They have *China* purfled in the ſame Manner with Gold, which is highly valuable for the ſame Reaſon. They have a kind of *China*, which by drawing Lines with a Hair Pencil, dipped in Oil of Flint, before it is varniſhed, looks like *Moſaic* Work, or as if the *China* had been cracked thorough in a thouſand Places, and was ſet together again without Cement. They have a kind of Violet-colour'd *China*, with Figures compoſed entirely of green Specks, which is done by blowing the Colour at once through a Figure pierced full of Holes, and this ſucceeds ſo rarely, that a very ſmall Baſon is worth two or three hundred Pounds. They have a kind of white *China*, exceſſively thin, with blue Fiſhes painted on the Metal between the Varniſh, ſo that they are inviſible but when the Cup is full of Liquor.

“ It is reported that the Secret of making this *China* is loſt, and that vaſt Sums have been ſpent in endeavouring to recover it. I muſt confeſs I doubt much of this, as well as of another Circumſtance univerſally believed, which is, that the old thick, and as the *Chineſe* very properly call it, ſilent *China*, becauſe though perfectly ſound it will never ring, is a Curioſity not to be attained in our Days. Father *Anthony Solis*, a *Portugueſe* Miſſionary, who reſided forty Years in *China*, and died at *Macao*, wrote a Treatiſe which was never printed, tho' it very well deſerved it, of the Frauds of the *Chineſe*, and amongſt theſe he reckons old *China*. He tells us, that no Country in the World abounds ſo much with *Virtuoſi* as this, and that theſe People, by giving high Prices for antique *China*, have brought it into great Credit, but that by the Help of a yellow Clay, Oils of ſeveral Kinds, ſome of which are metallick, and laying the *China* for ſome Months in Mud as ſoon as it comes from the Furnace, they produce the very ſame Sort that is ſo highly valued by the Vulgar, for being five or ſix hundred Years old. But after all, it is a moſt high Perfection in this Ware, that it is capable of enduring ſo long, not only without Loſs, but with an Acceſſion of Beauty; for tho' the Luſtre of the Colours decay, yet this is more than compenſated by that Softneſs and Mellowneſs, which reſults from that kind of Fading; and the Art of procuring this Degree of Elegance in a ſhort Space, is a wonderful Proof of the Application, as well as Ingenuity of this Nation.

“ There is but one Thing more that I ſhall add to this Diſcourſe, and that from the ſame Author; it is a Deſcription of an ancient Painting making one Side of a Summer-houſe, thirty-three Foot in Length, and ſeventeen in Height, which ſeems to be a ſingle and perfect Plate of *China*, though it is certain, that they can bake nothing of any Thing like that Size in a ſingle Piece. But upon a ſtrict Inſpection, it appear'd to be a Wall made of *China* Bricks, the Face painted, varniſhed, and thoroughly baked by a Fire raiſed before it, and kept up a proper Time. It appeared by the Hiſtory of the Town, that the *Mandaryn*, at whoſe Expence it was done, failed twelve Times in the Attempt, and that this was the thirteenth Wall of this kind that had been erected.

“ Every Trade in *China* has its peculiar Deity, or rather Idol, and therefore it cannot be ſuppoſed, that ſo noble, ſo gainful a Manufacture ſhould want one, and yet this was the Caſe for ſome hundreds of Years; at laſt a bold Potter formed the glorious Deſign of deifying himſelf, and giving his Profeſſion a Protector, as other Trades had. The Fact happen-

“ed thus; A certain Emperor ordered a Number of Veſſels to be made of a Size ſuperior to any in Uſe before his Time, and many Trials were made to no Purpoſe; for notwithſtanding they increaſed the Thickneſs of the Plates to ſeveral Inches, yet when the full Heat was given, they melted and ſunk down into a ſhapeleſs Maſs. At this the *Chineſe* Workman was at Length ſo much provoked, that growing frantick with Deſpair, he threw himſelf into the Furnace, and was there conſumed to Aſhes in a Moment; and what was ſurprizing, the Attempt that was next made ſucceeded happily; and the *Chineſe* Emperor had, according to his Wiſh, ſuch *Porcelain* as never adorned the Tables of his Predeceſſors. To reward the Courage of ſo great a Hero, of which by the Way there are but few in this Country, and to perpetuate the Memory of ſo extraordinary an Action, it was agreed, that he ſhould be honoured as the tutelary God of *China*-Ware, and his Idol is to this Day worſhipped by all the Fraternity of *Porcelain-makers*, under the Name of *Pou ſa*, to which they offer Prayers, cut Paper, and Incenſe, as to the other Idols.

“We ſhall however be much miſtaken, if we conſider *Pou ſa* as the only Martyr of this Trade, for in Fact there have been many thouſands, or rather Millions; for the Fatigues which they endure in every Branch of the Manufacture, but more eſpecially ſuch as attend the Furnace, is ſo great, that a quick Succeſſion in their Labours is occaſioned thereby. The Hills which ſurround the famous Town of *Kem te tchim*, are crouded with the Graves of theſe poor Labourers; but though ſuch Numbers are buried there, yet there are far greater Numbers that die ſo poor as not to leave wherewith to bury them at all. For the Reception of theſe unhappy Wretches, there are vaſt Pits dug at the Bottom of the Hills, into which their Bodies are hurled without either Ceremony or Covering, except it be quick Lime, of which half its own Weight is beſtowed on every Corpſe. By this Means the Fleſh is quickly conſumed; and once a Year, the *Bonzes*, from a Principle of Charity, as they pretend, come and collect the Bones which are burnt, and the Pit being purified by vaſt Fires, becomes again a Repoſitory for theſe Relicks of Mortality.

“Thus we have purſued the Hiſtory of this Manufacture, and the Manufacturers thereof, as far as we can well go; we have ſeen how long it has been in Uſe, what Miſtakes have been made upon it, how remote theſe Miſtakes are from the Matters of Fact they were invented to explain, what real Excellencies belonged to this Trade, what a prodigious Inſtance of Induſtry the State of it exhibits in *China*, from how many various Quarters Wealth is derived, from the Sale of this admirable Ware; while yet the fineſt and the beſt remains behind, which ſhows the Wealth of this Country to be by far ſuperior to that of all other Countries with which it engages in Commerce. Theſe and many incidental Circumſtances may ſerve to exerciſe the Thoughts, and excite the Curioſity of the Reader to a cloſer Enquiry into all the Branches of this comprehenſive Subject, the Heads of which, if we have ſo touched as to merit Attention and Pardon, it is all that we expect; for as to Approbation and Applauſe, they are the ſupreme Rewards of Learning, and ought to be beſtowed upon Works of greater Labour, and greater Extent, and which muſt be conſequently the Product of a ſuperior Genius.”

SECTION III.

The Author's Reception at the Court of *China*, the great Civilities paid him there; the wonderful State and Magnificence of the Imperial Palace; the Ceremonies of a Publick Audience; the Perſon and Manners of the Emperor deſcribed. An Account of the Curioſities of the City of *Peking*; the grand Eſtabliſhment of the Jeſuits there; Civilities paid by them to the *Ruſſian* Miniſter; remarkable Things obſerved by him during the Time of his Stay in the Imperial Reſidence; the pompous Ceremonies of his Audience of Leave; his Return from *China* by Land; the Accidents attending his Journey; the many and great Hardſhips he ſuſtained therein, notwithſtanding his Intereſt in both Empires, and his ſafe Arrival, after ſo many Hazards, and enduring ſo great Fatigues, at *Moſcow*.

From the Original Journal of his Excellency EVERARD YSBRANTS IDES, *Plenipotentiary from their* Czariſh *Majeſties* John *and* Peter, *to the Emperor of* China.

1. *The Author's Entrance into the Imperial City of* Peking, *with an Account of his Reception and Entertainment there, and the many Civilities paid him till the Emperor was ready to give him Audience.* 2. *He receives his firſt Audience, is there ſumptuouſly entertained, and eats in the Preſence of the Emperor of* China, November 16, 1693. 3. *The Civilities uſed by his Imperial Majeſty at his Departure. A Deſcription of his Apartment, Retinue, Perſon, and the Behaviour of thoſe about him.* 4. *He viſits the City of* Peking, *and is ſhown every Thing remarkable therein by the Emperor's expreſs Order.* 5. *An Account of the annual Feſtival which laſts for three Weeks, as alſo of the Author's Audience of Leave, from which he returns to his own Apartment in a Carriage drawn by an Elephant.* 6. *He is invited, by the Emperor's Permiſſion, to viſit the Jeſuits, who entertain him in a moſt ſplendid Manner. He viſits the Emperor's Stables, and ſees there Abundance of Curioſities.* 7. *The Author leaves* Peking *on the 19th of* February, 1694. *An Account of his Journey through the* Chineſe *Territories, and the Accidents that attended*

attended it. 8. His Arrival at the River Sadun, *where he is joined by a* Chineſe *Envoy, and the great Hazard they run of being burned in their Tents. 9. The Difficulties and Inconveniencies to which they were expoſed in this Journey, from the great Scarcity of Proviſions and other Accidents, together with the Methods they uſed to alleviate them as much as poſſible. 10. They relieve themſelves in ſome Meaſure by Hunting and Fiſhing. His Interview with a* Tunguſian *Conjurer, and the Succeſs of an Expreſs ſent to* Argun *for a Supply of Proviſions. 11. The long-expected Proviſions arrive, by which they are delivered from all their Difficulties. The Ambaſſador continues his Journey through the Territories of the Czar, and at length arrives ſafely at* Moſcow *on the Firſt of* January, 1695, *after having ſpent two Years and ten Months in his Travels.*

1. ABOUT Ten in the Morning we approached within half a Mile of *Peking*, and went by ſeveral magnificent Country Seats, belonging to the Inhabitants as well as *Mandaryns*; both Sides of the Way were adorned with theſe noble Buildings; before which were wide Channels, which ſerved to carry off the falling Water, with ſmall Stone Bridges over them oppoſite to the Houſes. The Gardens were moſt of them fenced with Stone-Walls, and adorned with carved Gates, and very fine Garden-Houſes; the largeſt Paths were planted on each Side with Cypreſſes and Cedars, which afforded a charming Proſpect and Paſſage through them. The Gates of the fineſt Gardens were ſet open, I ſuppoſe on my Account. Theſe pleaſant Seats continued on each Side the Way to the Entrance of the City. It is alſo obſervable, that from the great Wall to *Peking*, at the Diſtance of about every half Mile, are Watch Towers, in each of which are five or ſix Soldiers, who Night and Day diſplay the Emperor's Flags and Enſigns, which are yellow: Theſe *Turrets*, like Beacons; ſerve on Occaſion of any Enemy appearing from the Eaſt, to light Fires on, to convey Notice of it to the Emperor, which is done ſo expeditiouſly, that in a very few Hours it reaches *Peking*.

The Land from the City of *Lania* hither is plain, and good arable Ground, on which grows Rice, Barley, Millet, Wheat, Oats, Peaſe and Beans, but no Rye. The Roads here are very broad, perfectly ſtrait, and very well kept; for if but one Stone be found on them, it is immediately thrown to the Side by Perſons expreſly appointed for that Purpoſe. In all the Villages we ſaw Pails filled with Water ſtanding ready for the Camels and Aſſes to drink: And to my no ſmall Wonder, I obſerved that the great Roads through the Country, were as noiſy by the Multitudes of Travellers and Waggons, as if they were the crouded Streets of a populous City. So wonderfully ſtocked is this vaſt Empire with Inhabitants.

After I had cauſed our Caravan with all the travelling Baggage to be diſpatched into the City an Hour before, I rode on in order with my Convoy, and thoſe who were ordered to ride before me, making in all ninety Perſons, beſides ſeveral *Coſſacks*. The Croud at the Gates, and the Concourſe of People with which the Streets were lined, gave us ſome Interruption at our Entry into the City. Notwithſtanding there were ſeveral of the Emperor's Boſchy, or Harbingers, apponted to make Way for our Paſſage; yet they had enough to to do to make us bare paſſing Room; the *Chineſe* being very curious to ſee Novelties. Being come near to the Ambaſſadors Court, ſeveral *Mandaryns* came to meet and compliment me on my Arrival. Both Sides of the Streets were lined with Soldiers as well as the Court. Riding through which, they brought me to my Apartment, where not myſelf only, but all my Retinue were inſtantly ſtocked with all Manner of Proviſions and Refreſhments. And we every Morning returned Thanks to the great God, who after a long and difficult Journey of one Year and eight Months, had at laſt conducted us ſafe and well to our deſired Place, without the Loſs of any more than one Man, whoſe Death for that Reaſon has been particularly mentioned.

2. After a Repoſe of three Days, I expected to be informed when it would pleaſe the Emperor to admit me to Audience: And, according to the Cuſtom of this Country, that Day the Emperor's Orders came for me to appear, and receive a Welcoming or Meal. Upon which I prepared myſelf, and ſeveral great *Mandaryns* were appointed to conduct me up into the Caſtle, where the Viceroy, *Sungut Doriamba*, Uncle to the Emperor, and four of the greateſt Lords of the Empire, received and welcomed me. Here the Floor was overſpread with Carpets, upon which having ſeated myſelf with them, the Viceroy, in the Name of the Emperor, acquainted me that the Emperor his Maſter preſented me with this Table or Entertainment; and though he could not himſelf be preſent, yet deſired I would accept this Meal, as a Welcome after ſuch a long Journey. After which the Table was covered with cold Meats, as roaſt Geeſe, Chickens, Pork and Mutton, beſides all Sorts of Fruit, and Confections; the Table appointed for me alone was about an Ell Square, upon which the Diſhes, that were all of Silver, and piled one upon another, amounted, as I told them, to the Number of Seventy.

They were entertained with Tea, and I with Taraſoen and Rheniſh Wines. The Viceroy and other Lords diverted themſelves by Smoaking Tobacco, and he made his Compliment to me in the following Words; He deſired, that I would accept of this Entertainment, as a Teſtimony of the Emperor's Favour, and expect his Orders in a few Days, to bring their *Czariſh* Majeſties Credentials, and receive my publick Audience; upon which riſing up and thanking him for the Emperor's Favours, I return'd to the Ambaſſadors Court.

On the 12th of *November* the Viceroy ſent ſome *Mandaryns* to give me Notice to appear with their *Czariſh* Majeſties Credentials next Morning in the Caſtle; for which I accordingly prepared myſelf. At Eight in the Morning three principal *Mandaryns* came to adviſe me that it was then a proper Time to wait on the Emperor: Beſides their common Habit, they were alſo dreſſed in Robes, which were embroidered, ſome with Dragons, others with Lyons, and a third Sort with Tygers and Cranes on the Breaſt and Back, work'd with Gold Thread: They brought with them fifty Horſes for my Retinue. According to the *European* Mode, I advanced with their Czariſh Majeſties Credentials, and was attended by my Retinue in good Order towards the Court.

Coming to the outer Gate of the Caſtle, there is a Pillar, with ſome Characters engraven on it, where I was told I muſt alight, according to their Cuſtom; ſo that I went on Foot through five outer Courts to the Caſtle itſelf. I found a great Number of *Mandaryns* at the Court, all cloathed in their richeſt Embroidered Robes, ſuch as they wear in the Emperor's Preſence, who waited for me.

After we had mutually exchanged Compliments, the Emperor appear'd on his Throne; upon which I delivered his Czariſh Majeſty's Credentials, and after the uſual Ceremonies, and a ſhort Speech, was conducted back.

On the 16th of the ſame Month, I was informed that I was invited to eat before the Emperor: Wherefore in the Morning, accompanied with the *Mandaryns* thereto appointed, and the chief Gentlemen of my Retinue, I rode to Court. And in the ſixth Court, a great many Lords and *Mandaryns* were ſtanding in Rows in their beſt Robes; and ſhortly after an Order came for us to appear above in the Palace. As ſoon as I entred, the Emperor aſcended his exalted Throne, having near him ſome Perſons who played very finely on the Fife, and a Life-Guard of twelve Men with gilt Halbards without any Point to them, but adorned with Leopards and Tygers Tails. As ſoon as the King was ſeated, the Muſic ceaſed, and the Halbardiers ſeated themſelves croſs-legg'd on each Side below the Throne. The Emperor's Table was furniſhed with cold Meats, Fruits and Sweetmeats, ſerved up in Silver Diſhes, and the whole covered with yellow Damaſk. The Viceroy the Emperor's Uncle, and two other of the principal Nobles ſtood on each Side of his Imperial Majeſty, and I was placed on the Right-Hand of the Throne, about four Fathom diſtant from the Emperor; who looking very earneſtly at me, ordered the Viceroy (who received his Commands on his Knees) to bring me nearer. Upon which he took me by the Hand, and placed me about two Fathom diſtant from the Emperor, and my Retinue were placed about ſix behind me. The Emperor a ſecond time ſent the Viceroy to me with the utmoſt Reſpect, to aſk after the Health of their Czariſh Majeſties; to which I returned the proper Anſwer. Then he cauſed his Table to be uncovered by taking off the Damaſk Covering, and deſired me to eat; a Table being ſpread for me only: The other Lords and *Mandaryns*, about two hundred in Number, took their Places according to their Quality, ſitting two at each Table, in the *Perſian* Manner, upon Carpets, with their Legs under them; which Cuſtom I was obliged to comply with, as it is not to be diſpenſed with here.

The Emperor ſent me from his Table, a roaſt Gooſe, a Pig, a Loin of very good Mutton, and ſoon after ſeveral Diſhes of Fruit, and a Sort of Drink compoſed of boiled Tea, fried Meal and Butter, which looked not unlike Bean or Coffee Decoction: Having received all which, with due Reſpect, his Majeſty ordered the Viceroy to aſk me, what *European* Languages I underſtood? To which I anſwered, I could ſpeak the *Muſcovite*, *German*, *Low-Dutch*, and a little *Italian*.

Upon which he immediately diſpatched ſome Servants to the hinder Part of the Palace; which done, there inſtantly appeared three Jeſuits, who approached the Throne. And after Kneeling, and performing their Reverence to the Emperor, he commanded them to riſe. One of theſe was Father *John Francis Gerbillon*, a *Frenchman*; and the two others were *Portugueſe*, one of them called Father *Anthony Thomas*. The Emperor ordered Father *Gerbillon* to converſe with me; who coming towards me, ſpeaking *Italian*, aſked me in the Emperor's Name, how long I had been travelling from *Moſcow* to *Peking*, and which Way I came, by Waggon, on Horſeback, or by Water? To which I returned ſatisfactory Anſwers: On which, returning to his Majeſty, he informed him; who immediately anſwered, *Gowa, Gowa*, which is, Very well. The Emperor then ordered the Viceroy to acquaint me, that it was his moſt gracious Pleaſure, that I ſhould approach nearer the Preſence, by coming up to the Throne; upon which I ariſing, the Viceroy taking me by the Hand, after having led me up ſix Steps, ſet me at the Table oppoſite to the Emperor. After I had paid my moſt humble Reſpects to his Majeſty, he talked with Father *Gerbillon*, who again aſked me, How long I had been on the Way hither? In what Manner I travelled? and, in what Latitude *Moſcow* was ſituate, and how far diſtant from *Poland*, *France*, *Italy*, *Portugal*, or *Holland*? To all which I obſerved my Anſwer proved very ſatisfactory. Upon which he gave the Viceroy a Gold Cup of *Tartarian* Liquor called *Kumis*, in order to hand it to me; which with due Reſpect I accepted, and having taſted, return'd it. This *Kumis*, according to the Report of the Attendants, is a Sort of Brandy diſtilled from Mares Milk. After this, the Emperor ordered my Retinue to advance within three Fathom of his Throne, and entertained them with the ſame Liquor; which being done, I paid my Compliment in the *European* Manner, and the Viceroy took me by the Hand, conducting me to my former Place, where after ſitting for a Quarter of an Hour, I was deſired to riſe.

3. After this the Emperor aroſe, and having ſaluted me, deſcended from his Throne, and went out of the Audience Hall by a Door on the Left-hand, in order to go to his Royal Apartment. As he was leaving the Hall, he ſent the Viceroy to aſk me, whether I had heard any News out of *Europe* concerning Father *Grimaldi*, who had been diſpatched thither on the Emperor's Affairs: To which I anſwered, that when I left *Moſcow*, I was informed that he, with a Retinue of twenty-five Perſons, arrived at *Smyrna*, and reſolved to proſecute his Travels through *Perſia* and *India*. He replied, I am informed he is ſafely arrived at *Goa*, and is upon his Departure thence in order to his Return hither, and it is ſeven Years ſince he left *China*. Hereupon I took my Leave, and retired to my Apartment.

Deſigning to take another Opportunity to give an Account of what I could obſerve concerning the Court, I ſhall at preſent only deſcribe the Outſide of the Palace, and the Throne on which the Emperor ſate. The Palace is an oblong quadrangular Brick Building, which is twice as long as broad, and the Roof covered with yellow glazed Tiles, on which were fixed Lions, Dragons, and all Sorts of Imagery; the Height of this Building to the Roof was about eight Fathom; the Aſcent to the Hall was up ſeveral Steps, and the farther Part or Entrance of it was provided with certain open Places or Windows, which were not glazed but peaked with Paper. At the Ends of this Hall were two Doors, the Tops of which were adorned with a Sort of carved Work, ſomewhat like a Crown, which was extraordinary well gilt. This Building hath neither any Room over it, or arched Roof, but the Height of the Room is to the very Top of the Roof, which was compoſed of curious Pannels, beautifully colour'd, japann'd, and finely gilded. This Hall is about thirty Fathom long, and ten broad. The Floor, according to the *Tartarian* Mode, was covered with Carpets, adorned with Landſkips and Figures.

The Throne is placed oppoſite to the Eaſtern Entrance, againſt the back Wall, and is about three Fathom broad, and as many long; before it are two Aſcents, with ſix Steps each, adorned with Rails and Repreſentations of Leaves very well gilt: On the right and left Sides were alſo Rails of caſt Imagery, which ſome report to be Gold, and others Silver, which are alſo extraordinary well gilt. Exactly in the Middle of this raiſed Place is a Throne, ſomewhat like an Altar, which opens with two Doors, and in it the Emperor's Seat, about an Ell high, covered with black Sables, on which he ſate with his Legs acroſs under him. This Monarch was then aged about fifty Years, his Mien was very agreeable, he had large black Eyes, and his Noſe ſomewhat riſing: he wore ſmall black Muſtachoes, but had very little or no Beard on the lower Part of his Face; he was very much pitted with the Small-pox, and of a middling Stature. His Dreſs conſiſted of a common dark-colour'd Damaſk Waiſtcoat, a Coat of deep blue Sattin, adorn'd with Ermines; beſides which, he had a String of Coral hanging about his Neck, and down on his Breaſt. He had a warm Cap on turned up with Sable, to which was added a red Silk Knot, and ſome Peacocks Feathers hanging down behind. His Hair plaited into one Lock, hung behind him. He had no Gold nor Jewels about him. He had Boots on, which were made of black Velvet.

Whilſt he was at Dinner, ſuch a reverential and profound Silence was obſerved amongſt the *Mandaryns*, that not only no Noiſe was heard, but they forbore ſo much as ſpeaking to one another, all ſitting very ſtill with modeſt down-caſt Eyes, amongſt them the higheſt Mark of Reſpect.

4. On the next Day the Emperor ſent two *Mandaryns* with fifty Horſes for my Retinue, and a Meſſage, importing, It was his Majeſty's Pleaſure, that if I deſired to ſee the City, all that was worth my View ſhould be ſhewed me. Purſuant to which, I cauſed my Horſe to be ſaddled, and rode out with theſe *Mandaryns*, who, by the King's Command, brought me to a Sort of Play-houſe, or Court of Diverſion, which was a very lofty and capacious Building. In it was a great Stage, adorned with carv'd Imagery, finely painted, which the Players had the Uſe of for an annual Rent. In the Middle of this Palace was an open Place encompaſſed with Galleries, in which the *Mandaryns* deſired us to ſit down on Chairs; and having entertained

me with Tea and *Tharaſin* Wine, I and all my Retinue were treated with a Comedy, and the Diverſion of ſeeing a great many different Sorts of exquiſite Juglers, who, by a dextrous Slight of Hand, ſeem to produce not only all Sorts of Fruits, as Oranges, Limons, Grapes, *&c.* but live Birds and Crabs, and perform all the Dexterities of that Kind practiſed in *Europe*. Others ſo nicely played with round glaſs Balls, as big as a Man's Head, at the Point of a ſharp Stick, toſſing them ſeveral Ways, without breaking or letting them fall, that it was really ſurprizing. After this a *Bamboe* Cane, about ſeven Foot high, was held upright by ſix Men, and a Boy about ten Years old crept up to the Top of it as nimbly as a Monkey, and laid himſelf on his Belly upon the End of it, turning himſelf ſeveral times round; after which riſing up, he ſet one Foot on the *Bamboe*, holding faſt to it with one Hand, and then looſing his Hold, clapped his Hands together, and run very ſwiftly down, and ſhewed ſeveral other Feats of Agility, which were very wonderful as well as highly entertaining.

The Comedies had alſo a very good Effect, by reaſon they were acted in the beſt Manner by the Emperor's Players. They frequently appeared in Changes of very rich Dreſſes, embroidered in Gold and Silver; and the Plot turned on the Story of a Triumphant Hero, in which was brought in their Idols, and a late Emperor, whoſe Face was painted of a Blood Colour; which was intermix'd with a Farce, or diverting Entertainment, of two young Women richly dreſſed, who ſtood each on a Man's Shoulder, and nicely play'd with their Fans, bowing to one another, and keeping Time to the Muſick as exactly as if they had danced on the Ground. Two little Boys played *Hoſticki* or *Harlequins*, in very fantaſtick Habits, and recited their Parts very well. After the End of the whole, I thanked the *Mandaryns* and returned home. On the ſame Day the Emperor went out a Tyger-hunting, without the great Wall, purſuant to his annual Cuſtom, and returned in a few Days to *Peking*.

On the ſame Day I was invited to a Repaſt by the Viceroy, or *Sungut Doriamba*, with which Invitation I complied, and after ſome Diſcourſe paſſing betwixt us, he led me by the Hand out of his Bed-chamber into his beſt Hall, or Parlour, where ſeveral Tables and Stools ſtood ready; the Tables were adorned with rich Tapeſtry, Carpets of Silk and Gold, which were full wrought with Figures. I was ſeated on one, and the *Mandaryns* on the other Side of the Viceroy. The Tables were alſo ſet off with very fine Flower-pots, full of Flowers of all Sorts of Colours, worked in Silk, which not only looked very beautiful, but very natural; Crimſon Velvets, and the moſt charming coloured Silks being choſen to make them, it being Winter, when no natural Flowers were to be gathered: On the Fore-part of theſe Tables were alſo placed Silver Cups, in which was laid lighted Pieces of the fragrant Wood *Kalamba*, which afforded a very good Perfume; next which ſtood fine Wooden Images, and variety of ſmall Figures or Puppets finely painted and gilt. The Chairs or Stools on which the Viceroy and I ſat, were, according to the *Tartarian* Faſhion, hung at the Back with Leopard and Tyger Skins, which appeared very magnificent; and a larger Diſh of Tea than ordinary, in which was put peel'd Walnuts and Hazle-nuts, with a little Iron Spoon to take them out on Occaſion, was placed before each Perſon. After the Tea was drank off, which taſted very agreeably, ſeveral little Agate Cups, filled with Brandy mixed with diſtill'd Waters, were ſerv'd about; and after that, ſeveral Diſhes, or rather Cups, of fry'd or broil'd Fiſh, cut into ſmall Pieces, were ſet in Heaps one upon another, garniſhed with fine Herbs and Flowers, and as an Ornament ſet on the Fore-part of the Table in a Row; by them were placed ſix Cups of very agreeable Soops, diſh'd up with very fine ſtew'd Fleſh and Fiſh; and when we had eaten of theſe, we were regaled with ſeveral Courſes of the richeſt Edibles, which were followed by all Sorts of fine baked Meats; and after this laſt Courſe all Kinds of delicious Confects, as candy'd Grapes, Limons, Oranges, Cheſnuts, and Shell'd Nuts.

During our ſitting at Table in the Room where we eat, was acted a Play, interlarded with Songs and Dances, by little Boys dreſſed in Girls Clothes, who very ſkilfully meaſured their Steps in Proportion to the Time of the Song, and played on the Flute, withal diſtorting their Bodies into antick Poſtures, and playing with a Fan in their Hands. His Lady and Daughter alſo appeared at the farther Part of the Hall, ſtanding at a Door, which was but half open: They were very richly dreſſed according to the Mode of the *Mongalian Tartars*. After I had very agreeably ſpent three Hours there, accompanied by my Retinue, I rode to my Apartment.

Some Time after I was invited to the Houſe of the Treaſurer of the Empire, who is called *Schi'oy*, where I was ſplendidly entertained. His Hall was very well furniſhed according to the *Chineſe* Faſhion: The Floor of it was laid with a Sort of fine Stone, at three Corners of which, on Ebony Feet, were three extraordinary white Marble Tables naturally ſhaded with black Veins, which repreſented beautiful Woods, Mountains, and Rivers: On theſe Tables were placed high Silver Flower-pots, very naturally adorned with all Sorts of fine Flowers. The Pillars, clear up to the Roof, were painted with very fine Colours. While we ſat at the Table we were entertained with a Ball, and after this very agreeable Entertainment, I aroſe and took Leave, extremely ſatisfied with all the Civilities that were paid me.

When this Lord accompanied and conducted me through the principal Markets, where Silk, Cloth, Gold and Silver, Jewels, and all Sorts of fine Manufactures, were ſold, I was deſired to alight, and conducted to the Emperor's Diſpenſary, which I was willing to make ſome Scrutiny into, it being richly ſtock'd with all Sorts of Roots, Herbs, and Medicines. I was here treated with a Diſh of Tea, and obſerved while I ſtaid there, that according to the *European* Cuſtom, ſeveral Preſcriptions of Phyſicians were brought in, which were methodically prepared. Next to this was a Toyſhop, which I entered, and bought what I liked. The Maſter of it had a very fine Garden-Houſe, in which were all Sorts of Flowers, young Stocks, and Limon-Trees, in Pots: And amongſt other Things, he ſhew'd me a large Glaſs full of Water, in which were ſeveral living Fiſh about a Finger's Length, which naturally looked as if they had been gilt with the fineſt Gold; and the Scales of ſome of them being fallen off, diſcovered, to my great Surprize, the Colour of their Bodies to be the moſt beautiful Crimſon in the World.

After we departed from thence, we went through all the Markets; each Shop had a great Board ſet before it, on which is very orderly written the Shopkeeper's Name, and the Commodities which he deals in. We alſo went through the Fiſh-Market, in which are all Sorts of living Fiſh, but more eſpecially Carps, Caroeſſes, and Water-Snakes, (which they eat here) Crabs, Shrimps, *&c.* all which ſtand in Tubs to be ſold, in great Abundance. Paſſing through another Market, I ſaw great Numbers of Harts, Roebucks, Hares, Pheaſants, Partridges, *&c.* and ſeveral other wild Game, to be ſold.

5. On the 7th of *January* the cuſtomary annual Feſtival happened, which they obſerve for three Weeks. It began late at Night with the Appearance of the new Moon, and firſt the great Bell at the Emperor's Court was rung, and their large Drums, expreſly kept for, and uſed, in their idolatrous Worſhip, were beaten, and ſeveral Cannon diſcharged; upon which all the People in the City, of what Degree ſoever, according to their Ability, expreſs'd their Joy by Rockets, Serpents, and all Sorts of Fire-works, to which they alſo added the Beating of an infinite Quantity of Drums, and, according to their Cuſtom, the Sounding of Trumpets by the *Lama's*, or idolatrous Prieſts, in their moſt innumerable Temples and Cloiſters; inſomuch, that from ten at Night till next Day Noon, there was as great a Noiſe, as if two Armies of one hundred thouſand Men were in the Heat of Battle one againſt another. In the Day-

time the Streets were crouded with all Sorts of Proceſſions, with their Idols, which were carried in various Shapes, and the *Lama*'s marched by them with Incenſe-Pots, and Strings of Beads; the Drums and Kettle-Drums beating, Trumpets ſounding, and other Muſick playing, was endleſs. The carrying of theſe Diabolical Images, followed by a great Train of People, as well as a vaſt Number of *Lama*'s or Monks, which preceded them, laſted three Days, during which Time all the Shops were ſhut, and all Merchandizing forbidden, on Penalty of ſevere Puniſhments. During this Time alſo the Streets were crouded with People of both Sexes, but more eſpecially Women, who rode on Aſſes, or Chaiſes with two Wheels, covered all round, only before left open. The Servant Maids which ſat behind, ſung, ſome of them, whilſt others blew on a Sort of Horn-Pipe; and ſome Ladies ſat publickly taking a Pipe of Tobacco. The Women never appear in Publick thro' all *China*, except in the Province of *Peking* only, and more eſpecially the City, which is inhabited by *Tartars*; the *Chineſe* being obliged to live all about the City Wall, and the Suburbs, where all the chief Markets, and publick Places of Sale are.

Some Days after this, the Emperor ſent two *Mandaryns* to deſire me to be ready to receive my Audience of Leave the next Morning two Hours before Day: And accordingly three Hours before Day, three *Mandaryns* came to me on Horſeback, and we rode to the uſual alighing Place; whence being conducted to the third Court, and deſired to ſit down, I was entertained with a Sort of Bean Decoction or Coffee, uſually drank here in the Mornings. In the fourth Court appeared all the principal Officers in their richeſt Robes, dreſſed after the *Eaſt Tartarian*, or *Mongalian* Mode. At break of Day I was introduced into the fourth Court, and ſeated amongſt the *Mandaryns*, who, according to the particular Rank of each of them, were placed on the Eaſt and South Sides of the Court. After waiting half an Hour, we heard the Emperor approaching, accompanied with an agreeable Conſort of Fifes, and a Sort of Lutes. This was not the Hall in which I had my former Audience, but here was a Throne erected, and hung with yellow Damaſk, on this Occaſion. On each Side of it were two great Drums, curiouſly gilt and painted, each of which being two Fathom and a half long, they lay upon a Stool made on Purpoſe for them. After the Emperor was ſeated, by his Command, the Herald which ſtood before the Throne, went to the Preſence-Chamber Door, directed himſelf to the Lords which ſat without in the Court, and uttering ſome Words with a ſhrill Voice, he thrice ſucceſſively cried, *Bow down, bow to the Earth*. Whilſt this was three Times done one after another, the Bells were rung, the Drums were beaten, the Lute was touched, and three Pipes made for that Purpoſe, were very loudly ſounded. Then two principal Lords were, by the Emperor, ſent to acquaint me, that it was his Majeſty's Pleaſure, that I ſhould approach nearer the Preſence; accordingly they led me by the Hand, from the Place where I was, being about eight Fathom diſtant from the Throne, where my Retinue were left ſitting: And I ſat down on one Side, about three Fathom from the Royal Throne, betwixt two great Lords, which were *Wannes* or Princes, and by Birth *Tartarians*; and after having paid a reſpectful Compliment to the Emperor, his great Bell was rung, and the large Drums on each Side were beaten, which made as great a Noiſe as a Volley of Guns; the Flutes were alſo played on, and the beforementioned Pipes nine Times ſounded: Upon which I was deſired to ſit down; which having done, a Diſh of Coffee or Bean Decoction, was preſented to me, which I accepted and drank up. And after I had diſpatched the Affairs of their Czariſh Majeſties, with the Emperor, I roſe up, and having paid my Compliment to him, he alſo aroſe from his Throne, and went out at the Weſt-Door to his Apartment.

The Emperor's Life-guard ſtood in this fourth Court; they were cloathed in red Callicoe, printed with red Figures as big as a Rixdollar; they wore ſmall Hats adorned with yellow Feathers, that being the Imperial Livery Colour. They were arm'd with Scimiters by their Sides, and fine Lances, with Colours fixt to them, and ſtood ranked at a Diſtance from the Throne, on each Side of the Court, where alſo ſtood eight white Saddle-Horſes for Shew. In the third Court of State, were alſo placed four extraordinary large Elephants, one of which was white. They were all covered with rich Gold embroider'd Cloaths; and all their Trappings, as Bridles, Cruppers, &c. were covered with Silver, and gilt; and on their Backs was placed a very fine carv'd wooden Caſtle, or Gallery, ſpacious enough for eight Perſons to ſit in. In this Court alſo ſtood the Emperor's Waggons with two Wheels, and his Chaiſes, all hung with yellow Damaſk Curtains: Beſides all which, there were there placed ſeveral Stands, or Stools, for Drums, Kettle-Drums, Idolatrous Inſtruments, &c.

Being got out of the Caſtle, I mounted one of the Emperor's Waggons, and was drawn to my Apartment by an Elephant; on each Side of which ran ten Perſons, with a thick Rope in their Hands, faſtned to each Side of the Elephant's Mouth, by the Help of which they lead and govern him: On his Neck alſo ſat a Man with an Iron Hook in his Hand, which alſo contributes to hold him in and guide him. He went but at his ordinary Rate, which put his Leaders to run as ſwift as poſſibly they could in order to keep Pace with him.

6. A few Days after I was invited by the Jeſuits, with the Emperor's Leave, to viſit their Cloyſter; purſuant to which, two *Mandaryns*, according to Order, attended on, and conducted me thither. I was then introduced into the Cloiſter, which was encompaſſed with a high Stone Wall, and provided with two exquiſite regular Stone-Gates after the *Italian* Manner. On the left Side of the Entrance, under Shelter of a Roof, made for that Purpoſe in the Court, ſtand the cœleſtial and terreſtrial Globes, of an extraordinary Size, each being about a Fathom Diameter. From hence we proceeded on to the Church, which is a very beautiful *Italian* Building, furniſhed with a large Organ, made by Father *Thomas Pereyra*: And the Church itſelf ſuitable to the *Roman* Catholick Uſage, was richly adorn'd with fine Images and Altars; and was withal large enough to contain two or three thouſand People. On the Top was a Clock and Chimes. Having ſeen the Church, the Fathers brought me into the *Muſæum*, which was compleatly furniſhed with all Sorts of *European* Rarities. After which they conducted me to an Apartment on one Side of it, where being aſked to ſit down, I was treated with all Sorts of Confections and Preſerves: Nor did we forget, according to their Cuſtom, to drink the Healths of all the Chriſtian Princes of *Europe*, in rich Wines: And after a conſiderable Stay, I rode to my Apartment, very well ſatisfied with the Entertainment of theſe Fathers.

About this time, two *Mandaryns* came from the *Cham* to invite me to take the Diverſion of ſeeing the City: Accordingly I mounted with my Retinue, and theſe *Mandaryns* conducted me to the Emperor's Elephant-Stable, where ſtood 14 of thoſe Beaſts, one of which was white: Having thus ſeen them that was not enough, but they muſt ſhew ſeveral Tricks, and at the Command of the Maſter of the Stable, they roared like a Tiger, ſo diſmally loud, that their very Stable ſeemed to tremble: Others lowed like an Ox, neighed like a Horſe, and even ſung like Canary-birds; but which was moſt ſurpriſing of all, ſome of them imitated a Trumpet. After this they were obliged to pay their Reſpects to me on their four Knees; to lie down firſt on one Side, then on the other, then to riſe up. When they lie down, they firſt ſtrike out their Fore-legs forward, and then throw out their Hind-legs backward, and by this Means lie with their Bellies flat upon the Ground. One of theſe was not broken, and, by Reaſon he was very unruly, he was loaden with heavy Chains on two Feet, and, for the whole Time he had ſtood there, had not been removed from his Place; and a great Pit was dug before his Stall, that in caſe he broke looſe, he ſhould fall into it, and be prevented from coming into the Court to do any Miſchief. All theſe Elephants were extraordinary large, and the Teeth of ſome of them were a full Fathom long. The *Mandaryns* told me, that they came from the King of *Siam*, who annually ſends ſeveral, by Way of Tribute, to the Emperor of *China*. Their Food was only Rice Straw bound up in ſmall Truſſes, which they take up one after another with their Trunk, and convey to their Mouths.

After a ſatisfactory Sight of what I deſired, I rode with the *Mandaryns* to my Apartment; and as we were on our Way, I obſerved at the Door of a conſiderable *Mandaryn*, and a great Officer, ſome Perſons fleaing of a fat Dog; upon which I aſked the *Mandaryn*, wherefore that was done? Who anſwered, That it was a healthful Sort of Food, eſpecially in Summer, it being very cooling. After I had handſomely treated theſe *Mandaryns*, they went away.

Next Day the Viceroy ſent a Tyger, or Panther, in a Cage, to the Ambaſſador's Court, to be ſhewn to me; as alſo ſeveral Juglers with Monkeys and Mice, which had been taught ſeveral Tricks. Theſe Apes, at their Maſter's Command, did really ſome very ſtrange Things; they filled a Baſket with Stuff Coats of all Colours, each of which an Ape took out ſingly at his Maſter's Command, never miſſing the Colour which he was ordered to take out and put on, always varying his Grimace with his Habit; after which, he not only danced upon the Ground, but on a tight Rope, in a very diverting Manner. There were alſo two Mice faſtened to their Chains, who, at their Maſter's Command, ſo entangled themſelves in them, and immediately got looſe, that it deſerved Admiration: But what was moſt ſtrange to me, was the odd Motions of theſe Vermine.

The Jeſuits once told me, that about three Years paſt were ſent to the Emperor as a Preſent, from an Iſland in the Eaſtern Sea, four Animals as big as ordinary Horſes, each of which had two ſharp Horns prominent before; and that theſe Fathers were ſent by the Emperor's Order to his Park, about ten Miles from *Peking*, to ſee theſe Beaſts, in order to inform his Majeſty, whether they had ever ſeen any of them in *Europe*; but returning, they affirmed, that they had never before ſeen any of that Species. I was indeed very deſirous to have ſeen them, yet it being too far out of Town, and the Time of my Departure approaching, it was impracticable.

After I had ſent my Compliment to the Viceroy, I deſired that I might be advertized of my Departure eight or ten Days before the Time when it ſhould pleaſe the Emperor that I ſhould leave the Court and Royal City, which, purſuant to my Requeſt, was accordingly done ſome Days after.

7. Upon which, having made all neceſſary Preparations for ſuch a long Journey, and latterly, according to former Cuſtom, having one Morning in a Week eat at the Emperor's Table, I left *Peking*, accompanied out of the City Gate, with a numerous Train of Great Officers of State, and *Mandaryns*, on the 19th of *February*, 1694, and on the 25th reached the City of *Galgan*, cloſe to the *Daarian* Wall. From thence we went on to *Naun*, and paſſed through ſeveral *Xixigarſchean* Villages, to the *Tartarian* Frontiers, and the great Deſerts, where we encamped and lay ſtill ſeveral Days, and provided Saddles for our Camels, and all other travelling Neceſſaries, by reaſon that to *Argum*, on the Frontiers of their Czariſh Majeſties Dominions, I was obliged to provide me with all Neceſſaries on my proper Coſt, which I conſidered when in *Peking*; and Camels and Mules being very cheap there, I carried a good Number of the laſt looſe along with me, they, as well as the whole Caravan, travelling free at the Expence of the *Chineſe*, hitherto, as well as myſelf and whole Retinue, who eat at the Emperor's Charge thus far.

If I had not made this Proviſion before-hand, but had depended on the Camels and Horſes which I left at *Nuna*, we ſhould have fared but indifferently, for of all that I left there, ſcarce eight hundred remained, all the reſt, which were a very conſiderable Number, being killed by the ill Forage and unwholeſome Graſs.

On the 2d of *February*, being ready to ſet forwards on my Journey, I treated the *Mandaryn* and his Retinue, who, by the Emperor's Command, had accompanied me thus far; after which, taking very civilly Leave of each other, we parted.

On the 26th Inſtant, in God's Name, we entred the great Deſert, about the River *Sadun* and *Kallar*, being obliged to be on our Guard, by Reaſon that four *Mungeſſian Taliſchi*, or *Lords*, with about three thouſand Men, who waited for me, were ready and willing to try their Fortunes with us: Upon which I gave all neceſſary Orders, and in the Night cauſed a ſtrong Watch of ſixty well armed Horſemen to be kept; but not encountring any Thing from that Quarter, we next Day ſet forwards on our Journey. Reaching the *Jaliſchian* Mountains, we found our Forage grew worſe the farther we went, and our Saddle as well as Carriage Beaſts began to look thin. Having travelled a whole Day over theſe Mountains, the Night proved very cold and ſnowy, and the Graſs grew yet worſe, being that of laſt Year, which was dried up in the Field; ſo that the Camels, but more eſpecially the Horſes, though they eat their Fill, were not much ſtrengthen'd by it. I here deliberated whether I ſhould take the old Way, or a By-way, which was the ſafeſt Method that could be taken to eſcape the *Tartars* who lay in Wait for us, and again proceed on Eaſtwards; preferring Certainty to an Uncertainty, I pitch'd upon the laſt, which proved very incommodious, eſpecially for the Cattle.

We travelled but ſlowly through theſe ſteep, mountainous and deep moraſſy Ways, and that Day twelve Camels and fifteen Horſes ſunk under Foot, and for ſixteen Days after we were obliged to wreſtle with theſe difficult Ways, which daily occaſioned ſeveral Camels and Horſes to ſink under their Loads and die; which happened from the heavy Burdens they were obliged to carry, as well as from the ſapleſs and dry Graſs, which afforded them no Nouriſhment. But our Difficulties increaſed with reſpect to Forage, for our Cattle had Graſs hitherto, which, though dry and not ſufficient to ſatisfy, yet ſerved to keep them alive; but now we came to Fields that were entirely burnt up by the *Tartars*, which forced us, how feeble and uncapable ſoever our Beaſts were to perform it, to diſpatch two Days Journey this Day, in order to come to a Place where there was ſome Graſs left.

Several of our Merchants, who loſt their Saddle-Horſes, their others being ſufficiently laden with Merchandizes, were obliged to go on Foot; and if many of them had not been provided with ſpare Horſes and Camels, we ſhould have been obliged to have left a great Quantity of their Goods behind in the Wilderneſs.

8. After various Fatigues and Miſeries, with the greateſt Difficulty in the World, we at laſt reached the River *Sadun*, where our Quarters began to mend, in ſome Meaſure, and the tender Graſs to ſprout up a little. We lay ſtill two Days by this River, in order to refreſh our Camels and Horſes, which were unable to have held out any longer. During this Repoſe, a *Chineſe* Envoy with an hundred armed Men, came up to me, who, by the Command of the Emperor of *China*, was, by the Viceroy of *Tartary*, diſpatched from the City of *Mergeen*, with Orders to accompany me to *Nerzinſky*, there to treat, concerning ſome Affairs, with the Governor. The Arrival of this Company was very welcome to us, for now we could make out full ſix hundred Men, and conſequently had no Reaſon to fear any ſtrolling Parties of Robbers. On the 15th of *March* we arrived at the River *Kailaar*, which we forded, the Water being low; and paſſing about a Mile farther in a Dale, we pitched our Tents there, though there was but little Forage to be found: Yet we paſſed the Night here, and in the Morning diſcovered a terrible Smoke to ariſe out of the North-weſt, which gave me ſome Apprehenſions, that the *Tartars* having burnt

up the old Graſs, lurked under theſe Pillars of Smoak, in order to obtain an Opportunity to ſet upon us with great Numbers. To provide againſt this, I cauſed the Camels and Horſes which were left us in this horrible Deſert, betimes, to be drove to a Place where there was ſome Graſs, and which being behind a high Mountain, was ſecurely ſhelter'd from the Fire. After which I cauſed an hundred Men to provide themſelves with the Felts with which the Camels were covered, and be in Readineſs, if the Smoak approached us, to diſperſe and drive it from our Camp as much as poſſible. Within the Space of half an Hour, the Air was wholly darkned with the Smoak, and the Fire, driven on by a ſtormy Wind, flew ſwifter than a Horſe could run, into the Vale, where the Dry Graſs was about half an Ell high; ſo that it was ſcarce poſſible either to eſcape or quench ſuch a rapid Flame: The Fire flew, or rather flaſhed by our Camp, as ſwift as Lightning, ſo that whilſt I turn'd myſelf round, it was got to the ſhort Graſs, and behind the Brow of a Hill: Notwithſtanding its ſpeedy Flight, we did not clearly eſcape it, for the Flame laying hold of our foremoſt Row of Tents, immediately ſent ten or twelve of them burning into the Air: Great Quantities of our Merchants Goods were conſumed, and fourteen Men ſtruck down by it which were miſerably burnt, and ſome of them taken up for dead; but after neceſſary Care was taken for their Recovery, only one *Perſian* died. I was myſelf in great Danger, and if I had not in time run to a Hill where there was ſcarce any Graſs, and been aſſiſted by two Servants, which covered me with a Felt, to keep off the Heat, I ſhould not have eſcaped better than thoſe abovementioned.

The Flame was no ſooner paſt us than it viſited the *Chineſe* Ambaſſador, who was encamped at ſome Diſtance from us, amongſt the Hills, where, to his good Fortune, there happened to be very little Graſs, ſo that the Fire paſſed about and over the Hill, but was not violent enough to catch hold of any thing, ſo that their Horſes Tails only were a little burnt, or rather ſinged.

Before it was poſſible to have told two hundred, this Fire had reached the River *Kailaan*, (which was a Mile from our Encampment,) where it was quench'd by the Interruption of the Water. After this Burning, the Land, as far as we could ſee from the Hills, was quite bare of Graſs, and every where Coal-black. Upon this Diſaſter, I ſent out my Guide, to try whether he could diſcover any Place for us to encamp for that Night; he return'd the next Day, with Information, that for two Days Journey all round, there was no Forage, the Fire having conſumed it all; for though there were ſome few ſcatter'd Places which had eſcap'd the Flame, yet there was not half Graſs enough to ſatisfy ſuch a Number of Camels and Horſes as ours; which was but melancholy News for me and the whole Camp.

Wherefore I conſulted, whether it was not moſt adviſeable to repaſs the River *Kailaan*, where the Graſs had eſcaped untouched; but in Oppoſition to this, the Danger of being fallen on by the *Tartars* which were on that Side of the River, offered itſelf; ſo that I rather inclined to chuſe the travelling two Days in Want of Neceſſaries, than once more run the Riſque of expoſing ourſelves to the Inhumanity of theſe Barbarians.

9. In the Morning then we broke up our Camp, which we pitched late that Night near a great Moraſs, after having endured a great Deal of Miſery and Fatigue that Day, by paſſing through Moraſſes and over ſteep Hills; which Hardſhip fell heavieſt on the Cattle, inſomuch that in this Day's Journey only eighteen Camels and twenty two Horſes ſunk into, and remained in the Moraſſes, not being able to ſtir a Step further, which fell very hard upon us, and the farther we went, rendered us the more uneaſy, ſince we were as unwilling to leave our travelling Neceſſaries and Proviſions behind us, as the Merchants were to throw away their Goods; wherefore the Remainder of the Beaſts muſt neceſſarily be the heavier laden.

The next Day we alſo paſſed through Moraſſes, Vales, and over ſteep Hills, and came to the River *Mergeen*, where the Graſs was not burnt off. Having forded this River, and proceeded on our Journey, though in a miſerable Condition, as well by Reaſon of the ill State of our Cattle, which daily ſinking under their Loads, obliged us to leave them behind, as on Account of the Scarcity of Proviſions for ſo many Men; our Stock being at preſent very low, and conſiſting barely in a few lean live Oxen, which Travellers generally take with them in theſe Sort of Journeys, but not either Bread, Peas, Barley, or other Proviſions, becauſe the Merchants and *Coſſacks* wanted Beaſts for the Carriage of their Goods, and it would have been too chargeable to lade Camels with Proviſions.

There being but a ſmall Number of Oxen in our Camp, the People began to be very anxious, conſidering it was not poſſible to reach *Argum* on the Frontiers in leſs than ten or twelve Days; ſo that each Perſon, according to the Company he was engaged in, began to compute, how long what they had would laſt, and contrive how to manage his Share beſt.

On the 18th of this Month, with great Difficulty and Fatigue, we at laſt reached the River *Gan*, which at low Water we forded, and on the other Side found freſh Graſs for the Beaſts, with which we were very well pleaſed, and mightily encouraged. Here I reſolved to lie ſtill three Days, and would have reſted longer, if the Merchants, *Coſſacks*, and Workmen, had not complained that they were pinched by Hunger, and that there was but a very ſmall Number of Oxen remaining, conſidering how many hundred Men were to be ſubſiſted by them, and they, by Example, ſhewed me the beſt proviſional Methods which could be taken to prevent an entire Famine; for as ſoon as an Ox was killed, they ſaved his Blood, and boiled it to the Conſiſtence of Liver; this they eat inſtead of Bread. Others cut the Hides into Slips, ſhaved the Hair off, and toaſted them at the Fire, and this paſſed at that Time for good Food. Nor were any Part of the Entrails thrown away; ſo that if the Scarcity had endured longer, poſſibly their Nature had been changed into that of *Caffers* or *Hottentots*, who eat not only raw Fleſh, but even the Excrements alſo.

10. In this Strait, being informed that the Country all about this River abounded with wild Game, as Harts, Roebucks, *&c.* I ordered ſome expert Archers to go a Hunting; which proved ſo ſucceſsful, that they ſhot about fifty Roebucks, which were afterwards diſtributed to our famiſh'd Company, who greedily devoured them half dreſſed and half raw, and gave convincing Proof that Hunger, as 'tis commonly reported to be, is really a ſharp Sword; but beſides it muſt be owned that the aſſuaging it when it hath continued long, and is grown outrageous, is one of the greateſt Pleaſures of Life; though indeed a tedious Thirſt is more intolerable and painful to human Nature.

In this Strait I ſent a Gentleman, accompanied with eight *Coſſacks*, to *Argum* the frontier Place, charg'd with a Letter to the Governor, requeſting that he would immediately ſend us a Parcel of Oxen, Sheep, Bread, Meal and other Proviſions, under Convoy, by Reaſon we were driven to the laſt Extremity; and this Meſſage did not prove unſucceſsful, though the expected Relief did not arrive ſo ſpeedily as we wiſhed; each Day on theſe melancholy Occaſions commonly appearing an inſupportable Year.

Having diſpatched this Meſſenger with his Orders, I thought it neceſſary to break up from the River *Gan*, and in the Interim to advance as far on our Way, and ſtruggle as much as poſſible with our Uneaſineſs. And after we had travelled three Days, the hungry Complaints of our Company became inceſſant; the Roebucks were but a Morſel amongſt ſuch a Number of People, and no Edibles were to be bought for Money in this Wilderneſs. During which Affliction we were obliged to make a Virtue of Neceſſity, and bear as well as we could what we were not able to remedy. In this Condition, diſpirited and faint, we arrived at a Brook, which flowed from the Hills, and was richly ſtored with large Jacks, Trouts, and other Fiſh, of which we ſhot many with Bow and Arrow; for in clear Water the *Coſſacks* and *Tunguſians*

Tunguzians, of both which I had ſeveral, are ſuch expert Archers, that with their double-pointed Arrows they very ſeldom miſs the Fiſh they aim at, and but once touching, generally pierce through them, which inſtantly cauſes them to float on the Surface of the Water. This Fiſhery afforded a very conſiderable Refreſhment to our Camp, which was alſo increaſed by ſome Bucks being ſhot that Evening and dreſſed as before.

Our Hunters diſcovered a Hutt amongſt the Hills, where lived a *Schaman* or Conjurer and his Companion. This Magician was Uncle to our Guide, and a *Tunguzian*, which Nation abounds with ſuch Pretenders, as we have already hinted. About Midnight I was waked by a horrible Noiſe, upon which running out of my Tent, and aſking the Centry that ſtood there, what it was? He told me our Guide was making merry with his Uncle; which excited my Curioſity to that Degree, that led by one of the Centries, I ſtole thither ſoftly to ſee what they were doing; approaching the Entrance of the Hutt, I found that they were conjuring after their Manner; and though the greateſt Part of it was over, I yet obſerved him ſitting with an Arrow in his Hand, the Head of which was inclined towards the Earth, and the Point he held under his Noſe; after which he roſe up, making a louder Outcry, and after leaping all round, laid himſelf to ſleep. In the Morning the *Coſſacks*, whom I had ſent a Hunting, and whom he had accompanied, told me that this Conjurer came to meet his Nephew, whom he in their Preſence conjured out of their Sight, or carried away; which might eaſily be done without any Diabolical or other Aſſiſtance than the Darkneſs of the Night, and the uneven hilly Ground. My Meſſenger returned with the agreeable News, that within three Days we ſhould be furniſhed with all Sorts of Proviſions from *Argum*; the Approach of which appointed Time was not a little longed for amongſt us.

11. On the 3d Day Heaven favoured us with our promiſed Aſſiſtance, which conſiſted of twenty five Oxen and Cows, Millet and Bread; but the Sutlers that brought this Convoy of Proviſions, made the Merchants pay ſo very dear for it, that their Relief looked more like Extortion than Charity; they taking a *Rixdollar* for one Loaf, and for all the reſt in Proportion; however, coſt what it would, this Supply was very welcome to us at that Juncture.

Thus invigorated, and alſo encouraged to find that the farther we advanced on our Journey the Graſs grew better, on we went, till through the Mercy of God we got to the End of this barren Deſart, in which we had ſuffered ſo many Miſeries, and ſtruggled with the greateſt Difficulties in the World.

On the 27th Inſtant we joyfully reached the River *Argum*, which with the whole Caravan we paſſed: And on the 31ſt arrived very ſafe at the City of *Nerzinſkoy*, returning our Thanks to Heaven, that through ſo many Dangers we were thus far advanced on our Way, and had got out of the reach of pinching Neceſſity.

After having refreſhed the Camels and Horſes with good Graſs, and reſted ourſelves for a convenient Time, we departed from *Nerzinſkoy* on the 5th of *Auguſt*, and proceeding forwards by Land along the River-ſide, came on the 8th Inſtant to the City of *Udinſkoy*; where we furniſhed ourſelves with Barks, and aſſiſted by an ebbing Tide, and a good Wind, in one Night reached the Frontiers of *Siberia*, and on the 12th arrived ſafe at *Jekutſkoy*.

On the 17th we left that Place, and after running a great Riſque by wading through the great Quantities of Water which were fallen, arrived ſafe at *Jenizetſkoy*.

On the 26th we went by Land from this City, and travelled through a Wood twenty Miles long, in which were harboured ſeveral wild and ravenous Beaſts, that at our Approach took their Flight.

After which we arrived at the Village *Makoſkoy*, where finding as large a Store of Shipping as I deſired, we all embarked, and driving down the River *Keta*, on the 28th of *September* we reached the Caſtle of *Ketſkoy* on the *Oby*; on which we drove down without meeting any Thing remarkable, and on the 16th of *October* came to the Town *Samoroſſkoy Jam*, at the Mouth of the River *Jalis*, on which Stream I ſpent fourteen Days in waiting for Sleads to purſue our Journey by Land. I took the very firſt Opportunity, ſo that on the 29th I ſafely reached *Tobolſkoy*, where we reſted three Weeks to refreſh ourſelves, and to provide ourſelves with new Cloaths.

After which we ſet forwards with all poſſible Expedition, being very deſirous to put an End to ſuch a tedious Journey, and once more ſee the imperial Metropolis.

On the 24th of *November* we travelled through the City of *Wergaturia*, without encountering any Thing obſervable, and through the Mercy of God, arrived in Sleads ſafe at *Moſcow* on the firſt of *January*, after having ſpent two Years and ten Months in theſe Travels, and endured ſeveral fatiguing Miſeries, partly occaſioned by Scarcity of Proviſions, as already hinted. We returned Thanks to Almighty God for graciouſly preſerving us in ſuch imminent Dangers, and at laſt conducting us to the Place from which we were ſent by their Czariſh Majeſties.

SECTION IV.

A very copious and no leſs curious Account of the North-Eaſt Part of *Aſia*; comprehending a diſtinct, particular and authentick Deſcription of all that has hitherto paſſed under the general Name of *Siberia*, ſhewing the Extent and Situation of the ſeveral Diſtricts thereof, their Climate, Soil and Produce, the Riſe and Courſe of the principal Rivers, Deſcriptions of all the great Cities upon their Banks; of the ſeveral barbarous Nations that inhabit near theſe Rivers; of the Value of their Furrs and Fiſheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of leſſer Circumſtances, as well as material Points of Fact, which contribute to the perfect underſtanding the Condition of this hitherto unknown Country, and all its Inhabitants. To which is added, a ſuccinct Recapitulation of the State of the *Chineſe* Empire towards the Cloſe of the laſt

Century; with ſome very impartial as well as judicious Remarks on the Temper, Genius, and boaſted Oeconomy of that famous Nation; with a free Cenſure of thoſe Hyperbolical Panegyrics that have been beſtowed on the Progreſs of Science amongſt them.

Being the Concluſion of his Excellency EVERARD YSBRANTS IDES's *Travels by Land from* Muſcovy *to* China, *and of his Return from thence.*

1. *The Author's Account of* Siberia, *the Extent and Situation of that Country, the Motives that led him to think of making a Map of it, the Methods uſed by him for that Purpoſe, and the Reſult of his Pains upon this Subject.* 2. *The Country of the* Samojedes *deſcribed, with an Account of this Nation, their Food, Carriages, Government, Arms, Religion, Marriages, Poetry and ſtrong Diſpoſition to Magick.* 3. *An exact and excellent Deſcription of the Streights of* Weygats, *how far they are navigable, the* Ruſſian *Fiſhery in them, Privileges that Nation formerly enjoyed, which are now taken away.* 4. *An ample and curious Deſcription of the Mountain of* Pojas, *or Back of the World: Of the South Boundaries of* Siberia, *and of its principal Rivers,* viz. *the* Jaka, *the* Tobol, *the* Oby, *the* Jenizea, *and the* Selinga. 5. *The Source of the River* Kugur, *Deſcription of the* Uſſinian Tartars, *and their Neighbours, the Nature and Produce of their Countries, the Stature, and Complexion, Habits, Language, and Religion of theſe People.* 6. *Of the* Kalmucks *or* Kalmacks, *who inhabit between the* Tobol *and the* Oby. *The Lake of* Jamuſchowa, *famous for the excellent Salt it produces. The Country of* Barabinſy, *its Nature and Produce, the People that inhabit it, their Manners, Cuſtoms, Arms, Government, Religion, and Trade.* 7. *Of the famous Town of* Tomſkoy, *its Inhabitants and Commerce, of the ſhort Route from thence to* China, *and a conciſe Account of the Country between this City and that of* Jenizeſkoi. 8. *Of the Country of the* Kirgiſes, *the Hiſtory of that People, and of their Neighbours: Of the frontier Places belonging to the* Mongals, *with an Account of the three Princes by whom they are governed.* 9. *Of the Country about the Caſtle of* Argum, *of the People who inhabit theſe Parts, and of the River* Gorbiſa, *which ſeparates the Dominions of the* Czar *from thoſe of the Emperor of* China. 10. *Of the Rivers* Tugur *and* Uda, *and of the Inhabitants of certain Iſlands that come thither to trade, extremely curious, and which occur in no other Author.* 11. *The City of* Kamſatka *deſcribed, with an Account of its Inhabitants, the Climate about the* Icy-Cape, *the Fiſh taken there; the Manner in which the People live under Ground, and of the vaſt Mountains of Ice in the Sea.* 12. *Of the River* Lena, *and the City of* Jekutſkoi, *Capital of the Northern Parts of* Siberia, *the Fiſhery there, the Nations that inhabit on the Side of this River, their Cuſtoms, Religions, Habits and Language. Of a certain Idolatrous Nation in theſe Parts. A Deſcription of other Rivers that ariſe in this Country, and of the Lands they water.* 13. *A Deſcription of the City of* Wergolenſkoi, *the fruitful and pleaſant Country about it: An Account of the River* Jenizea *from its Source to its Mouth, with a Deſcription of the People that inhabit the Banks of that and other Rivers.* 14. *A ſuccinct but curious and exact Deſcription of* China, *with Remarks on the Genius, Temper and Diſpoſition of the People.* 15. *Of the Author's Converſations with them, in Reference to religious and philoſophical Subjects; with other curious Particulars.* 16. *The Author's Sentiments with reſpect to the high Notions that have been entertained in* Europe, *of the Wiſdom, Learning, Policy, Arts and Manufactures of this Nation.* 17. *Obſervations Hiſtorical, Political, and Critical upon the foregoing Section.*

1. THE great Value of theſe Travels ariſes from their Plainneſs, Perſpicuity, and apparent Veracity; for it is eaſy to ſee that our Author had a true *German* Sincerity, and was far from allowing his Imagination to co-operate with his Judgment in the Compoſition of this Work; what he ſaw with his Eyes, he has faithfully ſet down with his Pen, without Increment, without Diminution. But upon his Return to *Muſcovy*, and communicating his Journal of his Travels, many Queſtions were aſked him, and many Inquiries made, from which he was convinced, that a moſt uſeful and entertaining Supplement might be added to his Work; and this it was that put him upon writing what compoſes this Section. It had been a very eaſy Thing for him, by digeſting his Travels afreſh, to have brought all his Obſervations and Remarks into their proper Places; and this, without Doubt, would have render'd his Performance more elegant at leaſt, if not more uſeful. His Love for Truth, however, was ſo great, that he reſolved Things ſhould appear as they really were, and inſtead of taking that Step, has given us his additional Remarks in that Order to which he was directed by the above-mentioned Enquiries; by this Means he was obliged to retrace his whole Journey, which however he has done in ſuch a Manner, as to mention little or nothing that he had given us before, and has taken ſuch a Method, as will enable every attentive Reader to become abſolutely acquainted with this great Country never deſcribed before, and of which all Deſcriptions that have been made ſince fall very far ſhort of his. Thus much I thought neceſſary to premiſe, without taking away any Part of his own Introduction, becauſe I thought it but juſt to acquaint the Publick with this Author's real Merit, which in Point of Accuracy and Regard to Truth, I look upon as ſuperior to moſt, and not inferior to any; and I perſuade my ſelf, when he has peruſed it, that the Reader will be entirely of my Opinion, and will only regret, that in Collections of this Nature, ſo few Pieces of this Kind can be inſerted.

In the paſt Relation of our Travels, ſolely aiming at Truth, we have repreſented her naked, without any hyperbolical or ornamental Illuſtrations to render her the more agreeable and ſurpriſing, according to the common Practice of Writers of Travels, who magnify Trifles, and croud in various Particulars on the uncertain Reports of others, in order to furbiſh up the Book. This is indeed what I have all along carefully avoided in the Deſcription of my Journey; but finding I have not been ſo methodical as I could have wiſhed; that I have omitted ſome Particulars worth the Reader's Cognizance, or at leaſt not related them as they ought; for the firſt I beg Pardon, and ſhall endeavour to make ſome ſmall Amends for the latter by a ſhort Review.

My Travels then were through the whole Provinces of *Siberia* and *Dauur*; the Towns, Countries, and Rivers of which that I have paſſed through, or over, are already exactly deſcrib'd. The Courſe of our Journey was from the North to the Eaſt, that is, from *Weygats* to *Amur*; and from the Weſt from *Uffa Baſkiria* to the *Mongalian* Country, and from thence from the Weſt to the South.

As for what relates to the Frontiers of *Siberia* in general, they are every where garriſoned with well armed Forces by his Czariſh Majeſty, who are not indeed very ſolicitous to ſubdue the Southern *Tartars* inhabiting the *Geliſeeſchian* Plains to his Majeſty's Obedience, by reaſon it would not turn to any great Advantage. The Circuit of this Kingdom of *Siberia*, and the circumjacent Country is very large, as appears by our accurate Map, with regard to which I muſt acquaint the curious Peruſer, that he ought to guide himſelf only by the Degrees; but as for the Diſtances betwixt Countries, Cities and Rivers, they are not to be expected exactly placed to a Mile: For this Country having never been travelled by Geographers, much leſs meaſured by Miles, I have only, as carefully as I poſſibly could, taken the Altitudes with a Mathematical Inſtrument, and from thence marked the Places, leaving to my Succeſſors in theſe Attempts, the more thorough Search and Diſcovery of theſe untravelled Countries. I have indeed broke the Ice for them, being the firſt *German* that ever went through this vaſt Country to, and returned from *China*.

I muſt acknowledge that I am obliged for the firſt Light of a good Sketch of a general Map of theſe Lands, to the highly honourable and worthy *Nicholas Witſen*, Preſident Burger-maſter of the City of *Amſterdam*, whoſe Memory will be perpetually reverenced by all the learned World; he having firſt diſcovered to the *Europeans* all *Siberia*, the *Calmuckan*, *Mugalian*, and other Provinces, to the *Chineſe* Wall; and deſcribed them by a Map. This Map I made uſe of as a Guide throughout my Journey, and as a Foundation, on which to build that annexed to my own Book. A ſhort Sketch of my Journey is as followeth:

2. Firſt, we began our Travels in the North, in the *Samojedian*, which he before called *Sirenian* and *Waguliſſian* Countries, which are alſo under the *Siberian* Government, being ſubject to the *Waiwodes* of *Pelun*, as far as the Sea. It is obſervable that there are various Sorts of *Samojedes*, very different from each other in their Language or Expreſſion, as are the *Bereſoffkians* and *Puſtoſerſians*, which believe themſelves alſo to be the ſame Nation: After theſe are thoſe who live on the Sea-Coaſt beyond the Eaſt Side of the *Oby* to *Truchamſkoy*, or *Mangazeiſkoy*; as alſo thoſe which for the greateſt Part of the Year reſide about *Archangel*, near the River *Dwina*, though indeed in Summer they ſet up Hutts by the Water-ſide, and in the Winter far in the Woods: This laſt Sort are the Scum of thoſe People who formerly lived together by the Sea-ſide, which now are come to this Country.

Beſides theſe, are the *Samojedes* that inhabit all along the *Ice-Coaſt* of the Province of *Siberia*, which are a People that have not much more to pretend to than a human Face and Figure; they have but a very ſmall Share of Underſtanding, and in all other Particulars are very like Wolves and Dogs, for they eat all Manner of dead Carcaſſes, whether of Horſes, Aſſes, Dogs or Cats, which die a natural Death; as well as Whales, Sea-Cows, Sea-Calves or Horſes, &c. which are thrown upon the Shore by the Ice; nor do they take the Trouble of dreſſing theſe Meats, but devour them raw; and if they had but Wings they would certainly take their Flight to *Greenland*, and diet with the white Bears and Malmucks (a Sort of Birds of Prey) which feed on the flea'd Whales Carcaſſes: And notwithſtanding all this, they inhabit a Country that richly abounds with wild Game, Fiſh and Fleſh; but moſt of them are too idle to provide themſelves with it.

They have a Sort of Governors amongſt them, to whom they bring their Tribute, and theſe are obliged to carry the ſame to the Cities or Winter-Places of his Czariſh Majeſty. A Gentleman who ſtaid ſome time at *Poſtoi Oſer*, told me, that their Hart-Sleads were very convenient, and that with them they went prodigiouſly ſwift over the Mountains covered with Snow. (The Faſhion of theſe Sleads, their Manner of Travelling, and their Buckſkin Habit with the hairy Part outwards, together with their Bow and Arrows, are expreſſed in the annexed Print.) He added that he had ſeen the abovementioned Governors in ſuch Sleads as theſe, to which were ſometimes harneſſed ſix or eight Bucks; the Governors are commonly cloathed in Scarlet-Coats, but their Retinue in the Habit already deſcribed. Their Arrows, inſtead of being pointed with Steel or Iron, are only headed with the Bone of a Sea-Calf, or ſome other Animal.

They make a very diſagreeable Figure all over, inſomuch that I may venture to affirm, that ſuch a ſhocking ill looked People are not to be found on the Surface of the whole Earth. Their Stature is ſhort and flat; they have broad Shoulders and Faces, flat and broad Noſes, great blubber hanging Lips, and frightful Eyes like thoſe of the Lynx. They are very brown all over, their Hair is diſhevelled, ſome of it being red or pale, but moſt of it is as black as Pitch; they have very little Beards; their Skin is brown and hard, and they are very ſwift Runners. The Roebucks, which they uſe to draw their Sleads in Winter, are horned and ſhaped like Harts, but have crooked hanging Necks, like thoſe of Dromedaries; beſides which, what is obſerved of them is very particular, that they are as white as Snow in Winter, and greyiſh in Summer: They are fed with Moſs, which grows on the Ground in the Woods.

Theſe *Samojedes* are groſs Idolaters, who have no Notion of any Religion otherwiſe than that, like the *Perſians*, they worſhip the Sun and Moon, by bowing their Bodies Night and Morning; beſides which, they keep near and in their Tents Idols that hang on Trees; ſome of them are wooden Images repreſenting human Figures; others made of Iron, to which they ſhew ſome Reſpect: Their Tents are cover'd with Birch Barks ſew'd together, and when they remove them, as they frequently do in Winter as well as Summer, they ſet up the Stakes round with the Points together, and upon theſe they lay the Covering of the fore-mentioned Bark over them, leaving a Hole at the Top for the Paſſage of the Smoke. Their Fire is made in the Middle of their Tents, round which they lie at Nights naked both Men and Women. They lay their Children in Boxes or Cradles made of Birch Bark ſewed together, filled with Shavings of Trees which are as ſoft as Wool, and covered with Buck-ſkins.

They marry within the Degrees of Conſanguinity without the leaſt Scruple, and buy one another's Daughters for Wives, giving for them Bucks and Hides; and according to the Cuſtom of ſeveral Eaſtern Nations, they take as many Wives as they can keep. When they deſign a Merry-making, they ſtand in Couples oppoſite to each other, throw up one of their Legs, and mutually clap the Soles of their Feet ſo hard with their Hands that it may be heard at a Diſtance. Inſtead of Singing, they make a howling Noiſe like that of Bears, they neigh like Horſes, or chirrup like young Birds. They have a Sorts of Conjurers that ſhew all ſorts of diabolical Tricks, moſt, if not all of which are fraudulent Deluſions. But here taking our Leave of theſe monſtrous *Samojedes*, we ſhall turn our Diſcourſe to another and more pleaſant Subject.

Near this Coaſt, as far as *Weygats* and *Meſeem*, are all Sorts of Quadrupeds, particularly Wolves, Bears, Foxes, and Harts, &c. The Fowls are Ducks, Partridges, &c. being Snow-white in Winter, which is ſo very ſevere, that about *Samojeda* I have myſelf ſeen Rooks and Magpies fall down dead in their Flight, being killed by the piercing Froſt.

3. A great deal hath been ſaid concerning the *Weygats*, by *Engliſh*, *Danes*, and *Hollanders*, who with Ships have endeavoured to bore through this icy Channel, which hath been done indeed once or twice, but then thoſe who did it were repulſed, and forced to return to their own Country by the vehement Current of Ice in the South or Icy Sea; of which Mr. *Nicholas Witſen*, *Burger-maſter* of *Amſterdam*, treats at large, that Gentleman having obtained an exact Account of whatever is remarkable, from ſeveral Perſons who have been there; all which Obſervations he hath incomparably well digeſted in his Chart of *Weygats* and the Sea-coaſts, to

the River *Oby*; by which it plainly appears, that from *Weygats* to the *Icy* or *Holy Cape*, the Sea is utterly unnavigable with Ships, and ſhould a ſecond *Chriſtopher Columbus* appear, and point out the Courſe of the Heavens, he could not yet drive away theſe Mountains of Ice: For God and Nature have ſo invincibly fenced the Sea-ſide of *Siberia* with Ice, that no Ship can come to the River *Jeniſea*, much leſs can they come farther Northwards into the Sea. Not to mention the Voyage from the *Icy* or *Holy Cape*, round *Japan* and *Jedzo*, I ſhall only inſert what I have collected from the Informations of the *Ruſſians*, who ſeveral Times have ſailed through the Streights of *Weygats* to the *Oby*.

We go, ſay they, with our *Koiſkt*, (a Sort of Barks fitted for the Sea) to the Streights of *Weygats*, to fiſh for Sea-Calves, and if they do not meet with great Quantities of Fiſh, we ſail directly into the *Weygats*; but if the Wind blows from the Sea, the whole Coaſt is covered with Ice, and we are obliged to put into ſome of the Creeks or little Rivulets which run inland, and withal not to venture too far, but ſtay there till the Wind turns about and blows from the Shore towards the Sea; upon which theſe Streights are ſo perfectly cleared of all their Ice, that it ſoon drives ſeveral Miles out of Sight at Sea; and making uſe of that Opportunity, we ſail along the Coaſt till the Wind turns contrary, when we are again forced in, in Search of a Creek to ſhelter us; which if we fail of, the Bark is ſhatter'd to Pieces by the Clots of Ice.

About fifty Years paſt, the *Siberian Ruſſians* had free Liberty to fetch their Proviſion, as Corn, Meal, *&c.* from the Sea-ports, and to carry their *Siberian* Commodities thither through the *Weygats*, ſuppoſing that they paid the proper Toll to his Czariſh Majeſty: But theſe *Siberians* abuſed their Sovereign's Favour to a very great Degree, and made uſe of it to bring in great Quantities of Goods by other Ways and Rivers into *Ruſſia* by Stealth, whereby his Majeſty ſuffered very much in his Revenue; for which Reaſon, ever ſince, the Importation of any Goods through the Streights of *Weygats* have been abſolutely prohibited; but all are obliged to be brought over *Bereſova*, the *Kamenſkoy*, or the rocky *Pojas*; which Paſſages are not attended with ſmall Difficulties, for when they leave *Bereſova*, the Carriers are obliged to cut their Boats (which are cut out of a Tree) acroſs in two, and in thoſe half Boats draw themſelves and their Goods over the high Mountains, and having ſpent ſome Days in this irkſome Way of Travelling, till they are come to the North-ſide, they again faſten their Boats together, ſtopping the Joints cloſe with Moſs, and therewith purſue their Voyage to *Archangel*, or the other Places in *Ruſſia* ſituated on the River *Oby*.

4. I ſhall now turn my Diſcourſe to the *Pojas*, or *Ridge of the World*; which is a vaſt Quantity of Rocky Hills, that in their parting, according to the exacteſt Obſervation, make a Sort of *Ridge* or *Pojas*. This *Ridge* begins from *Petzerkay Oſer*, or *Pezerſe Lanis*, and extends, without any Diviſion, through the Province of *Wergaturia*, under which is compriſed the *Wergatcerſchian Wolok*; and this Maſs of Hills is no otherwiſe to be travelled than by drawing over it. From thence it runs Southward by the Caſtle of *Utka*, to the *Uſſinian Tartars* Country, out of which Mountains the River *Uſſy*, and Eaſtward the River *Nitra*, *Tuna*, &c. originally riſe, and the laſt falls North-Weſtward into the *Kama*. From hence this mountainous Ridge takes its Courſe Southwards, to the *Kalmockian Borders*, out of which *Pojas*, the large River *Jaica*, ſo rich in Fiſh, riſes Weſtwards, and diſembogues itſelf into the *Caſpian* Sea, and the River *Tobol* riſes out of the North Side of it. Its Courſe Eaſtwards is along the *Kalmuckian* Country, and the Borders of *Siberia*, paſſing by *Aſero Saiſan*, and *Oſer Kalculan*, two Lakes; from the firſt of which the vaſt River *Oby* ſprings, and from the ſecond *Irtis*. From this great Lake *Oſer Kalculan*, this Ridge of Mountains turns off again Southward, where the River *Jeniſea* riſes, which diſcharges itſelf into the *Tartarian Icy Sea*.

Farther Southwards this *Pojas* or Ridge of Hills inclines in the Shape of an Elbow to the North-Eaſt and South. It runs along by the River *Jenizea* Northwards, and Southwards by the *Oſer* or Lake *Koſogol*, out of which riſes the River *Selenga*, which falls into the Lake *Baikal*. From hence the *Pojas* extends to the *Sandy Deſert*, in the *Mongalian* Country, and being interrupted by ſome Days Journey through the mentioned Deſart, proceeds onwards to the South, as far as the *Chineſe* great Wall, and then turns off Eaſtwards to the *Careeſchian Sea*, as is delineated in our Map.

5. But to come to the Deſcription of the People of theſe Provinces, and to inform the Reader to whom they are Tributaries. The Country from *Pelim* to *Wergaturia*, all along by the River *Zuſawaja*, to the Province of *Uſſinia*, is moſtly inhabited by the *Woguliſchian* Heathens, whoſe Tenets and Manner of living are already above deſcribed. The River *Kugur*, where the *Uſſinian* Habitations begin, riſes out of the *Uſſinſchian* Juriſdiction, betwixt the Rivers *Zuſawaja* and *Uſſa*, and falls into the *Kama*. On this laſt River is ſituate the City called *Kungun*, in which his Czariſh Majeſty hath a Garriſon. Theſe *Uſſinchian Tartars*, as alſo another Sort called *Baſkinzians*, inhabit near the City of *Oeſſa*, and live diſperſed in Villages and Towns, all which are well built after the *Ruſſian* Faſhion, along the Weſtern Shore of the River *Kama*, and by the *Wolga* Side, almoſt as far as the Cities *Sarat* and *Sarapul*, both which are ſituate on the River *Wolga*, and garriſoned by his Czariſh Majeſty, in order to the collecting of his Tribute, and to keep the *Tartars* in Awe. This Tribute they pay in Furrs and Honey; and are a Sort of People that will not bear being too roughly handled by their Governors, but if ſo treated by them are ſure to rebel, of which there have been ſeveral Inſtances formerly; but for a long Time they have not been guilty of any Diſloyalty.

South-Weſtwards, in the Diſtrict of *Aſtracan*, there are alſo other ſmall Clans or Hords of that Nation, who being an independant People, in Conjunction with the *Kalmockians* bordering on *Aſtracan*, rob and pillage in the Province of *Siberia*. Beſides which, by Way of ſupplemental Maintenance, they apply themſelves to the Tillage of the Ground, chiefly for the Production of Barley, Oats, and Buck-wheat: And as ſoon as the Corn is reaped, they prepare a Threſhing-Floor in the Field, threſh it out, and ſtow it in the Barn. This Country as plentifully flows with Honey as any Part of the World. Moſt of the Men's wearing Cloaths are made of *Ruſſian* white Cloths, the Coat being about the ſame Faſhion with thoſe of the *Muſcovite* Peaſants, with long Flaps hanging down on their Backs. The Women, when the Seaſon is not too cold, cover the upper Part of their Body with a Shift only, which is curiouſly ſtitched with Silk of all Colours by Way of Stripe, from the Top to the Bottom; and about the lower Part of their Body they wear Petticoats, and a Sort of Shoes which not only cover their Feet, but reach above their Ancles. Their Head-dreſs conſiſts in a Sort of Fillet about a Hand-breadth, which they wear on their Foreheads, and faſten it behind. This Fillet is ſtitched with Silk of ſeveral Colours, and adorned with a Sort of variegated Glaſs, in Imitation of Coral, which is ſtrung, and hangs dangling near the Eyes. Some have theſe broader than others, as being full two Spans long, and of one Hand-breadth, and ſtitched through with Silk; theſe look like a thin Plank, and are adorned with Corals of all Sorts of Colours, which cover their Forehead. When they go abroad, they cover their Head-dreſs with a ſquare Linen Handkerchief, ſtitched with Silk, and edged with Silk Fringe.

Theſe *Uſſinſchian*, as well as the *Kaſkierſchian Tartars*, are a valiant, warlike People; they ſit their Horſes well, and carry no other Arms than Bows and Arrows, in the Uſe of which they are extraordinary dextrous. They are vigorous and large Men, their Shoulders are broad, and they ſuffer their Beards to grow to a good Length. The Hair of their Eye-brows is ſo very thick and long, that it hangs over their Eyelids, and generally runs ſo far croſs the Forehead as to unite the two Eye-brows. They have a Language peculiar to themſelves, yet can partly underſtand the *Aſtracan Tartars*. Their Religion is Pagan, though indeed they partly incline to the *Mahometan*, which they have borrowed from the *Crim Tartars*, with whom they formerly converſed very much.

6. The Country betwixt the Rivers *Tobol* and *Oby*, to the *Jamuſchowa Oſer*, is inhabited by *Kalmockians*. This *Oſer* or Lake plentifully abounds with hard Salt, and lies under the *Kalmockian* Juriſdiction; notwithſtanding which about twenty or twenty five *Dochenicks*, or *Ruſſian* Veſſels, guarded by a Convoy of 2500 well armed Men, come annually from *Toboleſk*, up the River *Irtis*, from whence they travel by Land to this *Oſer* or Lake, where they dig up the Salt like Ice from the Shore, and load their Ships with it. Indeed they generally have ſome Skirmiſhes with the *Kalmockians*, who will not allow of this Practice: But yet, whether they will or not, they are forced to ſuffer it.

Inclining lower down from this *Jamuſawaian Lake*, near the River *Irtis*, lies the City of *Torre*, adjoining to the River *Tara*: This is the laſt Frontier Place which belongs to his Czariſh Majeſty, bordering on the Territories of the *Kalmockian* Prince *Buſtuchan*. The Inhabitants of which are called *Barabinſy*, and ſtretch themſelves Eaſtward from the City of *Torre*, to the River *Oby*, oppoſite to the River *Ton*, and the City of *Tomſkoy*. This Country of *Barnabu*, is paſſable in Summer as well as Winter; but chiefly in the latter: For the *Oby* at *Surgut* and *Narin* being unpaſſable in the Winter, Travellers generally go this Way to *Siberia*, by *Tomſkoy* and *Jenuſeeſchs*. This Nation, which is called *Barabinſy*, conſiſts of a Sort of *Kalmocks* which pay Tribute equally to the Czar, and the *Buſtuchan*. They have amongſt them three Governors or *Taiſchi*; the firſt of which is called *Karſagaz*, the ſecond *Baikiſch*; and the third *Baiduk*: Theſe three Lords receive the Tribute of the *Barabinzes*, and bring the Czar his Portion. The *Karſagaz*, the firſt of them, brings his Part to the City of *Tora*; *Baikiſch*, his Portion to the *Ruſſian* Caſtle of *Teluwa*; and *Baiduk*, the Remainder to the Caſtle of *Kulenba*: All of theſe Tributes being paid in Furrs. Theſe are an inſolent villanous Sort of People; they live in low built wooden Houſes, like thoſe of the *Siberian Tartars*; they are not at all acquainted with the Uſe of Stoves or Ovens, but make Uſe of a Sort of Chimnies or rather Smoak-holes. When their Wood is burnt, they ſtop the Smoak-hole, and warm themſelves by the Coals as long as any Heat remains in them.

Their Houſes are ranged into Villages; they ſet up high Hutts in the Summer, but in Winter retire into their warm wooden Dwellings. They are tolerably ſkilful in Agriculture, and ſow Oats, Barley, Millet, and Buck-wheat, but are not fond of either Rye or Rye-bread: And though they like the Taſte of it well enough, yet they chew it ſo awkwardly, and roll it upon their Tongues as if they had Dirt in their Mouths, and ſpitting it out, ſcrape the Remainder off their Tongue as after a Thing which they cannot ſwallow. They ſteep their Barley in Water, dry it a little, and then threſh off the Huſk; after which they dry, or rather fry it in a very hot Iron Pan or Kettle; by which Management it becomes as hard as Bone; and this is their Bread which they daily eat, and is ſo hard and dry, that it craſhes betwixt their Teeth. They alſo eat the *Saranna* or Bulb of yellow Lillies, dried, ſtamped, and boiled with Milk, as a Sort of Milk-pap. They drink *Kumis*, a Sort of Brandy extracted from Mares-Milk; and *Karaza*, i. e. *Karatcha*, or black Tea, which is brought thither by the *Bucharians*.

Their Arms are thoſe common to the greateſt Part of the *Tartars*, *viz.* Bows and Arrows. They keep great Numbers of Cattle, particularly Horſes, Camels, Cows and Sheep: But neither keep nor will eat Hogs. Their Country abounds with fine Sables, Martins, Squirrels, Ermins, Foxes, Hyena's, Beavers, Minks, Otters, *&c.* in which they pay their Tribute. This Country extends from *Tora* to the Rivers *Oby* and *Tom*; is not mountainous, but plain even Land, abounding with Woods of beautiful Cedars, Larch-Trees, Birch and Pitch-Trees, which are interſected by ſeveral Cryſtalline running Streams. In the Habits of both Men and Women, they follow the *Numgolſchian* and *Kalmockian* Faſhion; and marry as many Wives as they can maintain. When they go into the Woods in order to hunt furred Animals, they carry their *Saitans* along with them; which is a rough Image, as well carved in Wood as they can do it with a Knife: This they cloath in a Stuff Dreſs of all Sorts of Colours, in Imitation of the Habits of the *Ruſſian* Women, and place him upright in a ſmall Caſe, and carry him upon a particular Slead, both made for that Purpoſe; and to him they offer up their firſt Capture of what Sort of Beaſt ſoever it prove.

When they have killed great Numbers of their Game, they return Home very merrily, mount their Idol in his Caſe, to the higheſt Place in the Houſe, and hang him behind and before, above and below, with Sables, Martins and all Sorts of Furrs, in order to expreſs their Acknowledgements to him for rendring their Hunting ſo ſucceſsful; and all theſe rich Furrs muſt hang there to be ſpoiled and putrified, they believing it a moſt unpardonable Crime to take off or ſell any of theſe dedicated Hides; whence it is that we daily ſee ſo many fine Skins placed by theſe Images, that are eaten up by the Worms, which it is indeed a great Pity are not better employed.

7. Croſſing the River *Oby* from hence, we come to *Tomſkoy*, which is alſo a Frontier Place belonging to the Czar, ſituate on the *Buzuk*, and is a very fine and vaſt large City, ſtrongly garriſoned by *Ruſſian* and *Coſſackian* Soldiers, to prevent the Incurſions of the *Tartars* into *Siberia*; and in the Suburbs over the River live great Numbers of *Bucharſian Tartars*, who pay Tribute to his Czariſh Majeſty. This City lies on the River *Tom*, which riſes in the *Kalmockian* Territories, and from hence the Subjects of the *Buſuchtu Chan*, and the *Bucharſians*, drive a very conſiderable Trade to *China*, ſeveral *Ruſſian* Merchants being concerned and ſharing with them. This Way to *China* is very expeditious, it being practicable to go thither in twelve Weeks, and return back in as ſhort a Time; but it is withal expoſed to the greateſt Inconveniencies and Difficulties in the World; for the Travellers are obliged to carry all Neceſſaries along with them upon Camels, nay even Water and Wood to dreſs their Victuals. They go directly through *Kalmockia*, and through *Cokoton*, a *Chineſe* City without the Wall. But it is utterly impoſſible for *Ruſſians* or other Nations to travel this Road, by Reaſon that it is infeſted with ſeveral Gangs of Robbers, which ſet on the Paſſengers, and very often deprive them of all that they have gained by ſo tedious and fatiguing a Journey.

From *Tomſkoy* down to the City of *Janiſeeſch* is utterly deſolate and uninhabited Land; the Country is an even Plain, on which appear ſome ſcattered Thickets: Alſo all about the two Rivers *Kia* and *Zuwin*, to as far as the Cities *Kuſnezkoy* and *Kraſnajar*, is very little or not at all inhabited, any where beſides the Frontiers. The firſt peopled Country we find here is that of the *Kirgizens*, which are the Subjects of the *Buſuchtu Chan*. The City of *Kraſnajar* is very large, and defended by a ſtrong Garriſon of *Coſſacks* placed in it by his Czariſh Majeſty, and they are always obliged to keep a very ſtrict Guard to prevent the Incurſions of the *Kirgizens*, for which Reaſon twenty Horſes both Day and Night ſtand conſtantly Saddled and Bridled, in the Market-place, before the Governor's Houſe: For the *Kirgizens*, though at Peace with the *Siberians*, are a People who are never to be truſted. For frequently when they are not expected, they come in Parties, and ſteal both Men and Horſes under the very Walls of the City, and out of the neareſt of the *Siberian* Villages: But the *Coſſacks* generally make ſevere Reprizals on them, by often killing and carrying off, ſeveral hundreds of Men and Horſes from their *Hords* or Clans.

8. Theſe *Kirgizens* extend their Habitations South-Eaſtwards as far as the *Mongalian* Diſtricts. They are a warlike Nation, being generally vigorous, tall, and broad-faced Men, ſomewhat like the *Kalmockians*. Their Arms are Bows and Arrows, but they never go out in

Queſt of Booty without very good Coats of Mail and Lances, which they draw along by the Horſe Side, with their Points on the Ground. They generally live in the Mountains, which naturally ſerve to defend them from Surprize. The greateſt Part of their Language is *Kalmockian*, but they alſo ſpeak a great deal of the *Crim Tartarian* Idiom, which the *Turks* partly underſtand.

From *Kraſnoy* along the River *Jeniſea*, as far down as *Jeniſeeſch*, is inhabited by ſome *Tunguzians*; but chiefly by *Burattians*. This laſt-mentioned Caſtle juſt touches on *Mongalia*, and borders on the Ridge of Rocks between *Tunkinſkoi* and the City of *Selinga*. The Frontier Fort butting on *Mongalia* is not large, but provided with a very ſtrong Garriſon, chiefly of Horſe, in order to defend the Weſtern-ſide againſt the *Mongalians*, and their ſubordinate *Tartars* the *Mirottians*, *Milyans*, and *Burattians*. Near this City grows a Sort of *Santalum* or *Sanders*, which is prodigious hard. The *Burattians*, which are under the Protection of his Czariſh Majeſty, formerly inhabited the Country all about *Selinga*; but by Reaſon ſome of them, at the Inſtigation of the *Chineſe*, began to fly over to the *Mongalians*, the Remainder were, for greater Security, tranſplanted to the *Baicaſſian Lake*, round which they now live in the Mountains, and pay their Tribute to his Czariſh Majeſty in Sables and other rich Furrs.

From this City to the Lake *Baikal* runs a continued Ridge of Hills, where are found very fine Sables and Cabardins. From the Lake *Koſogel* Eaſtward to the Sandy Deſart, and from thence to *Dway*, or the *Mongalian Lake*, and ſo on to the Province of *Argun*, and thence again North-weſt as far as the Rivers *Onon* and *Sikoy*, is the Circumference and Boundary of the whole *Mongalian* Territories, or, as hath been formerly ſaid, of the *Juriſdiction of the Race of* Gog *and* Magog, which is governed by three Regents, the Chief of which is the *Kuttucht*, who is alſo the High-prieſt of the Nation. The ſecond Brother is the *Azirci Sain Chan*, and the third is *Elict*, whoſe Boundaries border on the Weſt *Tartars*. The firſt two Brothers inſeparably hold together, but the third robs and plunders wherever any Booty is to be come at; and is ſo bold as to venture ſometimes even to the *Chineſe* Wall with his Troops, carrying off all that comes in his Way, not ſparing even the Emperor of *China*'s Money which he ſends as a charitable Preſent to the neighbouring *Tartars*, to engage them to a firm Continuance in their Allegiance. *Kuttucht*, otherwiſe call'd *Koetoegt*, and *Azirci Sain Chan* his Brother, though their Country is of vaſt Extent, have yet put both themſelves and that under the Protection of the Emperor of *China*, out of their great Fear of the *Baſuchtu Chan*, Prince of the *Kalmockians*, from whom they ſuffered very much in the Years 1688, and 1689.

9. But to ſtay no longer on the Frontiers of his Czariſh Majeſty's Territories, and to take a Turn Eaſtwards of *Ardum* Caſtle, which Fortreſs is built on the Weſt-ſide of the River *Argum*, and garriſoned with *Ruſſian* Forces; the People inhabiting all round are *Tungaſi Konni*, who pay their Tribute to his Czariſh Majeſty in Sables, Linx, and grey Ferrets Skins, which there prove very fine. The *Tunguſians* are a fierce, warlike People, and can, on Occaſion, from theſe Borders only, bring into the Field four thouſand Horſemen armed with Bows and Arrows; inſomuch that no roving *Mongalians* dare ride or appear hereabouts, otherwiſe than by Night, when they ſometimes drive away a few Horſes and Cattle out of the Field. Their Winter Cloaths are Sheep-ſkins, and their Boots like thoſe of the *Chineſe*. Their Caps are turned up with broad Borders of Furr, which they can turn up or pull down as rainy or fair Weather gives Occaſion. They wear about their Waiſts a Girdle of about a Hand's Breadth, faſten'd with thin Iron Plates, and an Arrow, upon which they make a Sort of piping Muſick. In Summer-time they generally ride with bare Heads, ſhaven all round, leaving only one Lock hanging behind, like the *Chineſe*. Their Summer Dreſs is made of blue *Chineſe* Callico quilted with Cotton; but as for Shirts they wear none. They naturally have very ſmall, or indeed ſcarce any Beards, are broad-faced like the *Kalmockians*, and very ſtrong Men.

When they labour under Want of Proviſions, they go in whole Hords or Clans out a Buck-hunting, where they encompaſs and ſhoot vaſt Quantities of them, and whatever they take, they ſocially divide, and rarely ſhoot but they hit their Game. The Wives are cloathed much in the ſame Manner as the Huſbands, being chiefly diſtinguiſhed by two plaited Locks which they wear on each Side of the Head, and hang down on their Breaſts, and are tied with Silver or Tin Rings. They marry as many Wives as they can keep, and buy them of one another, not being very nicely concerned at their having lived with another Man. They believe and acknowledge a God in Heaven, but they neither pay any Worſhip, nor addreſs any Prayers to him. In the Night they apply themſelves to the *Sutkur* or *Sattan*, by beating of Drums and performing of Exorciſms, eſpecially when they are going a Hunting, or upon any Robbing Deſign, to enquire whether they are to expect good or ill Succeſs. Their Liquor with which they make merry, is *Arak*, a Sort of Brandy diſtilled from Mares Milk, which they ſuffer to turn acid. Inſtead of a Cauldron they draw off this Liquor in two Pots, one ſet upon the other, and well luted together, there being a wooden Pipe in one of them. This they draw off twice or thrice, and this Operation produces good Brandy; which even Girls, as well as Men and Women, ſip to that Exceſs, that they become inſenſible and motionleſs for a long Space of Time. Their Wives and Daughters ride on Horſeback, arm'd with Bows and Arrows, as well as the Men. Their Bread is a refined and dried Sort of Flour of yellow Lilly Bulbs, of which they make a Sort of Pap; beſides which, they have no other Bread: But they alſo eat the mentioned Bulbs dry out of Hand, and are utterly unpractiſed in and ignorant of Agriculture. The Trade or Barter which ſome of this Nation drive with the *Targaſinians* and *Xixigarſians*, which live under the *Chineſe* Juriſdiction, is chiefly trucking Furrs againſt blue Callicoes, Linens, and Tobacco, and proves very advantageous to them, as it generally doth to all who follow it. They believe themſelves to be the Deſcendants of the *Targaſinians* of *Daorzi*, with ſeveral of whom they keep up an amicable Correſpondence.

Near the before-mentioned Caſtle of *Argum*, about half a Day's Journey from it, amongſt the Hills, is a Silver Mine, and it plainly appears, that formerly the People of *Nieuchieu*, or *Daourzen*, had ſeveral Foundaries and Works there, which are at preſent run to Ruin. From hence to *Nerzinſkoy*, the chief City of *Daour*, it is ten Days Journey by Land with Camels, and is alſo a fine Country, very conveniently watered with ſeveral running Brooks. Upon and betwixt the Hills, grow the moſt charming Herbs and Flowers which Imagination can ſuggeſt: And the Vallies are covered with long Graſs about half a Man's Height. Tillage is not very much practiſed here, by reaſon the Inhabitants are chiefly his Czariſh Majeſty's *Tartars*.

10. But leaving the River *Argum* again, and croſſing over the vaſt River *Amur*, I come to the River *Gorbiza*, which ſeparates the Dominions of his Czariſh Majeſty from thoſe of the Emperor of *China*; from the Haven of the *Gorbiza* Eaſtwards to the Sea being ſubject to the *Chineſe*, and the Weſtern as well as the Northern Side of the ſaid River belonging to his Czariſh Majeſty. If we ſteer Eaſtwards from the *Gorbiza* to the Rivers *Tugur* and *Uda*, which riſe Northwards of the *Amur*, and fall Eaſtwards into the *Chineſe* Ocean or *Amurſchian Sea*, we find the Country betwixt thoſe Rivers yields great Quantities of black Sables, and the Shores of theſe mentioned Streams are inhabited by *Tunguzians*, *Alemurians*, and *Koreizians*; which laſt Nation ſeems originally to come from *Corea*, that Country lying not far diſtant from thence, it being eaſy to reach it in a ſhort Day, with a favourable Wind. They are reported to have ſettled along the Banks of the River *Amur*, and afterwards ſpread themſelves farther. Those who live on the Sea-coaſt depend chiefly on Fiſhing; but there are many of the Inland People very rich, great Num-

bers of the beſt Sables and richeſt Furrs being found here. This Country is ſubject to the Governor of *Jakutskoy*, and the Woods in this Neighbourhood are all ſtrongly guarded, in order to prevent the *Chineſe Tartars* from hunting any Sables here.

To the Shores of theſe two Rivers, there come annually a Sort of People out of the Iſlands which lie in the Sea, but ſo near the Shore, that from thence they may be eaſily ſeen. Theſe People appear very well dreſſed in very fine Furr Surtouts, under which they wear ſilken Coats almoſt as rich as thoſe of the *Perſians.* They are tall, have large Beards, and make a noble manly Figure. They come in ſmall Barks to the *Siberian Tartars*, and buy Girls and Women of them, of which they are very fond, giving for them rich Sables and black Fox-ſkins; which they report they have in great Quantities on their Iſlands, and earneſtly ſolicit the *Siberian Tunguſians* to come and trade with them. They pretend that the Province of *Jakutskoy* was formerly ſubject to them; and their Language bears a little Similitude to the *Jakutſchian*.

11. Northwards of theſe two Rivers riſes the River *Ogota*, betwixt which and the *Uda*, near the Shore, and all along in the Sea, as far as the *Icy Cape*, abounds with Whales, Sea horſes, and Sea-Dogs. *Kamſatka*, and the Country farther along by the Sea ſide, is inhabited by a People called *Xuxi* and *Koeliki*, each of which have a Language peculiar to themſelves. Thoſe who live near the Sea are cloathed in Seal-ſkins, and dwell in ſubterraneous Caverns; but thoſe who inhabit the inland Country are generally rich, and very much accuſtomed to Hart-hunting; they eat all their Fleſh and Fiſh raw, and waſh themſelves with nothing elſe beſides their own Urine; and are a very ſly, treacherous People, that never keep their Words. Their chief Arms are Slings, in the Uſe of which they are very dextrous, and can throw a great Way. All hereabouts, near the *Icy Cape*, the Winter Snow lies on the Ground, though it is not very deep, and chiefly falls in the Beginning of the Winter, all the remaining Part of that Seaſon being free from Snow. There is a Gulf which comes up to *Kamſatka*, that affords prodigious Quantities of Sea-Horſes, and other Sea Fiſh, which are alſo caught in great Numbers.

If we put to Sea at the *Icy Cape*, we find, that the farther out we ſail, the Courſe of the Sea is ſtill the more interrupted by the Multiplicity of Iſlands; and not far above *Kamſatka* is a Paſſage which the Seal-Fiſhers and others make very good Uſe of. All *Anadieskoy* and *Sabaliska* are inhabited by the already deſcribed Nations called *Xuxi* and *Koeliki*. The River *Salaza* abounds with fine Herrings, Sturgeon, Sterbeth, and Nebna. And in the Inland Country ſomewhat diſtant from hence, all along by the *Simaniko*, are ſeveral Winter-houſes, which are inhabited by his Czariſh Majeſty's *Coſſacks*, who collect his Taxes and Tolls. But notwithſtanding that ſeveral Sables and Linxes are caught in this Province along by the ſeveral Rivers, yet the *Simonikoe* of *Muskoy* yields the moſt conſiderable Revenue, the greateſt Quantity of Sables being caught there. The Climate of this Icy Cape, called in *Muſcovite* Dialect, *Swetoinos*, otherwiſe the *Holy Cape*, is extraordinary cold, it freezing ſo hard, that the Sea is covered with thick Ice in ſeveral Places, which driven into mountainous Heaps by the Wind from Year to Year, increaſes and ſticks ſo faſt together that it ſeems but one Clot: From which, according as the Wind ſits, are ſometimes broke off great Pieces, which diſperſe themſelves, and in Proceſs of Time, in a boiſterous Sea, become new Mountains of Ice: It ſometimes happens that this Sea is frozen up for two or three Years ſucceſſively, and it was obſerved that it continued ſo from 1694 to 1697.

12. From hence let us proceed farther on to the great River *Lena*, which riſes out of the South-weſt near the Lake *Bakail*, where the Provinces of *Siberia* and *Daour* are divided from each other. Upon this River lies *Jakutſkoy*, the Capital City of this Northern Province: From which Town in Summer-time, it is cuſtomary for ſmall Barks to coaſt it along by the Shore Side, and go through the Cape to *Sabazia*, *Onadieſkoy*, and *Kamſatka*, in Search of Sea-Calves Teeth and Train Oyl, *&c.* The Neighbouring Heathens, or *Tartars*, make Uſe of little Leathern-Boats on this River, which are very ſwift. The Country about the City of *Jakutskoy*, and the River *Amga*, is inhabited by a Sort of People called *Jakutiſians*, whoſe Habit is very particular, their upper Coats being made of various colour'd Furrs ſewed together, and the Edges bordered all round, with a Border about a Hand's Breadth of Buck's Hair, but in every Thing elſe made ſomewhat like the *German* Faſhion, and open at the Sides and behind. They have long Hair, wear no Shirts, and believe that there is a great Being above in Heaven, who gave them Life, and ſends them Food, Wives, and Children. And they celebrate a great Feſtival in the Spring, in which they make Offerings of *Kumis*, or *Arak*, diſtill'd from Milk, to this Being: And during the Continuance of this Feaſt, they do not drink themſelves, but make great Fires, and continually ſprinkle this *Kumis*, or *Arak*, towards the Eaſt; which is their Manner of Offering. When any one of them dies, his neareſt Relation is buried alive with him; from the ſame Principles that, in ſeveral Places in *India*, the Women accompany the dead Bodies of their Huſband on the flaming Funeral-Pile, in order to enjoy their Company in the other World.

About one half of their Language agrees very well with that of the *Mahometan Tartas* near *Tobolskoy*, which is derived from the *Bulgarian*. They take as many Wives as they can maintain. Their chief Beaſts of Burden are their Stags, upon which they alſo ride, and thereby in a little Time go a vaſt Way: They are a valiant and a quick-witted People, and ſeem to be great Lovers of Truth. When the Governor of *Jakutſkoy* proves to be a Perſon who governs remiſsly, they do one another all poſſible Miſchiefs, by robbing, pillaging, and all other Exorbitancies: But when they have one that holds the Reins very tight, they are quiet and obedient, and no Outrages are heard of amongſt them; but they praiſe his great Wiſdom, and wiſh he may continue long in that Poſt. They venture to tell us, that their Anceſtors originally came from *Kalmockia*, from whence they were driven by the *Ruſſians*, and forced to take up their Quarters in the cold Parts of this Diſtrict. They are very much afflicted with the Scurvy, which they ſoon drive away, by eating raw Fiſh, and taking of *Deugti*, which is a Sort of Tar.

13. The *Jugogayers*, a Sort of Heathens alſo which inhabit Part of this Country, uſually, when any of their Relations die, cut off all the Fleſh of his Corps to the Bones, dry the Skeleton, and hang it with Glaſs-Corals of all Colours, carry it round their Hutts, or Dwellings, and thus pay Idolatrous Worſhip to the deceaſed. Along by this River *Lena* are annually found ſeveral Mammuts Teeth and Skeletons, which fall off from the Mountains, and out of the frozen Earth near this River; theſe Hills, by the Current of Ice from the high-ſwoln Waters in the Spring looſing great Pieces, which are tumbled down into the River. The ſeveral fine Rivers which deſcend from the South and fall into the *Lena*, are the *Witim*, *Olekina*, and *Maja*, along which are great Multitudes of fine black Sables, and other Furrs: In Winter 1000 Ermins being to be bought of the *Tartars* for three or four Roubels. All about the River *Maja*, as alſo at the Source of the *Lena*, at *Wergolenkolſo* and *Kirenga*, grows all Sorts of Corn, the Land being very fertile, and ſerving to ſupply the Province of *Jakutſkoy*, and that at ſo cheap a Rate, that an hundred Weight of Rye-Meal is commonly ſold for ten or twelve Pence, and all Sorts of Cattle are proportionably cheap; ſo that living here doth not coſt much, but Money is very ſcarce.

To take our Progreſs further along this Sea-Coaſt, from the *Lena* to the River *Jeniſea*, which Extent hath not yet been travelled further by any, either by Water or by Land, than to the River *Tarſida*, by Reaſon the Sea is too full of Ice, and is utterly unnavigable: Moſt of the Inhabitants between *Tarſida* and *Jeniſea* are found to be *Samojedes*, and a Party of *Tunguſiabian Tartars* and Heathens: What their Opinion is, has been hinted above. But the River *Jeniſca* is, all along its Shores, moſtly inhabited by *Ruſſians*, and riſes in the South-part of *Tartary*, in the *Kalmockian* and *Kirgizenian* Territories, and very plentifully abounds with Fiſh: Three very fine Rivers fall into it, which are the *Wergnaja Tunguſka*, *Podkamenna Tunguſka*, and the *Niſnaja Tunguſka*; on the Sides of all which dwell great Numbers of a barbarous, wild ſort of *Tunguzians*, which may very well be ranked with the *Samojedes*, the latter being only larger and ſtronger than the former. The *Tartars*, whenever they have wounded an Elk with their Bow and Arrows, (all their Arms) follow him by the Tract of his Feet, accompanied with their Wives and Children, ſometimes for eight or ten Days, in the Woods, and taking no Proviſions with them, but relying ſolely upon their Capture, they have a Sort of Stomacher, or Breaſt-Cap, which, by Reaſon of Hunger, they lace one or two Fingers Breadth cloſer; and having at laſt caught their Game, they kill it, pitch a ſlight Tent, and ſtay upon the Spot till no Part of the Beaſt but the bare Bones are left: But in the Interim if they get any Furrs, they immediately repair to the *Ruſſian* Villages and Towns in order to ſell them. Here are great Numbers of white and brown Foxes, Multitudes of Squirrels, but very few or no Sables. On this River are ſituate the two Cities of *Taugviſkoy* and *Mungaſeia*, both which drive a very great Inland Trade in Furrs, Sea-Horſe and Mammuts Teeth; and in Summer-time ſeveral Boats go from theſe Places to the Sea-ſide at the Mouth of the River, in order to catch Sea-Horſes or Sea-Calves and Seals.

Believing we have in ſome Meaſure attained our End, and performed what we propoſed in the Deſcription of our Travels, we ſhall now ſubjoin a ſhort, but very accurate, Deſcription of the mighty Empire of *China*, written by a Native of that Country, whom I brought hither with me: This Deſcription, which was never before printed, I have cauſed to be illuſtrated with ſeveral pertinent Annotations, extracted out of the beſt Deſcriptions of that Empire, in order to clear up ſome Difficulties, and ſatisfy the Reader; and this was not done by an illiterate Pen.

Notwithſtanding which, before I take Leave, I am in ſome Sort obliged to ſay ſomething in general, which is the Reſult of my own Obſervation, concerning that vaſt Empire, and was omitted in the Relation of my Travels.

14. The Empire of *China*, ſo far as I ſaw of it, to and in *Peking* its Metropolis, I muſt indeed acknowledge ſeems to be a Land peculiarly bleſſed by Heaven; and I believe, that as this City is the Capital, ſo it lies under the beſt and moſt healthful Climate of all *China*. The Men there are vigorous, healthy, and tall: Corn, all Sorts of Fruits, Herbs, Roots, and indeed whatever is either neceſſary or convenient to human Life, very plentifully abounds there, except only that no Tea grows in that Province, nor are any ſilk Manufactures or Porcelain made there. In Winter it freezes ſo hard here, that the Ice will bear the People going over it; and the Summer Weather is but moderately hot; whereas on the contrary, in the other Provinces, whole Summer Days are uſeleſs, by Reaſon of the intolerable Heat. The preſent Deſcendants of the ancient *Chineſe* are more ſincere than the *Manſures* or *Man tcheou Tartars*. They live temperately and frugally; are very neat and clean in their Cloaths; are very greedy of Preſents, and ſhameleſs in their Trade, and have Addreſs enough to ſuit themſelves to all Humours. They religiouſly obſerve their ancient Laws, in which appear ſome Traces of Barbarity. They never alter the Faſhion of their Dreſs, nor ſuffer the Introduction of any new Laws; and ſome of their principal Lords told me, that no Chan or King, for the Space of twelve thouſand Years, hath been empowered to make even the leaſt Alteration in their Religion, Laws, or Habits.

So that it ſeems that the preſent Emperor *Ammologgan Kambi*, is the firſt who hath diſcovered a ſlight Opinion of the old barbarous Cuſtoms, and accordingly began a good Reformation of their Religion and Law, when in the Year 1692, he cauſed publick Proclamation to be made in all his Empire, That whoever was deſirous to become a Chriſtian, had thereby free Liberty to apply himſelf to the *Romiſh* Clergy, and be baptiz'd. This was a grievous Thorn in the Eyes of the *Bonzies*, or Idolatrous Prieſts, but they were yet forced to bear it patiently, and be Eye-Witneſſes to the Converſion of Thouſands yearly to Chriſtianity; and which is more, the Emperor himſelf is, in his Heart, a good Chriſtian, but cannot poſſibly quit any of his 1236 Wives. He is a more abſolute Legiſlator than we hear any of his Predeceſſors were; for, by Virtue of his deſpotick Authority, he is ſo formidable to his Subjects, that he governs them, without the leaſt Reſtriction, according to his arbitrary Will and Pleaſure.

15. The *Chineſe* obſtinately perſiſt in denying, in their Map of the World, that there is any larger Country on the Surface of the terreſtrial Globe, than their own; to confirm which prepoſterous Aſſertion, their Maps never mention any more than their own, and one great Sea, in the Middle of which they aſſign a ſmall Point of Land, which faintly appears to the Eye, like one of the ſmalleſt Stars, for the reſt of the Earth.

They honour their Prince like a Deity, calling him a *Son of Heaven*, and a *Terreſtrial God*. Their Religion is perfect Pagan Idolatry, as appears by their hideous diabolical Images, expoſed to View in their Pagods or Temples. They have frequently replied to Queſtions which I put to them concerning the Immortality of the Soul and eternal Life, That they were utterly ignorant of any ſuch Thing; and that ſince their Forefathers did not believe it, ſo they could not. Their chiefeſt Pleaſure conſiſts in keeping ſeveral Wives, to which they are extreamly addicted. They have no Notion of Sin, but whenever they have been guilty of any villanous Crime, for which they happen to be ſeized and brought to Juſtice, they take the Puniſhment inflicted by the Judge, for only a very ſmall Scandal, without ſhewing any Remorſe for the Wickedneſs and Diſhoneſty of the Fact.

Their Adminiſtration of Juſtice, and Judiciary Deciſions, and whatever of that Nature which they take to be civiliz'd and reaſonable, are indeed but rude and barbarous. Their Manufactures are principally thoſe of Silk Stuffs, Porcelain, and varniſhed painted Works, which, conſidering their great Diſtance from *Europe*, are ſomewhat ſurprizing. Their Wars are carried on by the ſole Dint of Numbers, they very ſeldom taking the Field before they are two or three hundred thouſand ſtrong, as they did when they were engaged againſt *Buſucktuchan* the Weſt *Tartar*, from the Years 1686 to 1693; in which Wars, when their General *Allıganibo* happened to be killed in a Battle, they all fled, and each Man endeavoured to ſecure his Life by making all poſſible Haſte to his own Home. They carry with them good Field-pieces, and are indifferent expert in the Uſe of them; but their Hand-arms are very wretched, the beſt of them being their Bows and Arrows. Their Horſes are provided with very good Saddles, but when they ride, they cover them with Pillows, and Mattraſſes above them; ſo that they ſit very high and looſe from the Horſe's Back. In a Word, as their military Affairs are managed in a confuſed and diſorderly Manner, ſo their Battles being utterly void of all Conduct, they act like wild Men; for they run headlong together with their whole Force upon the Enemy, by which Means they frequently are entirely routed.

16. In ſhort, from my own Obſervation I conclude, that the great Share of Wiſdom, Arts and Sciences, for which they are ſo highly extolled by many Writers, comes far ſhort of the *Europeans*; though indeed ſome few *Chineſe*, by the aſſiduous Diligence of the Jeſuits, are inſtructed in the Mathematicks, Aſtronomy, and other Sciences; and therefore publiſh their Maſter's Fame to the World. The preſent *Ammolog Chan Kumſli*, or King of *China* and *Tartary*, is an Eaſt *Tartar*, or *Mongalian*, born at *Nieuchen*, near the River *Sagalien Oula*, or *Amoer*; he governs his Subjects very well, though he doth not heartily love the *Chineſe*, but on all Occaſions prefers his own Nation before them: And whenever a *Chineſe* ſolicits to obtain any impor-

tant Poſt from the Chan, he is obliged to naturalize himſelf a *Manſur* or *Tartar*. Moſt of the Inhabitants within the Walls of *Peking* are *Tartars*, and the principal *Chineſe* Markets and Goods are kept without in the Suburbs. All rich People keep a certain Number of Slaves for the Emperor's Service, for which they receive an annual Stipend from him; and theſe Men, in Time of War, are obliged to be kept ready armed, cloathed, and mounted on Horſeback. The Jeſuits who were at *Peking* when I was there were but eight; of which two were *Spaniards*, three *Portugueſe*, two *Frenchmen*, and the laſt a *Roman*.

The *Chineſe*, but eſpecially the Courtiers, retain a very great Reſpect for theſe Fathers, and the other Eccleſiaſticks; but the *Bonzies* look upon them ſomewhat obliquely. It muſt indeed be owned, that the *Romiſh* Clergy diſcover a very great Zeal for the Propagation of their Religion. The *Ruſſian* Nation hath alſo built a Church at *Peking*, and have converted and baptized ſeveral conſiderable Perſons to the *Greek* Chriſtian Religion. I do not think it at all neceſſary to touch on the Races of the Monarchs which have hitherto reigned in *China*, ſince the curious Part of the World may find an entire and exact Liſt of them in the *Chineſe* Chronology, publiſhed by *Chriſtian Menzelius*, Councellor and Phyſician of the Body to the King of *Pruſſia*, printed at *Berlin* in 1696.

As for what relates to the *Great Wall*, which encompaſſes Part of the Empire of *China*, I ſhall only add in ſhort, to what I have already ſaid of it, that it is a prodigious Work, but not ſo much to be valued on account of any extraordinary Art ſhewn in the building of it, as the ſurprizing Labour and Expence employed in the erecting of it by the Emperor who raiſed it; for which the *Chineſe* curſe him to this Day, by reaſon he thereby thoroughly ruined the Empire. The Jeſuit Father *Alexander* informed me, that by the Emperor's Order he travelled all along by this Wall, from the Weſt where it begins, to the South-eaſt, as far as the *Corſiſkan* Sea, and found it to be three hundred *German* Miles long, and had it ſtood all on a Level, it would certainly have ſtretch'd to four hundred Miles; but it is carried over ſeveral high Mountains, and hath four Entrances, *viz.* the *Leatongian*, *Daourian*, *Lelinger*, and *Tibetſchian* Gates; beſides which, it is ſo broad, that eight Horſemen may eaſily ride a-breaſt upon it.

I do not think it proper to offer any more Particulars concerning *China*, ſince my Reſidence there was not long, but deſire the Reader favourably to accept this little, and give me Leave to refer him to the ſuccinct Deſcription annexed, in which he will find ſeveral Things very well worth his Attention.

17. It is very remarkable, that even in theſe Obſervations our Author very modeſtly excuſes himſelf from the ſhort Stay he made in *China*, and from his Manner of living there, as to giving any diſtinct, methodical and regular Account of that vaſt Empire and its Inhabitants. We very open meet with Writers, who, without having any of theſe Advantages, preſume to enter into particular Deſcriptions of Countries and Nations, as if it were credible that in the Space of a few Months, a Man ſhould either ſee, or hear, or read ſufficient for that Purpoſe. There is another Thing no leſs extraordinary, our Author, though he is ſo circumſtantial in every Thing that he ſays relating to both his Journies, and to what paſſed at his ſeveral Audiences of the *Chineſe* Emperor, yet he does not ſo much as drop a Syllable of the Buſineſs upon which he went. He ſays nothing of the Commiſſion given him by their Czariſh Majeſties, of the Succeſs of his Negotiation, or of the Advantages he procured thereby to the Court of *Ruſſia*; and yet if he had been a vain Man, he might have done all this without any great Injury to Truth. A third Singularity there is which alſo deſerves to be remembered. He acknowledges the Country to be one of the fineſt in the World; he admits that no body could be treated more politely, or with greater Reſpect than he was; but for all this he does not ſuffer himſelf to be led away with thoſe fond and enthuſiaſtical Notions with which many Travellers are poſſeſs'd, and to which the World owes all thoſe romantick and extravagant Stories they have been told of this Country and People.

The Character he gives of both is very ſimple, natural, and intelligible, and he gives it not with any Air of Sufficiency or Confidence, but barely as his own Sentiment, the Reception of which he leaves entirely to his Reader, after he ſhall have examined it with the like Care and Candour with which it was delivered. It muſt ſeem not a little ſtrange to ſuch as have read other Deſcriptions of this Country, to find our Author advancing two Things that ſeem to be directly oppoſite to all we have ever heard of this Empire and its Inhabitants. The firſt is, that the *Tartars* are wiſer and more polite; the ſecond, that the *Chineſe* have naturally more Probity than the *Tartars*. But notwithſtanding this, many Reaſons may be alledged in Support of our Author's Opinions, and perhaps it will not fatigue the Reader much if we mention two or three. In the firſt Place, let it be conſidered, that the *Chineſe* were ſo much attached to their old Laws and Cuſtoms, that without regarding either the original Motives upon which they were eſtabliſhed, or how far they were agreeable to that Situation of Affairs which the Changes and Revolutions that all Things, great and ſmall, are liable to in this World, bring about, they perſiſted with inflexible Firmneſs, or rather incorrigible Obſtinacy, in ſupporting them, without the ſmalleſt Alteration, from a Notion that any Thing of this Kind was the higheſt Inſtance of Impiety.

The *Tartars*, though they very wiſely adopted the *Chineſe* Conſtitution as the fitteſt for that Country, and by which alone it could be governed, yet they would never ſubmit to this Notion of unalterable Laws; but on the contrary, made no Scruple of changing what either Reaſon inclined them to think wrong, or Experience had taught them to be ſo; and to this their Intercourſe with other Nations, their opening their Ports to all Strangers without Diſtinction, and their ſending and receiving Miniſters, are ſo many inconteſtible Inſtances. Whoever conſiders theſe Points with any Degree of Attention, will very plainly perceive, that our Author had Reaſon to prefer the Policy and civil Prudence of the *Tartars* to that of the *Chineſe*.

Another, and yet a ſtronger Argument of the Juſtice of this Preference, may be taken from the Hiſtory of the two Minorities which happened in this Empire immediately after the laſt Conqueſt of it by the *Tartars*. *Tſong té*, who ſubdued *China*, died in the Year 1644, almoſt as ſoon as he was ſeated on the Throne, and left the Empire to his Son *Chun tchi*, who was but ſix Years old, and confided the Care of the young Prince to his Brother *A ma van*. One would have imagined that this muſt have been fatal to a new and half eſtabliſhed Government; and not only our Hiſtories, but even thoſe of the *Chineſe*, by which I mean the natural and native Inhabitants of that Country, ſeem to confirm this; but it proved quite otherwiſe, the Protector finiſhed the Conqueſt of *China*, in the Space of about eight Years, without the leaſt Prejudice to the Authority of his Nephew, and upon his Death the Adminiſtration was put into the Hands of his younger Brother, with the Aſſiſtance of a Council, in which it did not continue long.

They perceived very clearly that this kind of Rule was by no Means ſuited either to the *Tartar* or to the *Chineſe* Conſtitution, and therefore with a Wiſdom and Honeſty, of which there is ſcarce any Parallel to be met with in Hiſtory, they laid down the Enſigns of their Power, and deſired the Young Emperor, who was then about fourteen, to take the Reins of Government into his own Hands. This was another Criſis that would have been fatal in almoſt any other Country, but it was favourable here, and the Emperor governed for ten Years with great Wiſdom and Capacity.

Upon his Death ſucceeded *Cang Hi* his Son, who was no more than eight Years old, and according to the Direction of the deceaſed Emperor, the Regency was put into the Hands of four of the principal Miniſters, and one would naturally apprehend, that this muſt have proved the Source of private Cabals, of various Factions, and in a ſhort Space of Time of Diſcord and

Confuſion. Yet nothing like this happened; the Council of Regency acted not only with Prudence and Unanimity, but what was more extraordinary ſtill, with the utmoſt Vigour; they found that there were ſome Diſorders in the State that needed Redreſs, that the Power of the Eunuchs was become too great, and that there was juſt Ground to fear, that the Emperor being a Child theſe Evils might encreaſe, or, which was worſe, might grow irremediable. To prevent which, they, without Heſitation, cut off the Guilty, removed all ſuſpicious Perſons, and by maintaining a wiſe and virtuous Conduct at Court, gave a good Example to the *Tartars* and *Chineſe* in general. But as this kind of Government is never ſubmitted to in that Country, from any other Motive than Neceſſity, ſo this Emperor, like his Father, was very early called to the ſole Management of the Affairs of his Empire, to which he ſhowed himſelf always equal, as well in the tender Years of his Youth, as in declining Age.

It was to him that our Author was ſent, and he governed no leſs than threeſcore Years, in which Time he gave all the Marks of a truly great Genius. At the Entrance of his Reign, the *Chineſe* rebelled, and it coſt a long and bloody War to reduce them. The Emperor appeared in thoſe Days rigorouſly ſevere, or rather cruel; he puniſhed the ſmalleſt Faults with Death, gave a conſtant Preference to the *Tartars*, and expreſſed a ſtrong Diffidence and Diſlike to the *Chineſe*. Under ſuch a Prince, it might have been apprehended, that the Empire would have been very unhappy; it fell out quite otherwiſe, his Severity made every Body attentive and circumſpect, the *Chineſe* were glad to abandon their own and affect the *Tartar* Cuſtoms, that they might become agreeable to the Emperor, who in the Midſt of his Severity, had a ſtrict regard to Juſtice. When he ſaw that the Empire was thoroughly ſettled, the two Nations perfectly incorporated, and the riſing Generation for the moſt part *Tartars* in Habit and Manners; he let fall his Severity by Degrees, and for the laſt thirty Years of his Life was acknowledged to be the mildeſt and juſteſt Prince that ever ſat upon that Throne. His Son and Succeſſor proves as extraordinary a Monarch in every Reſpect, and this by the Confeſſion of the Miſſionaries, notwithſtanding that he has driven them not only from the Court, but in ſome Meaſure out of his Dominions. He has taken Pains to reform all the Abuſes in the ſeveral Provinces of his Empire, applies himſelf wholly to the Cares of Government, receives every Memorial that is offered to him, reads and gives Anſwers to them all; ſuch a Succeſſion of Princes does Honour to a Nation. It is almoſt without Example in the *Chineſe* Annals, and therefore it is a convincing Argument of our Author's Penetration, with Reſpect to the Superiority in Point of Political Talents, of the *Tartars* over the *Chineſe*.

A third Proof of this may be taken from their Conduct towards Foreigners. Before the Time of their becoming Maſters of *China*, it was very difficult, indeed almoſt impoſſible for Strangers to find Admittance at the Imperial Court; that is now quite altered, and as theſe Travels plainly ſhew us, a Miniſter from a *European* Court is not only received and treated with Reſpect at *Peking*, but allowed to negociate whatever Buſineſs he comes about as at any other Court. It is very true, that this is not only contrary to the old Cuſtoms of the *Chineſe*, but is ſo very diſagreeable to their Humour, that they never ceaſe to oppoſe it, as much as in them lies; ſo that nothing but the Emperor's abſolute Authority could get the better of their Obſtinacy in this Reſpect, which very ſtrongly confirms the Truth of his Obſervation.

It is remarkable, that our Author gives the Title of *Bogdoy Khan* to the Emperor of *China*, but he does not explain the Reaſon of this, and therefore it is fit we ſhould. The *Ruſſians* called thoſe *Tartars* who are now Maſters of *China*, *Bogdoyes*, and therefore it is natural for them to preſerve that Way of ſpeaking with Reſpect to the *Tartar* Emperor, though he now reſides in and governs *China*. Many of our modern Writers call theſe *Tartars*, *Manſeurs*, which is only a barbarous Corruption of that Appellation which they have beſtowed upon themſelves, and which in their own Language is written *Man tcheou*; and this is no more than the proper Name of the Father of that great Conqueror by whoſe Valour and Prudence they were eſtabliſhed in *China*, and is a Mark of the Reverence and Reſpect which this whole Nation bear to his Memory. We may obſerve, that this Cuſtom of calling themſelves by the Name of ſome particular Perſon, from a Principle of Gratitude, has been common in moſt of the Nations of the Eaſt, but has been particularly ſo amongſt the *Tartars*, and, like many other of their Cuſtoms, prevails through all their Tribes, how remote ſoever in Point of Relation or of Reſidence.

We have an Inſtance of this among the *Crim Tartars*, which, as it is ſingular and curious, I will relate for the Amuſement of the Reader. The reigning Family in that Country was, about a Century ago, by civil Wars, reduced into very diſtreſſed Circumſtances, ſo that at length there remained only one Heir Male, and he was concealed and bred up privately in the Houſe of a very mean Perſon. The *Mirza*'s or *Tartar* Chiefs, that had thus got rid of their *Khans* or ſupreme Lords, fell out amongſt themſelves, and by their Feuds, the whole Country came to be filled with Blood and Confuſion. To remedy this, a general Council was called, in which both Princes and People lamented the Loſs of the Royal Family, and confeſſed that they were juſtly puniſhed by theſe dreadful Effects of their own Diſobedience. The old Man, who had bred up the only ſurviving Prince in his Houſe, took this Occaſion to produce him, and he was immediately acknowledged *Khan*, and his Succeſſors have governed *Crim-Tartary* to this Day: So great a Service demanded an extraordinary Reward, and the *Khan* offered his kind Protector to do for him whatever he pleaſed. The old Man, whoſe Name was *Guiery*, only deſired that his might become the Surname of the Royal Family, which was readily complied with, and all the Princes of the Blood Royal of *Tartary* bear it accordingly.

But to return to the *Tartars* that are in Poſſeſſion of *China*; they are properly ſtiled *Moungals* or *Nieuchen Moungals*, to diſtinguiſh them from the *Calcha Moungals*. By theſe Words there is nothing more underſtood than Eaſtern and Weſtern *Moungals*, and this in Reſpect to the Situation of their Countries with Regard to *China*. The former of theſe Nations, *viz.* the *Nieuchen Moungals* were, as we have ſhewn in another Place, once before Maſters of that Empire, out of which they were driven by the native *Chineſe*, *Anno Dom.* 1363. At preſent they have not only recovered the Dominion of this extenſive Empire, but have alſo brought the Weſtern *Moungals* to be dependant upon them, which the old *Chineſe* Emperors could never bring to paſs.

Our Author, that he might to the utmoſt oblige his Readers, and make his Work as perfect as they could deſire it, thought proper to add to it a Deſcription and Hiſtory of *China*, written by a Chriſtian Native, one *Dennis Kao*, who was a Surgeon by Profeſſion in his own Country, and had alſo practiſed his Profeſſion in ſeveral Parts of the *Eaſt-Indies*. The Reaſon that induced Mr. *Everard Yſbrant Ides*, to do this, was the Succinctneſs and Accuracy of that Performance, which, that he might render the more uſeful, he procured Remarks and Obſervations upon it, to be collected from the moſt eſteemed Works that were extant, and by this Means, made it, without extending it too much, a very compleat Thing, as we hope the Reader will allow upon peruſing it, as it ſtands in the next Sections, with ſome additional Remarks, diſtinguiſhed by inverted Comma's.

SECTION V.

A Geographical Deſcription of the extenſive Empire of *China*, and of the Sixteen Provinces into which it is divided. In which is contained a ſuccinct View of the Situation, Bounds, Produce, remarkable Curioſities, and whatever elſe is worthy of Notice in each Province, taken entirely from the Writings of the *Chineſe* themſelves, and more eſpecially from their authentick Records and natural Hiſtories penned by Direction of the State; with ſuch incidental Accounts of their Antiquities, and of the perſonal Hiſtory of the moſt famous Emperors, Heroes, Stateſmen, and Philoſophers, as have been born or flouriſhed in any of thoſe Provinces through the Courſe of many Ages.

By DIONYSIUS KAO, *a Native of* China. *Illuſtrated with many curious Obſervations and Remarks drawn from the beſt Authors who have treated of the Affairs of this Empire, both ancient and modern.*

1. *An Introductory Account of the Author of this Work, and of the Nature, Accuracy, and Uſefulneſs of the Work itſelf.* 2. *A general Deſcription of the vaſt Empire of* China, *and of the Sixteen Provinces into which it is divided.* 3. *The Province of* Peking, *and the Imperial City of the ſame Name, particularly deſcribed.* 4. *A large Account of the* Great Wall, *with Remarks thereupon from ſeveral Authors.* 5. *A Deſcription of the Province of* Xantung, *and of the famous Philoſopher* Confucius, *who was a Native of this Province.* 6. *The Province of* Xanzi, *with an Account of the great River* Huango, *and other Curioſities in that Diſtrict.* 7. *Of the Kingdom of* Xienxi, *with ſome Account of the Progreſs made both by the* Chriſtian *and* Mahometan *Religions in that Empire.* 8. *The Province of* Honan *deſcribed, with an Account of the Manner in which the chief City, and moſt other Places of Note, were deſtroyed, and remain ſtill in a ruined Condition.* 9. *Of the Province of* Leatung, *and of the original Inhabitants before it made a Part of the* Chineſe *Dominions.* 10. *An Account of the Conqueſt of* China *by the* Tartars *for the laſt Time.* 11. *A copious Deſcription of the Province of* Nanking, *and of the famous City of that Name, formerly the Capital of the Empire.* 12. *The Province of* Chekiang, *and the Cities therein deſcribed.* 13. *Of the Province of* Kiangſi, *including the Hiſtory of* Porcelain *or* China-ware, *as formerly given by the Miſſionaries.* 14. *A copious Deſcription of the Province of* Huquang, *including ſeveral other remarkable Particulars.* 15. *An Account of the Province of* Suchuen, *which is the ſmalleſt in the Empire.* 16. *Of the Province of* Queicheu, *and of the Number of Cities therein, and the Commodities for which the Country about them is famous.* 17. *The Kingdom of* Junan *deſcribed, with Remarks upon the Accidents that have befallen it.* 18. *An Account of the Province of* Quoangſi, *the Manner in which it became annexed to the Empire.* 19. *A copious Deſcription of the Province of* Quoangtung, *or* Canton, *with ſome very curious Particulars relating both to Civil and Natural Hiſtory.* 20. *The noble Kingdom of* Fokien *deſcribed, and the Manner in which it was reduced under the Power of the* Chineſe. 21. *A Digreſſion, containing the Hiſtory of the Iſland of* Formoſa, *the Conqueſt of it by the* Chineſe *Fugitives from the* Dutch. 22. *The preſent State and Condition of the Province of* Fokien. 23. *Of the Boundaries and Diſtances of the ſeveral Kingdoms and Provinces of* China; *the Diviſion of them into Inland and Maritime, larger and leſs; the whole intended as a Supplement to the Author's Deſcription.* 24. *The political Anatomy of the* Chineſe *Empire, from an* Italian *Manuſcript.* 25. *Remarks and Obſervations, Hiſtorical, Phyſical, and Philoſophical, upon the principal Events in the foregoing Section.*

1 THERE is ſcarce a Country in the World, that, laying all Things together, deſerves to be ſo perfectly known, as this which our Author has deſcribed; and for this Reaſon, without all Doubt, ſo many Pens have been exerciſed in making Deſcriptions; there are, however, three Particulars that ſeem to recommend this of our Author in an extraordinary Degree; the firſt is, that being a native *Chineſe*, and bred up to Letters, he muſt have had greater Opportunities both with reſpect to Books and Converſation, of knowing his own Country than any Stranger, much leſs any Traveller could pretend to, and at the ſame Time muſt be leſs liable to commit Miſtakes, even ſuppoſing he ſet Things down as they occurred to him, than they could be with all the Circumſpection and Care in the World. In the next Place, as he had ſtudied Phyſick, practiſed as a Surgeon, and had travell'd from Province to Province for many Years amongſt the Chriſtians, he muſt have had great Opportunities of ſeeing Things; that is, muſt have improved his Knowledge and Judgment very much. Laſtly, his Deſcription, after being often reviewed by his Excellency Mr. *Yſbrants Ides*, was judged to be the beſt he had ſeen, and ſeems to have appeared ſuch in the Eyes of others, ſince it was tranſlated into *Latin* and *High Dutch*, before it was printed in *Low Dutch*, with the Remarks that are now added to it, by the Care, and under the Direction of the famous Mr. *Witzen*. It may not be amiſs to inform the Reader, that it was penned about the Year 1694, and that the Author, who alſo wrote ſeveral other Pieces, was eſteemed a very worthy, honeſt, and pious Man, and appears to have written very impartially without any overweaning Fondneſs for his Countrymen, or ſlaviſh Dependance upon the Jeſuits.

What Additions were neceſſary have been very carefully added by the *Dutch* Editor himſelf, and we have alſo taken Pains to improve theſe as far as we were enabled to do it from ſubſequent Accounts, only as to the *Chineſe* Orthography we muſt own ourſelves not a little at a Loſs, there being as yet no Rules fixed that can enable us to reduce the different Ways of Spelling, to any rational Standard; only this we know, that as the *Chineſe* uſe no Monoſyllables, latter Writers generally follow that Method, though our Author ſeems to have neglected it for the Sake of keeping near the *Portugueſe* Pronunciation.

2. This extenſive potent Empire comprehends fifteen Provinces, which may more properly be called Kingdoms: For before they were united under one Head, above three thouſand Years paſt, each of them had its peculiar King: As at preſent every Province hath its Viceroy, all which are ſubordinate to one ſupreme Sovereign, the Emperor. The Province of *Leaotung*, though ſituate without the great Wall, is alſo reckoned amongſt the reſt, and paſſeth for the Sixteenth.

“ *Nieuhoff* places this Province within the Wall, in his Map affixed to the Relation of his Travels, and is herein followed by *Martinus Martini*; but are both clearly refuted by the convincing Teſtimony of our Author. The Jeſuits *Le Comte*, *Bouvet*, and *Gobien*, unanimouſly confirm our Author's Aſſertion, they all affirming that the Province of *Leauton* is only ſeparated from part of *Corea* by an Arm of the Sea, and is on that Side of the Great Wall, *viz.* the Side on which *Corea* is: Though Father *Martinus* the Jeſuit, in his *Chineſe* Atlas, hath not placed it on that Side, but within the Wall, and thereby miſled almoſt all the Geographers ſince, they having very induſtriouſly continued his Blunder.

“ Formerly all Authors reckoned but fifteen *Chineſe* Provinces; but after the *Leaotungers* aſſiſted the *Tartars* in the Conqueſt of *China*, that became one of the Provinces of that Empire, and doth accordingly enjoy all the Privileges of that Nation.

“ *Le Comte* ſpeaks yet plainer on this Head. The Geographers (ſaith he) are groſly miſtaken in their Accounts of *China*. Firſt they place the whole Province of *Leauton* on this Side of the Great Wall; though it is certain that it lies not within, but without it; notwithſtanding which it always belonged to *China*. This is an undoubted Truth, to be ſatisfied in which no more is requiſite than to have been on the Spot as well as we.

“ And yet farther he goes on, I do not take in as belonging to it (he is ſpeaking of *China*) the Iſlands of *Formoſa*, *Hanan*, and ſeveral others, which united would make a great Monarchy, any more than *Leauton*, which lies without the Great Wall.”

Theſe Provinces are divided into North and South.

The **North** (under which is alſo *Leaotung*) are *Peking*, *Xantung*, *Xanſi*, *Xienſi*, and *Honan*, in all ſix. And the South Kingdoms or Provinces are the following ten: viz. *Nanking*, *Chekiang*, *Kianſi*, *Huquang*, *Suchuen*, *Queicheu*, *Junan*, *Quoangſi*, *Quoantung* or *Canton*, and *Fokien*.

Beſides theſe, ſeveral Kings and Kingdoms are obliged to pay their annual Tribute to the Emperor of *China*: Of which Number are *Tunkin*, *Cochinchina*, *Laos*, *Liukin*, and *Chaoſien*. The two laſt of theſe are Iſlands, ſituate very near *Japan*. *Corea*, *Japan*, *Siam*, and *Pegu*, were alſo formerly ſubject to this Empire, though not at preſent. I deſign to deſcribe all theſe Provinces and neighbouring tributary Kingdoms ſeparately, and geographically, as they butt and bound Eaſt and Weſt, North and South, as briefly as poſſible.

Peking lies Eaſt of *Xanſi*, as *Xanſi* does Weſt of *Peking*, and the Great Wall ſerves as a Northern Boundary common to them both.

Xantung is Southwards of *Peking*, and Northwards of *Nanking*; it borders Eaſtwards on the Sea, and Weſtwards on *Honan*.

Xanſi, as is above hinted, lies Weſtwards of *Peking*, Eaſtwards of *Xienſi*, Southwards of *Honan*, and bounds Northwards on the Great Wall.

Xienſi, the largeſt of all the ſixteen Provinces, is ſituate Weſt of *Xanſi*, Eaſtwards of Weſt *Tartary*, whence the *Lama*'s come; Southwards of *Suchuen*; and Northwards of the *Tartars* at the End of the Great Wall. And the Source of the yellow River *Hoango* is alſo in the Weſt part of this Province.

Honan is in the Middle of *China*, butting towards the South on *Huquang* and *Kiangſi*; Northwards on *Peking* and *Xanſi*; Eaſtwards on *Xantung* and *Nanking*; and Weſtwards on *Suchuen* and *Xienſi*.

Leaotung borders Northwards on *Xantung*, which declines Southward from it; Eaſtwards it is oppoſite to *Corea*; it extends alſo Southwards to the Great-Wall, and Northwards to *Tartary*.

Nanking is bounded by *Chekiang* on the South, and *Xantung* on the North; it ſtretches Weſtwards to *Honan* and *Huquang*, and Eaſtwards to the *Ocean*.

Chekiang touches on *Nanking*, from which it lies Northwards, as it doth to the South of *Fokien*; the Sea waſhes it Eaſtwards; and Weſtwards of it lies *Kiangſi*.

Kiangſi borders Eaſtwards on *Chekiang* and *Fokien*; Weſtwards on *Queicheu* and *Honan*; Southwards on *Quantung*, and Northwards on *Nanking*.

Huquang is bounded Northwards by *Honan*; Southwards by *Quantung*; Weſtwards by *Zuchuen* and *Queicheu*; and Eaſtwards by *Kiangſi*.

Zuchuen butts Eaſtwards on *Huquang*; Weſtwards on *Tibet*; Northwards on *Xienſi*; and Southwards on *Queicheu*, and *Junan*.

Queicheu lies Northwards almoſt on *Quanſi*; Southwards on *Zuchuen*; Eaſtwards on *Huquan*, and Weſtwards on *Junan*.

Junan looks Eaſtwards and Southwards to *Quoangſi*; Southwards to *Gannan*; Weſtwards to *Laos*, and Northwards to *Zuchuen* and *Queicheu*.

Quoangſi or *Quamſi* hath *Quoantung* on the Eaſt; *Cochinchina* on the South; *Junan* on the Weſt, and *Queicheu* on the North.

Quoantung or *Canton* is bounded on the Eaſt and North by *Fokien*, on the Weſt by the *Yellow* Sea; farther Northwards by *Quoangſi*, and Southwards by the Ocean.

Fokein looks on the Eaſt and South-Eaſt to the Sea, and the Iſland of *Formoſa*; Weſtwards of it lies *Kianſi*; Southwards *Canton*, and Northwards *Chekiang*.

3. *Peking* is a Royal Province, ſubordinate to which are nine leſſer Provinces, or great Cities, with their dependant Diſtricts, all which are diſtinguiſhed by the additional Name of *Fu*. And theſe nine large have ſixteen leſſer Cities ſubjected to their Juriſdiction, which are alſo diſtinguiſhed from them by the Appellative of *Cheu*; and the leſs conſiderable Places which are under the Government of the laſt Sort are denominated *Hien*.

The firſt Imperial City of this Province is *Xuntien Fu*, otherwiſe called *Peking*; it hath twenty-ſix other Cities ſubjected to its Juriſdiction.

“ *Xuntien Fu* is the the ancient and true Name of this City; but ſince the Seat of the Empire was tranſplanted from *Nanking* to this Place, it hath aſſumed the Name of *Peking*; which imports the *North Court*, as *Nanking* ſignifies the *South*. We ſhall ſpeak of the Courts preſiding at *Nanking* in our Deſcription of that Province and City. This Metropolis however very juſtly lays claim to two Names, it being at preſent grown into two Cities, a new one being built near the old one: For when the *Tartar* eſtabliſhed himſelf on the Throne, he ſo crouded this Place with ſuch Numbers of his own Nation, that the *Chineſe* were neceſſitated to build a new City without the Walls of the old one. This new built Town is full as large as the ancient one, which laſt is a perfect Square, of about four Miles Compaſs, and being inhabited by *Tartars* alone, is called the *Tartar* City: The new Town is as big as the other, but more populous, and is called the *Chineſe* City: And both of them take up the Compaſs of ſix large Miles about, each Mile being reckoned at 3600 Paces, as appeared when it was meaſured by the Em-

“ peror's

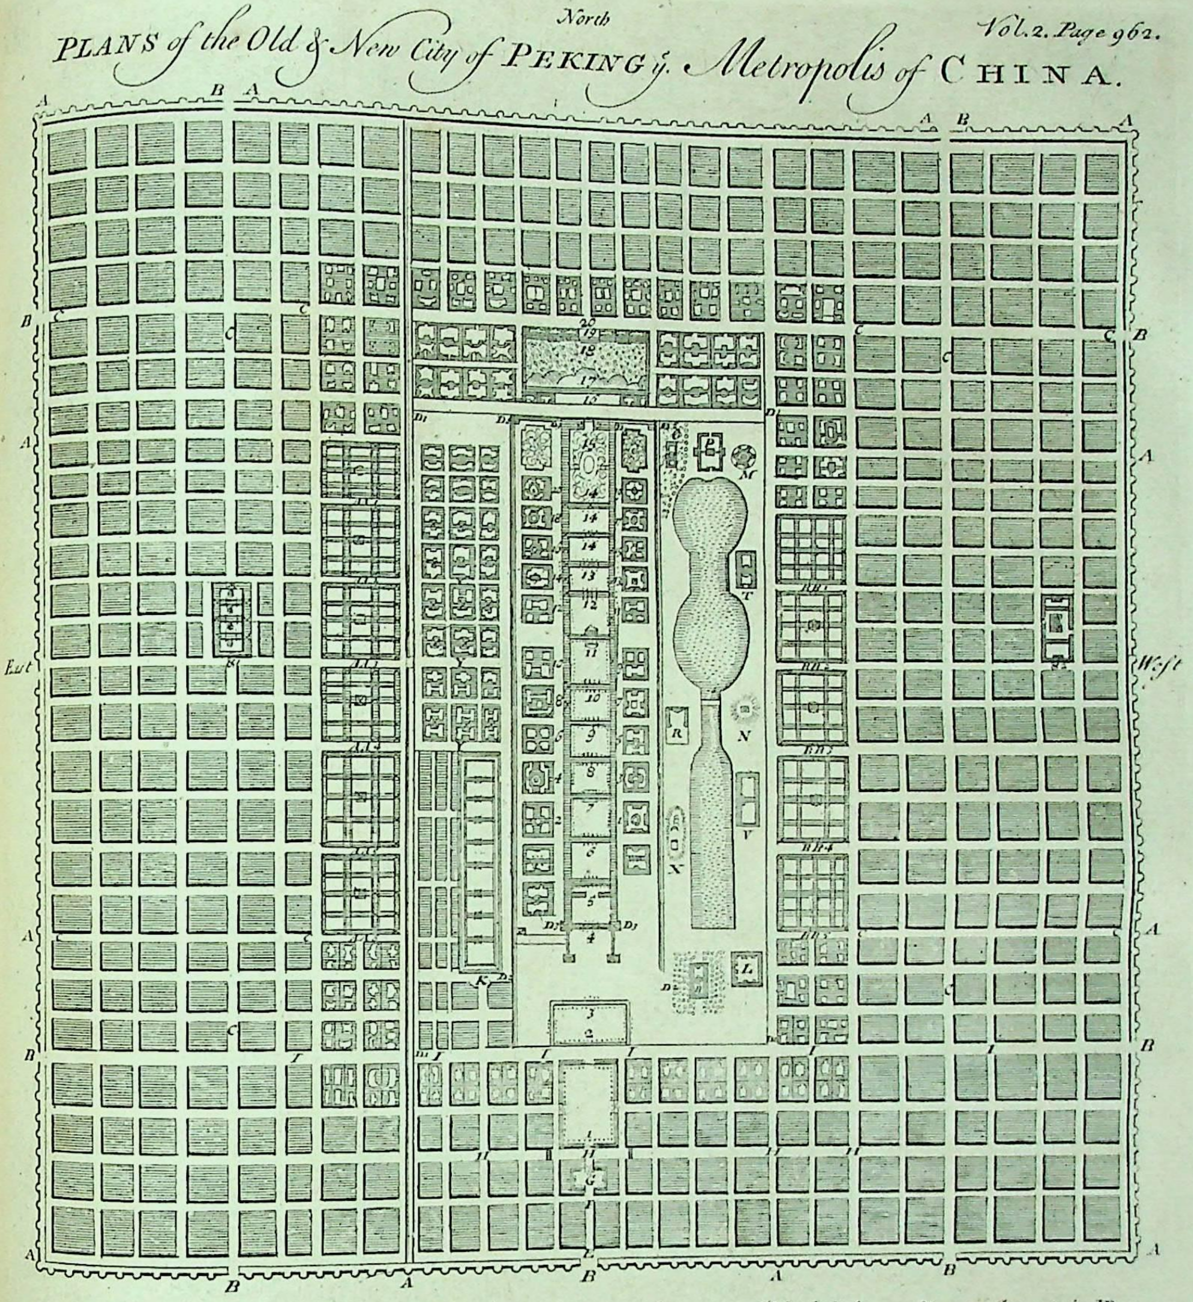
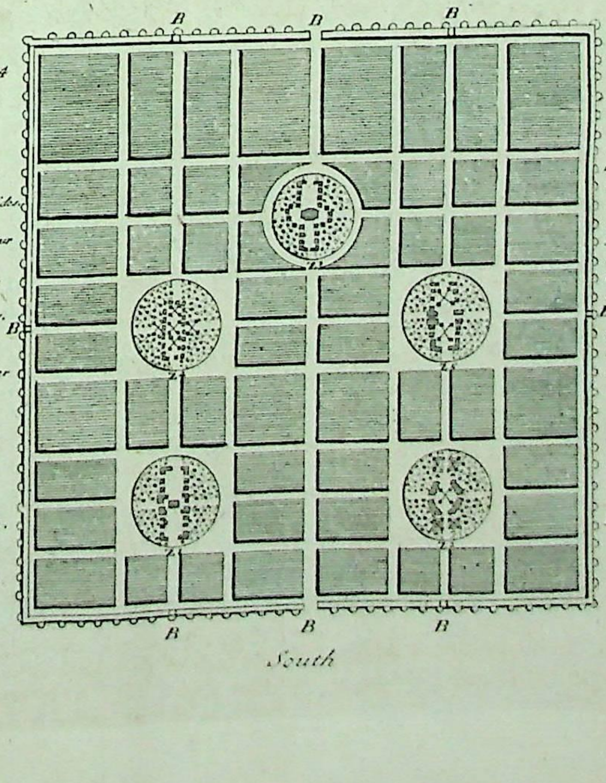
PLANS of the Old & New City of PEKING ye Metropolis of CHINA.



A Scale of 10 Chinese furlongs wch amount to 2730 Geometrical Paces one Chinese furlong making 273 Geometrical Paces



An EXPLANATION of the Plans of the City of PEKING

A The Walls of the antient City of Peking near 4 leagues in Circuit.
B The 9 Gates of the same Wall.
C The Streets of the City.
D1 The first Inclosure of the Palace two leagues in Circuit.
D2 The second Inclosure.
D3 The third Inclosure where the Emperour resides.
E The south and principal Gate of the City.
F The first street wch you pass through upon your entrance into the City.
G A Palace incompassed with a Marble Ballustrade.
H The second street wth two Triumphal Arches.
I The first Apartment.
1 The street of perpetual repose.
2 2d Apartmt wch is the first within the outer inclosure of the Palace.
3 3d called the Portal of the beginning.
4 4: The second Inclosure.
5 5 Called the Supreme Portal.
6 6 Called the supreme Imperial Hall.
7 7 Called the Hall thrice exalted.
8 8 Called the Supreme Hall in the Middle.
9 9 The Hall of Sovereign Concord where the Emperour sits in Council wth his Colaos.
10 10 The Portal of Heaven.
11 11 The Mansion of Heaven in wch and ye two next the Emperour lodges himself.
12 12 The Beautifull House.
13 13 The House which receives Heaven.
14 14 Courts and Gardens.
15 15 The last of the Inner Inclosure.
16 16 The High raised Portal on the south side with a place to manage Horses.
17 17 The Park and artificial Mountains.
18 18 Consisting of three Houses.
19 19 The Portal on the north side.
20 20 The Inclosure called ye Portal of repose
1 2 3 to 20 Are 20 particular places belonging to the Emperour for several uses.
K The first Palace between the two Inclosures.
L The second Palace.
M 3 Palace upon the Lake.
N 4 Palace upon a Mountain.
O 5 Palace near the Lake.
P 6 Palace near the Lake.
BQ 7 Palace.
R 8 Palace of the Fortress.
S 1 Temple of ye 4 within ye Palace.
T 2 Temple.
V 3 Temple.
X 4 Temple.
Y 24 Places for the Mandarins.
Z 5 Temples in ye new City marked 1 2 3 4 5.
& 1 Temple in the Old City.
& 2 Temple in the Old City.
AA The 6 Tribunals marked 1 2 3 4 5 6 wth AA.
BB The 5 Tribunals of ye military Mandarins.

peror's expreſs Command: It is indeed a large City, but not to be compared to *Nanking*."

The ſecond, *Junging Fu*, hath ſix Cities under her Command.

The Third, *Chinding Fu*, hath twenty-ſix Cities.

The Fourth, *Quoamping Fu*, preſides over ſix Cities.

The Fifth, *Thiemming Fu*, is chief of eleven Cities.

The Sixth, *Funming Fu*, governs ſix.

The Seventh, *Hokien Fu*, governs ſeven.

The Eighth, *Paoding Fu*, ten Cities.

The Ninth, *Xunte Fu*, hath nine inferior Cities.

From this Rule, Superiority, and Power, which the great Cities as well in this, as in all the following Provinces, have over the leſſer, though large and populous Cities, plainly diſcover the Ability of each Province, and taken together diſplay the vaſt extended Power of this moſt glorious Monarchy.

The Soil of this Province is not very fertile in any Thing but Corn, yet even of this it doth not yield ſufficient to ſupply its own Neceſſities; but is obliged to be furniſhed with what falls ſhort in their own Growth, from other Countries.

Formerly *Nanking* was the Metropolis and Imperial Seat: But the Incurſions and Outrages of the neighbouring *Tartars*, occaſioned the Removal of the Imperial Court to *Peking*, in order to be nearer the Great Wall and the Enemy.

" The Emperors of the laſt Race before the *Tartarian Mancheou* (the Family or Nation which now reigns in *China*, and of which the preſent Emperor *Cangby* is the third) tranſlated the Seat of the Empire to *Peking*, for the Reaſon hinted by our Author, that the Troops of the Houſhold being ſeveral thouſand ſtrong, might be immediately ready and near the Enemy: But neither this Precaution, nor the Great Wall, of which we ſhall ſpeak preſently, could prevent their being forced, or rather hinder Prince *Tſon tè* (who was invited into *China* to oppoſe a Tyrant and Uſurper) from eſtabliſhing himſelf on one of the moſt auguſt Thrones in the World."

4. This Wall, which is of a prodigious Length and Thickneſs, was built above 260 Years paſt, by the *Chineſe* Emperor *Chien Chuvoang*, by Way of Proviſion againſt the Incurſions of the neighbouring *Tartars*; and accordingly it covers the three Provinces of *Peking*, *Xanſi* and *Xienſi*. This Wall, exactly meaſured with a Line, in Length, is above ſix hundred and fifty *French* Miles, or Hours travelling; (and by the Way, the Reader is deſired to take all Miles mentioned in this Tract for *French* Miles of an Hour's March each.) But if all its crooked Windings were meaſured, it would appear to be above one thouſand Miles long; it being carried over very ſteep Mountains and Rocks. Upon the higheſt of theſe it is provided with Fortreſſes and Towers, four of which are placed within the Space of every Mile throughout the whole. Beſides all which, it is full broad enough for eight Horſes to gallop abreaſt without any Danger.

" This Wall is reported to be built by the Emperor *Chius*, about 250 Years before the Birth of Chriſt; to the Performance of which ſuch a vaſt Number of Men were allotted, that the whole was finiſhed within the Space of five Years, and was ſo extraordinary firm, that no Nail could be driven into it. To raiſe Men for this great Work, that Monarch abſolutely commanded throughout his Dominions, that three out of every ten Men ſhould work at it, and afterwards two out of every five were compelled to labour at this Undertaking: it is alſo ſaid, that though the Inhabitants of each Province wrought as near their own Abode as they could, yet either by the Length of their Journey, or the Difference of the Climates, almoſt all thoſe employed in this Building died ſuddenly; which raiſed a Tumult in the Empire, that proceeded ſo far as to murther the Emperor and his Son *Agutzi*, in the Fortieth Year of his Reign.

" The Jeſuits, who enjoy the Ear and Favour of the Emperor, are very expert in the Art of Menſuration, as their printed Books diſcover; amongſt theſe are the above-mentioned *Le Comte*, *Bobet*, and *Gobien*, and they tell us, that the moſt formidable Enemies the *Chineſe* ever feared were the Weſtern *Tartars*; wherefore an ancient *Chineſe* Emperor built this Great Wall to keep them off.

" I have (ſaith *Le Comte*) four times traced and obſerved it very near Hand, and without any Hyperbole dare aver, that the ſeven Wonders of the World are not to be compared to it, and that Fame repreſents it leſs in *Europe* than I found it to be.

" Two Particulars, continues he, ſurprized me very much.

" I. That this Wall, in its long Extent from Eaſt to Weſt, is in ſeveral Places carried, not only directly through vaſt and deſolate Plains, but alſo over very high Mountains; over which it ſeems to advance by ſlow Degrees, the intermediate Vacancies betwixt being ſtrengthened with great Towers, which ſtand about two Bow Shot diſtant from each other. I meaſured the Height of one of theſe, and found it one thouſand ſeven and thirty Geometrical Feet above the Horizontal Line; and it is not eaſy to conceive how ſuch a prodigious Bulwark could be raiſed to ſuch a Height, in dry mountainous Places, to which Water, Stone, Lime, and all other Materials, muſt of Neceſſity be brought from Places far diſtant.

" II. That this Wall is not carried on in a direct Line, but in ſeveral Places winds and turns, according as the Shape of the Hills required, ſo that one would be apt to ſay, that three Walls inſtead of one, cover a great Part of *China*."

He farther ſaith, " That the *Chineſe* have exceeded the Antients in Fortification; that they call this Wall *Vauli Tcham Tchin*, that is, of ten thouſand Furlongs: That its Extent is from the Oriental Sea to the Province of *Xanſi* or *Chanſi*: That though it is certain that it is not ſo long as Report makes it, yet all the Turnings and Windings conſidered, it cannot be much leſs than five hundred Miles long: That whereever it ſeemed moſt eaſy to be forced, two or three Ramparts are clapped up one behind the other, ſo that the hindmoſt can eaſily contribute to the Defence of the foremoſt: That it is carried over the higheſt Hills, or raiſed or ſunk in Proportion to the uneven Ground it ſtands on; for (ſaith he) it is not to be imagined that it is every where level, but that whenever it takes its Courſe over lofty Mountains, it is extraordinary high, but otherwiſe it doth not exceed the Height of common City Walls; and notwithſtanding Writers ſo widely diſagree about its Breadth, it is not above five or ſix Foot."

He adds, " That it is built with Brick, but the Work ſo good, that though it hath ſtood ſo many Ages, it is yet ſound and almoſt intire. That as this Undertaking was the greateſt in the World, it was alſo the moſt ridiculous Attempt that ever was made; for admitting, that Prudence obliged the moſt feaſible Inlets to be ſhut up, and fortified, it is nevertheleſs abſurd, to raiſe a Wall to thoſe Mountain Tops which are ſo high, that a Bird can ſcarce fly over them, much leſs could the *Tartarian* Troops climb them, and to leave ſome Places ſo low and defenceleſs as they are. It is indeed to be wondered at, how they found ſuch excellent Artiſts and proper Inſtruments, to convey the Materials ſo high; and more Workmens Lives were ſacrificed in this Building, than the utmoſt Outrages of the *Tartarian* Armies would ever have killed them."

5. The Kingdom or Province of *Xantung* lies Southwards of *Peking*, and extends Eaſtwards towards the Sea; and through this Province, or that of *Leaotung*, the Inhabitants of *Corea* bring their annual Tribute to *China*. The Soil is fertile, producing all Sorts of Corn and Fruits in ſuch Plenty, that one Year's Crop is ſufficient to provide the Inhabitants of this Country for ten Years. All Sorts of Edibles, tending to the Support of Luxury, as well as ſupplying Neceſſity, bear but a very low Price here; and this Province abounding with Rivers, Canals, and Lakes, this is the Rea-

ſon that Fiſh is here prodigious plenty; as alſo the Fleſh of all Sorts of tame and wild Beaſts. Nor are the Silk-worms backward in yielding great Quantities of Silk. But withal this Country is more infeſted with Robbers and Thieves than the other Provinces of *China*, and they herd together in ſuch Numbers, that they can raiſe a ſmall Army. Subordinate to this are ſix great Cities, diſtinguiſhed by the additional Appellative of *Fu*, the Signification of which is explained above.

And ſubject to theſe ſix are fifteen leſſer Towns, diſtinguiſhed under the Title of *Cheu*, under which are eighty-nine yet leſſer, called *Hien*.

The principal City is *Zinan Fu*, which hath under its Juriſdiction four *Cheu*, and ſixteen *Hien*, which have again twenty under their Command.

The ſecond large City is called *Junchu Fu*; it hath twenty four *Cheu*, and three and twenty *Hien*.

Tungchang Fu, the third large City, preſides over three *Cheu* and fifteen *Hien*.

Cinceu Fu, the fourth, hath ſubordinate to it fourteen *Cheu* and as many *Hien*.

Tengcheu Fu, the fifth great City, commands one *Cheu*, and ſeven *Hien*.

Laicheu Fu, the ſixth, governs two *Cheu*, and five *Hien*: And theſe are the ſix great Cities of *Xantung*.

The moſt excellent *Chineſe* Philoſopher *Ciungfuſius*, drew his firſt Breath in this Kingdom or Province.

This *Ciungfuſius* or *Confutius* left ſeveral Philoſophical Tracts behind him, for which not only the *Chineſe*, but alſo the neighbouring, polite, and knowing People, expreſs the greateſt Veneration, and carefully preſerve them, as the moſt ſacred and valuable Writings in the World; he is ſaid to have flouriſhed about five hundred Years before Chriſt. The *Chineſe* ſo highly reverence him, that they bow down to the Ground at the very Sight of any Table or Plank, *&c.* dedicated to his Memory, and on which his Name is inſcribed. Though indeed this Practice doth not always obtain, but at certain Solemnities, at certain Times and Places, that the Memory of ſuch a learned Man and great Benefactor to Mankind may not die; to preſerve which they make an Idol of him.

There are ſome ſmall Iſlands which are alſo dependent on this Province, among which the following three, *Fuxu*, *Xamuen*, and *Tenneng*, are the moſt conſiderable; and the laſt very remarkable for having five hundred *Chineſe* Philoſophers murthered there, though it is not ſo much rever'd on this Account as *Xantung* is for having given Birth to the great *Confutius*. The Story of that ſingular Maſſacre is this:

The Emperor *Xius* or *Chi Hompti*, who built the great Wall (mentioned in the Deſcription of *Peking*) being very much addicted to War, and an accompliſhed Soldier, but an utter Enemy to all Philoſophers, whom he had peremptorily reſolved to put to Death; commanded them all to repair from all Parts of his Kingdom to a particular Place, on the ſpecious Pretext of diſcuſſing ſome very important Point; and they all being aſſembled together, he ſhipped them off to the mentioned Iſland, and cauſed them all to be murdered in a very inhuman Manner, though others ſay they drowned themſelves. He was ſuch an inveterate Enemy to all Literature, that he ſtrictly commanded all his Subjects, on Pain of Death, to burn all the Books in the whole Empire, except only thoſe which treated of Agriculture, Phyſic, and Necromancy or Magick.

Through this Province runs the River *Luen*, of which the Inhabitants relate very ſtrange Things, many of which are found to be true.

" *Nieuhoſ*, amongſt other ſurpriſing Things reports,
" That if nine Sticks are thrown into it, ſix of them
" will infallibly drive Southwards, and three to the
" North; and that himſelf tried the Experiment and
" found it ſucceed" *Sed credat qui vult.*

In this and other Provinces, is obſerved a Sort of Fiſhing Bird called *Louwa*, which is ſomewhat leſs than a Gooſe, and not unlike a Raven; having alſo a very crooked Bill towards the End. The Manner of Fiſhing with them is as follows: the Fiſhers having rowed themſelves in their Boats to a proper Place, throw theſe Birds over-board, who immediately dive, and the very Inſtant they have caught their Game, dart up to the Surface of the Water, when their Maſters immediately ſeize them, and very expeditiouſly pull the Fiſh out of their Crops, it not being poſſible for it to deſcend lower, becauſe it is ſtopped there by a Ring fixed about the Bird's Neck, which is removed when the Sport is over, and the Birds let looſe; after which they go a Fiſhſtealing with open Throats, and having ſatiated themſelves, return to their Boats.

" *John Gonſales de Mendoſa* ſays, they are faſtened
" under their Wings to a long Rope before they are
" thrown into the Water, and that they fiſh every third
" Day in the proper Seaſon, after the Fiſh have ſpawn'd.

Near the City of *Chincheu*, or *Junchu Fu*, a Stone called *Nieuhoang*, is obſerved to grow in the Stomach of the Cows, which ſome take for a Sort of *Bezoar*, and is very highly eſteemed by the *Chineſe* Phyſicians, being an efficacious Remedy againſt Catarrhs, and other phlegmatick Diſorders.

6. *Xanſi* lies Weſtwards of *Peking*, extending Northwards to the Great Wall, and is divided into two Parts by a large rapid River which runs through it, though it riſes in the Weſtern Part of *Xienſi*, from whence it turns Southwards, ſhortly after it winds to the North, and laſtly, inclining again Southwards, diſembogues itſelf into the Sea.

" Writers differ very ſtrangely concerning the
" Names of this Province, City, River, *&c.* Our Au-
" thor calls the Province *Xanſi*, another calls it *Chanſi*;
" the chief City he names *Honang Fu*, others *Caiſung*;
" he calls the River *Huango*, another makes it *Hoamſo*;
" and there is alſo a Difference, though not a very wide
" one, concerning its Source. *Le Comte* tells us, that
" the *Hoamſo* riſes at the farther End of thoſe Moun-
" tains which cover the Weſt Part of the Province of
" *Suchcuen*; from whence it throws itſelf into *Tartary*,
" where having run its Courſe without the great Wall,
" it repaſſes through it into *China*, betwixt the Pro-
" vinces of *Chanſi* and *Chenſi* (or *Xienſi*,) after which
" it waters the Province of *Honang*, and running through
" the Province of *Nanking*, having compleated its
" Courſe of above 600 Miles laſtly empties itſelf, not
" far diſtant from the large River *Kiam*, into the Ori-
" ental Sea."

It runs through four Provinces, beginning with Weſt *Xienſi* where it riſes, and paſſes through that Side of that Province; after which it runs through *Xanſi*, *Honan* and *Nanking*, where it falls into the Sea. The Breadth of this River in ſome Places is a *French* Mile, or a Mile and half, and in others, two Miles over; and by the Violence of its Tide, and Force of this great Maſs of Waters, it very much damages the adjoining Lands, by ſometimes overflowing not only particular Houſes, but whole Villages and Cities, twenty or thirty Miles diſtant, ſweeping before it Men, Cattle, or whatever it finds. In the *Chineſe* Language it is called *Huango*, which ſignifies the yellow River, by Reaſon the Water looks yellow or reddiſh, which is occaſioned by its Paſſage over, and carrying along with it a Sort of yellow Earth on the *Tartarian* Mountains, that imparts its Tincture to it: For this River runs through Part of *Tartary* without the Great Wall, and after taking a winding Courſe there re-enters the Wall. It is in many Places very deep, but yet in moſt Parts of it unnavigable.

" This River hath formerly made vaſt Devaſtations,
" and obliged the *Chineſe* to keep off its Water, by
" caſting up high and ſtrong Dikes or Banks; which
" after all proved inſufficient to the ſecuring of the Ci-
" ties from the ill Effects of its overflowing. Beſides
" which, the Cities in *Honang* are all fenced round,
" about a Quarter of a Mile from the Town, to pre-
" vent an Inundation, in Caſe of this rapid River's
" breaking through all its Banks, as it did above fifty
" Years ſince. For the Emperor, in order to raiſe the
" cloſe Siege laid to *Caifung*, the chief City of *Honang*,
" by the Rebel *Lihuang* (who had perfectly block'd it up
" from all Relief,) and to confound his Army, cauſed
" the Banks to be cut through. But their Delivery
" proved more fatal to them, and did them more Miſ-
" chief than the utmoſt Rage of the Enemy could:
" For by that Means not only the City itſelf, but al-

“ moſt the whole Province, and ſeveral other Towns
“ and Villages were laid under Water: So that above
“ three hundred thouſand Men, amongſt which were
“ ſeveral Miſſionaries, who had then a numerous Chri-
“ ſtian Congregation in the ſaid City, were all drowned
“ and deſtroyed, loſing at once both their Church and
“ their Lives.

“ *Le Comte* ſaith, I have ſailed on ſeveral Parts of
“ this River, and found it every where broad and ra-
“ pid, but ſhallow, and ſcarce navigable.”

This Country is very mountainous, and though leſs than other Provinces, yet it is very populous and fertile; its Juriſdiction extends over ſix *Fu*, eleven *Cheu*, and ninety-five *Hien*.

The metropolitan City of the firſt large Diſtrict is called *Thayenſu*; the ſecond *Pauteſu*; the third *Pingiangfu*; the fourth *Zugenſu*; the fifth *Funcheuſu*; and the ſixth *Tatinſu*.

All theſe have ſeveral ſmall ſubordinate Cities, which not affording any thing very remarkable, to avoid Prolixity I ſhall not enlarge on. But it is very obſervable, that in all Parts of this Province are found fiery Wells, which very conveniently ſerve for the Boiling of their Victuals in the following Manner; they cover them cloſe with a Lid in which is left a Hole, to ſet the Kettle or Pot on, by which Means whatever is contained in it is boiled without any other Aſſiſtance.

The valiant Warrior and great General *Quan'nchang*, was born in this Province. This Hero had three Boſom Friends, all of them great Lords, who had ſworn a mutual and inviolable Friendſhip, and to whom he proved very ſincere and faithful. They were all three highly eſteemed by the Emperor, but one of them was his peculiar favourite: And it happening that the Death of the Emperor occaſioned a Civil War, this Hero and the others endeavoured to ſet their Friend on the Throne; in Purſuit of this End he ſeveral Times proved victorious, and won ſeveral Battles; but it happening once that the enemy had carried off his Friends Wives and their Attendants; the News no ſooner reached his Ears, than with utmoſt Haſte and equal Bravery, he reduced his Men to Order, beat the Enemy, and delivered the captive Ladies, and retired before and in Sight of a vaſt approaching Army, which purſued him cloſe at the Heels for two Days and two Nights; notwithſtanding all which, he defended and preſerved them from all Danger, and delivered them inviolate and untouched to his Friends. And for this glorious and gallant Action he is highly revered by his Countrymen; in Remembrance of ſuch ſublime Virtue they adore him as a God, and ſet up Images in their Idol Temples in Honour to him. It is but ſeldom that they will ſhew this Image, the Face of which is of a very deep Blood-Colour, like a Hero not debauch'd by *Bacchus*. And the military Men highly eſteem that Sort of Countenance; nay, the whole *Chineſe* Nation imagine him very proditious to them, and fancy that ſuch a fiery flaming Face will inſpire them with Valour, and enable them to acquit themſelves well.

7. *Xienſi* or *Xenſi*, is the largeſt of all the *Chineſe* Provinces, and had formerly three Viceroys, though at preſent it hath but two. Its Breadth from Eaſt to Weſt is three hundred and fifty, and its Length four hundred Miles. Its Plains as well as Hills are very fertile, and here are vaſt Herds of Kine, and large Flocks of Sheep.

“ This Province breeds as many Cattle of all Sorts
“ as any Country in the World; the Sheep and Goats
“ come on ſo kindly, and thrive ſo well, that they are
“ ſhorn thrice every Year, and their Wool is wrought
“ into very fine Cloths and Stuffs, fit for Cloathing or
“ other Uſes. This Country alſo produces great Quan-
“ tities of Muſk, which is extraordinary good, and
“ grows at the Navel of an Animal like a Hart, with-
“ out Horns; their Navels ſwell moſt in their Rutting-
“ time, when they are taken and killed, the Navel,
“ and what is contained in it is cut, and that proves
“ the beſt unadulterated Muſk; a more particular Ac-
“ count of which, illuſtrated with a Print, is inſerted
“ in Mr. *Yſbrants Ides*'s Travels to *China*.”

This Province lies Weſtward of *Xanxi*, the Great Wall terminates in it; it alſo borders on *Weſt-Tartary*, from whence the *Lama*'s come, which are *Tartarian* Prieſts that wear yellow or red Habits.

“ The great or chief *Lama*, in their Language *Dalai*
“ *Lama*, is the Head of their Religion, and him they
“ honour as a Deity. When the firſt Embaſſy, ſent by
“ the *Dutch Eaſt-India* Company to *China*, was at *Pe-*
“ *king*, there was alſo an Envoy from him; and by
“ Reaſon, ſaith *Nieuhoff*, they had formerly lived in
“ *China*; but before the *Tartar* had conquered that
“ Empire, had been by the laſt *Chineſe* Emperor driven
“ out of it: Their Errand was then to requeſt a Per-
“ miſſion for the Return of their baniſh'd Eccleſiaſticks
“ on the old Foot, and a free Exerciſe of their Reli-
“ gion.”

This Province alſo borders on the upper Principality of *Tibet*, which extends itſelf to the Territories of the *Great Mogul*, from whoſe Dominions great Numbers of Merchants come to the vaſt trading City of *Zunning*, in the Kingdom of *Xienſi*: And the Door of Commerce being for ſome Time opened here, and Liberty granted to them, as well as *Muſcovites* and *Tartars*, to trade there, they have with their Wares and Trade introduced the *Mahometan* Religion, which, as Weeds grow apace, is ſpread over all *China* to that Degree, that there appears more of that accurſed Seed than of the true Doctrine of Jeſus Chriſt, which from Experience I ſpeak with Sorrow.

In this Province are eight large Cities, which have an hundred and ſixteen under their Juriſdiction. The principal City is *Sigan Fu*, which is not only large in Size, but alſo very fine; the reſt are *Hanchang Fu*, *Fungiang Fu*, *Pingliang Fu*, *Linxiu Fu*, *Vachan Fu*, *Hingang Fu*, and *Singang Fu*; theſe are the eight, ſubordinate to which, as I above hinted, are all the others.

Not far from *Sigan Fu*, ſomewhat above ſeventy Years ago, a monumental Table was found, upon which a Croſs and ſeveral Letters were cut, whence the Eccleſiaſticks prove, that the *Chriſtian Religion* was anciently known in *China*, and that St. *Thomas* the Apoſtle, or ſome of his Diſciples, were there.

“ The Jeſuits *Kircher*, *Le Comte*, *Gobien*, and others,
“ ſpeak largely of this Croſs and Table; but I ſhall
“ only make a ſhort Extract of the principal Things
“ which they treat of at full. They ſay then, that it is
“ a long Marble Table, on the Top of which is engra-
“ ven a Croſs; that in the Year 1625, ſome *Brick-*
“ *layers* digging the Ground near *Siganjou*, in the Pro-
“ vince of *Chienſi*, found a long Piece of Marble, which
“ formerly had been ſet up as a Monument, but Time
“ had ſunk it under the Earth. This Stone was ten
“ Feet long and five broad, and was the more narrowly
“ examined, by Reaſon a well engraven large Croſs ap-
“ peared at the Top of it; and ſomewhat below it a
“ long Inſcription in *Chineſe* Characters, with ſome
“ ſtrange unknown Letters, which were found to be
“ *Syriack*. The Emperor being informed of it, cauſed
“ a Copy of it to be given out, and afterwards com-
“ manded the Monument to be kept in a Pagode,
“ where it is at preſent, about a Quarter of a Mile from
“ *Siganfou*. The Inſcription, which is too long to be
“ tranſcribed here, mentions the *Meſſias*, and imports
“ that an Angel brought the Tidings of his coming,
“ and that *Olopouen* departed from *Judea* in the Year
“ 636, and came to *China*; that he being examined,
“ his Teſtimony was found good, and that the Empe-
“ ror publiſhed a Declaration and Command in his
“ Favour, in order to the building of a Church, &c.”

8. *Honan* is ſituated in the Middle of *China*, borders Southwards on the Provinces *Huquang* and *Kianſi*; Northwards on *Peking* and *Xanxi*, Eaſtwards on *Xantung* and *Nanking*, and Weſtwards on *Suchuen* and *Xienſi*. Anciently, before all *China* was ſubjected to one Monarch, and each Province or Kingdom was governed by its own Prince, this was accounted the middle Kingdom, and diſtinguiſhed by that Name, which is at preſent given to *China*, by reaſon it is ſituated in the Middle of ſeveral Kingdoms: And accordingly the *Chineſe* frequently ſay,

South

Southwards lie the Kingdoms of *Tunking* and *Siam*; Eaſtwards *Japan*, and ſome other Iſlands; Weſtwards *Pegu*, and the Country as far as *Bengal* and *Tartary*; Northwards are the *Barbarian Tartars*, which formerly paid Toll and Tribute as Subjects. Whilſt *China* lying in the Middle of all theſe, is juſtly called in *Chineſe*, *Chung Iuoi*, that is, the Middle Kingdom.

This Province conſiſts of flat Land, without Hills, which is very fruitful, yielding a vaſt Plenty of Rice and other Corn, all which are to be bought here very cheap; a hundred Pound of Rice being frequently ſold for no more than twelve Pence. In this Country was born the famous *Tchcon Tſong*, who, according to the *Chineſe* Annals, invented the *Mariners* Compaſs a thouſand Years before the coming of Chriſt.

It contains eight large Cities, which have ſubordinate to them an hundred and eight Towns or leſſer Cities. The principal City is called *Schaifung Fu*.

This formerly was the Royal Court, but was overflowed and covered with Sand by a great Inundation; and at preſent a City is built oppoſite to it. *Quinte Fu*, *Hinℓte Fu*, *Vecſe Fu*, *Vaking Fu*, *Honan Fu*, *Nining Fu*, and *Hojang Fu*, are the Names of the remaining Cities, making all together eight, having Juriſdiction over the above-mentioned hundred and eight.

“ By this Inundation is to be underſtood the cutting
“ of the Banks already mentioned in the Deſcription of
“ *Xanxi*, of the River *Hoanga*, which was done by the
“ Emperor to deliver the City from the Siege which the
“ Rebel *Lihuang* had laid to it, and to drown him and
“ his Army: But alas! it proved the Drowning and
“ Deſtruction of this chief City, and ſo many hundred
“ thouſand Men. I ſhall only add, that the Cham-
“ paign Ground of this Province hath continued ever
“ ſince like a Pond or Moraſs: Projects have indeed
“ been thought on to drain it, and reduce it to its
“ priſtine State; but the Undertaking is almoſt above
“ human Ability, the Expence is unmeaſurably great,
“ nor is it poſſible to accompliſh it; wherefore the
“ Court hath given over all Thoughts of it; yet Time
“ has done much towards it, and Things are now much
“ altered for the better.”

9. *Leaotung* lies Northward of *Xantung*, Eaſtwards of *Corea*; but Southwards of *Tartary*. Through this Province the preſent *Tartar* Conqueror came into *China*. In the Reign of the Emperor *Vanli*, about the Year of Chriſt 1590, the *Tartars* alſo broke into *Leaotung*, but were repulſed by that Monarch. This was about the Time that Father *Matthew Ricci*, the Jeſuit, came into *China*. This Emperor *Vanli* governed, and peaceably poſſeſſed *Leaotung* for forty-nine Years: But after his Death the *Tartars*, by the Aſſiſtance of ſome exiled traiterous *Chineſe*, that lived in this Province, the utmoſt Boundary which divided *China* from *Tartary*; the *Tartar*, I ſay, aſſiſted by theſe Traitors who had before behaved themſelves ill at Home, again entred this Country. This happened when the Emperor was but young, and all the publick Affairs were directed by his Viceroys and Eunuchs. So they grew more potent in this Province. And about the Year 1630, one *Lichuang*, a perfidious Rebel, roſe up againſt him in the Province of *Xienſi*, of which he not only made himſelf Maſter, but alſo over ſeveral others, before the Emperor ſo much as knew of it; his Eunuch Commanders induſtriouſly concealing it, ſo that the ill News never reached his Ears till it was too late to remedy it, that is, till this Rebel was advanced with his Forces ſo near *Peking*, that he entered it the next Morning.

“ He was the laſt of the Race of *Taiminga*, whoſe
“ Name was *Zungchi*: Of which Family *Chu* was the
“ Founder. He drove out the *Tartars* who then lord-
“ ed it over the *Chineſe*; and his Deſcendants enjoyed
“ the Empire for ſeveral hundred Years.”

Upon the News of which the Emperor clapt his Hand to his Sword, not out of manly Reſolution, but hurried thereto by Deſpair only, in order to kill his Imperial Conſort, Concubines and Daughter, who expreſſed their Grief in Tears and Lamentations ſufficiently pathetick to have moved the moſt obdurate Heart. Having thus prevented their future Miſery by preſent Death, himſelf climbed to the Top of a Mountain, within the Walls of the Imperial Palace, and to provide againſt falling into the Hands of this baſe Rebel, choſe rather to die by his own, and accordingly hanged himſelf on a Tree.

After which *Lichuang* aſcended the Throne, and eſtabliſhed himſelf in the Poſſeſſion of the Monarchy, as Sovereign Ruler of the People, but deported himſelf like a Tyrant and Uſurper; for he began his Reign with Cruelty: He commanded the Father to the Prince and General at the great Wall, and ſeveral other Noblemen to be put to an ignominious and painful Death, for no other Reaſon than becauſe he could not bring over his Son to the Rebels Side; who afterwards not only attempted the Revenge of his Father's Death, but alſo to deliver the Empire from this Uſurper.

For he then went to *Leaotung*, and invited the *Tartars* to his Aſſiſtance: But they very much diſtruſted him at firſt, to remove which, he promiſed them, on the Word of a General, to be faithful to them, confirming his Promiſes with an Oath on the naked Sabre. After which he led them as their General, and they boldly followed him. The prevailing Uſurper was come without the Wall, and alſo requeſted Aid of the *Leaotungers*, but in vain.

“ From this and what follows, as that *Lichuang* went
“ without the great Wall to requeſt the Aſſiſtance of
“ the *Leaotungers*, it clearly appears that *Leaotung* lies
“ without the mentioned great Wall, ſince this Princely
“ General, by ſome called *Uſangeii*, and by our Author
“ *Vii Sangquei*, who then commanded, went from the
“ great Wall and applied himſelf to the *Leaotungers* as
“ well as the Uſurper, and on the ſame Account. But
“ in the Beginning of this Tract, to which we refer the
“ Reader, this is ſo clearly proved, that no farther Evi-
“ dence is in the leaſt neceſſary.”

This Heroick General bravely faced his Enemy, and in the firſt Place revenging the Murther of his Father, after an obſtinate Reſiſtance, he routed, put him to flight, and purſued him and his flying Army as far as *Peking*, where his Enemy made no ſtop, but after he had taken out his hundred and ninety Concubines, and the richeſt Furniture and Jewels, ſet Fire to the Imperial Palace. The General purſu'd him, accompanied with his own Forces, and ſome *Tartars*, leaving the reſt at *Peking*.

10. The *Tartarian* Chan or Prince, though but invited, in order to aſſiſt the *Chineſe*, having with him about ſeven or eight thouſand *Tartars*, beſides the *Leaotungers*, made Uſe of this fair Opportunity to mount the Throne of this mighty Empire. This happened about ten Years before the worthy Father *John Adam Schalt* ſettled in *China*.

The General returning from the Purſuit of his Enemy, found the *Tartar*, whoſe Aſſiſtance he had implored, ſeated on the Throne, and himſelf obliged to obey him: And complying with Neceſſity, he conſented to become his Relation by Inter-marriage. And the new Emperor created this Prince King of *Junan*.

The Bond of Affinity was yet too feeble, and the Crown of *Junan* too mean, to ſatisfy and reſtrain within Bounds this aſpiring Prince, who aimed at the Empire itſelf. And accordingly after the Expiration of a few Years, he roſe againſt the Chan; and ſtiled himſelf Emperor, by the Name of *Vii Sangquei*; reduced ſeveral Southern Provinces to acknowledge his Sovereignty: And after having carried on a vigorous war againſt the Chan, and conquered near half the Empire, he at laſt died, being arrived to a very great Age.

His youngeſt Son who ſucceeded him in his Pretenſions, was, at the Time of his Death, a Minor, and as it generally happens in Revolutions, an irreconcileable Diſſention aroſe amongſt the Princes, which prevented his maintaining his Claim to the Empire: The eldeſt Son kept his Court at *Peking*, was by Marriage allied to the Emperor, and had three Sons; but though he was thirty-five Years of Age, yet he and his three Sons were put to Death. And ever ſince the whole Empire of *China* hath been ſubject to one Sovereign, who is the Chan of the *Mantcheou Tartars*.

“ There is a Law in Force in *China* which extends the Puniſhment of Rebels to the ninth Generation. The preſent Emperor *Canghi*, who is a mild Prince, and diſcovers a very great Averſion to Cruelty, found himſelf oblig'd, in Compliance with the Laws of the Land, to put to Death the Children and ſome other Relations of *Ouſangeii*, by Reaſon he was convicted of Rebellion: But to teſtify his Averſion to any ſuch Practice, he cauſed Proclamation to be made before-hand, that it was not he that had condemned them, but that he was conſtrained by the rigid Laws of the Empire, the general Aſſembly of the Princes of the Blood, and the ſupreme Courts of Juſtice of the Land, not to delay the Puniſhment of any Perſon who was convicted of Rebellion.”

It is indeed true, that not long before ſome Lords roſe up againſt the Emperor, and carried on a War againſt him, which did not prove ſucceſsful, by Reaſon of their mutual Diviſions: Yet incredible Numbers of Men were killed; ſome talk of forty Millions, others ſay four Millions: Inſomuch that human Blood (in an unheard of Manner) ſtreamed from Mountain Tops; that the deep Channels were filled with dead Bodies, and the deeper Vales piled up and levelled with the Hills. This happened during the Minority of the preſent Emperor *Canghi*, he being then not much above fourteen Years old.

As his Father's Acceſſion to the Throne was not accompanied with any Fatigues or Uneaſineſs, ſo his Reign was very peaceable; leaving the greateſt Difficulties for his Son to ſtruggle with, who, by his great Wiſdom, heroick Courage, Royal Virtues, and exalted Endowments, hath overcome them all.

We ſhall now turn towards the Southern Provinces, and take Leave of theſe Northern Countries, with ſaying that *Leaoutung* is a very fine though ſmall Province, containing not above twelve as well large as ſmall Cities: And adding that in this Province grows the famous Medicinal Root *Ginſeng*, acknowledged by the Phyſicians to be an excellent Cordial Reſtorative. The *Chineſe* Doctors uſe it in Hectick Peſtilential Fevers, and ſeveral other dangerous Diſeaſes: It is prepared by Mixture with ſeveral other Drugs. Thoſe of theſe Roots which are large, bright and weighty, are choſen as the beſt; they wrap them up in Paper, and keep them in dry Earth, and alſo in Pepper: They commonly boil two or three Grains of it, minced ſmall, in Chicken Broth, or in fair Water: But particular Care muſt be taken that the Pot be cloſe covered, by Reaſon that in an open Kettle a great Part of its Virtue evaporates.

“ The Reader will naturally expect to have ſome Account of this famous Plant, beyond what our Author, to whom it was common and familiar, has thought proper to ſet down here. The *Ginſeng* is a perennial Root that produces an annual Stalk of the Size of a large Quill, which riſes not very high, and opens with five Leaves. Some ſay, that this Plant bears white and beautiful Flowers; others, that it produces no Flower at all. The Root, which is the Part moſt valued, is of the Size of a ſmall Parſnip, not very unlike it, and generally divides itſelf into two. It is held to be the greateſt Reſtorative in the World, and the *Chineſe* Phyſicians have written whole Volumes about it, in which they tell us many Things that ſeem to ſurpaſs all Credit. It is however to be obſerved, that the figurative Stile, and the very conciſe Deſcriptions in theſe Sort of Books, very often hinder *Europeans* from comprehending their true Senſe; ſo that we are apt to reject, as a ridiculous Romance, what with them paſſes for a well-wrought Allegory, or a uſeful Fable. The Miſſionaries, generally ſpeaking, agree that it is both an uſeful and an efficacious Medicine; that it removes Vapours, raiſes the Spirits, ſupplies Strength, and promotes Secretions in a wonderful Manner. The Leaves are uſed as Tea, and have a very great Effect that Way, but the Root is far preferable, and the true Way of uſing it is thus. Divide an Ounce of *Ginſeng* into ten Parts, by breaking it, for it is affirmed, that Experience ſhows it loſes much of its Virtue by being cut with a Knife: One of theſe Portions is ſufficient for a Doſe, and is to be put into an earthen Pot, with a Pint of Water, and being cloſely covered, muſt be ſet upon a ſlow Fire, till by ſtewing, it is reduced to about a Quarter of a Pint. This Liquor is to be ſweetned with white Sugar Candy, and ſo drank moderately hot. Then half that Quantity of Water may be put upon the ſame Root, and being half conſumed, the Liquor is to be taken in the like Manner. The former ſhould be taken in the Morning, faſting, the latter in the Evening, and nothing eat after it. There are various Reaſons why this Drug does not anſwer in *Europe*; one is, that bearing a high Value, we are often cheated, and ſome other Root ſent us, inſtead of *Ginſeng*; another and a better Reaſon is this, that the Root itſelf is very apt to corrupt and ſpoil, ſo as to loſe all its Virtue. I knew a Phyſician that made Uſe of a Tincture of it, brought by the *Chineſe* to *Batavia*, with great Succeſs; but this Tincture was extravagantly dear, ſince at the firſt Hand it coſt three Pounds an Ounce. The *Ginſeng* commonly grows in woody Places, under the Shade of large Trees. It has been plentifully found in *Canada*, where it was diſcovered by a *French* Jeſuit, one Father *Lafitau*. It is alſo found in *Maryland*, and under the Title of the *Maryland* Plant is very well deſcribed by Mr. *Ray*. There is another Plant more common in Phyſick, the *Latin* Name of which is *Hepatica Nobilis Tragi*, that is held to be very little inferior in its Virtues to the *Ginſeng*, and ought therefore to be more in Uſe. It were to be wiſhed that ſome of the Jeſuits ſettled in that Empire were well verſed in Chemiſtry, and then there is no Doubt they would be able to prepare Extracts from this famous Root, that would reſtore and eſtabliſh its Credit in *Europe*, and prevent our Phyſicians from believing, that the *Chineſe* Doctors, either through Ignorance or Prepoſſeſſion in Favour of their Country, have extolled this Drug far above its Deſerts. But till this be done, it would not certainly be amiſs to make ſome Experiments on the *American Ginſeng*, of which we might have conſiderable Quantities from *Maryland*; and as to the Liverwort before-mentioned, one can hardly believe that ſo good a Judge as *Schroder* ſhould commend it to ſuch a Degree, if it had not really ſome very conſiderable Qualities; but we are too apt to neglect Simples, and leave them entirely to the Vulgar and to Quacks, who very often perform ſuch extraordinary Cures by them, as not only raiſes their Credit, but is prejudicial to that of regular Phyſicians, who are more enamoured of Botany as a Science, than attentive to its Conſequences, as it is a Branch of the Art of Medicine.”

11. Having deſcrib'd the Northern, we come to ſpeak of the Southern Provinces or Kingdoms of *China*.

Nanking, which we named firſt, is very large, and is governed by two Viceroys: The chief City is called *Nanking*, or rather at preſent *Kiamning*, the *Tartars* having changed its Name. This was formerly the Metropolis; and the Imperial Court, now kept at *Peking*, antiently reſided here. This is the largeſt City in *China*; and at preſent is ſixteen or ſeventeen *French* Miles in Compaſs; but formerly contain'd three Circuits. The firſt or outermoſt and largeſt Circuit was thirty Miles; but ſince the Tranſlation of the Seat of the Empire, it is run to Decay, and become ſo far deſolate, that its ſecond Circuit contains but ſixteen or ſeventeen Miles, in which Compaſs are above thirty Hills.

“ The Footſteps of theſe Walls yet remain viſible; and ſeem rather (ſaith *Le Comte*) to have been the Bounds of a Province than a City: And though *Peking* is large and very populous, and *Nanking* very much declined from its former Grandeur, it is ſtill more populous than the other. The Reaſon of the Removal of the Court is hinted in the ſecond Chapter.”

“We ſhould alſo here add, that this City was within one Night of falling into the Hands of *Coxinga* or *Couefius*; but our Author having mentioned it in the Chapter where he is treating of *Fokien* and the Iſland *Formoſa*, I refer the Reader thither. And as for the third Circuit, (which our Author barely mentions, without any Deſcription) we gather from other Writers, that it was the ancient Imperial Palace, where the *Chineſe* Emperors formerly reſided in as great Splendor as at preſent at *Peking*; it was on the South-ſide of the City, and encompaſſed by a Wall, which at preſent encloſes the principal Part of the City. Each of its four Sides were an *Italian* Mile long, and conſequently required above an Hour's time to go round it, being by *Nieuhoff* compared to *Haarlem* in *Holland*.”

This moſt charming City far ſurpaſſes all the reſt; beſides which it is adorned with a lofty Tower of the fineſt Porcelain of various Colours, and ſet off on the Outſide with very fine Imagery: It is nine Stories high, and within is full of Stone Figures, richly gilt.

“The Difference amongſt all Authors in the Orthography, in Writing concerning *China*, is very ſurpriſing, they not agreeing in Names, the Senſe of them, nor even in Things; one writes *China*, another *Sina*; this *Xanſi*, *Xienſi*, that *Chanſi*, *Chienſi*, and alſo *Chenſi*: One calls the Emperor *Canghi*, another *Kamhi*; one writes *Ouſangouei*, whilſt others have it *Uſangejus*, or *Viiſonguei*; and all mean the ſame Thing or Perſon. So we find the like Difference concerning the Porcelain Tower, in, or more properly without, *Nanking*. Our Author ſaith, the Porcelain on it is of the very fineſt and beſt Sort; others ſay, that this Tower is but plaiſtered with Porcelain; and though the Rain and Duſt hath decayed the Beauty of it, the Remains are yet ſufficient to determine that it was Porcelain, and not the fineſt, but a coarſe Sort. Nor do Writers vary leſs about the making of Porcelain, which will be treated of in the Courſe of this Work. But before I take Leave of this Tower, I ſhall add what *Nieuhoff* ſaith, *viz.* That Seven hundred Years paſt this Tower was built, to the great Grief of the *Chineſe*, and as a pompous Monument of the *Tartars* being then Lords of *China*, of which they left this Memorial. *Le Comte* on the other Side ſaith, it is about three hundred Years ſince this Tower and the Temple of Memory were built by the Emperor *Yonlo*: And farther, ſpeaking of Towers, ſaith, That the Spire, which is one of its fineſt Ornaments, hath fixed on the Top of it a gilt Ball, or Pine Apple, of an extraordinary Largeneſs; and *Nieuhoff* tells us, that the *Chineſe* report this to be all maſſy Gold. Thus (*Le Comte* goes on) you have a Deſcription of the Porcelain Tower, which ſome *Europeans* would call a Brick Turret: But indeed the *Chineſe* are wonderfully expert in beautifying their Stones with all Manner of Ornaments: And as it is, it is undoubtedly the neateſt, moſt compact, and beſt Piece of Work at preſent remaining in the Eaſt.”

The Streets of *Nanking* are very ſpacious and wide, as well as clean and neat, and there all Sorts of Rarities and fine Wares are expoſed to Sale; but what is moſt amazing is the almoſt incredible Number of Men which are obſerved to be there. The Inhabitants are computed to be eight Millions, Houſekeepers or Maſters of Families, ſo that the Croud of People there ſeems juſtly enough ſaid to be incredible to thoſe who have not ſeen it.

Cloſe by, or about the City, runs a River of two *French* Miles over, which in the *Chineſe* Language is called *Tangſku Kiam*, that is, the Son of the Sea, and is navigable through all *China*. This River runs by and cuts through ſeveral Lakes and Rivulets, which all by its Aſſiſtance are conveyed to, and by that Means diſcharge themſelves into the Sea: Wherefore this River is very richly laden with innumerable Ships, and leſſer Craft, which are very fine within, and richly gilt without; beſides this, they are adorned with extraordinary fine painted Flags, and above Deck provided with all Manner of convenient Seats, Tables, and Couches, for the Convenience of Travellers, and they are withal well victualled.

“It is reported to be ſo deep that no Bottom is to be found; whence proceeds that *Chineſe* Proverb, *That the Sea is without Bounds, and the* Kiam *without Bottom*. And ſome who have been there, affirm upon their own Experience, that no Ground was to be diſcovered by Sounding. But they alſo add, that their Line was but fifty or ſixty Fathom, and that if they had made uſe of one of two or three hundred Fathom, they ſhould have given another Account of it.”

The Jeſuits, who have ſeen the vaſt Numbers there are of theſe Ships, ſay that there are enough of them, (proverbially ſpeaking) to make a Bridge from *China* to *Europe*.

The Juriſdiction of this Province extends to fourteen very large and magnificent Cities, all which are vaſtly rich, and have ſeveral ſmall, and they again ſeveral leſſer ſubordinate to them, as in the other Provinces.

The ſecond large City of this Province is *Suchen*, which is the moſt illuſtrious, largeſt, and moſt famous of all the reſt, being a Place of the greateſt Trade of any in the whole Empire; and Ships, as well as Men, appear there as numerous as Sand on the Sea-ſhore.

The Emperor receives from hence five Millions of *Laens*, each of the Value of two Rixdollars, beſides the Corn, Rice, and Fruit, which is tranſported from hence annually to *Peking*, in nine thouſand nine hundred and ninety nine Jonks or large Ships; each of which is capable of carrying three or four hundred Weight: Not to mention all Sorts of Silks and other Commodities yearly carried to the Emperor.

The Ships are ſix Months on the Way; and as ſoon as they are come to the End of the great Water, they come into navigable Rivers, cut by human Labour, with a Sluice at the Diſtance of every *French* Mile, to preſerve the Water on Occaſion.

“Travellers, in the Deſcriptions of their Voyages, call them Sluices, but repreſent them widely different from ours; for they are a Sort of Waterfalls, over which the Ships are forced by the Aſſiſtance of a great many Hands and Windleſſes. It is indeed ſtrange, that the ſubtle *Chineſe* have not yet invented ſuch as ours are, which if they once ſaw, they would be forced to acknowledge, that we are not ſuch clumſy dull Wretches as they and other Nations repreſent us there; and that they themſelves ſeem rather like unthinking People, when they are forced to make uſe of ſo many Hands, and are ſo fatigued to force over their Ships, which we do with the greateſt Eaſe in the World.”

The Names of the other Cities are, *Ninchueu Fu*, *Thaiping Fu*, *Ganking Fu*, *Sun Kiang Fu*, *Chin Kiang Fu*, *Geancheu Fu*, *Jungjan Fu*, *Chingan Fu*, *Lucheu Fu*, *Quongte Fu*, *Chancheu Fu*, and *Kingcheu Fu*. Theſe fourteen, the two former being included, exerciſe Juriſdiction over a hundred and thirteen other conſiderable Cities.

12. The Kingdom or Province of *Chekiang* borders on *Nanking*; and the *Chineſe* ſay, that next to that, it is the *Indian* Paradiſe of Arts, and the Paradiſe of the Gods; by reaſon it plentifully flows with all good Things. Throughout this whole Country are deep cut Channels, by Help of which all Parts of this Province may be eaſily travelled over as well by Water as by Land. The Bridges have all of them very fine Stone Arches; and the Number of Barks or Boats there is as vaſt as that of Men in the great Streets of *Peking*, that is, innumerable; which is the leſs to be wondred at, ſince this Place is frequented by Merchants from all Parts of the World.

It contains eleven large Cities, the chief of which is *Hancheu*, and is the fineſt of them all, being provided both within and without with deep and navigable Channels, and almoſt all the Corners of the Streets are adorned with lofty triumphal Arches. Not far diſtant Weſtward from the City Wall, there is a very fine Lake, the Circumference of which takes in ſeveral Miles; its Water

ter falling into it from the Hills is very bright and clear, and is conveyed into the City by the above mentioned Channels.

Eaſtwards alſo, near the City Wall, there runs a great River called *Zhien Tangkiang*, which at that Place is two Miles over, or as broad as the River *Kiam*, but not ſo deep, nor doth it extend ſo far, as paſſing through but one Province.

The other large Cities of this Province are, *Kiaking Fu*, *Xanking Fu*, *Nimpo Fu*, *Kiunchieu Fu*, *Venčteu Fu*, *Niencheu Fu*, *Chinchem Fu*, *Kingkoa Fu*, *Taicheu Fu*, and *Nincki Fu*; the whole Number being eleven. They preſide over ſeventy ſix leſſer Cities; to which is added *Viicheu Fu*, a City not leſs conſiderable than any of the reſt, and from it are brought very great Quantities of Silk.

13. *Kiangſi* is a large Province, which plentifully abounds with all Neceſſaries to human Life: It borders on *Nanking*. A Lake or ſmall Sea of three hundred *French* Miles in Bigneſs, called *Phojang Fu*, takes up the greateſt Part of it, and is as navigable for great Ships as the main Sea, and is ſurrounded by a Multitude of fine Towns and Cities. All the Rivers of this Province flow into this Meer, which diſcharges itſelf into the *Nankinſian* River, and by Means of that is conveyed to the Ocean.

This Province contains thirteen large Cities, the chief of which is *Nanchang Fu*, which, though a great City, is now ruined and reduced to a deſolate Condition by the Wars. *Vieicheu Fu*, a City where the *Porcelain* or *China* Earthen-ware is made, is alſo in this Province.

“ That this Porcelain is a common Manufacture in *China*, is acknowledged by all; and that the oldeſt is eſteemed the beſt, few are ignorant, partly on account of its beautiful Whiteneſs, partly for its Antiquity, and by Reaſon none ſo good is at preſent made; becauſe that the Emperor appoints a *Mandaryn* at the Places where it is wrought, in order to chooſe for his Uſe the fineſt Pieces, for which he notwithſtanding pays but a very mean Price; wherefore the Manufacturers, not being able to ſet their own Rate, or perhaps being but very ill paid, are diſcouraged from making it better than ordinary, and will neither take Pains, nor endeavour to ſhew any great Art in the manufacturing this Ware, without being richly rewarded. Our Author here relates the Manner of its Compoſition in his uſual plain Manner. But others *(J. G. de Mendoſa)* tell us, that it is made of Chalk, which being beaten is thrown into a Pond cloſely walled in, in which it diſſolves and boils up, a thin Skum ariſing, of which the fineſt Porcelain is made, and the coarſer of the Remainder; for the nearer the Bottom it grows, it becomes ſtill coarſer. They work this into what Shapes they pleaſe, in the ſame Manner as we do, and gild or paint them according to their Fancies, which Colouring or Gilding never fades. This, ſaith he, is what we know of our own Obſervation, and is more probable than that it ſhould be compoſed of Sea Shells which have lain a hundred Years under Ground to putrify, and are taken up, beaten, and then baked. *Nieuhoff* ſaith that it is made of a Sort of Earth which is brought from a certain Hill in the Province of *Nanking*; that this Earth is not moiſt like Clay or Chalk, but dry like fine Sand; that they diſſolve it with Water, but not that of *Hoeicheu* in *Nanking*, or the neighbouring Parts, it being impoſſible to work it in that Water; the Truth of which they have frequently been convinced of by unfortunate Experience; but it is ſucceſsfully tempered with the Water of *Vieicheu Fu*, and the adjacent Places. That having wrought it into Veſſels of all Shapes and Sizes at Pleaſure, they firſt dry them in the Sun, before they venture them in the Oven, after which they put them into the Furnace, and let them bake for fifteen Days, and ſtand fifteen Days after that to cool, before they take it out, *&c.* *Le Comte* ſaith, That it is made of a more ſolid Earth than ordinary, which is found in the Stone Quarries of this Province: That this being cleanſed and beaten to a fine Powder, is moiſtened and made into a Maſs, which is long and thoroughly mixed and beaten, in order to clear and refine it: That it is probable this Earth is moulded into ſeveral Forms at Pleaſure by ſuch a Wheel as is uſed for that Purpoſe in *Europe*: That after this it is carefully dried in the Sun, when the Ground and Paint is laid on, and then is put into the Furnace, which is kept to a moderate even Heat; and, that being baked enough, after a long Time ſtaying there, and becoming perfectly cold, it is taken out.”

This Porcelain is compoſed by the Mixture of certain Sorts of moiſt and dry Earths: The dry comes from the Province of *Nanking*: From theſe two Ingredients this *China* Earthen Ware is prepared, moulded into ſeveral Shapes, dried and baked; and when it is become cold, or rather almoſt cold, the Colours are laid on, and it is glaſed, once more put into the Oven, and baked in the Shape the Artiſt deſires it ſhould remain.

The other large Cities are *Kincheu Fu*, *Suicheu Fu*, *Nanhang Fu*, *Quoangſin Fu*, *Quienchang Fu*, *Linkiang Fu*, *Chungkue Fu*, *Tungcheu Fu*, and *Nangan Fu*.

Theſe large preſide over ſeventy eight leſſer Cities.

14. *Huquang*, and *Xienſi*, already deſcribed, are the two largeſt Provinces of *China*. This contains in its Juriſdiction fifteen Cities, and more plentifully abounds with Rice, Corn and Fiſh than all the reſt; being alone very well able to furniſh the whole Empire with ſufficient Quantities of Corn. For the Space of ten Years, this Province was miſerably infeſted with civil Wars and Diſcord, which have cut off incredible Numbers of Men.

The factious *Licbuang*, already mentioned in the Deſcription of *Leaotung*, was the Cauſe of all this Bloodſhed when he poſſeſſed himſelf of this Province.

And after an Interval of only a few Years, Prince *Vii Sanguei* (who invited in the *Tartars* to his Aſſiſtance) made himſelf Maſter of a great Part of it, and for the Space of ſeveral Years carried on a vigorous War againſt the Emperor.

There is a Lake in this Province, the Circumference of which is above four hundred *French* Miles, into which ſeveral Streams and Rivulets fall: And at the Mouth of it are ſeveral Mountains and ſmall Iſlands, from whence and from its boiſterous Waves, it is not unlike the main Sea. It is frequented by an incredible Quantity of Ships, and from it deſcends a very large River, which falls into the famous *Nanquingian* River.

On the four Corners of this Province are ſituate four Cities: The firſt of which is called *Jocheu*, and lies at the Mouth of the River, and is very ſtrong, and the Key of all the reſt. *Vii Sanguei*, King of *Junan*, took it. The Emperor's Brother, whom he had created King of this Province, aſſiſted by the Imperial Forces, ſat down before it with a very great Army, and very cloſely beſieged it, loſing a great many Men before it. It happened one Night, either in this Streight to rid themſelves of uſeleſs People, and unprofitable Mouths, or elſe in order to convey a great Number ſafe over the Meer, they embarked on board three hundred Ships, but ſuch a fatal Storm aroſe, that all the three hundred Ships and fifty thouſand Souls were ſunk to the Bottom.

But after the Death of *Vii Sanguei*, this City, as well as the whole Empire, fell entirely into the Emperor's Hands. There are in this Province fifteen large *Fu*, ſubordinate to which are an hundred twenty-five leſſer.

Vii Chang Fu, the Principal, is a very large City, which is interſected by a River, frequented by Multitudes of Ships that drive a very conſiderable Trade here.

Cotton grows here in ſuch vaſt Abundance, that it is tranſported from hence to all other Places almoſt throughout the whole Empire.

The other large Cities are *Hanjang Fu*, *Huangcheu Fu*, *Gangling Fu*, *Sangiang Fu*, *Juniang Fu*, *Tegan Fu*, *Jangiang Fu*, *Jocheu Fu*, *Changxa Fu*, *Paoking Fu*, *Xincheu Fu*, *Changte Fu*, *Hangcheu Fu*, and *Jungcheu Fu*; the whole Number being fifteen, whoſe Juriſdiction extends over one hundred and twenty-five other Towns.

15. The Province of *Suchuen*, which hath been ruined and laid Waſte by ſeveral Wars, is the leaſt of all the *Chineſe* Provinces, and is mountainous. It produces Quickſilver, Tin, Wine, and a conſiderable Quantity of Rhubarb, all which are exported to other Countries. But the Rhubarb is not eſteemed the beſt, nor are great Quantities of it either uſed or ſent Abroad.

There are in this Country nine large Cities, the chief of which is *Chingtu Fu*; which is a very great and conſiderable City, but reduced to a very low Eſtate by numerous Wars.

The others are *Langan Fu*, *Xunking Fu*, *Hunghing Fu*, *Paoning Fu*, *Chungching Fu*, *Lingcheu Fu*, *Hiengcheu Fu*, *Mahu Fu*, and *Taoy Fu*; the Whole making up the Complement of Nine, which preſide over one hundred and three leſſer Cities.

16. The Province of *Queicheu* is a mountainous Country, which produces great Quantities of Quickſilver, Copper and Tin; and contains fourteen large Cities, ſubordinate to which are twenty-four leſſer.

Though this Province hath but a very few Cities, its Circumference is very extenſive; but it is alſo depopulated and ruined by deſtructive Wars.

The chief City is *Queijang Fu*, and the reſt are *Gangxun Fu*, *Tugven Fu*, *Cinquen Fu*, *Laiping Fu*, *Suchuen Fu*, *Sunan Fu*, *Xecang Fu*, *Tungin Fu*, *Pinjung Fu*, *Pingiuen Fu*, *Thaiding Fu*, *Veineng Fu*, and *Meſi Fu*; amounting together as above to fourteen large Cities, which preſide over twenty-four leſſer.

17. *Junan*, the farthermoſt Province of *China*, borders Weſtward on the Kingdom of *Lao*; Southwards on the Kingdom of *Tunkin*, and was formerly accounted amongſt the *Chineſe* Provinces; but now is only tributary to that Empire.

Cochinchina and *Tonquin* alſo formerly made one Kingdom; but were afterwards divided into two, and diſtributed to two Brothers, who carried on very bloody and obſtinate Wars againſt each other.

This Province produces Gold, Silver, Copper, and Tin, in great Abundance, and its Mountains, Rivulets and Streams afford ſeveral precious Stones, eſpecially Rubies.

This Kingdom is very large, and was formerly, together with the Title of King, and the abſolute Power of governing it at his Pleaſure, beſtowed on Prince *Vii Sanguei*. He alſo kept his Royal Court, and built a very magnificent Palace there; but after his Death the whole Kingdom as well as the Court fell to Ruin and Deſolation. The Country is partly mountainous, and partly even Ground; the Air healthful and temperate, being neither too hot nor too cold; and in this Province is a Lake which is ſtored with Fiſh of different Kinds.

This Kingdom comprehends twenty large, ſubordinate to which are ſixty-eight ſmaller Cities. The chief City is *Junan Fu*, a charming pleaſant City, where Apples, Pears, Peaches, Plumbs, and all Sorts of Fruits, are incredibly plentiful.

The other great Cities are *Quongſi Fu*, *Kaihoa Fu*, *Cinſung Fu*, *Chingkian Fu*, *Quagnan Fu*, *Ivenking Fu*, *Chekiam Fu*, *Viiting Fu*, *Tali Fu*, *Manghoroa Fu*, *Junchang Fu*, *Li Jikang Fu*, *Hoking Fu*, *Kintung Fu*, *Juning Fu*, *Xunning Fu*, *Xingan Fu*, *Tungoha Fu*, and *Sinkoa Fu*: Theſe are the twenty above mentioned Cities which preſide over ſixty eight.

18. The greateſt Part of *Quoangſi* is mountainous, but the Remainder very fertile; one Point of it borders on the Kingdom of *Cochinchina*. Abundance of Cinnamon grows here, as doth alſo a certain very uſeful Wood to dye Red; which the *Portugueſe* call *Sapao*; and which grows alſo very plentifully in *Siam*. Here are likewiſe ſeveral excellent Sorts of Wood fit for the making of all Sorts of Cabinet, Joyners or Carpenters Work; beſides which, great Quantities of Rice are tranſported from hence to *Kanton*.

There are thirteen large, and eighty leſſer Cities in this Province.

Queiling Fu, the chief City, is very agreeably ſituated in a pleaſant Plain. This Province was formerly governed by a King, who was a Prince of the ancient Imperial Blood; but he dying without any Heir, his Dowager governed it for ſome Time; but after her Death, the Royal Court was ruined and demoliſhed; in which State it is at preſent.

The remaining great Cities are, *Pingeo Fu*, *Viichen Fu*, *Zincheu Fu*, *Nanning Fu*, *Taiping Fu*, *Sunun Fu*, *Teucheu Fu*, *Zhincheu Fu*, *Singuen Fu*, *Chincheu Fu*, (near which grows a certain Plant, of which is made a Sort of Stuff that is worth more than Silk) *Suchin Fu*, and *Chingan Fu*: They altogether commanding eighty leſſer Cities.

Very good *Porcelain* is alſo made in this Province; but the Earth from which it is prepared (as we have already ſhewn) comes from one Place, and the Water from another: Poſſibly by reaſon that it is more efficacious, and breaks the Earth finer, or incorporates better with it, or for other hidden, though natural Reaſons: Thus one Place borrows from another what it ſometimes doubly reſtores.

As the greateſt Part of *China*, ſo this Province is very populous, being alone capable of raiſing a Million of Men able to bear Arms, and containing near two hundred thouſand Families.

19. *Quoantung*, called by the *Europeans*, *Canton*, is the moſt Southern Province in *China*; is bounded by the Ocean, and is provided with a very good Haven at the End of a River which is navigable by great Ships up to the City of *Canton*. The whole is a fertile Country, plentifully abounding with all Neceſſaries, which draws a very conſiderable Trade hither, as well with the *Indians* as *Europeans*, from which latter above one hundred *Engliſh*, *Dutch* and *Portugueſe* Ships annually come to and go from hence.

The laſt mentioned Nation having made themſelves Maſters of *Macao*, a neighbouring Peninſula, have there a very fine Haven, from whence they drive a great Trade to *Canton*, but are obliged on that Account to pay annually 50000, ſome ſay 500000 Laens to the Emperor, each Laen amounting to two *Rixdollars*.

" *Macao*, ſaith *Le Comte*, is famous for the vaſt Com-
" merce of the *Portugueſe* formerly carried on there,
" before the *Hollanders* juſtled them out of almoſt all
" *India*: And at preſent they are not able to keep
" many Forces there. Here is a very good Road for
" Ships to ride; the Haven indeed is very ſmall, but
" ſafe and very commodious. All Cuſtoms on import-
" ed Goods are the Emperor's: And though the *Por-*
" *tugueſe* have ſtill a Sort of Government there, yet
" they are ſubject to the *Mandaryns* in all Caſes which
" concern the Emperor."

They have poſſeſſed this Iſland above an hundred and ten Years: (Our Author wrote about the Year 1694.) and they have ſtrongly fortified and built ſeveral Churches and Monaſteries upon it. The Commodities for which they chiefly trade with the *Chineſe* are Pepper, Cinnamon, Cloves, Sanders, (very uſeful in dying) Callicoes: The Medicinal Wood *Pucho*; Ebony, Red Dying Wood; Wine, and a Sort of Birds Neſts found in the above-mentioned Iſland. Theſe Birds Neſts are eſteemed a very good Reſtorative Medicine: They are commonly boiled for a Quarter of an Hour, and not longer, in Chicken Broth; for if it be ſuffered to boil longer, the whole would diſſolve: Each Pound of this coſts three, and ſometimes four Laens; and the white is eſteemed beſt. *Arecca*, being the Fruit of a certain Palm, which is hard, bitter and aſtringent, is alſo brought hither to be ſold: The *Indians* commonly chew it with the Leaves which they call Betel, which waſhed in a little Lime-water become red: And the Spittle of thoſe who chew it is of a Blood-Colour: And any Perſon not accuſtomed to this Uſage, upon trying of it, becomes very red in the Face, and as it were inebriated, or half fuddled.

This Plant is very much uſed in *India*; both Sexes biting and chawing it the whole Day, as ſome ſmoak Tobacco in other Places: It is hot and dry, warms the Stomach, and helps Digeſtion. It is alſo boiled in Water, and being aſtringent, is uſed in Caſe of Fluxes. There are alſo brought hither Rhinoceros's Horns, Ivory, Furrs, and red Lacca, from whence the fineſt Sticks of Sealing Wax are prepared: This Drug is the Excrement of a Sort of Worms or Ants, which ſticks to the Leaf and Wood of the Plants. We ſhall hereafter treat of the Fruits.

This Province abounds with white and brown Sugar; and great Quantities of Silk are wrought here, of which all Sorts of Goods are made, and tranſported hence to *India* and other Places. The *Indians* alſo buy here great Quantities of Procelain, Tin, Iron, and Copper-work, Paper, and ſeveral other Merchandiſes and Rarities, moſt of which are paid for in Silver; but on the other Side a great deal of Gold is tranſported from *China* to *India*.

The chief City of this Kingdom is called *Quangcheu Fu*, an extraordinary fine City, which is ſtocked with and trades in all Sorts of *European* and *Indian* Commodities. About four *French* Miles diſtant from this City is a Village called *Fuxan*, where the greateſt Trade in all *China* is drove: For the Inhabitants keep conſtantly vaſt Magazines of all Sorts of Manufactures: And it is reported that ſixty thouſand Families live in this Village.

This Province hath ſuffered very much by War. In the Beginning of the Revolution of the Empire, the chief City was beſieged by two petty Kings, Princes of the Imperial Blood, with a very great Army, and for above the Space of one whole Year, furiouſly aſſaulted and bombarded with Cannon and great Pieces of Artillery, by which Part of the Wall was demoliſhed; notwithſtanding which it was not taken by that Means, but delivered by the Treachery of a Perſon, to whom the chief Command of one of the City Gates was entruſted, who, tempted by a large Sum of Money, and larger Promiſes, let in the Enemy; after which he received the juſt Reward of his Treaſon; for inſtead of the promiſed Riches, he was ſtifled in Sand, after the Enemy had cut all to Pieces that came in their Way, and plundered the whole City: And after this they over-run the whole Province.

"These Princes were afterwards, one of them King of *Quantong*, and the other of *Fokien*: But thoſe Monarchies were but of ſhort Duration; nor did they devolve on their Heirs; for all theſe, one after the other, were accuſed of ſome Crime or other; but indeed the true Reaſon of their Fall was, that Reaſons of State would not permit the jealous *Tartar* to ſuffer any Princes of the ancient Race, of which the *Chineſe* were not a little fond. This was alſo the chief Reaſon why *Oſangouei*'s Poſterity were killed, whatever ſpecious Pretences were made Uſe of to colour the Barbarity; ſuch were thoſe drawn from the rigorous *Chineſe* Laws, which directed the Puniſhment of Treaſon to the ninth Generation, and that they were thereby forced to it."

This City was computed to contain eight hundred thouſand, or near a Million of Families: And without the Fort or Caſtle is two Miles in Compaſs.

One of theſe Princes was made King of this Country, and built a magnificent and Royal Palace in the City; but being afterwards accuſed of foul Practices againſt the Emperor, he was deprived of his Life. And the other Prince, in reward of his heroick Actions, was created King of *Fokien* by the Emperor then reigning.

The firſt Prince or King being killed, his Family, houſhold Goods, and royal Treaſure, by the Emperor's Order were carried to *Peking*. His Treaſure indeed very juſtly deſerved the Name of Royal; for that alone amounted to above one hundred Millions, beſides other valuable Effects, and the moſt ſplendid Furniture of the Court.

This Province comprehends ten large Cities, which exerciſe a ſuperior Juriſdiction over ſeventy four, that are ſubordinate to them. The ſuperior Cities are *Quangcheu Fu*, already deſcribed; *Nankiang Fu*, *Xancheu Fu*, *Hoycheu Fu*, *Xanking Fu*, *Kiaocheu Fu*, *Lutcheu Fu*, *Liencheu Fu*, *Chaucheu Fu*, and *Kincheu Fu*, ſituate on the Iſland *Ainan*, which is very conſiderable on Account of the great Trade driven there with the Kingdoms of *Tonkin* and *Cochinchina*. The Compaſs of this Iſle is three hundred Miles, and on it are thirteen leſſer Cities. Here is alſo a very fine Pearl Fiſhery; and Aloes are very common. That Plant grows like a Sort of Reed or Flag, about a Finger thick, but forty or fifty Yards in Height, and is a very good Medicine on ſeveral Occaſions.

Le Comte, whom we have ſo often quoted, relates, "that there is upon this Iſland of *Ainang* or *Hainang*, a ſtanding Water, in which Fiſh petrefy. I have myſelf (ſaith he) thrown Crabs into it, and obſerved the Claws to be conſolidated and ſo far changed, that they differed very little from Flints. But theſe Miracles of Nature are not ſo peculiar to *China*, for we meet with them elſewhere (adds he) and withal a great many more Prodigies, and occult Qualities of Nature are obſervable there, but yet all the *Chineſe* ſay muſt not be believed; for though there may be ſome Truth in what they relate, yet in the diſhing up they are too apt to interlard it with ſo much fabulous Stuff, as frequently inclines us to queſtion the Truth of the whole Story. However, the Reader ought not to doubt of the Truth of the Petrification of Crabs and other Things, by Reaſon that he may at Pleaſure ſee that, and other ſuch-like Metamorphoſes, in Mr. *S. Schynvoet*'s *Muſæum* at *Amſterdam*."

20. The Province or Kingdom of *Fokien* hath ſuffered very much by ſeveral Wars; and before the preſent Viceroy governed it as a Viceroyalty, was ruled by a potent Prince, who when the *Tartar* ſeized the Empire, would neither ſurrender his Realm, nor acknowledge any Subjection to him: but being treacherouſly invited to Court, on the Pretence of treating concerning ſome important State Affairs there, though he was forewarned and ſmelt the Deſign, he reſolved to venture thither, leaving the Regency in his Son's Hands; being the leſs ſuſpicious, as he thought, that having left the Government in the Hands of ſo brave a Prince as his Son was known to be, the Court therefore would not dare to injure him; and accordingly he went to the Emperor's Reſidence, but was kept there. The more prudent Son, though daily invited, perſiſted to refuſe that Favour, being at the ſame Time convinced his Father was become an involuntary Priſoner at Court: At which being highly incenſed, he began and for ſeveral Years bravely carried on a vigorous War againſt the Emperor; who on the other Side being impatient to reunite this Province to the Empire, was not wanting in the Uſe of all Means tending to compaſs that End; purſuant to which he raiſed a vaſt Army in order to ſubdue the young Prince: Who ſeeing this numerous Force approach him, and finding himſelf unable to reſiſt ſuch a potent Emperor, repulſe his diſproportionate Force, and gain his Point, though at ſeveral Times he gave them very ſevere Blows, at laſt reſolved to quit his Country and ſhip himſelf off. He accordingly prepared a Fleet, embarked with his Forces, and ſteered with them to *Tajoan* or the Iſland of *Formoſa*; where he landed, drove out the *Dutch*, and made himſelf Maſter of that charming Iſle. This Prince is by the Natives called *Quoſing*, but by others *Coxinga*.

The *Dutch Eaſt-India* Company had poſſeſſed this Iſland, and had very ſtrongly fortified it.

At the Time of the *Chineſe* Commotions, and the great Revolution of that Empire, it was utterly neglected and abandoned to the next who pleaſed to give himſelf the Trouble to reduce it. The *Spaniards* of the *Manilhas* or *Luſong*, being but fifteen or twenty Miles diſtant, and being informed hereof, ſeized, built and fortified a City on it; which was afterwards conquered by the *Dutch*, who becoming Maſters of the whole Iſland, built ſeveral other Forts upon it; and deſigned, on Account of its very commodious Situation, to have made it one of the moſt conſiderable Places in all *India*, and the Centre of their Commerce with the adjacent Countries.

21. *Formoſa* is indeed a very beautiful Iſland, which is naturally fruitful, and the Air healthful as well as temperate, very commodiouſly ſituated in the Neighbourhood of *Japan*, *China*, and the *Manilhas*, fit for managing Trade both Eaſtwards and Weſtwards; it being ſo-

ſible for Ships to come thither, and go from thence, the whole Year round.

When the above-mentioned *Chineſe* Prince *Quoeſing* or *Coxinga* landed, there were ſeveral large as well as ſmall Ships in the Haven; and upon the Iſland there were ſettled nine or ten thouſand *Hollanders*, who were as rich, and lived as well as any where beſides. But notwithſtanding the *Dutch Eaſt-India* Company was ſo ſtrong there, the *Chineſe* left their Native Country, and blocked up the Haven with their Fleet; they bravely attached the *Netherlanders*, and their Fortreſſes, and conquered, burnt or deſtroy'd them: So that at laſt they took the City, Forts, and the whole Iſland: They alſo exerciſed ſeveral Cruelties on their conquered Enemies, of whom they killed ſeveral, and cut off the Hands and Feet of ſome, and the Ears and Noſes of others; after which, they ſent theſe miſerable Wretches on board three Ships to *Batavia*. This we muſt underſtand as taken from the *Chineſe* Accounts.

After this Succeſs, they diſpatched away an Envoy to the *Spaniards* at the *Manilhas*, in order to demand a Recognition and Tribute of them; threatening withal, if they refuſed, to treat them as they had done the *Dutch*. But the *Spaniards* ſlighting their Menaces, peremptorily refuſed to comply with their Demands. Before we take our Leave of this Subject, we ſhall relate another Circumſtance that happened to this Prince. He had diſpatched three Ships freighted with Silver, under the Conduct of ſome of his Officers, with Orders to unlade it at *Taioan*. Theſe Officers, inſtead of carrying it where it was bound, bring it to the Emperor of *China*, who appoints them ſafe Conduct, and praiſes the Enterprize. But this Prince being very much enraged at the Treachery, raiſes an Army of above an hundred thouſand Men, and equips an innumerable Fleet, on board of which, with the utmoſt Diſpatch, he ſhipped his Forces, and unexpectedly ſailed up the great *Nankingſian* River, beat both Army and Fleet, by Water and by Land, reducing the Places round about the City of *Nanking*. To which he alſo laid ſuch cloſe Siege, that he plainly ſaw that it was feaſible, and therefore he abſolutely intended to maſter it in a very few Days: Which he had certainly done, had he not declared to his Army, that it was his Pleaſure, that a certain Day ſhould be celebrated with all Manner of Mirth and Jollity, in Remembrance of his Birth-Day, which accordingly began with all imaginable Expreſſions of exceſſive Joy, but ended with a bitter Farewel; for the *Nankingers* having Notice of it, and being informed of the Negligence of their Guards, (thoſe upon Duty, as well as thoſe who were not, being all drunk) took that Opportunity to make ſeveral vigorous Sallies on the Beſiegers from all Parts, fell upon them in the Midſt of their Debauch, beat them out of their Trenches, and killed the greateſt Part of the Army, a few only eſcaping, who ſerved to carry the News.

The Prince with his ſmall Remainder returns to his Iſland, and is reported to be ſo much affected with this ſcandalous Loſs, that running diſtracted he bit off a Piece of his Tongue, which Wound occaſioned ſuch a Flux of Blood, as could not timely be ſtaunched, ſo that he died of it.

His Son, who ſucceeded him, being young, and very little experienced in Military Affairs, his Father's Loſs remained unrevenged; and thus the faireſt Opportunity imaginable of taking *Nanking* was irretrievably loſt by an unſeaſonable Rejoicing, and a ſcandalous Debauch. [Our Author ſpeaks here in the true Language of a native *Chineſe*.]

On the other Side, the Emperor could not reſt, till, in order to revenge the atrocious Affront offered to him and the late Imperial Metropolis, by this unexpected Incurſion, and to prevent any ſuch Attempt for the Future, had mann'd out a Fleet of four hundred and fifty Sail, and embark'd on board them Forces enough to take *Taioan*, which was entirely encompaſſed and blocked up by the Fleet. But contrary to all Expectation, the young Prince taking the Advantage of a favourable Wind, though he had but forty Ships in all, yet by the Aſſiſtance of his excellent Sea-Officers, he heroically attacked, beat, utterly ruined moſt and deſtroyed the Emperor's great Fleet. That Monarch, who thus by dire Experience was inſtructed not to have too mean Thoughts of his Enemy, ſoon reſolved to take juſter Meaſures: Accordingly he renews his Attempt the next Year, and not only ſends more Ships and Forces, but took Care that they ſhould more cautiouſly encompaſs and cloſely ſhut up all the Avenues to the whole Iſland, and kept it in this blocked Condition. Mean while the Prince ſlipping no Opportunity to gall his Enemy, imagining the Coaſt clear, though provided with a very ſmall Number of Ships, boldly flew at his too powerful Enemy; but was beaten out of the Sea, and forced to fly back to his Iſland, where he bravely defended himſelf the Remainder of that Year: But the Coaſts being encompaſſed, and conſequently a Stop put to all Commerce; beſides which, it was alſo afflicted with a very great Drought, there having been no Rain for five Years; and no Relief appearing, he at length being driven to the laſt Extremity by War and Famine, found himſelf forced to ſurrender his Country, and ſubmit himſelf to the Emperor's Mercy, who ordered him to be brought to *Peking*. At Sight of him the Emperor (touched by the tender Years, and the heroick Deportment of the Princely Youth) not only ſpared his Life, but afterwards made him a Preſent of the before-mentioned Iſland, and the Title of King of *Formoſa*, which he accordingly at preſent governs.

Thus the whole Empire of *China*, in the Year 1682, was again ſubjected to one Sovereign, and the Iſland *Taioan* or *Formoſa* ſubmitted to the Juriſdiction of the Province of *Fokien*, with the additional Appellative *Fu*, and is accordingly number'd amongſt the great Cities of that Province.

Its Compaſs takes in a Circuit of five hundred Miles: Sugar and Buck-ſkins are the prime Commodities there, and this Iſland is reckoned about forty Miles diſtant from the firm Land or Continent of *China*.

22. *Focken Fu*, that beautiful and large City, is the chief of this Province, and is very famous for its Commerce with the *Japoneſe*, *Indians*, and *Europeans*, tho' this of late has declined.

This Province contains nine large Cities, amongſt which, as is already hinted, the above-mentioned Iſland of *Formaſa* is reckoned as one. Three of theſe nine are very conſiderable and large, to which is added another Iſland, *viz.* *Haimui*, which is about eleven or twelve Miles in Circuit, is bleſſed with the fineſt Haven in the whole Province, and formerly was poſſeſſed by the above-mentioned Prince of *Formoſa*, and for a long Time bravely held out againſt the Emperor; but ſome time afterwards it was conquered by one of the two Kings, which, as is before related, governed, the one *Canton*, the other *Fokien*. Both of them were rewarded for their great Actions with Donatives; but the King of *Fokien* rebelled againſt the Emperor.

This King of *Fokien* at the ſame Time proſecuted a vigorous War againſt the Prince of *Haimui* by Sea, and the Emperor by Land; who being too feeble to reſiſt them both, ſubmitted himſelf to the Emperor, on whoſe Command being come to *Peking*, he and his Son were put to Death.

In theſe Civil Diſſentions in this Empire, there fell, by the above-mentioned Wars, above Forty Millions of Men. The Names of the remaining large Cities are, *Zhivencheu Fu*, *Hinghoa Fu*, *Chaboen Fu*, *Jenping Fu*, *Quien Fu*, *Tingcheu Fu*, *Changeſu*, and *Taioan Fu*, or *Formoſa*. Theſe nine Capital Cities preſide over ſixty others.

The Number of Cities in the whole Empire amounts to ſeventeen hundred; to particularize the Names of all which would take up too much Time, and tire the Reader, wherefore we have only mentioned the Chief of them. I have barely touched on ſome Events, the Story of which is very well known, happening moſtly within the Compaſs of our Remembrance, and during the Reigns of the laſt *Chineſe* and the preſent *Tartarian* Families; for it would have taken up too much of the Reader's Patience, to have deſcended to Particulars:

Wherefore I choſe rather to ſupply this ſhort Deſcription moſtly from my own Knowledge and Obſervation, having in the mean Time, in the acquiring of one, and making the other, ſuffered great Scandals and Afflictions for Chriſt's Sake, as well as frequently put up my Supplications to him, and implored his Aid in Time of Need, as alſo that he would pleaſe to make his Grace known to the World, which I hereby do, through his great Mercy; deſiring the Reader to give as much Credit to theſe few Pages, as he would to a Perſon that chiefly writes the bare Reſult of his own Knowledge and Obſervation, by which Rule his Pen hath been guided, as it will be in the future Part of this Tract.

I proceed now to treat of the Diſtances of Provinces, and at the ſame Time to deſcribe the People of the Country, the Progreſs of the Chriſtian Religion; the Rivers, Lakes, Shipping, Bridges, and Walls; the *Chineſe* moral Precepts, Education of their Children, Compliments, good Manners, and Learning; their Trees, Fruits, and Vegetables; neighbouring Iſlands, Provinces, Kingdoms and People; concluding with the Nations that have been ſubdued or were annexed to *China* by the preſent Emperor *Canghi*.

23. The Metropolis of the Empire, *Xuntien Fu*, otherwiſe called *Peking*, is ſituated two hundred Miles diſtant from *Leaotung* and *Xantung*; about one hundred and ſixty Miles from *Peking*. *Xanſi* is one hundred and ſixty, *Xienſi* two hundred and fifty, *Nanking* two hundred and ſixty, *Honan* one hundred and thirty, *Kiangſi*, four hundred and thirty, *Chekiang* three hundred and fifty, *Suchuen* ſix hundred and fifty, *Huquang* three hundred and fifty, *Queicheu* eight hundred, *Junan* one thouſand, *Quoangſi* eight hundred and fifty, *Quantung* eight hundred, and *Fokien* ſeven hundred and fifty Miles or Hours from *Peking*. This is the Diſtance of all the Provinces from the Court, computing from the Metropolis of the whole Empire to each Capital City of the reſpective Provinces.

From *Nanking* to *Xantung* is reckoned two hundred Miles, to *Honan* one hundred and eighty, to *Huquang* two hundred, to *Chekiang* one hundred, to *Kiangſi* one hundred and ſixty. This is the Diſtance betwixt *Nanking* and the mentioned capital Cities.

Xienſi is diſtant from *Honan* two hundred Miles, from *Xenſi* one hundred and fifty, and from *Suchuen* two hundred.

Huquang is diſtant from *Chiangſi* one hundred and thirty, from *Honan* one hundred and ſixty, from *Suchuen* two hundred, from *Quoangſi* three hundred and ſixty, and from *Canton* four hundred Miles.

Chekiang lies two hundred Miles diſtant from *Kiangſi*, and above three hundred from *Peking*.

Canton is three hundred and fifty Miles from *Fokien*, four hundred from *Quoangſi*, and three hundred and eighty from *Kiangſi*.

Junan is diſtant from *Quoangſi* three hundred Miles, from *Quiecheu* three hundred and thirty, and from the Kingdom of *Laos* three hundred. Theſe are the reciprocal Diſtances of the capital Cities, computed according to the common Land Meaſure.

The Maritime Provinces are, *Zantung*, *Nanking*, *Chekiang*, *Fokien*, and *Quantung* or *Canton*.

Nanking, *Chekiang*, *Hucvang*, *Kiangſi*, *Junan*, *Canton*, and *Fokien*, are eſteemed the fineſt Provinces.

Xantung, *Xanſi*, *Xienſi*, *Peking*, *Honan* and *Leaotung*, are of the middle Sort.

But *Queichieu*, *Suchuen*, and *Quoangſi* are accounted the worſt of all, by reaſon they are very mountainous, and very much impoveriſh'd by the Wars.

The largeſt Provinces are *Xiengſi*, *Huquang*, *Nanking*, *Junan*, *Kiangſi*, and *Chekiang*; each of theſe larger Provinces is above three hundred Miles wide, and much longer. Compared with theſe, the middle-ſiz'd Provinces are *Peking*, *Xantung*, *Quaongſi*, *Queicheu*, *Honan*, and *Fokien*, and ſo accounted, becauſe they are not above two hundred Miles broad; and alſo *Quantung*, which is but one hundred and fifty Miles long, but full three hundred Miles broad; by which Rule, *Xanſi*, *Leaotung*, and *Suchuen*, are likewiſe reckoned but ſmall Provinces, ſince they are but about one hundred and fifty Miles broad, and one hundred and ſixty in Length.

The principal Maritime Trading Cities, Towns, and Places, which are frequented by the *Indians*, *Japoneſe*, and *Europeans*, are the following ten, *viz.* *Canton*, the Iſles of *Macao*, *Hainan* and *Chaocheu*; all which belong to, and are dependant on the Province of *Quoantung*; and belonging to *Fokien*, are *Fochen Fu*, and the Iſlands *Haemui* and *Tajouan*, or *Formoſa*; theſe drive on a vaſt Trade with the *Europeans* and *Indians*: Beſides which, there are alſo two Cities in *Nanking* and *Xanhai*, and the City *Nimpo* in the Province of *Chekiang*; all which have a very conſiderable Trade with the *Japoneſe*. In the Province of *Xinſi* or *Xienſi* is the great City of *Zinning*, which is a moſt noble Emporium, being the Centre of a vaſt inland Commerce with the Weſtern *Tartars*, *Moungalls*, *Tibetts* and *Ruſſians*.

“ The Iſland of *Macao*, which is mentioned above, belongs to the *Portugueſe*; and they have upon it a Fort and City, if that Name may be given to a few Houſes, which are not encloſed by any Wall: This Place is famous for the Trade which the *Portugueſe* drove there before the *Dutch Eaſt-India* Company chaſed them out of *India*. What they at preſent poſſeſs is by Favour of the *Chineſe*, to whom they are obliged to pay ſervile Obedience, if they intend quietly to enjoy what they hold: All Cuſtoms for Goods imported here are paid to the Emperor; and though the *Portugueſe* preſerve a Sort of Government here, their Power extends no farther than to Caſes which do not concern the *Chineſe*; for they are otherwiſe ſubordinate to the Juriſdiction of the Mandaryns of *Quoantung* or *Canton*.”

24. It may poſſibly contribute to the Information, as well as Entertainment of the Reader, to peruſe the following very ſuccinct and comprehenſive Account of this Empire, written within theſe few Years, by an *Italian* that has reſided upwards of thirty ſeven Years in the Empire, for the Satisfaction of an illuſtrious young Prince, whoſe Inclinations leading him to procure the moſt certain Intelligence, as to the preſent State of all Nations, had found Means to requeſt this Favour of one, who of all others, had the greateſt Opportunity of ſatisfying his Curioſity. There is nothing taken from the Piece except the introductory and concluding Compliments, which having nothing to do with the Matters of Fact, it was thought neceſſary, for the ſake of ſaving Room, to ſtrike them out.

“ As to the Extent of this Empire, it is not eaſy to ſpeak of it with Certainty, for with Regard to the *Europeans*, they have no Opportunity of examining the Frontiers on every Side, in ſuch a Manner as might enable them to decide on this Head, with any Degree of Exactneſs; and as for the *Chineſe*, they have fewer Occaſions, and much leſs Abilities for a Work of this Sort. To ſay the Truth, the Thing itſelf is ſcarce practicable, there being nothing more difficult, than to fix the Extent of the Territories of the *Tartar* Princes, dependant upon this Empire, and yet without this, there is no doing any Thing. It is true, the old *Chineſe* Writers tell us, that their Empire was formerly much greater than it is at preſent; that *Japan* was once ſubject to them, as alſo the Kingdoms of *Tunkin*, *Siam*, &c. and part of the Dominions of the Great Mogul; but for all this, I am apt to believe, that ſince the *Tartars* became laſt Maſters of *China*, which is now a compleat hundred Years, the Empire is to the full as large as ever it was. Its bounds at preſent are the Dominions of the *Ruſſians* on the North, the Ocean on the Eaſt, and on the South, for I look upon the Peninſula of *Corea* as dependant upon this Empire; on the Weſt, they have great Deſarts, and the Countries under the *Contaiſh Khan*, which ſtretch as far as the *Ruſſian* Territories; and this is all I am able to ſay, as to the Extent of this Empire, except that according to a Perambulation that I have ſeen, the Line of their Boundaries is computed at about ſeven thouſand Miles, which, as far as I am able to judge, does not exceed the Truth.

“ I can ſpeak more particularly, as to the Climate; it extends from 18 Degrees of Latitude to 55, and conſequently takes in all the Climates from the third to the tenth, ſo that the longeſt Day in the moſt Southern Parts is thirteen Hours and a half long, and in the moſt Northern about ſeventeen Hours. The Heat is great in the Southern Provinces, and the Cold very ſevere in the North. As to the former, I have been upon the Coaſts of *Bengal*, and I think it not at all warmer than in *China*. I have been alſo in *Poland*, and did not find it ſo cold there as in the Northern Parts of *China*, or rather of *Tartary*, about the River *Amur*. By this Means they have at *Peking* all Sorts of Fruits, by which I do not mean every Kind of Fruit, but of thoſe different Sorts that are peculiar to the warmeſt and coldeſt Climates; as for Inſtance, the moſt high flavoured Oranges and well-taſted Apples; but there is this Difference between them, that Nature brings the Southern Fruits to the higheſt Perfection, with little or no Culture, whereas thoſe of the North require a great Deal, which however the *Chineſe* never beſtow upon them; hence therefore three or four Sorts of Apples, and five or ſix of Pears, is all they can boaſt; and as for Cherries, they have them both red and black, but they are neither of them good, though they might have them, if they were at Pains, in the utmoſt Perfection.

“ It is eaſy to diſcern from hence, that there are no Kind of Commodities or Manufactures wanting in this Country, and a very few Specimens will convince you of the Truth of this; they have the very beſt Silks of all Kinds in the World, and in a vaſt Abundance; they have very rich Furs, which I take to be the oppoſite of Silk; they have alſo prodigious Quantities of Cotton, and are not deficient in Wool. They have Metals of all Sorts in great Plenty, except Lead; they have likewiſe all Kinds of Wood, Sugar in the utmoſt Abundance, and Spices ſufficient for their own Uſe, and yet they uſe a vaſt deal. It was from a true Senſe of their own Abundance, that the ancient *Chineſe* were averſe to Foreign Trade; and if the *Tartars* permit it, it is upon this Principle, that their Subjects are vaſt Gainers by it; for except Toys and Lead, there is nothing comes to a good Market in *China*.

“ At preſent the Empire of *China*, excluſive of its Dependencies, is divided into fifteen Provinces. Thoſe of *Chenſi*, *Chanſi*, and *Petcheli*, in which laſt is the Imperial City of *Peking*, are bounded by the famous Wall which divides *China* from *Tartary*; thoſe of *Chan tong*, *Kiang nan*, in which is *Nanking* the old Capital, *Tche kiang* and *Fokien* lie on the Eaſtern Ocean; thoſe of *Quang tong*, *Quangſi*, *Yun nan ſe tchuen*, lie on the South, and on the Weſt; *Honan*, *Hou quang*, *Koei tcheou*, *Kiang ſi*, are Midland Provinces. They divide their Towns into four Ranks, which it is impoſſible to deſcribe; the three firſt have Names, the laſt are ſuch as are under the Juriſdiction of the reſt, and conſequently have no particular Denomination. The great Cities they ſtile *Fou*, and of theſe they reckon one hundred ſeventy three. The larger Towns they call *Tcheou*, and of theſe they reckon two hundred thirty five. They give their biggeſt Boroughs the Name of *Hien*, and of theſe they reckon eleven hundred and ſeventy three; as for the ſubordinate Places, I dare not call them Villages, for many of them are walled, and ſome of them contain fifty thouſand Souls; theſe, I ſay, are without Names, and without Number.

“ They pretend to be very exact in their Computations of the Number of their People, and from the beſt Enquiry I have been able to make, though the Thing muſt appear romantick and ridiculous in *Europe*, I am convinced that they are not much beyond the Truth, in affirming that their Emperor has ſixty Millions of Souls in his Dominions.

“ One would imagine that vaſt Difficulties muſt ariſe to the Government, from ſuch a Multitude of Subjects; but it is quite otherwiſe, for Government is with them a ſyſtematical Thing, reduced under certain Rules, with which, ſo far as he is concerned, every Man in the Empire is acquainted, and moſt of them no farther. The Emperor himſelf has his Circle of Buſineſs, which he is obliged to go through, and which cannot be done for him, and therein conſiſts the great Secret of their Policy. He has always the State of ſome Province or other under his Inſpection, and when one is finiſhed, Nobody knows which will be the next; but all theſe Inſpections are made with great Strictneſs and Severity. It is true, that in ſome Province or other, Corruption prevails perhaps for twenty or thirty Years, but it is as true, that ſome Time or other all this is redreſſed, and Things are brought back again to their original Inſtitution. The firſt Maxim in the *Chineſe* Syſtem is, that the Emperor acts as the Father of his People, he may indeed be a bad Father, but he would be ſoon told of that; by his abſolute Power he might diſpatch this Monitor, but that would quickly produce more; there are always many Patriots in *China*, who for the Sake of that Glory, which reſults from doing good to the Society, are ready to lay down their Lives; yet after all, Things are ſeldom puſhed to this Extremity, and it is more common to ſee the Emperor confeſſing his Faults and Weakneſſes in his publick Edicts, which are generally calculated to repair them, and are uſually concluded with many fair Promiſes for the Future.

“ It is certain, that the People are very corrupt, and that this Corruption runs through all Ranks; but their Scheme of Government is ſo wiſe, that ſooner or later theſe Corruptions are met with; ſo that Vice ebbs and flows, and is driven out of one Province, when it gains Ground in another; but ſtill there is ſuch a Stock of Virtue, as ſerves to preſerve the whole, and to keep the Machine moving. Capital Puniſhments are very rarely inflicted, for there are more Executions in a Year in *Naples*, than in all *China*; one Year with another, there are not three in *Peking*, but there is a kind of Puniſhment more exemplary, and more uſeful than Death, that is very common; their Mandarines, even of the higheſt Order, may be degraded, and he who had Yeſterday a Train of twelve hundred Men, ſhall be To-day upon a Level with the meaneſt of them, but never without Cauſe; for though there is Injuſtice enough in all their Tribunals, yet the laſt Reſort is pure, and the *Tartar* Emperors have been hitherto the Fathers of their People, in almoſt all, but in that Reſpect more eſpecially. Their Armies are very numerous, and according to their Mode very well diſciplin’d, yet their Fire-Arms are but indifferent; it is their Numbers that ſecure them from any Danger from their Neighbours; in one Thing they are ſingular, their Motions create no Diſorder, a Body of fifty thouſand Men will traverſe the whole Empire without taking an Egg or an Apple by Force. Their Traders are all Cheats, and their being ſo is no great Inconvenience or Detriment to Commerce, for it makes them all very expert and attentive; ſince their Maxim is, that it is not the Perſon who does the Wrong, who impoſes upon another, but he that is outwitted that does wrong himſelf. As great as their Country is, the Number of People that are in it would ſoon be reduced to Starving, if every Spot was not cultivated that will admit of it, and every Hand employed that can work.

“ This is a ſhort but a true Repreſentation of this Empire, and of thoſe that compoſe it. It is not like to extend itſelf, but it will certainly laſt for many Ages. The *Chineſe* never will make Conqueſts, or puſh their Foreign Commerce beyond its preſent Bounds. *Ningpo* will be the Center of the *Japaneſe* Trade, *Amoy* of the *Indian*, and *Canton* of the *European*, as long as they continue a Nation. They have been long free from inteſtine Commotions, but in ſucceeding Times they may be expoſed to them; and yet thoſe Revolutions, though deſtructive to Individuals, can hardly be dangerous to the Empire. The Proſperity of their own Government is the ſole Object of their Conſideration; their Stateſmen, and more eſpecially their Emperors, are far from being

“ to

“ ſo ignorant of Foreign Affairs as is imagined; they “ know enough of them for their Purpoſe, and they “ have neither Leiſure, Occaſion or Inclination to know “ more; they are naturally civil to Foreigners, but at “ the ſame Time they are naturally jealous of them. “ To ſum up all, they look upon themſelves to be the “ Wiſeſt, the Greateſt, the Richeſt, the Happieſt, and “ the moſt Powerful of all Nations; and, excluſive of “ their Spiritual Concerns, thoſe who are beſt ac- “ quainted with them, will think them the leaſt miſ- “ taken.

25. After this conciſe Detail of the *Chineſe* Affairs, it is Time to haſten to the End of this Subject, by giving our Readers the remaining Part of *Dionyſius Kao*'s Deſcription and Account of his own Country, which is written in ſo plain, ſo diſtinct, and ſo juſt a Manner, that it will be eaſily perceived it differs as much from the Accounts given us by the Jeſuits, as it is poſſible for Pieces to do that are written upon the ſame Subject, and neither of which can be ſaid to be abſolutely void of Truth: For moſt of the Deſcriptions given us by the Miſſionaries, are penned in a high-flown rhetorical Stile; and every Thing in them is repreſented ſo much beyond the Life, that either we do not conceive it at all, or the Notions we form are quite beſide the Truth. But what our *Chineſe* writes is in an eaſy, ſimple, and familiar Way, and in ſuch a Way as leaves us in no Doubt that he tells us the Truth, and nothing more or leſs than the Truth. In his Account, the Reader will obſerve a Clearneſs and Candour that is ſcarce to be found in any other Thing of the like Nature, as well as a Strain of ſincere Piety, that has very little in it of Superſtition, and nothing at all of that Hypocriſy, and Cant with which moſt of the Deſcriptions of *China* are burthened. The Contents of it will very fully ſupport and confirm what is delivered in the foregoing Memorial, and afford a Picture at whole Length, of what is there repreſented only in Miniature.

Before we put an End to this Section however, I crave Leave to make one Obſervation of my own, which I flatter myſelf will enable the Reader to deliver himſelf from a difficulty that has hitherto been thought almoſt inextricable. It is this: Some Writers, very well acquainted with *China*, repreſent its Inhabitants as the moſt ingenious, the moſt penetrating, and the moſt happy in their Inventions, of any People in the World; while others again, who pretend to know them full as well, poſitively aſſert, that their Notions are narrow, their Inventions mean, their Execution very incorrect, and that, in ſhort, they fall full as much below the *Europeans*, as their Admirers would place them above them. Now common Senſe ſeems to teach us, that one of theſe opinions muſt be abſolutely falſe, and yet it is not very eaſy to diſtinguiſh which, ſince the Authorities on both Sides are pretty nearly equal. On the ſtricteſt Enquiry I begin to think, that both theſe Notions, properly underſtood, are reconcileable enough to Truth, and even to one another. If we compare the Arts and Sciences of *China* with thoſe of *Europe*, there is no Doubt that in moſt Things they fall very far ſhort; and yet compared with the reſt of the Eaſtern Countries, their Knowledge and their Performances are very extraordinary.

But on the other Hand it is to be conſidered, that the *Europeans* have had much greater Experience, and much better Maſters: For as to the former it is notorious that we have all the Lights which various Countries and various Ages can beſtow, what the *Greeks* left unfiniſhed to the *Romans*, what the *Romans* farther perfected, and what, upon the Revival of Arts and Sciencies in *Italy*, was cultivated with that Zeal and Diligence, which is natural when Arts are emerging out of Barbariſm, at once excites and directs our Endeavours in theſe later Times. But beſides all this, there is and has been a vaſt Spirit of Emulation in the different Parts of *Europe*, and what has been firſt ſtruck out in one Country, has been altered, improved and carried to the higheſt Perfection in another. By this Means we are become, in moſt Things, infinitely ſuperior to the *Chineſe*; but if we conſider Things in another Light, we muſt allow them to be ſuperior in their Turns.

They have been always a diſtinct and detached Nation, having nothing to do with the reſt of the World, or at leaſt nothing to do with them in this Reſpect; all that they have acquired, with regard to Science, all that they perform, in reference to Arts, is ſolely of their own Invention, Proſecution, and Improvement; and therefore they deſerve in this Senſe the higheſt Praiſes. If Printing, Artillery, the Uſe of the Compaſs, and many other Things, ſeem very rude amongſt them, in Compariſon of that Neatneſs and Perfection to which they are arrived with us; yet we cannot deny, that they had them long before us; and after all, there may be many Things ſaid in Excuſe of that State in which they are found here; for their Manner of expreſſing their Language in Characters, the Method they uſe in Printing is better than ours; their Artillery are ſufficiently ſerviceable for any the Purpoſes to which they employ them; and as to their Navigation, conſidering the Maxims upon which their Commerce is carried on, it may be very doubtful whether they wiſh, and conſequently we need not wonder, that they are not ſolicitous to arrive at any farther Perfection.

Thus I apprehend this Knot is fairly untied, and the Diſpute ſettled, as to the Proficiency of the *Europeans*, and the Ingenuity of the *Chineſe*; if the former excel in the one, ſo do the latter in the other; and if we know Things better, we have this Knowledge from others; whereas they have all from their own Stock, and had all they have much earlier than we.

SECTION VI.

A copious, accurate, and authentick Account of whatever is moſt remarkable in Regard to Perſons or Things throughout the whole Empire of *China*; more eſpecially the Number of the Inhabitants in general, and of the Chriſtians in particular; the Rivers, Shipping, Lakes, Bridges, &c. The different Religions that prevail, and have prevailed, amongſt the People; their Manners Ceremonies and extraordinary Politeneſs. Of the remarkable Trees, rich Fruits, and valuable Drugs in this Country; together with a ſuc-

cinct Account of thoſe Kingdoms, that either now depend, or formerly depended upon it.

By Dionysius Kao, *a Native of* China.

1. *An Account of the vaſt Numbers of People in this Empire, together with Proofs of, and Reaſons for, its being ſo populous.* 2. *An Account of the Progreſs of Chriſtianity, and of the Number of the Chriſtians in* China *towards the Cloſe of the laſt Century.* 3. *The Situation and Extent of the famous* Chineſe Wall; *the famous Rivers, and prodigious Quantity of Shipping in this Empire.* 4. *Of the moſt famous Lakes, the moſt remarkable Bridges, and the moſt celebrated Ports in* China. 5. *The Religious and Philoſophical Opinions of the* Chineſe, *more eſpecially thoſe of* Confucius *and his Followers.* 6. *Of the breaking out of a deteſtable Hereſy that ſtill prevails in this Empire, and of the Entrance and Progreſs of Idolatry amongſt the* Chineſe. 7. *Of the Prevalence of Atheiſm in this Country, the Nature of it, and the pernicious Effects of their ſuperſtitious Regard for Antiquity.* 8. *Of Deiſm, or Natural Religion, as profeſſed and practiſed by the wiſeſt and beſt Sort of People in* China. 9. *Of the Eſtabliſhed Religion among the* Tartars, *their Lama's or Prieſts, and of the* Dalai Lama, *or Living God; with the ſurprizing Progreſs of this abſurd Superſtition.* 10. *Of the Ceremonious Civilities and Compliments eſtabliſhed by Law in* China; *and of the Rules preſcribed to all Ranks of People in Reference to Things of this Nature.* 11. *Of the Marriages amongſt the* Chineſe; *of their Manner of Living in their Families, and other Things of that Nature.* 12. *Of their Funeral Solemnities, their long Mourning, and the ſuperſtitious Honours paid to Perſons deceaſed.* 13. *Of the Lanthorn Feaſt, and of other publick and private Feſtivals obſerved by this Nation.* 14. *Of the Trees, Fruits, Flowers, Herbs, Drugs,* &c. *in* China. 15. *Of the Animals, Mines, Metals and Minerals in this Empire.* 16. *The Author's Account of* Japan, Corea, Formoſa, Tunkin, *and* Laos. 17. *Of other Countries formerly dependent on, or that have been lately ſubjected to the Emperor of* China.

1. IN the Villages and Towns, as well as Cities in *China*, the People are reckoned not by ten or hundred thouſands, but by Millions: Their Numbers are ſo vaſt, and *China* ſo prodigious populous, that it really ſeems incredible; and thoſe who have taken a View of this Country from an exalted Place, have always compared the Number of Men to that of Ants creeping in Crouds amongſt one another. They are indeed ſo numerous, that common and very indifferent Houſes are charged with five or ſix Families: And the Roads, Streets, and Lanes, are ſo crouded, that it is ſcarce poſſible to paſs without juſtling one another. All this will appear yet more ſurprizing, if it be conſidered, that no Woman appears in Publick in any Part of *China*, except at *Peking*; they never go on Foot, but are carried in covered Seats or Chairs, wherever they pleaſe.

The moſt populous Cities are *Nanking*, *Hangcheu*, *Sucheu*, *Peking*, *Jungcheu*, *Canton*, *Fochen*, *Viichang Fu*, *Chengcheu*, and *Zuencheu*, beſides ſeveral others. Not to mention the fabulous Relations concerning the firſt planting and peopling of Countries, I am of Opinion that the firſt Inhabitants of this Empire were the Deſcendants of *Shem*, *Noah*'s eldeſt Son; for in the Diviſion of the World they ſeem to be all diſtributed in *Aſia*, of which *China* is Part: And at the Confuſion of *Babel*, traverſing that Quarter of the World, probably ſettled here, becauſe they found no Part of it better than this, which is bleſſed with a healthful Air, temperate with Regard both to Heat and Cold: The Fertility of the Paſture Grounds, which richly feed all Sorts of Cattle, invited their Choice, and in a Manner forced them to take up their Abode here. After which, Experience confirmed the Happineſs of their Choice, by their being amply provided not only with all Neceſſaries to human Life, but even with whatever Luxury could wiſh. Induſtry, Art, and Prudence, improved the natural Liberality of the Soil, and engaged their Neighbours to think *China* the Garden of the Univerſe, and its Inhabitants the wiſeſt and moſt polite People in the World; and that thoſe of their Neighbours, who ſucceeded beſt in the Imitation of them, were next them eſteemed the moſt intelligent People of *Aſia*. Buoyed up by this vaſt Reputation, they extended the Limits of their Empire far beyond the Bounds of *China*: And not only *Tunchin*, *Cochin-China*, and *Laos*, beſides ſeveral neighbouring Iſlands; but the Kingdoms of *Siam*, *Pegu*, Part of *Tartary*, *Camboja*, and *Japan*, have been ſubordinate to them, as may be ſufficiently proved by their complying with and continuing to make Uſe of the ſame common Cuſtoms; which is alſo confirm'd by the *Chineſe* Empire, being known to be above one thouſand Years old, and to have always retained the ſame Language, Doctrine, Government, and Habit, down to this Time. Though indeed one Exception lies to that General Rule, which happen'd about fifty Years paſt; and that was the changing their Faſhion of wearing their Hair, when the *Tartars* overpower'd their Monarchy; but that Alteration was a coercive Acknowledgment of their wretched Slavery.

The *Chineſe* formerly wore long Hair, of which they were not a little proud, adorning it with Gold Wire, and firmly believing that they ſhould be drawn up to Heaven by it; which doubled the Severity of the Command that obliged them to part with it, and comply with the *Tartarian* Faſhion; and engaged them rather to ſuſtain the Fatigues of a cruel War, at the Expence of a great many Lives, than ſuffer their Hair to be cut off: But the *Tartar* had proceeded too far to be oppoſed. However the Prudence of the Emperor, and the Mildneſs of his Government, permitting the *Chineſe* Men of Quality, called Mandaryns, quietly to enjoy their important Poſts, ſomewhat alleviated the melancholy Reflections, occaſioned by this Loſs, and their Slavery; for the *Tartars* having ſubjected *China*, did not ſhew themſelves ſolicitous to make any Alteration in its ancient Form of Government; and, as I juſt now hinted, the *Chineſe* Mandaryns remained in the ſame State and Character as before, only having an equal Number of *Tartars* added to them: And by theſe ſubtle Meaſures the foreign Power, which they were always jealous of, ſtole in upon them. And this Maxim was ſo well obſerved, that all the Courts of Juſtice, from the higheſt to the loweſt, were equally ſupplied with a *Tartarian* and *Chineſe* Judge; and indeed the whole Government is jointly entruſted in the Hands of *Tartarians* and *Chineſe*, and to this preſent Time, peaceably adminiſtred in Subordination to the Commands of the Emperor of *China* and *Tartary*.

In the Reign of the preſent Emperor, the Chriſtian Religion is more freely indulged than ever; ſo that we ought not to deſpair, but that the whole Empire of *China* may in Time embrace that Faith which only leads to Salvation. And from the firſt Entrance of the Miſſionaries into that Empire, they have continually uſed their utmoſt Induſtry, to engage this ſubtle Nation to embrace Chriſtianity, and plant that ſaving Doctrine, which is at this Time very widely ſpread in *China.*

Kanghi, the preſent reigning Emperor, in the Year 1692, granted to the Miſſionaries and Jeſuits, Freedom for all the World to worſhip God in their Churches, which is the ſame as to become Chriſtians; and this Edict, purſuant to the Emperor's Pleaſure, was ratified by the Supreme Court of Juſtice of the Empire; and empowered thoſe, who thought fit to cauſe themſelves to be baptized, afterwards freely to exerciſe the Chriſtian Religious Worſhip, without the leaſt Interruption, which before that Time was prohibited; a Favour that had long been earneſtly deſired, and before which the Chriſtians had run through many ſevere Perſecutions: But now by the Divine Goodneſs, we are delivered from ſore Afflictions and Oppoſitions, for which we continually return our Thanks to Almighty God.

About the Middle of the ſixteenth Century, *Francis Xavier*, deſigning to plant the Goſpel here, died in Sight of Land, as he was coming from *Japan:* After him ſeveral Miſſionaries and Prieſts came into this Country with the ſame Intent, *viz. Martinus Xerrada, Geronimo Marino, Michael Rugieri, Piedro Alſaro*, and *Matthias Ricci*, beſides ſeveral others, who a little before the Year 1600, laid the firſt Foundation of this good Work in the Reign of the Emperor *Vanlie.* Father *Ricci*, whom we named laſt, diſtinguiſhed himſelf above all the reſt; he converted ſeveral of the Nobility, and acquired a very great Reputation; he perfectly underſtood, and fluently ſpoke the *Chineſe* Language; and being a ſedulous and faithful Labourer in the ſpiritual Vineyard, made the moſt ſucceſsful Beginning, on which Account he hath always been thought the firſt of the Miſſionaries.

Whilſt this Father *Ricci* was in *China*, and in the Reign of the Emperor *Vaile*, the *Tartars* made an Irruption into *China*, took ſeveral Cities, and conquered ſeveral Countries; but were ſhortly repulſed by that illuſtrious Prince; after which he ruled in perfect Peace, and in the Year 1620, the eight and fiftieth of his Age, and forty-eighth of his Reign, he died. Not long before, about the Year 1615, aroſe a furious Perſecution, which threatened the utter Extirpation of the Faith that was ſo lately planted. Theſe exorbitant Cruelties were principally puſhed on by *Chinkio*, one of the chief Magiſtrates of *Nanking*; and by a malicious Cunning the Shepherds were the moſt vigorouſly attacked, in order the more ſucceſsfully to deſtroy the Flock; but after they had ſuffered great Afflictions for the Space of ſix Years, their Perſecutor was puniſhed by Death, and the Church recovering her former Liberty, began to encreaſe daily, eſpecially after the Arrival of Father *John Adam, Schaal* or *Scaliger*, whoſe Learning, Mathematical Knowledge, and prudent Conduct, acquired for him one of the chief Places in the Emperor's Favour, and the good Opinion of the whole Court; which furniſhed him with an Opportunity of farther propagating and confirming Chriſtianity. And though in the Interim the great Revolution happened, which transferred the Crown to the *Tartarian* from the *Chineſe* Family, by the Death of *Zunchi*, the laſt of the Race of *Taiminga*, which had ſwayed the Imperial Sceptre for the Space of two hundred and eighty Years, and produced in that Time ſixteen Emperors; yet the ſagacious Father *Adam Schaal* rendered himſelf ſo agreeable to the new *Tartarian* Court, that he became Preſident of the Tribunal of Mathematicians, and continued, though not without Envy, the Emperor's Favourite; and after having enjoyed that Poſt for ſeveral Years, died in 1665.

2. *Yamquamſien*, the wicked Inſtrument of the moſt cruel Perſecution that ever was in *China*, ſucceeded Father *Adam Schaal* in his Preſident's Charge: But his Reign did not continue long, being oppoſed by Father *Ferdinand Verbieſt*, who clearly demonſtrated his Abilities for that Poſt to be far ſuperior to thoſe of his Perſecutor; wherefore he was promoted in his Place, and *Yamquamſien* fell into ſuch a Diſgrace, that he narrowly eſcaped a Sentence of Death, as the Reward of his Perſecution againſt Father *Adam*; a Stop being put to that Perſecution by the eſpecial Mercy of the Emperor.

After the Death of Father *Ferdinand Verbieſt*, in the Year 1688, which was lamented by the Emperor himſelf in a Funeral Elegy, he was ſucceeded in the beforementioned Charge of Preſident of the Mathematical Tribunal by Father *Philip Grimaldi*, who filled that Poſt as honourably as his Predeceſſor, and advanced himſelf to ſuch a high Place in the Imperial Favour, that in the Year 1689, he was ſent Ambaſſador from the Emperor into *Europe*, to adjuſt ſome important Affairs in *Muſcovy* with the Czar; his Preſident's Poſt in the Tribunal being worthily ſupplied till his Return by the Fathers *Thomas Pareira* and *Anthony Thomas.*

" This is the ſame Father *Pereira*, who, in Con-
" junction with Father *Gerbillon*, was twice ſent, they
" being dignified with the Title of *Mandaryns* of the
" third Rank, as Interpreters in the great Embaſſy and
" Treaty of Peace at *Nepchou*, by the *Muſcovites* called
" *Nerzinſkoy*, and of whom it is reported, to their great
" Honour, that they ſuggeſted the Meaſures which ren-
" der'd the Treaty of Peace betwixt the *Muſcovites* and
" *Chineſe* ſucceſsful. To which Purpoſe, *Gerbillon* went
" ſeveral Times alone to the *Muſcovite* Camp, and ſo
" far convinced that Nation of their true Intereſt, that
" the Treaty of Peace betwixt the two Empires was
" ratified and ſworn on the 3d of *September*, 1689."

The Number of Chriſtans daily increaſed, from the Reſpect paid to the Jeſuits by the Court, and the Emperor's zealous Inclination for the *European* Arts and Sciences, inſomuch that the leaſt Number of Chriſtians computed to be in *Peking* was ſixteen thouſand; in *Nanking* an hundred thouſand. In the aboveſaid large trading Village or Town *Xanghui*, there were but ten thouſand; in the Province of *Chekiang* are reckoned ſeven or eight thouſand; in *Koangſi* they amount to about ten thouſand; in *Huquang* there are ſix or ſeven thouſand; in *Canton* about ten thouſand; in *Fokein* about five thouſand; and in *Xienſi* about three thouſand. The whole Number of Chriſtians throughout the whole Empire being computed to amount to two hundred thouſand. But the Number of Shepherds which carefully watch this Flock, and ſedulouſly endeavour the Converſion of others, is not above ſixty.

3. The prodigious Wall which covers this Empire, is called by the *Chineſe* in their own Language, *Vauli Tcham Tchim*, and was built ſome Centuries before Chriſt's Time by the *Chineſe* Emperor, *Chien Chu Voang*, in order to prevent the Incurſions of the Weſtern *Tartars:* For which End it is extended from the *Leaotungian*, or oriental Sea, far beyond the Middle of *Xienſi*, and includes the Provinces of *Peking*, *Xanſi*, and almoſt all the Country of *Xienſi:* Its Length is computed directly as a right Line at above 650 *French* Miles, but reckoned as a Curve Line amounts to one thouſand: Whence its *Chineſe* Name was derived, which imports a thouſand Miles: It is full eight El's thick, and ſix high. It is not a little ſurprizing to ſee this bulky Wall in a Manner ſkip over the moſt terrible and ſteep Hills, and to obſerve three or four lofty Towers or Forts within the Compaſs of every Mile, as well as its having run through ſo many Ages, and its being in ſuch good Caſe at preſent, which is owing to conſtant Surveys, and timely Repairs. The two principal Rivers in this Empire are, the Yellow River, in *Chineſe* called *Hoangſo*, and *Yangſu Kiang*, that is the Son of the Sea, ſo called on Account of its vaſt Depth and great Breadth, it being full two Miles wide: It is alſo called the *Nankingſian* River, becauſe it runs through the Province, and cloſe by the City of that Name. This laſt River is navigable throughout the whole Empire; ſeveral ſmall Lakes as well as ſeveral Rivulets fall into it, which riſe in the Provinces *Kiangſi, Huquang, Quangſi, Quantung, Chekiang, Suchuen* and *Honan*; and there are beſides, Paſſages cut and rendered navigable from this to the other principal River. The Courſe of the Yellow River is extended to a very great Length, and runs thro' ſeveral Countries, it is alſo very deep, broad in ſome Places and narrow in others: It riſes out of the Lake

in the Weſtern Quarter of *Tartary* and runs through the Provinces of *Xanſi*, or *Xienſi*, *Honan* and *Nanking*, where at laſt it falls into the Sea. This River is ſcarce navigable by Reaſon of its prodigious Rapidity, and the vaſt Floods which frequently deſcend into it from *Tartary* and the Northern Parts, (through which it runs;) and ſometimes prove very miſchievous to both Men and Cattle, by carrying away Houſes, Hutts, Fields and whatever is upon them, and at other Times ſweeping away whole Villages and Cities.

Beſides theſe two Principal there are other Rivers, as *Zhientangkiang* which is very broad, but not comparable to the two former in Length or Depth; running only through the Province of *Chekiang*, and then falling into the Sea. The remaining Rivers, though ſome of them are large, are much leſs conſiderable than theſe which have been deſcribed.

Beſides the natural Streams or Rivers, here are ſeveral artificial large navigable Channels; moſt of the Provinces are provided with one of theſe broad Channels of long Extent, for a Conveyance from one Province or River to another: They are commonly cut in a direct Line, paved with flat Stones, and adorned with beautiful lofty Stone Bridges, the Arches of which afford a very fine and regular Proſpect. Some are of Opinion that the Yellow River was cut by human Induſtry, above three thouſand Years paſt, by Order of the Emperor *Juvoang*: And to ſtrengthen their Aſſertion, they add, that the Land whereabouts it riſes was overflowed by a vaſt Inundation of Water, and that the Emperor, in order to draw it off, cauſed a very wide and very long Channel to be dug, which making Way for this Deluge, it broke through, and diſcharged itſelf with ſuch Force into theſe artificial Channels, that it compoſed the Yellow River. But this meets with a very cool or rather no Credit; it not being poſſible for the Flux of Waters occaſioned by ſuch an Inundation perpetually to ſupply a River, whoſe Length is above ſix hundred Miles, and the Current of which is ſo ſtrong, beſides its vaſt Depth and Breadth.

There are navigable large and convenient Canals to all Places of the Empire, except only in the Provinces of *Suchuen*, *Queicheu*, *Xanſi* and *Xienſi*.

In *China* the Quantity of Ships is innumerable as the Sand of the Sea: Thoſe which carry Corn only to *Peking* amounting to 9999 large Ships, ſufficient to carry above thirty or forty thouſand Weight: And their Paſſage from *Nanking* to *Peking*, being ſeven or eight hundred *Italian* Miles, moſtly through artificial Channels, take up full ſix Months time. Beſides theſe, there is an equal Number of Ships made uſe of to carry Silk Stuffs and other Goods thither; ſo that they are prodigiouſly numerous, beſides the Ships which belong to particular Merchants: So that it is not only feaſible to ſtep from Ship to Ship as on a Water-Key, from *Nanking* to *Peking*, but as the Jeſuits expreſſing their incredible Number ſay, if it were but practicable in other Reſpects, here are Ships enough to make a Bridge from *China* to *Europe*.

“ The ſame Number of Nine thouſand nine hundred
“ ninety nine being before-mentioned, we will explain
“ both Paſſages here: *Le Comte* ſaith that the Barges
“ from eighty to an hundred Tuns Burthen, make this
“ Voyage once in a Year; but in another Place he tells
“ us, That 9999 are always kept in a Readineſs; to
“ which he adds, ſo runs the common Report of the
“ People, by Reaſon that ſuch a Sort of Expreſſion in
“ their Language imports a much larger and indefinite
“ Number, which may fairly be conſtrued ten thou-
“ ſand.

“ The ſame *Le Comte* calls it a watry Road, deſtined
“ for the Tranſportation of Grain and Stuffs from the
“ Southern Provinces to *Peking*. The Number of Ships
“ (ſaith he) is ſo large, that whenever one ſees that nu-
“ merous Fleet paſs by, one would be apt to ſay, they
“ were laden with all the Tribute and Treaſures of
“ the Eaſt, and of all their Monarchs, and that one of
“ their Returns would furniſh ſufficient Stores of Pro-
“ viſion to ſupply all *Tartary* for many Years.”

Beſides theſe ſmaller Veſſels, there are at *Nanking*, and alſo ſeveral other Havens of the Empire, Ships which are twice as large as theſe, being of ſeventy or eighty thouſand Weight Burthen; and theſe ſerve to carry Salt to every Port in the whole Country. There are alſo Abundance of magnificent Barks or Ships which belong to the *Mandaryns*, Governors, and others of the Nobility, which are provided with ſpacious Halls and Apartments, very richly furniſhed, as alſo with Galleries, Rails, Windows and Doors, for Convenience and Pleaſure; they are beſides finely gilt, lacquered, and beautifully painted with the fineſt Colours. There are likewiſe ſeveral Pleaſure-Boats, made Uſe of by the *Chineſe* only for Diverſion and Merry making; theſe are alſo provided with Chambers and Apartments which are finely painted, lacquered and gilt both within and without; ſo that indeed they deſerve rather to be eſteemed Floating Houſes than Ships: Beſides all which, all Parts are abundantly provided with all Sorts of neceſſary Barks or Boats for Travellers: For there is ſcarce a City whether large or ſmall, to which there is not a Paſſage by Water. And what is yet more, here are a Sort of driving Floats, on which whole Families live, by keeping Ducks, or following ſome other Trade: So that indeed, when one ſees ſuch various Sort of Craft in one Vehicle, they ſeem ſtrongly to reſemble a floating City, in which the Veſſels run together like Ants.

4. There are in *China* ſeven or eight famous Lakes or ſmall ſtanding Seas; three of which are the largeſt and moſt celebrated.

The firſt called *Tungtinghu* is in the Province of *Huquang*, and is four hundred Miles in Circuit.

The ſecond is in the Province of *Nanking*, not far from *Sucheu*, and is alſo about four hundred Miles in Circuit: This Sea is beſides very deep, and hath in the Middle of it an Iſland called *Thaihu*, which is about ſeven or eight Miles in Compaſs and very mountainous.

The third is in the Province of *Kiangſi*, its Circumference is about three hundred Miles. Theſe Lakes, by Reaſon of their towering hollow Waves and Roughneſs, appear to the Sight like the boiſterous Ocean. The other Meers are in *Nanking*, and are about two or three hundred Miles in Circuit. We are told prodigious Stories concerning ſome Lakes in *China*, *viz.* That the Waters of that in the Province of *Canton*, annually exchange their Colour; that there is a Lake of green Water in *Fokien*, which tranſmutes Iron to Copper; that there is alſo a Palace on the Shore of another and not very diſtant Lake, where a Ringing of Bells is always heard againſt ill Weather; and ſeveral other like Reports are ſpread, the Truth of which we entirely leave to the experimental Examination of others, having had none ourſelves.

There are great Numbers of fine built Stone Bridges in *China*, which are ſupported by Stone Arches: Two of theſe Bridges are the moſt conſiderable and extraordinary, being built over an Arm of the Sea: One of them is called *Loiang*, and the other *Fungiang*; and each of them is above an Hour's Journey, or a *French* Mile long. The firſt contains nineteen Arches, of ſuch an extraordinary Height, that large Ships may ſail under them with their Maſts up. Each of theſe Arches is ſhut by two Stones, each twenty Ells long, above two broad, and three thick. The Jeſuits, and other *Europeans*, who have ſeen and been upon them are aſtoniſhed at the Sight of them; nor can they comprehend what Inſtruments could be uſed to raiſe ſuch great, heavy and long Pieces, all which are of ſolid white Marble, to ſuch an extraordinary Height. The ſecond Bridge, though not ſo high, is as broad and as long.

There is alſo a third extraordinary Bridge in the Province of *Quanton*, not far from the City of *Chaceu*; but this is carried over Land from one Mountain to another, and is as long as the former. And throughout the whole Empire there are ſeveral of theſe Stone Bridges, which though not ſo ſurprizing as thoſe already mentioned, are yet very elegantly and artificially built; and are every where carried a-croſs the Channels for the Traveller's Convenience, that he may come to all Villages and Towns by a ſtreight Road and without going a great Way about.

In watry or moraſſy Places there are alſo high Banks or Cauſeways raiſed, to ſerve inſtead of Roads, and when any Hills or Mountains obſtruct theſe Roads, no Coſt or Labour is ſpared to level, cut through, or render them paſſable. The Road from *Siquan Fu* to *Hamtcheou* is cut through a Mountain, which was very rocky and ſteep, and propped up with large Pieces of Timber, ſo that betwixt the Air and the Mountain, it looks like a pendant Gallery of Clouds, and appears very diſmal to thoſe who are not uſed to travel it: But they have bred and ſo accuſtomed their Mules to ſuch Sort of Roads, that they will climb up the moſt rough, fatiguing and almoſt inacceſſible Ways, as eaſily as if they were in ever ſo eaſy and good Roads.

On the high Ways, at the Diſtance of every half Hour's Journey, are a Sort of arched Gates about ten Ells high, on which, for the Direction of Travellers, are written in large Letters, the Diſtance of one Place from another, and an Account to what City, Town or Village that Way tends. In all Parts of *China* there are great Numbers of Marble Triumphal Arches, commonly containing three arched Doors, the largeſt of which is in the Middle, and the Sides are adorned with great Lions and other Sorts of Imagery; the Gates are every where beautified with very fine carved Images, Trees, and Foliages; and their Number in ſome Cities mounts ſo high, that the Streets are rather incumber'd than adorned with them.

China hath alſo very good Havens. That of *Nanking*, into which the *Nankingian* River falls, is much celebrated on Account of its Depth, Breadth, and the prodigious Quantities of Goods which paſs from thence to the City of that Name, and higher up to *Peking*, and all over *China*, but do not paſs ſo cloſe by the City, ſince the famous Robber before-mentioned beſieged, and had taken that City, if he had not been hindred by his own Negligence and Luxury.

The Haven of *Quantung* or *Canton*, on the Ocean, which waſheth this Province Southwards. Before the Entrance of the City of *Canton* are a great many ſmall Iſlands, the moſt conſiderable of which is *Macao*, which hath a very good Haven, and is very famous for the great Commerce of the *Portugueſe* formerly there, by reaſon of its Neighbourhood to *Canton*, to which great Ships could eaſily come, and where all Sorts of Merchandize and Proviſions are very plentiful.

Fokien is alſo provided with a very fine Haven, in which any Ships may ſafely ride, and come almoſt cloſe to the Shore, the Sea being very deep, and the Harbour bounded on the other Side by the Iſland *Emoni*; and a very great Trade is driven here with Foreigners.

The Haven of *Nimpo* or *Ningno*, in the Province of *Chekiang*, is famed for the great Trade which is there driven with the *Japoneſe*, becauſe from thence it is but a ſhort Voyage to *Japan*; but no very large Ship can well come in there by reaſon of Shallows and ſmall Rocks, which render the Paſſage very difficult.

In the Province of *Zantung*, joining to *Chekiang*, where it runs out Eaſtward on the great Ocean, there is alſo an indifferent good Haven and Trade with the Inhabitants of *Corea* and *Japan*; but neither the one nor the other are ſo large and conſiderable as the Harbour and Commerce at *Nimpo*, though that Province is very well watered; there being there, as well as in almoſt all Parts of *China*, very convenient navigable Channels, provided with Sluices and Locks; without which, the Ground not being every where level, and the Water tending downwards, and all theſe Channels dug, they would ſoon be dry; which Neceſſity put them upon inventing thoſe Sort of Waterfalls to let the Water through intermitting Pieces of Land, and keep it at an equal Height, and to wind or pull over them the Boats, Barges, *&c.* by the Help of Ropes and Windlaſſes.

5. The *Chineſe* are perfectly well inſtructed and trained up in the Principles of their Religion from their Youth. The Parents ſend their Children to School at the Age of ſeven or eight Years, to learn Reading, Writing, and good Manners, that is, Rules which teach them to pay the ſubordinate Reſpect and Obedience due to their Parents and Superiors. They begin their Studies and Exerciſes with the Inſtructions and Rudiments of their famous Inſtructor in Wiſdom, Policy, and good Manners, *King* or *Confucius*, called in *Chineſe*, *King fu*, and highly reverenced amongſt them. Theſe firſt Principles, as we have already hinted, conſiſt chiefly in directing them to obey and love their Parents, to reſpect and honour thoſe older than themſelves, to live honeſtly and virtuouſly, to do no Perſon any Wrong, or what they would not have done to themſelves, to give every Perſon his Due, and ſuffer him to keep it. All theſe Leſſons are comprized in five Books, which in their tender Years they are obliged to learn by Heart. After which they diligently learn the Arts of Writing, Arithmetick, and Oratory; in which having made proper Advances, they are queſtioned and ſtrictly examined in what they pretend to have ſtudied; and then being adjudged capable, they by Degrees become Bachellors, Maſters, and Doctors of their higheſt Knowledge, and are alſo raiſed, not only to that of *Mandaryns*, but the more elevated Dignities of the Empire, in Proportion to their Worth, Learning, and Capacity to ſerve the Publick, either in the Government of Provinces and People, on the Bench as Judges, or in the Exerciſe of ſeveral Political and Civil Offices entruſted to them.

This learned and venerable *Confucius* lived ſeveral hundred Years before the Birth of *Chriſt*, was born in the Province of *Xantung*, as is hinted before in the Deſcription of it, and died, according to ſome, in the Seventy-third, or according to others, in the Sixty-third Year of his Age. His Memory is very highly honoured by all intelligent and learned Men. In all Cities and Villages honorary Temples are erected in Remembrance of him; though his Image is not placed in the interior Part of them. His Virtue and honeſt Principles are very famous, his Precepts are reverenced like the Word of God, though he is acknowledged to have been but a Man, a Lawgiver and Preceptor; in Honour of whoſe Memory, the *Chineſe* have erected a Pyramid, not of Stone, but in their Hearts, and they annually diſcover Signs of Gratitude and Acknowledgement. Some of his Deſcendants are at preſent living in *China*; who are by Donative endowed with the perpetual Inheritance of a City, with all its Incomes, Rights and Lordſhips; and for the more auguſt Preſervation of his Memory, their Right of Exemption from all Tolls and Taxes hath been, and is, inviolably obſerved to this Day. He had ſeventy (others ſay five hundred) Pupils, which enforced his Doctrine with the Teſtimony which they bore in all Parts, that his Zeal was perfect, and nothing was to be added to the Purity of his moral Leſſons: Beſides which, they ſometimes rather eſteemed him as an Inſtructor of the new Law, than a Man educated in the Corruption of Nature.

6. For above two thouſand Years paſt, or, to full five hundred Years before Chriſt's Birth, the *Chineſe* have acknowledged the Lord of Heaven and Earth, abſtracted from all Idols; which appears from their Hiſtories, and the Books of the above-mentioned illuſtrious *Confucius*, in which we read, *Kiao xe chi li ſoy ſu xang tie*; which imports, that our Duty obliges us to make Offerings to the Lord of Heaven and Earth; almoſt and only like the *Jewiſh* Sacrifices of a Calf or Lamb to the Lord, in the Holy Scripture. Notwithſtanding which, their Knowledge and Idea of God was not ſo clear, but on the contrary much more obſcure and confuſed than that of the *Jews*. But the primitive Knowledge of God declined rather than encreaſed, and that more eſpecially after *Li Laokim*, a certain Philoſopher, and one of *Confucius*'s Diſciples, appeared in the World: He indeed wrote ſome good Books, but withal taught, that the Supreme Deity was corporeal, and governed the other Deities as a King doth his Subjects, and that Man might be immortal: It was then that Idolatry crept in under the Shew of good Manners, and corrupted the Minds of Men; and Conjuring, and other Diabolical Arts, came into Requeſt, in order to prevent Death. Temples were built to the Honour of

Li Laokim, and as much was conſecrated to his Memory as to that of a Deity, though he died; and every Man, by Covenants with Satan and other deviliſh Practices, was earneſtly bent in Queſt of that Immortality which their great Maſter could not find. Time ſtrengthened the falſe Doctrine, and increaſed the Number of its Teachers, who by their ſeducing Practices, drawing of Lots, and other Frauds, have even to this Day wonderfully poſſeſſed the Hearts of the Populace; who being miſled to, and ſtrengthened in that Opinion, continually ſearched for that on Earth, which is not there to be found.

The *Chineſe* alſo relate, that long after that Time, an Emperor named *Fanvang*, dreamed or was informed by Revelation, that there was a Saint in the Weſt, whoſe Religion we ought to embrace; and this without wreſting may be underſtood to be ſpoke of CHRIST and his Doctrine. They alſo relate, that this Emperor diſpatched a Perſon thither, in order to bring this Doctrine to *China*; but the Envoy miſtaking his Way, fell into the South Country, where he met with the *Bramins*, (a Sort of idolatrous Prieſts, which worſhip the Image of one of their Kings) and having declared the Reaſon of his Coming, he was ſo well entertained by theſe diabolical Engines, that they at once preſented him with an Image, and with the Syſtem of their helliſh Doctrine, both which he brought to *China*, and to which they at preſent cleave, that Idolatry being firmly retained, and numerous Temples every where erected to that Idol, inſomuch that the Number of theſe wicked Prieſts is infinite. They are called *Bonzi*'s, and pretend to abſtain from Fleſh and Marrying; but Experience convinces us of the contrary, and that they ſacrifice to their Luſts in private; ſo that now they are not very much reverenced even by the *Chineſe* themſelves, though they have ever ſince that Time worſhipped that Deity, and the Images repreſenting him.

“ *Le Comte* calls this Emperor *Minti*, and tells this Story thus: That *Confucius* frequently ſaid, That the true Holy One was to be found in the Weſt; that this his Aſſertion was continually in the Mouths of the Learned; and that the Emperor *Minti* being diſturbed at theſe Reports, and excited by the Image of a Man coming out of the Weſt, and appearing to him in his Sleep, diſpatched Ambaſſadors to the Weſt, with Orders to travel that Way till they found this Saint, which Heaven had revealed to him about ſixty-five Years after the Birth of our Lord: That theſe Ambaſſadors were forced, by the Danger of the Sea, to remain on a certain Iſland; and that they found there the Idol *Fo* or *Foe*, which had perverted *India* ſeveral Years before with his diabolical Doctrine: That theſe Miniſters cauſed themſelves to be perfectly inſtructed in the Superſtitions of that Country, and carried them back with them to the Emperor and his Subjects; and that through thoſe Means and from that Time, this impious Doctrine was ſpread throughout the Kingdom.”

Anciently they worſhipped the Images of ſeveral illuſtrious Men, as in treating of the Province of *Xanſi*, Mention is made of a valiant and potent Hero, which ſprung out of that Country, whom they honour and pray to as a Demy-God, which revives their Courage and excites their Magnanimity; and the *Tartars* themſelves, at preſent Maſters of *China*, likewiſe offer up their devout *Oraiſons* to it; though indeed this is no Point of their Religion, Faith or Doctrine: But the Idolatrous Worſhip and Religion of the *Bonzi*'s is ſpread over all *Eaſt-India*, through the Kingdoms of *Pegu*, *Laos*, *Siam*, *Cochinchina*, *Japan*, and all over *Tartary*.

7. Several of the moſt learned Perſons amongſt the *Chineſe* are Atheiſts, who believe neither God nor Devil, deny a future State, and in Raillery aſk, who hath ever ſeen or been either in Heaven or Hell? Or once came out of either of them? And boldly tell us they are meer idle and brainleſs Imaginations. But the Image-worſhippers believe a Heaven and a Hell; that the ancient, virtuous, and happy Dead are great Spirits or Souls in Heaven; that placed there as ſuperlunary Princes, they tender and do good Offices to Mankind; whilſt themſelves abound in Riches and Proſperity, and perpetually divert and entertain themſelves with the fineſt Wines and all Manner of Delicacies. That on the contrary, the Souls of wicked and impious Men either go to Hell, or tranſmigrate into other Animals, which are either better or worſe, in Proportion to their Merit. So that at preſent the *Pagan*, *Mahometan* and Chriſtian Religions prevail in *China*.

I ought not to omit that in Paganiſm, the firſt of theſe, the Reaſon of State or Policy is the ſupreme and prevalent Deity in *China*, to which all Principles and Practices are adapted: And whatever does not fall in with the political Intereſt is condemned as downright Sin, and conſequently not to be tolerated. The *Chineſe* are utter Enemies to Novelty, and are ſtrangely fond of all ancient Cuſtoms, ſolely on Account of their Antiquity; and abſolutely reject, or at leaſt are hardly prevailed with to allow any modern Uſage: This Fondneſs for Antiquity prevails not only in Temporals, in which they dare not preſume to alter any Cuſtom without the Emperor's ſpecial Command: But more particularly in Spirituals, though it really ſhould be, and they themſelves were convinced it was for the better. Hence it is that they reject the *Chriſtian* Religion, becauſe in Proportion to the Antiquity of their Empire it is too recent, and hath too lately appeared in the World, as tho' Antiquity alone were ſufficient to triumph over Truth, and it were a Crime to hinder the perpetuating of thoſe ſtupid Errors which could only pretend to have prevailed for numerous Ages.

“ It is a fundamental Axiom in the *Chineſe* Policy, ſaith *Gobien*, That the Prince is primarily obliged to preſerve Peace, Repoſe, Plenty and Eaſe; for which the Subjects ſhould acknowledge their Obligations to him, and he cauſe them to be inſtructed that they are indebted for all this to him. For all Attempts to keep the Subjects within the Bounds of their Duty would be vain, without the effectual Performance of the primary Condition of Obedience: Since the Laws themſelves would be but a weak Bulwark, if oppoſed to the Force of Arms: And all Inſtructions would make but ſmall Impreſſions on the Minds of a People, that are hurried on to diſprove them by Want and Miſery. *And he tells us elſewhere*, That the true Foundation of the Authority of the Œconomical and State Government conſiſts, with Regard to Families, in the due Obedience and Reſpect to Parents and to Maſters; with Reſpect to Government, that the Subjects be faithful to the Prince, and that he be tender of his People: A prudent Conduct, the Love of our Neighbours, Virtue and Juſtice are its Eſſentials; an exact Obſervation of mutual Civilities helps to fill up the Meaſure: But the ſavoury Laws of a good Government afford Means for compleating the whole.”

8. There are beſides ſeveral other Sects of Religion in *China*; for ſome of them believe that there is a ſupreme, eternal and omnipotent Spirit, which governs and directs all Things: This Being they acknowledge for the Lord of Heaven and Earth: And before Idolatry prevail'd, they worſhipped him under the Name of *Chamti* or the Lord of Heaven: But ſince the Sowing of that profligate Seed, this Opinion obtains only amongſt a few, but thoſe indeed are moſt of them great Men: The Emperor himſelf is ſaid to eſpouſe this old Sentiment; and it is not improbable, that it is owing to this, that he is not averſe, but rather inclined to the *Chriſtian* Religion and Doctrine, and probably would not reject, but eaſily be induced to embrace it, if not reſtrained by political Reaſons, and a Fear of creating thereby Tumults and Inſurrections in his Empire.

There are others alſo who acknowledge Nature to be the ſole Deity; underſtanding thereby the Force or Power and natural Operation, which being the efficient Cauſe of Motion and Reſt, produces, maintains and preſerves all Things: They look on Dame Nature as the Fountain of all and every particular Being: And that ſhe is able to appoint and to alter the Order of all Things: They take her to be the one Soul which univerſally informs Matter, by Virtue of which ſhe produces all Things; thus attributing to Nature almoſt all that the Ancients aſcribed to Heaven, or we acknowledge in the Deity: They call her a Principle independent of all others; ſeparating her from the Imperfections and Deficiencies of all corporeal and ſenſible Matter. Thoſe who incline to this Sect believe, that the World had a Beginning, and ſhall have an End: But ſhall afterwards begin and end again as before, and ſo perpetually and interchangeably renew and periſh. And according to their Opinion numerous Worlds have already exiſted, and thoſe after this to an infinite Number ſhall ſucceſſively make Room for one another.

Though theſe Hypotheſes and Opinions concerning Nature are but groundleſs Imaginations, yet the moſt learned *Chineſe* are very fond of them, as affording Matter for ſeveral Speculations no Way diſagreeable, which may tend to the Improvement of their Intellectuals.

9. We have already mentioned the *Bramins* and *Bonzi*'s in this Chapter; they are not very different from the *Lama*'s, (which are *Tartarian* Prieſts) in any Particulars beſides the external yellow Cloathing, and ſome peculiar ſuperſtitious Ceremonies: Both worſhip the ſame God *Fo*; their religious Worſhip, Opinions and Faith is very near the ſame: However the *Lama*'s in *China* are only *Tartarian* Prieſts, but in *Tartary* they act the Part of the *Lama*, God or Gods of the People: It is there that *Fo* has his Throne, it is there he appears in the Shape of an immortal rational Animal, whoſe Place at leaſt is perpetually ſupplied by a living Creature; for as ſoon as one Man dies, another like him is ſubſtituted in the divine Throne in the Temple, in order to keep up and promote the ridiculous Opinion of the Immortality of this God. To this Purpoſe he is honoured with religious Worſhip by great Crouds of *Lama*'s, whoſe Number is ſo large, and the Eſteem of this Doctrine (though not for the Prieſts of it) is ſo imprinted on the Minds of the People of all *Tartary* and *China*, that it is thought to withhold the Emperor himſelf from diſcovering any farther Inclinations to favour the Chriſtian Religion for Fear of a Revolt.

We have already ſpoken concerning the Chriſtians, the Time of their firſt beginning to ſettle here, their planting of the Faith, the bitter Afflictions they have ſuffered, and in what State Chriſtianity ſtands at preſent. It now only remains that we ſay ſomething of the *Mahometans*; of whoſe Principles and Practices I ſhall only obſerve, That their Number is not very great in *China*, though they are more numerous than the *Chriſtians*, as having inhabited that Country much longer, that is, above ſeven hundred Years longer in ſeveral Provinces of this Empire, where they were indulged with Liberty, which they neither did, nor do miſuſe, by preſſing others to embrace their Religion, or zealouſly aiming at the making of Converts; for they quietly live together, and are moſtly allied by Marriage, Intereſt, or Converſation; and, in ſhort, live in a Sort of Covenant, like the *Jews* in other Countries. But their Religion is very much ſpread here ſince their Original, and hath taken very deep Root more eſpecially ſince the free Trade with the *Muſcovites*, *Tartars*, *Mogols*, and other Nations. And as Weeds ſoon ſprout up and grow apace, this pernicious Seed of impious Doctrine hath ſo increaſed, that the Sprouts of it are, as I have ſaid, much more numerous in *China* than the Chriſtians.

10. The *Chineſe* in general are very well bred, and they are obſerved to be very civil in Words and Actions; when they entertain any Perſon, though below them, they always give the Gueſt the upper Hand, which in the Southern Provinces is eſteemed the Right, but in the Northern is taken to be the Left. They alſo utterly differ from the *Tartars* in their Manner of Sitting; for the former ſit down on the Earth, but the *Chineſe* make uſe of Chairs and Stools. In Viſits, the Maſter of the Houſe, ſeeing his Gueſt approach, goes out well dreſs'd to meet him, and with his Head covered, (uncovering the Head being a Salutation never uſed in *China*) advances half Way of the outer Court before his Houſe, where he and the Viſitant meet, and exchange Compliments in the following Manner: The Gueſt takes the Right Hand of his Entertainer (or Left, according to the above-mentioned Difference in the Northern or Southern Provinces) who conſequently ſtands on the other Hand; then they both very reſpectfully bow very low three or four Times, lifting up their Hands and Arms, (which whilſt they are going they fold in their wide Sleeves) in a Sort of ſtately Manner, and afterwards as decently letting them fall; after which they ſpeak to one another in a very civil and engaging *Chineſe* Tone: This done, ſometimes they change Places, he that was on the Right taking the Left Hand, in order to repay the received Civilities. After which they enter the Houſe, where the viſited Perſon always takes the lower, and gives his Gueſt the Upper Hand. Being entered and ſat down, a Diſh of Tea, with a Piece of Sweetmeat in it is ſet before each Perſon; he that ſits at the upper Hand being firſt ſerved, and the reſt ſucceſſively in Order. Before they ſit down, even betwixt Perſons of equal Condition, ſeveral ceremonious and engaging Conteſts ariſe about the Refuſal of the ſuperior Place; the moſt worthy and higheſt eſteemed Perſon is placed uppermoſt, and he among thoſe of equal Character is the oldeſt; but Strangers, and thoſe who come from diſtant Countries, are ſet above all the reſt.

The Ceremonies at Departure are almoſt the ſame with thoſe at the Entrance. The Maſter of the Houſe, with ſeveral Bowings of Head and Body, and moving the Hands, accompanies his Gueſts, firſt to the inner Door, then to the Middle of the outer Court, and laſtly to the outermoſt Gate, out of which he alſo goes; during all which Time the Viſitants are complimenting and thanking their Entertainer with the ſame Reſpect; after which, they either mount their Horſes, or get into their Chariots as they came; then a Servant is ſent after them by the Maſter of the Houſe, to compliment and wiſh them a good Journey in his Maſter's Name; upon which they ſend their Servants back to the Entertainer, to thank him for his laſt Civility. The Ceremonies in paying and receiving of Viſits amongſt great Officers or Perſons of Quality, muſt not be done in their common Cloaths, but in Robes of State; and in Caſe the Viſitant ſhould fail in this Particular, the Viſited would be apt to be diſguſted at it, and not give him Entrance, at leaſt before he had changed his own Dreſs: And in like Manner, if the Maſter of the Houſe ſhould attempt to receive his Gueſt in a meaner Robe than he hath on, the other would not enter the Houſe. For which Reaſon, Perſons of Condition always take Care to be provided with theſe viſiting Robes, and cauſe them to be carried after them, in order to make uſe of them in Caſe of any ſudden Accident; for even in chance Meetings, the Compliments are delayed if one of them have his Robe of State on, till the other can put on his. The *Chineſe* abound in theſe and ſuch like Grimaces and Geſtures, which they reckon an Honour to their Nation, and ſay that they are Signs of good Breeding, in which they excel other Nations, as much as Men do Beaſts.

In Caſe of a Salutation or Viſit betwixt Perſons who have not for a long Time ſeen each other, they both fall on their Knees, and thrice bow ſo low as that their Heads touch the Ground. And it is in the very ſame Manner that even the meaner Sort welcome one another. This is likewiſe the Poſture of Servants ſpeaking to their Maſters, and the Populace to the *Mandaryns* or high Officers. The like Bowings of the Head thrice ſo low, as to touch the Ground, are alſo uſed in the worſhipping of their Idols.

I forgot to mention, that the Viſitant, always before he makes any Viſit, diſpatches a Servant to the Perſon to be viſited, with a Piece of red Paper in his Hand, in which is written the Name of the Perſon his Maſter intends to viſit: With this he goes to the Houſe and delivers his Meſſage; but if the Maſter of the Houſe be abroad, or engaged, he ſtill leaves that Paper in Diſcharge of his Order, and returns with the Anſwer to his Maſter.

The Ceremonies obſerved in Feaſts and Entertainments are very great; after the cuſtomary Compliments of Salutation, each Perſon is placed according to his Condition at a ſeparate Table, without either Napkin, Knife or Spoon, but is preſented with a Couple of long Ivory or Wooden Scures tipt with Gold or Silver, to aſſiſt him in the Conveyance of the Edibles, which are all cut in Pieces, to his Mouth; and they are ſo dextrous in the Uſe of theſe, that they can very ſpeedily clear the Diſh even to a ſingle Corn of Rice. As I have already hinted, they make uſe of fine Chairs, Stools, or Benches, quite different from the *Tartars*, who, equally void of Civility and Manners, clap down on the Earth, without any other Geſticulations than what they now obſerve in the *Chineſe*, and begin to learn from the very Alphabet to the Book of Manners. The *Chineſe* have alſo very fine Beds and Couches; but the *Tartars*, on the other Side, having neither the one to lie, nor the other to reſt themſelves on, make uſe of a Board or Plank laid flat on the Earth. The firſt Diſh is commonly ſome Sort of Haſh, and a Glaſs or Cup of Wine, which yet is not ſo much as taſted before the Maſter of the Houſe leads the Way; which is followed by the Servants crowding in Diſhes and Wine, none of which are taken away, but piled up pyramidically, to the Number of twenty or twenty four, or more. Each Perſon drinks out of his own Cup, and is ſure to follow his Leader; and though the Wine may be very briſkly and continually put about, there is no Danger of intoxicating very ſoon, ſo ſmall a Quantity being filled into the Cups, and the Wine itſelf not being very ſtrong. A ſerious Gravity is always obſerved at Meals, the *Chineſe* diſliking all immoderate Laughter. After, and ſometimes alſo during their Meals, ſeveral Tumblers, and ſuch like, ſhew their Agility of Body, ſeveral Farces are acted, and other Diverſions added: Beſides which, they alſo play amongſt themſelves, and he that loſes is obliged to drink, and is, but within the Compaſs of good Manners, rallied by the Company.

11. Marriages in *China* are very ſplendidly celebrated, and accompanied with Plays and Diverſions during ſeveral Days. As for the Preliminaries to Marriage, the young Perſons who intend to enter into that Eſtate, have not the Opportunity by converſing together to ſound one another's Inclinations; for they are never permitted to come together, but the whole is managed by their Parents, who frequently promiſe their Children long before they come to be married, regarding Nothing ſo much as that their Years agree, or at leaſt be not very diſproportionate: And though their Sons and Daughters happen to be advanced in Years, yet they make the Matches without ſo much as the Conſent of the Perſons to be married. But there is yet a great Difference on this Head, betwixt the Conduct of People of Quality, Middling Perſons, and thoſe of the loweſt Condition. Amongſt Perſons of the firſt Quality, no Marriages are concluded without the Emperor's Conſent, great Care being taken that young People are always matched to Perſons of equal Deſcent. Thoſe alſo of a lower Degree are deſirous of allying with and marrying into as good Families as their own; but their Concubines they either take or buy from their mean Parents, and this to an unlimited Number. The lawful Wife is only honour'd as Mother or Miſtreſs of the Family, and reſpected and attended by all the reſt as Chambermaids; and on her Death the Concubines Children are obliged to a three Years Mourning, which they are not obliged to for their own Mothers. The Children of the loweſt Rank of People are in like Manner married by their Parents, and the Girls are in a Manner ſold; for it is the Huſband which gives the Portion, and the Bride hath only a few Trifles, though when ſhe is led to the Bridegroom's Houſe, ſhe ſeems to bring a large Share of Houſhold Furniture along with her; but all of it is bought before by the Bridegroom; beſides which, he gives the Parents a Sum of Money in Proportion to their Character, for their Daughter, whence he is or may be ſaid to buy his Wife. If a Nobleman or Perſon of Quality dies, the Widow muſt not marry again; but this perpetual Widowhood is not ſo much regarded by Perſons of meaner Condition, though even amongſt them, the Widows, which yield to a ſecond Marriage, thereby loſe, or at leaſt leſſen, their Reputations. Though ceremonious good Manners and the Authority of the Parents run ſo high amongſt the *Chineſe*, the Children will not yet endure a Father-in-Law, or pay him any other than ſuperficial Obedience; wherefore almoſt all the Widows end their Days in that State. The mature Years for Marriage are twenty, or two and twenty for the young Men, and eighteen or twenty for the young Women.

The *Chineſe* Wives utterly ſeclude themſelves from the Sight of all Men beſides their Huſbands, not allowing themſelves to be ſeen even by their Father-in-law, their Huſband's Brother, or any of the Male Sex, their Huſband's youngeſt Brother only excepted, and that in the Time of his Childhood only: But all her own Male Relations are abſolutely excluded from all Sight of or Acceſs to her. Nor do the *Chineſe* Women ever appear in the Streets throughout the whole Empire, except in *Peking*, the Metropolis, where they are carried whither they pleaſe in cover'd Coaches or Sedans, as we have before obſerved.

12. The Piety which the *Chineſe* expreſs towards their Parents is incredible; which yet on no Occaſion ſhines brighter than at or after their Deceaſe. The Mourning and Funeral Solemnities are very numerous; which conſiſt in the lamenting, keeping the Corpſe above Ground, burying, and what is afterwards done in Remembrance of them. When they put themſelves into Mourning, they differ from other Nations who make Uſe of black, and wear all white Cloaths; in which Dreſs they keep a long Time for any of their Relations; and for a Father or Mother they mourn thus three Years. A Wife alſo continues in Mourning as long for her Huſband. But the Huſband does not hold it above a Year on Account of his Wife's Death; which is the Term commonly obſerved by a Brother or Nephew for their reſpective Brothers or Uncles. Children for at leaſt one hundred Days after the Death of their Father or Mother, are obliged to avoid lying on any Bed, but repoſe themſelves on the Earth, and daily celebrate their Remembrance in Tears; beſides all which, they are obliged, for three Years, to avoid all matrimonial Converſation with their Wives; and if any of them ſhould happen to be pregnant in that Time, they are liable to be puniſhed. They ſequeſter themſelves from Treats, Nuptials, and other Entertainments; they confine themſelves to their Houſes, without ever ſtirring abroad, and lay down their Offices for above a Year, and ſome for three Years. Whenever they are abſolutely obliged to go Abroad, they cauſe themſelves to be carried in Coaches or Chariots covered all over with cloſe Mourning to the intended Place.

Their Obſequies are not much different from their Converſations, with Reſpect to Ceremonies: What firſt appears in the Funeral Parade, is the Repreſentation or Figures of Men, Women, Lions, and other Animals painted on Paper, which are carried in State; the Bearers of theſe are followed by ſeveral Incenſe Carriers, next which comes the Bier and Coffin, borne by ſeveral Men, and is followed by the Sons, and all other Relations and invited Gueſts: The Sons are dreſt all in white, and carry Wands in their Hands; next which comes the Women in cover'd Chariots or Chairs, hung with Mourning ſo cloſe, that no Perſon can ſee them. The Graves or Tombs are all without the City, ſome of them are magnificently adorned with Marble, like a Palace, encloſed on the Outſide, and planted with ſeveral Trees in the Way to the particular Burying-place: To which being come, the Corpſe, incloſed in a Coffin of coſtly Wood, after the Paper Figures and Images are burned, is laid in the Tomb, and upon it are placed ſome Stone Figures, and an Inſcription in Praiſe of the Deceaſed. And at certain Set-times of the Year the *Chineſe* viſit theſe Tombs, offering there Meat and Drink, Tears and Lamentations, in Remembrance of the Dead.

" There are, ſay the Jeſuits, three Seaſons when the
" Dead are honoured in different Manners in *China*:
" Firſt, before the Interment, when the Corpſe are ex-
" poſed to View, or laid in State, together with a wood-
" en Image, with the Name of the Deceaſed, which " is

" is placed upon a Table with burning Candles and Perfumes about it: They ſalute and honour the Corpſe by Kneeling and Proſtrations, according to the Cuſtom of the Country. The ſecond Seaſon is obſerved from ſix to ſix Months, in a particular Chamber of the Houſe called their Anceſtors Apartment, in which every Spring and Autumn all the richeſt Delicacies that could be prepared for a Prince, are ſerved up in Remembrance of the Dead. The third ſolemn Time happens but once each Year, and is obſerved at the Tombs; all of which being without the City, they viſit them about *May*, when they pluck up Graſs and green Herbs out of the Earth, expreſs by ſeveral Tokens of Lamentations their Eſteem for the Dead, and then having ſet their Victuals and Wine on the Grave, renew their Mourning Feaſt."

The *Chineſe* obſerve ſeveral Feſtivals, but none more ceremoniouſly than that of the New-Year. This Day or Days, for it laſts three Days, are by Perſons of all Ranks, paſs'd in very ſplendid Mirth and Jollity; they then dreſs themſelves as fine as poſſible, viſit, and make Preſents to each other: There is no End of Plays, Entertainments, and other Diverſions, and all are then equally rich and happy. Buſineſs is at a Stand, the Poſts and Meſſengers ceaſe, all civil and criminal Courts are ſhut up, and according to their common Phraſes, the Seal ſhut, as indeed it is incloſed in a Cheſt: And this Seal is of ſuch Force, and the Judge ſo far obliged to regard it, that though his Prince, fully ſatisfied of his Sufficiency, ſhould ſign his Commiſſion, yet he would not dare to act till he had found the Seal, if once loſt.

13. The Lantern Feaſt obſerved on the following full Moon (for the new Moon begins with the Year) is not leſs famous; nor is there one Houſe in all *China* which is not illuminated at that Time; the Lanterns (ſome of which are ſo very large as to admit of Theatrical Repreſentations within them, acted by living Perſons inſtead of Puppets) are ſo filled with Lights, and ſo numerous and cloſe to each other, that the Cities and Towns ſeem to be in a perfect Flame; nor are Fireworks and Gunpowder ſpared to add Flame to Flame: The Clangor and thundering Noiſe of ſmall and great Shot, mixed with the loud Acclamations, Singing, Roaring and Hollowing of the raving Populace, look as if the whole World rejoiced at that Time.

There are alſo Feſtivals obſerved in Spring and Autumn, in Commemoration of the ſo much celebrated *Confucius*: The Ceremonies of which conſiſt in Kneeling before a Board erected on a Table, with this Philoſopher's Name, encompaſſed with beautiful Leaf-work, written on it. Kneeling before this Inſcription, they nine Times proſtrate themſelves ſo low, till their Heads touch the Earth, and ſerve up Wine, Victuals, Fruit, *&c.* much in the ſame Manner as is above related, that the genteeler Sort and rich People commemorate their Parents and deceaſed Friends with Mourning Feaſts. Anciently this Philoſopher's Image was honoured in this Manner: But the Emperors finding the People fall off to Idolatry, and that they either actually did, or probably would, pray to and adore him as a God, they ordered theſe Sort of Boards, with the bare Inſcription of his Name, to be placed in all the Schools and Colleges, inſtead of his Image: And the ſhewing of this commemorating Reſpect hath occaſioned ſeveral warm Contells betwixt the *Jeſuits* and *Dominicans*; the latter charging this Practice with downright Idolatry, whilſt the other urge in their Defence, that it is barely the Cuſtom of the Country, and a civil Ceremony paid to the Memory of every dead Perſon; and not only that, but the ſame is given to the living *Mandaryns* of the Empire in common Viſits and Ceremonies.

The *Chineſe* always obſerve and paſs their Birth-day in Diverſion; and as all happy Wiſhes of numerous Years added to that, Panegyricks, or whatever elſe can contribute to Pleaſure, are not ſpared on the one Side, ſo grateful Acknowledgements due to ſuch Compliments on this happy Day are not wanting on the other. In ſhort, this Day is wholly ſequeſtred to civil Entertainments, *&c.* and ends with good Wiſhes.

14. The Northern Provinces of *China* do not produce the Fruits which grow in *India*, but the Southern yield them in the greateſt Abundance. The common arboriferous or Orchard Fruits are, Apples, Pears, Peaches, Plumbs of all Sorts, Grapes, Olives, and ſeveral Sorts of Figs, *viz.* the *Chineſe*, *Indian*, and *European*; the *Chineſe* are as large as Apples; the Skin is ſoft and ſmooth; they are variouſly ſhaped, ſmall or large, round or oval. If they are dried in the Sun, they may be kept a long Time good; their Stem is rough and ſtrong. The *Indian* Fig being perfectly ripe, when the Skin is taken off is longiſh, ſoft, and of a ſweet Taſte, though there are indeed various Species of them, and what they grow on cannot properly be called a Tree, but rather a Sort of overgrown Shrub or Plant, not unlike Box, the Sprouts of which are covered with a thin Film, not much different from the Skin of an Onion; the Leaves are extraordinary long and broad; the Trunk bears its Fruit, which hangs by a ſingle Tendril; its Bloſſom is a Liver-colour'd Flower, of which it is obſervable, that whenever it appears like the Infant from the Womb, it burſts and forces its Way from its proper Root; whenever the Fruit is pluck'd, this Plant dies, but is ſucceeded by freſh Sprouts which ſhoot from its Root: It is found to grow in the South Parts of *China* only, but in all Parts of *India* it abounds. Theſe Southern Provinces alſo produce great Quantities of Oranges, ſufficiently known in *Europe*, and diſtinguiſhed by the Name of *China Oranges*.

" The *Portugueſe* brought this delicious Fruit into *Europe*. And the very firſt Orange-Tree from whence all the reſt ſprung, we are told, is yet in Being in the Earl of St. *Laurence*'s Garden at *Liſbon*."

The *Licia*, a charming Fruit, alſo grows there; it is red and contained in or fenced with a ſharp or prickly Shell; the Kernel is of a bright white Colour, very ſweet, warm, and ſo perfectly agreeable, that it ſurpaſſes all other Fruit, not only in Taſte, but Colour: The Tree on which it grows is alſo very fine, large, and full of Branches and Leaves, which render it very agreeable to the Sight: The Fruit, which grows in Bunches, though not crouded together, but on long Stalks, is about the Size of an ordinary Plumb or Nut, and there are alſo various Species of it. If eaten to Exceſs it inflames the Body, and raiſes Ulcers; for which Reaſon it is generally dried in the Shells, and like preſerved Fruit, is ſerved up in a Diſh of Tea, and by Reaſon of its agreeable Acidity preferred before Sugar; the interior Part of the Kernel diſſolving like Sugar in the Mouth; for which and other Reaſons it is ſtiled the *King of Fruits*.

The Fruit called *Lurgan* or *Onjeu*, is almoſt like the *Licia*, but not ſo large, and of a very different Taſte; their Kernel is of a ſhining white, and their Shell of the ſame Colour; their Taſte is agreeable and refreſhing, but not ſo hot as the *Licia*, and not prejudicial to Health even if eaten to Exceſs: They are alſo very good dried, though not to compare to the freſh. The Tree which bears them is like that on which the *Licia* grows; and a well taſted Wine is preſſed out of this Fruit whilſt freſh.

The *Jacca* is a Fruit which grows to the Bulk of forty and ſometimes fifty Pounds; but there are alſo ſmall ones, of an oval Shape, with a ſharp prickly Sort of a Shell: The Kernel or Pulp is not firm but fibrous, taſtes very ſweet, and is of a Gold Colour; and the Shell Green: This Fruit of the great Sort, grows to the Foot of the Stem or Root, otherwiſe the Branches (though ſtiff and ſtrong, the Tree being very large) would be too feeble to bear their Weight. The Shell of this Fruit is ſo very hard, that it can no otherwiſe be opened than by a Hatchet. The Inſide is full of ſmall Cavities, in which are contained a yellow Juice, and the Nut, which when ripe, eats better than a roaſted Cheſnut: The Leaves are rough and broad; and at the Branches grows alſo a Sort of Fruit, more agreeable to the Taſte, and more healthful than the *Jacca*: The Aſhes of the Shells burned are uſed by the *Chineſe* as a Ley to cleanſe Linen or Woollen.

Anana's are a well-taſted Fruit when ripe; they are yellow or red, and emit a very agreeable Scent: The Plant ſhoots its Leaves (ſomewhat like Aloes) to the Height of ſix or ſeven Feet; the Leaves are three Fingers broad, alſo hairy or woolly; and of them whilſt tough a Sort of Clothes or Stuffs are made, which in Fineneſs equals Silks: The Fruit ſprouts out in the Middle amongſt the Leaves, and when come to Maturity is very near as large as a Man's Head; it is ſweet and acid on the Tongue, though very delicious; at a Diſtance it looks like an Artichoak: On its middle Stem grow ſeveral young ones, which are clapped into the Earth, by thoſe who gather the Fruit, and in a Year's Time produce ripe Fruit. The ſharp and corroſive Nature of this Fruit is ſo violent as to work even on Iron and Copper, and it alſo renders the Throat by ſwallowing it very rough.

The *Petchi* likewiſe grows here, at the Side of, or in the Water; and the uppermoſt Paring being taken off its Root, there appears a Sort of Whiteneſs which taſtes almoſt like a Hazle-nut, and is endowed with the Virtue of ſoftening Copper in the Mouth.

Le Comte ſaith, " That he had an Account of an " Experiment made to that Purpoſe by one of their " Society; by rubbing a Copper Coin with this Root, " one of us, ſaith he, which had good Teeth, bit it " into ſeveral Pieces, but the Fragments ſtill remain" ed hard, which made us apt to think that this Root " was naturally more efficacious to the fortifying of " the Teeth, than ſoftning of Copper."

The *Cocao-nut* is the Fruit of a Tree which ſhoots upright: They grow in the Province of *Junan*, on the Iſland of *Hainan*, and in other Places in *China*, but in *India* they are incredibly plentiful; the Nuts are as big as a Man's Head, the external Part of the Shell is hairy, and the Subſtance of it ligneous, being in the whole about three or four Inches thick, and in the Core or innermoſt Part of it full of Juice, which the ligneous Cruſt being pierced through, runs out to the Quantity of a Cup-full: The Kernel is white and firm, and being ſhaved or ſcraped, and mixed with fair Water, it turns it to a lacteous Colour, not unlike Milk from a Woman's Breaſt, only a little thicker, as if it had been turned with Rennet; it is alſo very good Food; it corroborates thoſe who are weary and faint, refreſhes Sea-faring Men, fatigu'd with the Scurvy and other Diſeaſes after long Voyages; for which Reaſon they are very fond of it, being well acquainted with its Uſes. It is boiled with Rice, or in Fleſh ſoops: Beſides which a very fine Oil is drawn from it, not inferior to that of Almonds, and is not only uſed in Medicinal Preparations, but eaten as Sauce like Oil of Olives. The exterior Shell is ſo hard, that the Kernel being taken out, it is uſed as a Cup or Bottle. The Trunk on which the Fruit grows, ſhoots directly upright to the Height of fifty Feet, like the Maſt of a Ship; the Wood is hard, and through it runs oleaginous Veins in the inner Part of it which is ſpongy: Its Root doth not pierce deep, nor is it large, ſo that it is very ſurprizing that ſuch lofty Trees, laden with the heavy Weight of Fruit and Leaves, ſhould not be blown up by the Roots by the Winds. The Branches and Leaves are very beautiful and long, the former being full charged with the latter both without and within; and both regale the Eye with a very agreeable Proſpect. No Part of this excellent Tree is uſeleſs; the very hairy Covering, which encompaſſes the Nut-ſhell, ſerves inſtead of Tow to caulk and ſtop Ships: Cups and other Veſſels are made of the Nutſhells; the Leaves are made into Paper and Cloth; the Wood is worked into Maſts, Planks, and Rudders; the Bark furniſhes Sails and Ropes, and its Fruit lade our Ships, and is uſeful alſo in Phyſick.

Arceka, of which I ſpoke in treating of the Province of *Canton*, is an *Indian* Fruit, tranſplanted thence to *China*: The Tree bears ſome Sort of Similitude to the *Coco*, but is neither ſo thick, nor loaded with ſo many Leaves; both Fruit and Tree are called *Arceka*: The Fruit is hard, bitter and acrimonious; it is chewed with *Betel*, and a litle ſoftened with Lime, and the Spittle tinctures the Mouth and Lips red. The *Indians* chew it inceſſantly, and are moſtly followed herein by the Inhabitants of *Quantung*, *Junan*, and *Quoanſi*, which is indeed to be wondred at, conſidering how little the *Chineſe* are addicted to Travelling, and conſequently the few Opportunities they have of catching foreign Cuſtoms; but finding by Experience that it is good for their Gums, keeps their Mouths clean as well as moiſt in hot Countries, and beſides cauſes a ſweet Breath, hath drawn them into this Cuſtom, as well as ſeveral others which they borrowed from the *Europeans*, being now convinced, that they are full as clear-ſighted, if not more, than themſelves.

The Fruit *Jambua*, is a Sort of Lemon and Orange blended, as big as a Man's Head; the Peel or Rind is all round a Finger thick; the Fruit is white and red, ſpongy, and of a bitter Taſte; its Inſide is almoſt like that of Oranges, with this Difference only, that the Kernels or Seeds are larger: The Juice of ſome of them is ſweet, and of others ſour: The Trees are much larger than Lemon-trees, and their Leaves are broader and rough; they are prickly or thorny like the above-mentioned Lemon-tree, which they alſo reſemble in their Bloſſom; they afford a very grateful Smell, as hath alſo the Water extracted from them by Decoction.

The *Indians* call this Fruit *Pampelmans*.

The *Pepper-tree* is but a Shrub, which, like Beans or Hops, climbs up Poles or Stakes, and, when got to the Top, like them, inclines downwards. There is a ſecond Sort of Pepper, which is round and long; both of them, whilſt green, grow in long Bunches cloſe to the Stalk, but when ripe the Fruit turn black, is ſtript off and dried in the Sun; and if the black Skin falls off, as it is eaſily made to do, it is white, and taſtes much hotter. The *Long Pepper*, which is more uſed in Pharmacy than Cookery, grows much in the ſame Manner, but creeps more on the Earth, and climbs about lower Stakes, wherefore it becomes more moiſt, and if that Humidity be not dried up, becomes worm-eaten; the long Sort is dearer and harder than the round; and the Leaf of the former differs ſomewhat, but not much from the latter, which is ſofter, and of a deeper Green than the other, ſomewhat like Ivy. The Leaves, Branches and Roots are all hot and dry, enflaming both Tongue and Throat, though not to ſo great a Degree as the ſmall Corns.

Here grows likewiſe a Plant or Berry called *Maluei* (in the *Indian* Language *Carambole*:) This Fruit ſprouts from large Plants or Shrubs, about three Ells in Height: The Berries are like thoſe of *Palma Chriſti*; they are a very ſtrong Purge, four or five Grains being a Doſe large enough for the moſt robuſt Man; they operate on tough Phlegm, and pituitous Humours, and are good againſt a foul Stomach, cleanſing the Entrails: The Leaves, as well as the Berries, are inflammatory to a high Degree; wherefore thoſe who pluck them are obliged carefully to avoid putting their Hands (when gathering them) to their Face or Eyes, which would immediately inflame them. This Plant, mixed with Rice or Dough, and thrown into the Water kills the Fiſh. It grows in *India* as well as in ſeveral Provinces of *China*: It is alſo preſerved in Pots with Sugar, and ſo tranſported; and by Reaſon of its cordial Virtue, made uſe of againſt a cold Stomach or ſtinking Breath. There are alſo Nutmeg-Trees, in ſome Parts of *China*, but they are not near ſo plenty there as in other hotter Places in *India*, from whence they are brought thither. This Tree is almoſt like a Pear or Apple-tree: It ſprouts free enough and grows wild. The Nut which follows the Bloſſom joined to the End of the Branch, is at firſt green and rough, but when ripe changes its Colour, and becomes pointed all over, and chop'd on the Outſide, being very ornamentally encompaſſed by the Mace, which perfectly ripe, is three or four times annually gathered, and is of ſeveral Sorts and of different Natures with Reſpect to its Virtue and Worth.

Grinoffel, or *Clove-Trees* are by no Means ſo plentiful here as in other Places in *India*, from whence they are imported hither in vaſt Quantities. The Tree on which they grow is, when young, about as large as the former, and ſo encreaſes to a great Thickneſs; the

Leaf is longiſh like that of the *Pear-tree*, and full of Fibres; at the End of which the Cloves grow in Bunches, and out of their Heads ſprout the Bloſſoms, which, as well as the Cloves, afford a very ſtrong Scent; the Bloſſoms are of various Colours, and like the Fruit change in Ripening; for the Cloves are not black or brown at firſt, but green; and accordingly the Flower is firſt white and then red. The Cloves are plucked or beaten off, and then gathered; and if any happen to remain on the Tree, they fall on the Ground without any farther Trouble, and from thence ſhoot up young Sprouts, which are nouriſhed by the Soil, and thrive without Culture. I ſhall not ſay any Thing more of this Tree, becauſe it is very well known all over the World, and ſhall only lightly touch on the *Cinnamon* Tree.

I have already hinted, that *Cinnamon* grows in vaſt Plenty in the Province of *Quoangſi*, and not only ſmells very well, but is alſo very ſharp upon the Tongue. The Tree on which it grows is like that which bears Lemons, but its Leaves are ſomewhat like thoſe of Lawrel. This Plant hath a very fragrant Bloſſom, which afterwards affords us a Fruit like a Plumb; but neither the Fruit, Bloſſom, nor Leaf, agree in any one Particular with the Bark; which is the *Cinnamon*, and is alone endowed with the ſpicy and odoriferous Virtue, for beſides that, the Tree is a perfect inſipid Wood, whoſe Fruit is of no other Uſe than to be eaten by the Apes. This Bark, which clings cloſe to the Tree, when the outmoſt Rind is ſcaled off, appears green, is dried in the Sun, and after it is cleanſed and thoroughly dried, it turns to the known Colour. The Tree being ſtripped of its Bark, does not die, but, after the Expiration of ſome Years, obtains a new Bark, and flouriſhes again.

“ The *Indian* Writers tell us, that theſe Trees grow
“ in ſuch prodigious Abundance in *Ceylon*, that if vaſt
“ Woods of them were not burned, the whole World
“ could not conſume the Cinnamon which grows there.
“ And *Nieuhoff* adds, that though this Iſland is ſo very
“ fruitful in Cinnamon, yet neither Clove nor Nutmeg
“ Trees will take there.”

There is yet another Tree in *China*, which indeed grows more luxuriantly in *Goa*, and is by ſome called the *Indian* Fig-tree, and it accordingly produces little Figs, full of ſmall Seeds like other Figs, but not very much eſteemed, by reaſon of their diſagreeable Taſte. This Tree or Trunk ſhoots up very high, and the Branches afterwards turn down towards the Earth, and take Root again; after which, like the Main Trunk, they ſhoot up, and then down again; ſo that a ſingle Tree becomes a great Wood, and the firſt Stem is hardly to be diſcovered.

The *Fat* or *Tallow-tree* is the moſt ſurprizing Plant of all that grows in *China*; it yields a very fine Leaf and Flower; it is of a moderate Height, and its Stem is but low, its Branches thick, and covered with long Leaves ſhaped like a Heart, and its Bloſſoms white, which are followed by the Fruit; and this, when ripe, reſembles a Cheſnut or Walnut, with one Cleft. Round about the Stone, which is very like that of a Cherry, is the Greaſe, or that which in Colour, Smell, and all its Characteriſticks, exactly agrees with Greaſe, except only that it doth not foul the Hands like it; round the Stones (of which each hath three ſeparated by Films) is the Pulp, which melted makes a Candle as white as the whiteſt Capon, and is ſupplied with a Weik of Wood run through it inſtead of Cotton. From the Stone or Kernel, which is full of Moiſture, is drawn an Oil, which, by Reaſon of its ſtrong unſavory Smell and Taſte, is not eaten, but ſerves for Lamps. The red Leaves and white Bloſſoms of this Tree render it very agreeable to the Eye.

Cotton grows here in great Abundance, notwithſtanding which, as is hinted a little higher, they do not uſe it for Candle-Weiks, but make ſeveral Stuffs of it. It grows on a very thick, lofty, and crooked Tree, which is not overloaded with Branches, and its Bloſſom is a yellowiſh Flower, from whence proceeds the Fruit not unlike a common Apple, that when ripe, opens and diſcovers the Wool, which when prepared is tranſported to all Parts of the World. There are alſo Shrubs and Sprouts which produce this Wool, and are not very different from this Tree; but their Bloſſoms are of a deeper Yellow, and their Leaf more rugged; beſides which, the Cotton which theſe laſt yield is better and finer, and of that are made the white Callicoes. The Stems of theſe ſecond Sort of Plants, which are like Reeds, run up to a good Height; when come to Maturity, they are cut down, thrown into the Water to rot, and afterwards peeled. The Province of *Fokien* yields prodigious Quantities of this Shrub, of which the beſt and fineſt Callicoes are made. Here are alſo whole Thickets of Canes or tough Oſiers, which the *Portugueſe* call *Kota*; they grow ſpontaneouſly, ſpread very kindly, and are very tough; of them are made all Sorts of Ropes or Cords, Hurdles, Baſkets, Chairs, Stools and Coaches, which in Summer are very cool, and for that Reaſon are very much in Uſe amongſt the *Chineſe*.

Sugar-Canes grow in great Abundance in the Province of *Suchuen*, and produce the beſt Sort of Sugar; beſides which, other Provinces yield very good; and this proves a very valuable Commodity.

Bambooes grow here wild, on waſte and untilled Lands; and though they are but a Sort of Canes or rather Reeds, ſome of them grow to ſuch a vaſt Thickneſs, that ſmall Boats are made of them, which both the *Chineſe* and *Indians* make Uſe of and row very dextrouſly: But the chief Uſe which is made of the Bambooes is, that of ſerving for Stakes or Poles for the Pepper to grow up and cling round. When they are young, the ordinary People draw from them a Juice of an agreeable Taſte; from whence they prepare their *Achar*, which is a very delicious Sauce.

Though Mulberries are a Fruit univerſally known, yet the Mulberry Trees in *China* are managed in a Manner abſolutely different from all other Countries, for they are kept low, and lopped annually, as the Vineyards are in *Europe*, and the Reaſon is, becauſe the young Sprouts contribute to the Production of the beſt Silk; and indeed the Difference betwixt the Silk produced by thoſe Worms, which feed on the firſt Leaves, and that of the Worms feeding on the latter Growth, when they are much harder, is very conſiderable.

Though Ginger grows in ſeveral Parts of *India*, yet is there no Country produces greater Plenty of it than *China*; nay farther, it yields that Spice in a greater Degree of Perfection than any other Part of *India*. There are two Sorts of it, a larger and a ſmaller Species; the Leaves and Root of the latter are leſs than the former, and therefore termed *Male*, whilſt the other is called *Female-Ginger*. The ſlender Stalk, to which it grows, is like a ſmall Reed when it firſt ſhoots out of the Ground. And the Roots are not all of one Sort, but the heavieſt are the beſt: Whenever they are dug, one or two of theſe Roots are left in the Earth, which moderately cultivated, watered, and dunged, ſpread luxuriantly, and next year are dug out of the Earth with great Advantage. This Plant is alſo produced in another Manner, by cutting off the Ginger or Root from the Trunk, and reſetting it in the Earth, which by the next Year ſpreads and ſends forth young Shoots. The freſh or green Ginger is not ſo hot as the dried. It is medicinally uſed againſt flatulent Diſtempers, Fluxes, and other Diſeaſes of that Claſs.

Tea, the Infuſion of which is the common Drink, as well as the entertaining Liquor of *China*, grows there in great Abundance; but ſince this Plant is univerſally known, I ſhall ſay no more concerning it, nor intermeddle with the Diſputes of its Virtue, farther than to inform my Reader of a Matter of a Fact, which is, that Rheumatiſms and Gouts, the Stone and Gravel, are Diſtempers which none of the *Chineſe* are ever afflicted with. Whether this is owing to Tea, warm Water, or the Nature of the Climate, or Temperament of the People, I ſhall leave to be diſcuſſed by others, and proceed to the Deſcription of ſeveral wholſome Roots.

The Root *China*, though it grows plentifully in all Parts of of the Empire, yet is not of equal Virtue; for the Province of *Suchuen* produces the beſt, and the wild Sort thrives every where. The firſt Sort grows out of a Sap or Gum, which adheres to the Root of a *Pine tree*, which renders it ſuch an excellent and efficacious Remedy, and ſo famous on that Account in all Parts of the World. Theſe Roots increaſe to an extraordinary Size, ſome of them being as big as a Man's Head. The wild Root, though far ſhort of the Virtue of this, is not leſs eſteemed. We have already deſcribed the Root *Ginſeng*, and its cardiacal Virtues, in our Acount of the Province of *Leaotung*, where it grows; and therefore we refer the Reader thither.

China abounds with great Quantities of Rhubarb, but no Place produces better than the Province of *Suchuen*, as I have already hinted in the Deſcription of that Country.

“There are two Sorts of *Rhabarbarum* or Rhubarb ſold, an *Oriental* imported from *China*; and this is ponderous, diſtinguiſhed by gold coloured and red Veins, bitteriſh and aſtringent, ſweet ſcented, rather of a yellow Colour, and being moiſten'd ſtains the Hand with a Colour like that of Saffron, and is much eſteemed for its Virtues. The other Sort comes from *Ruſſia*, and is ponderous, and of a darker Yellow, and leſs valued than the other.

“Rhubarb is a mild and gentle Purger of yellow Bile and viſcous and tartarous Phlegm from the Stomach and firſt Region. It is a Specifick for the Liver, cures a Jaundice, and for its aſtringent Quality is commended beyond other Medicines; for all Diſorders proceeding from Relaxation, as a Diarrhœa, Dyſentery, and the like.

“This Root was unknown to *Dioſcorides* and *Galen*; and therefore ſome are very erroneous in confounding the Rha or Rheum of the Ancients with our Rhubarb, for the Rheum of *Dioſcorides* has leſs of a cathartick Quality, and wants the Characters of the true Rhubarb, which is a compact Subſtance, ponderous and dry, of a bitter Taſte, and acrid Smell, of a reddiſh Colour on the Outſide, and of a light Red inclining to Yellow within, with ſome Veins of deeper Colour, and, being macerated or chew'd, dyes of a Saffron Colour. Rapontic, on the contrary, is not of a cloſe but thin Subſtance, and not ponderous, but light, and wants the ſweet Scent of Rhubarb.

“The Virtue of the Root conſiſts in the Mixture of a ſubtle and acrimonious Salt, with mucilaginous and earthy Particles; thoſe ſaline and acrimonious Particles, in Proportion as they are more or leſs diſengaged from the Mixture of mucilaginous and earthy Particles, in which they ſtuck and were entangled, the more or leſs they exert of their ſtimulating Force. Sometimes they excite ſo great a Commotion, as to preſs upon the Liver itſelf, and eſpecially the Gall Bladder, whence may follow a double Excretion of Bile, which proves the Root of extraordinary Efficacy in the Jaundice, as was before obſerved. Its Cathartic Virtue conſiſts in its Salt, and not at all in its Reſin or oleous Particles, as appears from its Tincture, which is extracted with Water.

“Now it is clearly demonſtrated from Chymiſtry, that Water can never reſolve reſinous nor oleous Subſtances; and beſides, the Tincture extracted by Spirit of Wine is not ſo potent a Cathartick as what is extracted with Water; nay, the Water itſelf, after Mixture, does not become Milky, as it happens in all other Tinctures which are extracted from oily and reſinous Subſtances; and it is further to be obſerved, that the ſaline Principles may be ſo diſſipated or diſſolved by the Quantity of Liquids, as to be incapable of exerting their Force. The Root, when it is dried up with Age, loſes its Acrimony, and all its Cathartic Virtue, as it does alſo in Boiling. The Smell of it, in ſome, provokes to Stool. It is of Service in a *Gonorrhœa*, by allaying the Heat of Urine, expelling the Malignity, and ſtopping the Flux. It is uſually preſcribed in Subſtance, from half a Dram to two Drams; the Doſe of the Extract is two Drams, of the Tincture one Dram. The Root roaſted or dried is aſtringent, and as effectual in a Dyſentery as *Terra ſigillata*, and being mixed with Nutmeg and *Laudanum*, proves an excellent Remedy for an immoderate Flux of the Belly, its aſtringent Virtue diffuſing itſelf into all Parts. *Pechlius* employed it for Hæmorrhages of the Noſe, and ſuch like Caſes. The Root is ſometimes hurtful in a Vertigo; it deſtroys Worms, and is an Ingredient in many officinal Compoſitions.

“*Alexander Trallianus*, in the Opinion of Dr. *Freind*, was the firſt Phyſician that mentioned Rhubarb, who recommends it in a Weakneſs of the Liver, and a Dyſentery, though Monſ. *Le Clerc* tells us, that the *Arabians* indeed, in tranſlating *Dioſcorides* and the *Greek* Phyſicians, confound this Root with the *Rhaponticum*, and aſcribe the Virtues which the Ancients have obſerved in this latter to what is properly the *Rhabarbarum*, as may be evident to any who will look into the Deſcription which *Rhazes* gives of it. And I believe *Alexander* himſelf, though it is plain *Rhubarb* was known in his Time, was in the ſame Miſtake, for he mentions it only as an Aſtringent, as the elder *Greeks* deſcribe the *Rhaponticum* without the leaſt Hint of its purging Virtue. *Paulus* ſeems to be the firſt who takes any Notice of the Purging Faculty of the Rheum (he calls it ſimply ſo) and tells us how we may make ſome laxative Medicines ſtronger by the Addition of this. And *P. Alpinus* ſays, that ſome have obſerved, that even the *Rhaponticum* would ſometimes purge, though in a leſs Degree than *Rhubarb*.

“The modern *Greeks* gave this Root the Name of *Barbaricum*, not from the Place of its Growth, but from the Place it was imported to, for the Country in the Upper *Æthiopia*, was called *Barbaria*, as *Salmaſius* well obſerves from its lying upon the *Sinus Barbaricus*, in which were many great *Emporiums*, particularly *Rhapta*, the Metropolis of this Region. This Gulph upon the Eaſt, joins with the *Indian* Ocean, and therefore *Actuarius*, and after him *Myrepſus*, calls this Plant *Reon Indicon*. No doubt in thoſe Times it was imported this Way to *Alexandria*, and ſo might be known to theſe latter *Greek* Phyſicians. However I muſt obſerve, that *Salmaſius* does not take Notice of *Alexander*'s mentioning *Rhubarb*, but quotes *Paulus* for it, who does not mention it, but only in general ſpeaks of and deſcribes the *Rha*. *Garcias ab Horto*, Phyſician to the *Spaniſh* Viceroy, tells us, he had learnt in *India*, that all the *Rhubarb* which was imported thither, and into *Perſia*, grew in *China*, that was brought thither by Sea and Land, but that the latter Way of bringing it over *Tartary* to *Ormuz*, was much the beſt, for by Sea Carriage it was more ſubject to rot.”

15. In Reference to the Animals in *China*, though the Natives relate ſtrange Things of them, yet there are indeed very few ſo extraordinary in their Kind, as to deſerve mentioning. In ſome of the moſt mountainous and worſe cultivated Provinces of the Empire, there are Troops of very large Apes that live to a great Age, notwithſtanding they are often attacked by the Natives; theſe by obſerving frequently the Actions of Men, and imitating them aſſiduouſly, perform many Things, which to Strangers would appear very ſurprizing. The *Chineſe* call this Animal *Sin Fin*, and from their Deſcription one would imagine, that theſe were a Race of wild dumb Men, and that perhaps Pains would not be thrown away in endeavouring to reclaim them. After all, the Truth of the Matter is, that the *Chineſe* love to magnify every Thing they deſcribe, and above all, every Thing that relates to their own Country, for at the Bottom, the *Chineſe* Baboons are as much Brutes, and ſenſeleſs Brutes, as any other Baboons upon the Earth.

There are alſo in ſome of the Woods, on the Sides of high Mountains, a particular Species of Bears, of a moſt enormous Size, and capable of doing a great deal of Miſchief. Theſe, without any View to Raillery or Wit, the *Chineſe* call Men-Bears, to expreſs their Superiority and Strength, which however it ſeems to do but obſcurely. As for the Horſe-hart, there is nothing in it wonderful, or even ſingular; except that it is of the Size of a little Horſe; but they have a Kind of Deer that never grow any bigger than an ordinary Dog, which from the Beauty of their Shape, and Cloſeneſs of their Hair, are real Curioſities. As to the Horſe Tyger, that lives in the Water, and is covered with Scales as thick and as hard as Tortoiſe-ſhell; it is a mere Invention, contrived to impoſe upon weak People, and to make wiſer Men laugh. But all theſe Kind of Tales begin to be exploded, for the *Tartars* are a Sort of People that do not at all affect them, but deſpiſe the *Chineſe* for believing and telling gravely known Falſehoods and palpable Abſurdities.

There are ſome wild Elephants in *China*, but not many; the Emperor has a Stable of fifteen or twenty of them, which are Preſents from Foreign Princes. Their Horſes are of middle Size, the ſtrongeſt and moſt serviceable come from *Tartary*; there are alſo Mules and Camels, Oxen, Cows and Buffaloes, alſo Wolves, Bears, Tygers, and other Beaſts of Prey in the mountainous Parts of the Country. Their Sheep are like thoſe of *Turkey* with great Tails that weigh ſeveral Pounds. Deers and Hares they have in great Numbers. Their Hogs are black, and have Bellies that reach the Ground, they are eſteemed very good Food, notwithſtanding the Heat of the Country, for indeed this is made no Objection to Hog's Fleſh in the Eaſt.

Geeſe, Hens and Ducks, and all Sorts of Poultry, are mighty cheap; their Eggs are hatched in Ovens or Dunghills in moſt Places: As to the Birds of *China*, they have Paroketes extreamly beautiful in their Colours, and that are as eaſily taught to ſpeak as thoſe that come from *America*. They have alſo a Kind of Hawks, which they call *Hai tſhing*, larger than our Falcons and ſtronger, but theſe are very ſcarce, and are ſeldom ſeen but in the Emperor's Court. It is very true, that in *Chineſe* Writers there are very curious and copious Deſcriptions of Birds that reſemble the Phœnix of the Ancients, but then it is chiefly in this Particular, that though often deſcribed, they were never yet ſeen; ſo that there is no Need of ſwelling this Chapter by inſerting ſuch Deſcriptions. The firſt Miſſionaries however were very excuſable in giving Place to them in their Writings, becauſe it was impoſſible for them to perceive, but in Length of Time, how little Credit was due to thoſe Authorities. Geeſe, Hens, and Ducks, as we obſerved, and indeed all Sort of Poultry, are exceſſively plentiful, and prodigiouſly cheap, throughout the whole Empire, and yet there are numberleſs Families that live by Feeding and Selling them. As for the Ducks, thoſe that deal in them, become almoſt as much Aquaticks as the Commodity they deal in, for their Houſes are fixed upon Barges, and as the Ducks live in, ſo they and their Families paſs their Lives upon the Water, and their Children are often three or four Years old before they ſet their Feet upon the Land. Wild Fowl are alſo plenty, and they may very well be ſo, for with reſpect to thoſe, as well as to Animals, the *Chineſe*, without Ceremony, eat all that come to Hand, let them breed or feed how they will.

There are Butterflies in *China* of an extraordinary Beauty, and of a very extravagant Size, but they are found only on a ſingle Mountain in the Province of *Quangtoung*; and theſe too are generally ſent to the Emperor. They ſtick upon Trees and Flowers in the Day immoveable, with their Wings cloſe; but if once diſcovered, are eaſily taken: Towards Evening they fly about like Bats, and the Extent of their Wings is very little if at all inferior to thoſe of Bats in *Europe*. The Colours in their Wings are beautiful almoſt beyond Deſcription, finely and regularly variegated with White, Green, Blue and Crimſon; the Body, which is almoſt as thick as a Man's little Finger, is cover'd with a yellow Down as bright and as reſplendent as burniſh'd Gold. There are a ſmaller Sort of Butterflies taken in the Mountains of *Sichang*, not far from *Pekin*, which have very vivid Colours, but are far inferior to thoſe enormous Butterflies beforementioned, and which make Part of the Furniture of the Imperial Cabinets.

Graſhoppers are exceeding troubleſome in *China*, and frequently devour the Fruits of the Earth in ſome Provinces; there are alſo ſeveral Kinds of Serpents, particularly the *Cobra Capella*, or hairy-headed Serpents, which have been deſcrib'd in our Accounts of *India*. Fiſh abound in their Rivers and Canals, and beſides Nets and other Engines, which are uſed in *Europe* to catch them, they breed up large Fowls like *Herons*, which are as much under the Fiſherman's Command as our Dogs and Hawks are under the Huntſman's; they keep them perched on the Sides of their Boats, and when they give a Sign, every Bird takes its Flight to look for the Prey, and will divide themſelves the whole Breadth of a River or Lake; when they have ſeized a Fiſh they bring it to their Maſter, and if it be too big for one, they will help one another; it is ſaid, when they have brought it to the Boat, they immediately take their Flight again in Search for more; but they have a String about their Necks, which prevents their Swallowing the Fiſh, till the Maſter thinks fit to leave off his Sport, and then they are ſuffered to prey for themſelves.

There are alſo all thoſe Kinds of Fiſh in their Waters, which are met with in *Europe*, and many more, particularly one, which is called the Gold and Silver Fiſh, which is wonderfully beautiful, and kept by the Quality in large Baſons in their Gardens. They are about the Length and Bigneſs of one's Finger, the Male of a fine red, from the Head to the Middle of his Body, the reſt with the Tail is of ſuch a bright and glittering Gold Colour, that no real Gildings can come near it. The Female is of a pure Silver White, the Tail of either of them is not flat, but gathered thick like a Noſegay, which is an Addition to their Beauty. They are a very tender Animal, and ſoon ſenſible of the Alteration of the Weather; therefore Contrivances are made to ſhelter them from the Heat, and their Water often changed. And if they are to be removed from one Baſon to another, great Care is taken not to touch them, for the leaſt Touch, it is ſaid, will kill them, as will ſometimes the Noiſe of great Guns, loud Thunder, or an offenſive Smell, ſuch as Pitch or Tar. But it is needleſs to inſiſt longer on this Subject, ſince Numbers of theſe Fiſh have been of late Years brought over into *Europe*, and even into *England*, which has afforded the Curious an Opportunity of ſeeing that, though the *Chineſe* often exaggerate, yet ſometimes they keep at leaſt pretty near the Truth.

The Mountains of *China* are held to be the richeſt in the World; ſome ſay, on Account of their Mines of Gold and Silver; but perhaps their Character may be maintained, even ſuppoſe their Title to theſe rich Metals could not be made out. Yet this is very far from being the Caſe; for it is certain there are two Silver Mines open, one in the Province of *Se tchuen*, and the other in that of *Yu nan*, which ſtill produce conſiderably, and were formerly exceſſively rich. The Emperor *Can ghi* cauſed another Silver Mine to be opened and wrought for ſome time, but it was afterwards diſcontinued. It is believed alſo that they have very rich Gold Mines; at leaſt it is very certain, that in the Mountains on both Sides of *China* there are very rich *Lavadores*, as the *Spaniards* call them, that is, Places where Gold Sand is waſhed out of the Rocks. The *Chineſe*, who are equally reſerved in their Politicks and in their Books, and who in their Converſation ſpeak Truth or Falſehood, juſt as it ſuits their Purpoſes beſt, affect to ſay, that though they have rich Mines of theſe Metals, yet they lie in Places inacceſſible, and where it would coſt more to come at them, than ever Gold and Silver are worth.

This, however, is but a Pretence, ſince the very Mine they laſt wrought was diſcontinued for being too rich; and the Secret of this Policy lies here: The Emperors of *China* have ſixty Millions of Subjects, and at preſent the Country being perfectly well cultivated, they are plentifully ſupplied with Neceſſaries, Conveniencies and Elegancies; ſo that Induſtry is rewarded by Abundance. But as there is no eating either Gold or Silver; as wearing it is of very little Conſequence; and, as there is already enough for all Sorts of Plate and Manufactures; to open Mines therefore would be a Means of diverting the People from their more neceſſary Labours, would raiſe the Price of all Commodities, and inſtead of being a Source of real Riches, would actually become the Cauſe of Want and of Diſtreſs. Beſides, in no Country upon the Face of the Earth the true Value, or rather the true Uſe, of Gold and Silver is better underſtood than in *China*; and therefore they hold it to be, as it certainly is, much better Policy to draw theſe Metals into the Empire by Commerce, than to dig them out of Mines; and from theſe Principles they aim chiefly at two Things, one is to export their Commodities and Manufactures into other Countries, by which they obtain a Balance of Gold and Silver; and the other is, to keep it when they have got it: In both which Schemes, as indeed in almoſt every Scheme they form, they have been very ſucceſsful.

Add to all this, that as Indigence creates Induſtry, ſo Indigence and Induſtry, taken together, are the ſtrongeſt Motives to Obedience. A rich and idle People may be and generally are prone to rebel; but a poor and active People are commonly dutiful and ſubmiſſive. This is the Caſe of the Bulk of the *Chineſe* Nation, who get wherewithal to live, and live pretty well; yet with all their Sharpneſs and Dexterity, this is as much as they can get; and to ſay the Truth, this is what makes them ſo ſharp. But if War, Famine, Inundations, or any other publick Calamity happens, they are preſently ſet a Starving; and in this Situation the Wiſdom and Equity of their Government appears, for to the Emperor they apply as to their common Parent, and they never apply in vain. He takes all they feel upon himſelf; he aſcribes their Diſtreſſes to his Errors, their Misfortunes to the Judgments of Heaven upon his Sins; and therefore, beſides imploring the Mercy of the Supreme Being, and giving large Alms to the Poor and Needy in his Capital; he relieves thoſe who are thus diſtreſſed in the Provinces, not only by a temporary Supply of Food and Raiment, but by remitting their Taxes for a certain Number of Years, and creating a Demand for their particular Manufactures by Dint of that abſolute Power, ſo terrible in other Countries, and uſeful and beneficial in this alone. But to proceed.

The Mountains of *China* furniſh prodigious Quantities of Coals, inſomuch that no Country in the World is better ſerved with them, and the Iſland of *Great-Britain* excepted, perhaps none ſo well. They have alſo Iron and Tin in Abundance, and ſtill greater Plenty of another Metal, called *Tutenague*, which is highly valuable, and of which one Mine produces them Hundreds of Quintals in a Day. They have alſo great Quantities of Copper, of the ordinary Sort, and beſides this they have two very ſingular Kinds of Copper, which are ſcarce found, more eſpecially the firſt of them, in any other Part of the Univerſe. The *Chineſe* call this wonderful Metal *Pe tong*, which is as much as to ſay, white Copper, and it is very properly ſo called, for it is as white as Silver, and they make all kind of Veſſels of it; the only Fault it has, is its Brittleneſs, ſo that in the Hands of careleſs People, it is apt to break. To remedy this Defect, they employ one ſixth Part of *Tutenague*, which makes it tougher, but if they were to uſe twice that Quantity of *Tutenague*, the Metal would be much better, and the Reaſon that they do not uſe it, is becauſe it ſpoils its Luſtre, and not its Colour, as the Jeſuits commonly write; for it remains as white as ever, but it is a dead, lifeleſs, tinny white. Four Parts of this Metal, and one of Silver, makes a Metal equal in Luſtre to Silver itſelf, and is fit for any thing but Money; for upon the Application of a Stamp it cracks. The other Kind of Copper, the *Chineſe* very properly call *Te ſe lai tong*, that is *Self-made Copper*, becauſe it is found like Gold in Grains, or in large Pieces, waſhed out of the Mines by Torrents; properly ſpeaking it is red Copper, and very rich. The *Chineſe* have Chemiſts amongſt them, or rather Alchemiſts, but their Skill in Metals does not reach ours; for it is certain, that their red and white Copper, mixed with *Lapis Calaminaris*, in a proper Quantity, will produce a Metal as high coloured as Braſs, and almoſt as malleable as Silver.

Their Mountains alſo afford them moſt excellent Quarries of various Sorts of Stone, and amongſt others a Kind of yellow Stone, ſo ſoft, that they work it into any Kind of Veſſels, paint it with Vermillion, and ſell it very dear. They have alſo *Lapis Lazuli*, but not in any great Quantities, and Rubies, but they are very ſmall, though very fine, and ſeveral Kinds of Agate and Jaſper. Rock Cryſtal they have in vaſt Abundance, and they make various Kinds of Utenſils of it, which are extremely beautiful, as well as all Sorts of Toys. Marble of ſeveral Kinds is common, but they know not how to to poliſh it, at leaſt to ſuch a Degree as is common in *Europe*. As for Stones proper for Building, and Earth fit for Bricks, they have as much as they want, and indeed every thing in this Empire is at a low Price, which is owing to the Wiſdom of the Government, and to the Facility of Water Carriage, by which the Commodities and Manufactures of all the Provinces are to be found in every Province, and at reaſonable Rates.

So that it may very truly be ſaid, that *China* plentifully yields not only whatever is requiſite to the Reſtauration of Health, ſupplying the Neceſſities and ſuſtaining of Mankind; but likewiſe all Things which can contribute to gratify the luxurious Wiſhes even of an Epicure: Nor do any of the *European* or *Aſian* Countries produce any one Commodity, which is not here to be found; or at leaſt the Deficiency is doubly ſupplied with equal or much better Subſtitutes: But to particularize and deſcribe all the Roots, Herbs, Fruits, Shrubs, Trees, Plants, or whatever elſe of the Botanical Kind, which is either neceſſary or agreeable to the Tongue or Eye, would be to tranſgreſs the Limits of our ſhort Account of this Country; wherefore we have contented ourſelves with barely pointing them out, and ſhall proceed to diſcourſe of what we next promiſed.

16. *Japan* is juſtly preferred to all the Eaſtern Iſlands: and (though its Natives unwillingly hear it) was formerly ſubject to *China*: Their Manner of Living is like the *Chineſe*, they learn and read their Books; and alſo eat with two Ivory Sticks or Scewers; but ſit upon the Ground, wear a different Habit, Leathern Boots, and long Hair.

" *J. D. de Mendoza*, alſo aſſures us, that the *Chineſe*
" were formerly poſſeſſed of the whole Continent from
" *China* to the moſt remote Part of *India*: That of this
" there are yet ſeveral conſiderable Remembrances on
" the Coaſt of *Cormandel*, particularly a Caſtle called
" the *Chineſe Caſtle*, by Reaſon it is ſuppoſed to be
" built by them: That at preſent in the Kingdom of
" *Calicut*, there are ſeveral Fruit-trees which the Inha-
" bitants own to be planted by the *Chineſe* when they
" governed there, and were alſo Maſters of *Malacca*,
" *Siam*, &c. He adds, that at the ſame Time they were
" Maſters of *Japan*, as appears by ſeveral Monuments,
" as well as the common Uniformity betwixt the Man-
" ners and ſome of the Laws of both Nations."

This Iſland is an independant Sovereignty, governed by a Prince who aſſumes the Title of Emperor. It is a hundred and fifty or ſixty Miles broad, and three hundred or three hundred and fifty in Length. It very plentifully produces Gold, Silver and Copper, as well as whatever can be wiſhed to ſupply both Neceſſity and Luxury; it lies amongſt and is parted from ſeveral leſſer Iſlands, in 34 or 35 Degrees of Latitude. The Natives are very ſubtle and fraudulent in their Dealing, and thoroughly verſed in the Art of Politicks: They are very jealous of their Liberty, and treat all other Nations with the utmoſt Suſpicion; purſuant to which, they are ſo very cautious of any Thing that barely ſeems to contribute to their Strength, that they unrig and take away the Rudders of all foreign Ships in their Havens. They are very neat in all Particulars, and rally the *Chineſe* on that Head, believing themſelves very much to exceed them. Before the cruel and outrageous Perſecution which fell upon the Faithful, almoſt half the Natives were converted to Chriſtianity, but at preſent no one Perſon who is but ſuſpected to be a Chriſtian, is ſuffered to enter any Part of that Empire, before he hath trampled upon a Crucifix, as a Teſtimony that he is not of that Religion. Notwithſtanding which, we are told that there are ſome who privately retain that Belief in their Hearts, and confeſs it to God alone. But the very Name of Chriſtian is here ſo deteſtable, that, even thoſe of that Religion which do but trade here are obliged to conceal it; and the *Hollanders*, which drive a great Trade here, being aſked by them whether they are Chriſtians, never fail to reply that they are *Hollanders*, by which indirect Anſwer they ſhun the dangerous Rock, that would ſhipwreck their Hopes of Gain.

The ſecond Iſland or Peninſula, (for it is doubted whether it be ſeparated from the firm Land) is called *Corea*, but the *Chineſe* Name is *Caoli*; it annually pays a Tribute to the Emperor; and lies Eaſtwards of *Peking* and *Xantung*. When the *Coreans* carry the abovementioned Tribute to the Imperial City, they moſt commonly go by Way of *Leaotung*, but very rarely through *Xantung*. In their Habit, Writing, *&c.* the Natives follow the old Cuſtoms of the *Chineſe*; but they differ from them in their common Converſation with Reſpect to Women, who are here allowed to come freely into the Company of Men; on which Account the *Chineſe* ridicule them as a barbarous and unpolite People: And this Difference alſo occaſions another in their Marriages, which are here the Effects of Choice. This Country is larger, but not ſo rich as *Japan*: It plentifully produces all Sorts of Corn, and according to the Report of the *Chineſe*, is four hundred and ſixty Miles long, and one hundred and ſixty broad. Though this Country is very commodiouſly ſituated, and richly provided with all Things, yet its Inhabitants at preſent drive no conſiderable Trade with any other Nations than the *Chineſe* and *Japoneſe*. Here are very rich Gold Mines, and the Root *Ginſeng*, of the Virtue of which I have already ſpoken, grows here; as alſo the red Colour which the *Chineſe* call *Cil*, or *Sandaracha*, the beſt Sort of which is prepared here by Expreſſion out of the Bark of a certain Tree, and is of a Conſiſtence like Pitch or Glue; whatever it is laid on with a Bruſh is tinctured red, and ſhines as bright as a Looking-glaſs; fine Pencils and Paper are likewiſe made of it.

Beſides this there are two Iſlands ſituate near *Japan*, one of which is called *Chaoſien*, and the other *Linkin*: The Princes of both which Kingdoms pay Tribute to the Empire of *China*, though in Habit and Manners they approach much nearer to the *Japoneſe* than *Chineſe*: Theſe Iſlands are large, but not to be compared with *Japan*.

The Iſland *Taion*, otherwiſe called *Formoſa*, is alſo ſubject, as has been ſaid, to *China*, and is accounted one of the nine great Cities of the Province or Kingdom of *Fokien*. The Iſland *Hainan* lies South of the Province of *Canton*, and, as is already ſaid, is numbered amongſt the Cities of that Province: It is two hundred and fifty Miles in Circuit.

There are alſo ſeveral other Iſlands, which are Dependants on or Members of the Province of *Canton*, as that of *Sanciam*, where *Francis Xavier* died and was buried: *Macao*, where the *Portugueſe* have a Fortification and Port; together with the three Iſlands under *Xantung*, one of which was famous or rather infamous for the lamented Deſtruction of the *Chineſe* Philoſophers, as has been mentioned. Theſe, beſides ſeveral others, are ſubject to this vaſt Empire, all which united under one Dominion, would by themſelves amount to a very potent Monarchy, and furniſh Matter for a particular Deſcription. But we ſhall content ourſelves with barely naming them as they lie in our Way, and conclude this Chapter with an Account of ſome ſubordinate and adjacent Kingdoms.

The Kingdom of *Tunking* lies Weſtward of *China*; and formerly was ſubject to and a Province of that Empire: But is at preſent only tributary to it; and is divided into the two Kingdoms of *Tunking* and *Cochinchina*; ſubject to their reſpective Kings, who are two Brothers, that continually make War againſt each other. And though this Kingdom, or more properly theſe Kingdoms, are very diſtant from *Japan*, they yet follow the Faſhions and Manners of the *Japoneſe*: They are inſtructed by and read *Chineſe* Books, which they, like the *Japoneſe* and *Coreans*, are very well verſed in. Several Chriſtians live amongſt them; and the *Engliſh*, *French*, *Dutch* and others, trade very conſiderably with the Inhabitants of both Kingdoms.

The Kingdom of *Laos* borders on the Province of *Junan*, and is alſo tributary to *China*: Its Metropolis is *Lanchang*: It borders Southwards on *Siam*, and Weſtwards on *Pegu*: But is a Country of no Manner of Commerce.

Siam is a very large Kingdom, which has been frequently infeſted with Foreign Wars and Domeſtick Confuſions: It was formerly ſubject and tributary to this Empire, but taking Advantage of its diſtant Situation, and the various Revolutions of the *Chineſe* Monarchy, that Kingdom hath, like *Pegu*, ſhook off the Yoke. This is a Kingdom of very wide Extent, but the Land is waſte, untilled and uninhabited; and its People living moſtly in Woods and Wilderneſſes, behave themſelves rather like wild Beaſts than reaſonable Creatures. They build or erect Huts made of Hides, and the whole Country abounds with Woods, which harbour Elephants, Rhinoceros's, Buffloes, wild Oxen, Tygers, Bears, and ſeveral other wild Beaſts. Here are great Herds of Apes as big as Children. The Woods are very cloſely crouded with lofty Trees, of the Height of forty or fifty Ells; ſome of which are alſo ſo thick, that ſeven or eight Men holding Hands can hardly begirt them, and one Trunk is large enough to hew out a Boat. Here are innumerable Crocodiles, which devour Men alive, and are four or five Ells long; which renders Travelling, either by Water or Land, very dangerous in all Parts of this Country; as it is alſo in *Pegu*, *Laos*, *Camboja*, *&c.* The Inhabitants of all which Countries wear the ſame Sort of Habits, and very nearly agree in their Cuſtoms and Manner of Living: but differ in their Language and Way of Writing. They are all Heathens, and extravagantly reverence or rather idolize their Prieſts. Their Pagods or Temples are all of Brick, but very numerous and ornamental; their idolatrous Images are large, beautiful, and finely gilt, ſome of them being about ten Ells high. The Streets and ſeveral ſpacious Places are adorned with large Turrets about fifty or ſixty Ells high, gilded all over on the Outſide. Theſe Idols were brought by the *Bramins* (ſo their Prieſts are called) out of *India*.

The King keeps his Court at *Jutia*, which is alſo called *Siam*; this is a large, and upon an exterior View, ſeems a very fine City, but is very far from being ſo within. The *Dutch* have a Houſe or Factory at the City of *Ligor*, and the *Engliſh*, *Portugueſe*, *Mogols*, *Perſians*, and *Chineſe*, trade very conſiderably here; nay, ſeveral *Portugueſe* live in the City. Formerly the *Europeans* enjoyed great Immunities here, but are now abridg'd of ſome of them, and this on the following Occaſion.

One *Conſtance*, a *Greek*, that had long reſided amongſt the *Engliſh*, came to *Siam*, and became ſuch a Favourite of the King's, that, in a ſhort Time, he got into the beſt and moſt honourable Poſts, and climb'd to the higheſt Step in the Adminiſtration; the King left the whole Government of his Realm to him, and he conſequently became the Spring of Action. During this Time the News happen'd to reach the King's Ear, that *France*, then at War with the *Dutch*, had obtain'd a great Victory over the States; upon which that Prince, who look'd on the *Hollanders* with jealous Eyes, as a People that might one Day do him an Injury, reſolved to ſend an Ambaſſador to the King of *France*. And he accordingly diſpatched one of his *Mandaryns* on that Errand in 1677, on board a *French* Ship; but it is to this Day unknown what became of either the Ambaſſador or the Ship, nor was the leaſt News of them ever heard. The King, however, purſuing his firſt Deſign ſent other Ambaſſadors, in a *French* Ship, to the Court of *France*, where they ſafely arrived, and were very well received. They, by Order of their Prince, entreated the *French* King's Friendſhip, as well as made Proteſtations of their Maſter's tender Regard for his Moſt *Chriſtian* Majeſty; and withal requeſted, that he would pleaſe to ſend him ſome Forces to remain in his Country for the Defence of it. And after the Expiration of ſeveral Years, the King of *France* ſent Ambaſſadors, and three Ships to *Siam*, where they ſafely arrived, and were very well received and ſplendidly entertained; beſides which, large Privileges were granted to the *Chriſtians* on their Account; for beſides the Ambaſſadors, in the three Ships, there came over with them a *French* Biſhop with ſeveral Monks, which, together with three or four hundred Men deſigned for the Defence of the King and Kingdom, were by the Ambaſſadors left behind.

This very much diſguſted the Populace, but more the Prieſts; and ſeveral of the Chief of the Nobility look'd awry at it; as did the *Mahometans*, who gave the King Poiſon, of which he ſicken'd and died.

After which, the General and others roſe up in Arms againſt the Regent or Adminiſtrator, maſtered the City, and cut the above-mentioned *Greek* to Pieces; and the King dying without Heirs, leaving only one Daughter, and this General having forcibly got into the Throne, deſigned the immediate Deſtruction of the *French*; but they perceiving his Intention, retired to a ſtrong well-fortified Place, which they ſo bravely defended, that he was obliged to permit them to depart freely, and furniſh them with three Ships for their Voyage.

17. *Tartary* borders North and North-weſt on *China*, from which it is divided by the Great Wall: Theſe Nations are divided into *Eaſt* and *Weſt Tartars*; the latter conquered *China* at the latter End of the Twelfth Century; but about eighty Years afterwards were driven out of that Empire; and the *Eaſtern Tartars* are at preſent poſſeſs'd of it, having ſeated themſelves on the Throne in the Year 1643. They are called *Eaſtern Tartars*, not with Regard to *China*, of which they lie Northwards, but with reſpect to the other *Tartars*, which lie Weſt of them, and are called *Weſtern Tartars*.

The *Eaſtern Tartars* were ſeparated from *China* not only by the Wall, but by the Province of *Leaotung*, which was not a *Chineſe* Province before the *Tartars* came through it into that Empire; but being ſituated without the Wall, it lay as a Barrier againſt the Incurſions of the *Tartars*; and before it became a Province of *China*, was a Place of Exile, whither all baniſhed Perſons were either ordered or fled of their own Accord for Refuge. Theſe and other Exiles aſſiſted Prince *Ouſangouei*, who, with the Help of the *Tartars*, drove the Uſurper *Li* or *Licoung* from the Throne, which the *Tartars* then aſcended. After which, the Province of *Leaotung*, in grateful Acknowledgment of its introducing the ſaid *Tartars* into *China*, was incorporated to the Empire, and declared the ſixteenth *Chineſe* Province, enjoying the ſame Rights, Privileges and Immunities with the fifteen ancient Provinces; all whoſe Tribunals and ſuperior Courts of Juſtice are ſupplied by an equal Number of *Tartars* and *Chineſe*, as are alſo all the Preſidentſhips.

Since the *Tartar* conquered *China*, he hath extended the Frontiers of his Dominions in *Tartary*; for being formerly but one of the petty Kings of the *Eaſt Tartars*, he hath not only obliged the other *Eaſtern* Princes, but even the *Weſtern Tartars*, to ſubmit to, obey, and for the moſt Part, acknowledge him their Sovereign Prince. And the Union of theſe two mighty Kingdoms and Nations, has ſwelled this Empire to an extraordinary Bulk, and rendred it one of the nobleſt Sovereignties in the World. By Means of this wide Extenſion of this Monarchy, *China*, or more properly *Tartary*, ſtretches its Borders to *Muſcovy*, by which it is bounded Northwards. And by the Peace betwixt the Czar and the Emperor of *China*, concluded in the Year 1689 at *Nipchou*, by the Ambaſſadors of both Emperors, it appears that the Borders on both Sides are fixed by Agreement in the Latitude of 55 Degrees; which appeared very ſurprizing even to Geographers themſelves, they ſcarce believing that *China* and *Muſcovy* were become Empires confining on each other by the Addition of *Tartary*. And the Ambaſſadors could not reach the before-mentioned Frontier City, ſituated on the utmoſt Borders of *Muſcovy* from *Peking*, in leſs than ſix Weeks Time, the Diſtance being three hundred Leagues.

The Empire of the *Great Mogul*, and ſeveral other Monarchies, were in like Manner formerly Provinces obedient to the *Chineſe* Empire, as is amply evinced by the preſent remaining Monuments in ſeveral Parts of *India*: But either their diſtant Situation, political Intereſt, or the *Chineſe* Seditions, have long ſince torn them from that Monarchy. The Empire of the *Great Mogul* extends over all the Kingdoms and Countries betwixt the Rivers *Ganges* and *Indus*, to the Gulph of *Bengal*. The Inhabitants of *Cambay*, *Bengal*, and other ſubordinate Countries, drive a very great Trade with the *Chineſe*, and have alſo with their Merchandize introduced their own, that is, the *Mahometan* Religion. The Metropolis, where the *Great Mogul* keeps his Court, as alſo the Province in which it is ſituated, is called *Delli*; the Countries ſubject to him are very fertile, and what by reaſon of the Gulph or Arm of the Sea, and the Rivers which on both Sides run by it, very commodiouſly ſituate for the Tranſportation of the Produce of that Country. Beſides vaſt Plenty of Corn and Fruit-trees which that Land yields, it affords alſo great Quantities of Wax, Frankincenſe, Spices, and Drugs, as well as Diamonds and other precious Stones. The Number of Elephants is here ſo great, that they are not computed by Hundreds, but Thouſands; and according to the Cuſtom of this Country, the Horſe and Foot capable of taking Arms, and which upon a ſhort Warning may be raiſed, are reckoned by Hundreds of Thouſands. The Commodities with which they chiefly trade in *China*, are rough and other Diamonds, Jewels, Elephants Teeth, Wax, *&c.* The Emporium to which they and other *Indians* coming out of the Weſt reſort, as is already hinted, is *Zunning*, a very great and commodious trading City, frequented by all Nations; for though anciently no Foreigners were permitted to come to or trade in *China*, yet the wiſer *Tartars* regarding their own Intereſt much more than obſolete Cuſtoms, have allowed almoſt all Nations to trade amongſt them. All the *Indians* are ſwarthy, and go naked, except only a Cloth, which both Men and Women wear about their Waiſts.

It was thought beſt to inſert the Whole of our Author's Account of the Kingdoms, anciently and at preſent depending upon *China*, juſt as it ſtands in his Book, and without any Remarks, that the Reader might perceive at once what the Situation of Things was at the latter End of the laſt Century. We may very eaſily diſcern from his Manner of Writing, that he was a very warm Friend to the Glory of his Country, and very deſirous of repreſenting it as infinitely more glorious in former Times than it is now. It is not eaſy to ſay, what his Sentiments would have been, of an Opinion that prevails amongſt ſome very learned Men, if he had been acquainted with them, *viz.* that the *Chineſe* themſelves are but a Colony from *Egypt*. On one Hand indeed, this Notion derogates much from their Glory, as it makes them appear ſo far below what they eſteem themſelves, and of which they continually boaſt, that they are an original Nation; that many Nations have deſcended from them, and that before the Conqueſt of their Country by the *Tartars*, their Race was in a good Meaſure unmixed; yet conſidered in another Light, this Notion ſeems to do them Honour, for if we reflect on the Accounts given us by *Herodotus*, *Diodorus Siculus*, and other antient Writers, concerning the Government, Cuſtoms and Manner of Living amongſt the original Natives of *Egypt*, they muſt be owned for one of the wiſeſt and moſt polite People of whom there is any Record in Hiſtory.

In Matters of this Nature, however, it is not enough to aſſert, there ought likewiſe to be ſome kind of Proof, and thoſe who give into this Sentiment, endeavour to ſuſtain it by three Arguments. The firſt is, that the ancient *Egyptians* poſitively aſſert it, their having ſent, in the moſt early Times, vaſt Armies into the higher *Aſia*, who left behind them conſiderable Colonies, of which, however, the *Greeks* tell us rather Fables than any Thing that can be called Hiſtory, as to the Remnants they met with in *India*. So that ſuppoſing the Travels of the *Egyptian Bacchus* to have ſomething of Truth, though buried under a Load of Fiction, we may likewiſe ſuppoſe that he penetrated into *China*, and in that Country rather than in *India*, left his Colonies. The ſecond Argument is deduced from the great Conformity between the two Countries, for if *Egypt* has its *Nile*, *China* has its great River of *Nanking*; if the former abounds with Canals and Cutts of Water, from Town to Town, for the Sake of an eaſy and commodious Communication, ſo does the latter; and if in *Egypt* there are many Monuments of great Antiquity, the like are alſo to be found in *China*. The third Argument is taken from the Reſemblance of their Governments, and the Maxims upon which they are founded; the Likeneſs between the ancient Hieroglyphicks, or rather ſacred Character of the *Egyptians*, and that of the *Chineſe*; the Averſion and Contempt which both Nations have for Foreigners, flowing from an arrogant Opinion of their own Superiority in Science, and in every Thing elſe; the Notions the *Egyptians* had of the Excellence of their Country, which is exactly copied by the *Chineſe*, and in fine, the pacific Diſpoſitions of both Nations, ſpringing from the Principles of their Policy, immutable through the Courſe of many Ages. How far theſe Arguments reach towards eſtabliſhing the Probability of this Sentiment being true, we pretend not to determine, it being our Aim only to give the Reader as ſhort and clear an Account of the Sentiment itſelf as was in our Power; and having done this, we leave it entirely to his Deciſion.

But it may not be amiſs to add, that the *Japoneſe*, the *Simceſe*, and other Nations mentioned by our Author, have actually ſuch a Tradition amongſt them as he contends for, and are ſo far from denying that they were formerly under the ſame Dominion with the *Chineſe*, that on the contrary, they boaſt of being deſcended from them as a very high Honour, and appeal to their Cuſtoms and Manners for the Proof of it, ſuppoſing that their Learning and Knowledge of what Nature ſoever it may be, could be derived to them only from that People, who they eſteem the wiſeſt and moſt polite Nation in the Eaſt. We are not therefore to regard what our Author ſays, as the pure Effects of Vanity, but as an Opinion that is current amongſt the ſeveral Nations of which he ſpeaks.

It muſt look very ſtrange after what has been ſaid, that theſe Countries are no longer under the Dominion of the *Chineſe* Emperor; for it ſhould appear extremely eaſy to preſerve Territories, the Inhabitants of which have a Pride in being Subjects; but the Riddle is not hard to be diſcloſed, and as the Solution is neither unprofitable nor unpleaſant, it may not be amiſs to inſert it. The *Chineſe* Monarchs of the laſt Race, before the Country was ſubdued by the *Tartars*, were deſirous rather of keeping than of extending their Dominions; and for this Reaſon they choſe the natural Bounds of Seas and Mountains, together with the artificial Fortification of the Great Wall, which had been raiſed by their Anceſtors, and raiſed from that very Maxim which they now purſued.

By this Means the fifteen Provinces of *China*, though of ſuch a vaſt Extent, were perfectly well covered from foreign Invaſion. On the Eaſt or South they could be attacked only by a maritime Power, and a Power capable of attacking them, they very well knew ſubſiſted not in that Part of the Earth; ſo that their Coaſts were perfectly ſafe, even ſuppoſing they had not been ſo defenſible as they really are. To the South-weſt they have a long Chain of impracticable Mountains, on the other Side of which lie the Kingdoms of *Laos*, *Tonkin*, *Cochinchina*, and *Siam*; from the People of which they knew by Experience they had nothing to fear; and they were wiſe enough alſo to know, that it would be much eaſier for them to aſſiſt theſe Nations in Caſe they were attacked, than to defend their reſpective Countries as Provinces. On the Weſt they are likewiſe covered by Mountains, and on the North by the famous Wall, beyond which they have the Country of *Leontong*, which they kept as an Outwork againſt the *Mantcheou Tartars*.

This Policy of theirs was ſound and good, and muſt for ever have ſecured *China*, if their own Civil Diſſentions had not opened a Way to that Revolution which the *Tartars* compaſſed by ſuperior Skill rather than Force. As Things now ſtand, there is Reaſon to believe that on the one Hand the *Tartars* will not be eaſily diſpoſſeſs'd, becauſe their Force daily increaſes in Compariſon of the native *Chineſe*; and as to any Attempts of other Nations they are leſs to be feared than ever, becauſe the *Tartars*, heretofore their moſt formidable Enemies, are now become a kind of Out-guards, as willing and more capable to defend them than the proper Subjects of the Empire.

As this Obſervation is obvious, and as the *Chineſe* have Penetration enough in this Reſpect, we have Reaſon to wonder that our Author has taken no Notice of it; but a little Reflexion will diſcover the Cauſe. He was not of *Tartar*, but of *Chineſe* Extraction, and therefore if this Notion occurred to him, he would certainly ſuppreſs it as deſtructive to the Honour and Reputation of his Country, which it is viſible enough from his Manner of Writing he meant to raiſe as high as he could. At the Time he wrote, the *Tartars* had not been Maſters of *China* above fifty Years; and it is very natural to believe, that the *Chineſe* ſtill retained Hopes of being ſome Time or other able to throw off the Yoke; and in ſuch Caſes, thoſe who are well verſed in the Diſpoſitions of Men, which are pretty much the ſame in all Countries, will eaſily conceive, that all Things muſt appear to them in falſe Lights, becauſe on one Side, the flattering Expectation of becoming once more free and independent, heightened the Opinion of their own Strength; and on the other, their Averſion to Foreigners hindred them from perceiving that the *Tartar* Power was continually increaſing, and at the ſame Time, their Ability of reſiſting declining apace.

But to deſpair, and to deſpair in ſo capital a Point as this at that Time, muſt have been thought by every *Chineſe*, was what he muſt wiſh to avoid, and whatever Men wiſh with Regard to ſpeculative Points being always in their Power, they ſeldom fail of bending their Belief to their Wiſhes. We have various Inſtances of this in other Countries than *China*, and Inſtances that in Point of Time reach very far beyond that wherein they have even now been Subjects to a foreign Power; a Circumſtance every where alike hateful, and which therefore amongſt all Nations will ever have the like Effect, till ſuch Time as the Cauſe imperceptibly wears out, that is, till thoſe who were conſidered as Strangers become Natives, and ſo the Will to expel them is gradually loſt. In all human Probability this Time is already come in the Country of which we are ſpeaking, and if we had a Hiſtory of it written by a *Chineſe* at this Day, we ſhould find him place the Subject that we have been diſcuſſing, in the very ſame Light that we have done.

We muſt not however diſſemble that there are various Paſſages in his Accounts which might be corrected, and ſome which without Prejudice to his Performance might have been omitted, but it is to be conſidered, that theſe Miſtakes are not very conſiderable, either in their Nature or in their Number, that he wrote at a Diſtance of Time, when Slips of the like kind would have been very pardonable, even in an Author on this Side of the World; that there is ſomething uſeful in ſeeing what miſtaken Opinions gain Ground in thoſe Parts; and laſtly, that there is not the leaſt Danger that a Perſon, who has peruſed the former Volume of this Work, ſhould be miſled by what he ſays. Add to all this, that as we have hardly ſeen any *Chineſe* Writer before, ſo it would not become us to play the ſevere Criticks now. The Knowledge our Author had, like that of his Countrym was all of his own acquiring, and what he has co nicated, is written with that Freedom and In uity, that it is highly reaſonable we ſhould aff it a favourable Reception, and make many A vances for the many Diſadvantages he muſt neceſſarily labour under.

The ſame Excuſes, though perhaps in a more extenſive Degree, muſt be likewiſe offered for what ſtill remains of his Account, which it is very poſſible may not be altogether ſo exact as the modern Accounts of the Jeſuits, but at the ſame time, they are very well worth preſerving for many Reaſons. He had a Mind to give the People of *Europe*, a very ſhort Account of the two great Revolutions that had happened in *China*, ſince they became acquainted with that Country, and alſo an impartial View of the State that Empire was in at the Time he left it; this very Deſign has ſince employed the Pen of a very celebrated *French* Jeſuit, and yet upon comparing their Works we may ſafely affirm, that though our Author is not a tenth Part ſo long, it contains as much Matter, many Circumſtances that are not to be met with in his, explains the Cauſes and Conſequences of theſe Revolutions as clearly to the full, and affords a better Picture of the reigning Emperor, than that drawn by the *French* Father.

It was for theſe Reaſons, that after mature Deliberation, we gave it a Place here, ſo that the Reader has now the intire Work of *Dionyſius Kao*, and in a better Dreſs than it has hitherto appeared. Some of our Readers indeed might poſſibly expect a larger Hiſtory of *China*, but beſides that, this would have run us into much too great a Length, it would have been alſo foreign to, and quite beſide our Deſign; for all we aim at, is to give our Readers a juſt Idea of Countries as they ſtand at preſent, and if we ſometimes ſtep back into more remote Times, it is only with a View that from the Accounts we give of theſe, the preſent may be the better underſtood.

Taking Things therefore upon this Footing, what our Author has delivered is preciſely what we wanted; it is a Sketch of the *Chineſe* Hiſtory, within that Period of Time which fall immediately under our Notice, and accounts for the principal Events which have happened ſince it was viſited by *Marco Polo*, the firſt *European* that ever wrote about it, and whoſe Travels are inſerted intire in our former Volume. One Thing more is to be obſerved upon this Subject, before we leave it, and it is this, that whatever Diſlike our Author might have for the *Tartars*, he found himſelf obliged to ſpeak of the Emperor reigning at the Time he wrote, in as high Terms as it was in his Power to invent; from whence we diſcover two Things of ſome Importance, with an equal Degree of Certainty; the firſt, that the Monarch of whom he ſpeaks, really deſerved the high Character he gave him, for otherwiſe it is impoſſible that ſo many Writers of different Nations and Intereſts, ſhould agree in it. The ſecond, that it plainly appears from hence, that our Author had a juſt Regard for his Proteſtations, and did not ſuffer either his Fondneſs for his own Country, or his Averſion to the *Tartars*, to miſguide him from the Paths of Truth. From this extraordinary Inſtance therefore of his Veracity, of which we have the fulleſt Proof, we learn what Credit is due to the reſt of his Performance, and that it is not without Reaſon we have commended his Writings ſo much, to which it is now high Time to return.

Tho' the *Chineſe* Empire is by all the Learned of that Nation, without the leaſt Scruple, poſitively aſſerted to have continued for above the Space of four thouſand Years, under the Government of two and twenty Imperial Families; and others believe it poſſible to trace its Origin five hundred Years higher; yet to this Day, or rather to the Middle of the ſixteenth Century, the *Chineſe* have not made any Alteration in their Humour, Morals, Learning, Habits, Manner of Government, or Language. It is indeed true, that Seditions, Civil Wars, Inſurrections and Revolutions have happen'd, which have made a temporary Alteration of the exterior Form, but they ſoon diſappear'd, and all Things returned to their former State: For one while the Empire was divided into one hundred, nay three hundred Parts, then reduced to ſeven, afterwards to three; and at laſt returned to the primitive State of an entire Empire, ſubject ſolely to one Sovereign.

According to the *Chineſe* Chronology, the abovementioned two and twenty Royal Families have produced two hundred and thirty ſix Emperors, computed to extend to the preſent Monarch, and beginning with the firſt Emperor *Fohi*: Which Prince, agreeably to this Chronology, and the unanimous Atteſtation of all learned Men, is acknowledged for the undoubted Founder of the *Chineſe* Sovereignty. This is particularly confirmed by thoſe appointed to examine into it by the Emperor himſelf, and his chief or moſt able Miniſters. We are told that this Emperor was a Prince of an exalted Genius, great Courage and Experience; that he projected their Laws, declared good Education and good Manners to be the beſt Foundation of the Publick Good, and beſtowed his utmoſt Praiſes on thoſe who by virtuous Means preſſed forward to the higheſt Degree of Wiſdom; whilſt on the other Side, he baniſhed all Sloth, and ſet a very high Value on thoſe, who by their Parts and Induſtry diſtinguiſhed themſelves from the reſt of Mankind. His illuſtrious Reign, crown'd with venerable Age and Experience, tranſmitted to his Deſcendants ſuch a ſtrong Impreſſion of his real Excellencies, that his Maxims, Inſtructions, and Laws, are regarded as divine Precepts, and thoſe who have ſtudied them, have found them ſo ſuperlatively excellent, that they have juſtly deſerved as well as retained their exalted Fame amongſt the *Aſiatick* Nations.

Fohi was ſucceeded by *Chunming*, and he by *Hoangti*, who was ſucceeded by *Xao*, and ſeveral others in order, which according to the ſame Chronology were elective Kings; and being as long-liv'd as the *Noachian* Patriarchs, each of theſe is ſaid to have reigned above one hundred Years; though like the *Antediluvians* mentioned in holy Writ, they declined in Proportion to the Time of their Flouriſhing. The ſame Chronologies aſſign *Yvus* as the firſt Monarch which followed theſe elective Kings, and whoſe Son and Race ſucceeded to the Crown; ſince which Time it has remained hereditary to this Day.

The preſent reigning Monarch of the Houſe of *Taicin* or *Taicou*, (as we have already hinted) is the third *Tartarian* Emperor, whoſe Grandfather, after the Death of *Zunchi*, the ſixteenth and laſt Emperor of the Race of *Taiminga*, which had ſwayed the Scepter for the Space of two hundred and ſeventy ſix Years, ſeized or rather ruſhed into the imperial Throne, after the Defeat and Expulſion of the traiterous Uſurper by Prince *Ouſangouei*, aſſiſted by the *Tartarian* Forces.

The ſame Writers inform us, that in the Reign of the Emperor *Xunus*, the *Tartars* made their firſt Incurſions into *China*, but that Prince bravely repulſed them, and ſettled the Empire in a quiet State: So that this Event, which happened long before Chriſt's Time, was rather an Incurſion, than a War of any Duration. But in the twelfth Century, the *Tartars* conquered this Empire in the Reign of the laſt Emperor of the Houſe of *Sung*, which Family had then reigned four hundred Years: They then entred and ſeized the Empire, by the traiterous Aſſiſtance of *Zinghay*, one of the Nobility: For this Traytor, watching his Opportunity, introduced the *Tartars* during the Emperor's Minority; and they quietly enjoyed the Empire about eighty Years: But in Proceſs of Time, the Peace, Eaſe, and Plenty in which they wallowed, debauched that warlike Nation to the luxurious, ſoft, and lazy Way of living of the *Chineſe*: Valour and Order were diſplac'd, and Reputation vaniſhed: The Soldier became leud, and tranſgreſſed his Orders with Impunity: And the great Remiſsneſs of the Commanders occaſioned the greater Miſchief, of Robberies on the Highways, and in the Streets, and Murthers; which Current of Crimes running high, Fear of Puniſhment produced Conſpiracies, extending to whole Battalions, which at firſt ſculking and diſperſing themſelves throughout the whole Empire, rendred all *China* very dangerous either to live or travel in: Eſpecially when they grew ſtrong enough to appear in the Field in Troops, and at laſt in ſmall Armies.

The *Chineſe*, tired with this foreign Power, which grew to inſupportable Tyranny, as appears by what followed, murmured at it, and raiſed Commotions throughout the whole Empire, but none of the Nobility ſtirred in it, notwithſtanding which they were delivered from the *Tartarian* Yoke in the following Manner.

A certain Boy, born in the City of *Fajangfu*, in the Province of *Nanking*, that had loſt his Parents by the Plague, to eſcape that raging Diſtemper, as well as thro' Want of Bread, and in Hopes of bettering his Fortune, left his native Place, and retired to a Pagod, or idolatrous Temple, and put himſelf into the Service of the *Bonzi's*, which are their Idolatrous Prieſts: But they treating him ſomewhat ſeverely, he ran away from them, and became a Herdſman; and in Proceſs of Time, being advanced to maturer Years, he liſted himſelf a Soldier amongſt the Robbers before-mentioned, which were now grown to a formidable Body: And what contributed to his continual and gradual Advancement amongſt them was, that one of their principal Commanders was his Uncle, who finding him acquit himſelf well, took Care to raiſe him: And becoming himſelf a General, he died ſometime after, and was ſucceeded by this Nephew: Who had not been long General before (having encreaſed his Forces to his deſired ſufficient Number, and being aſſiſted by the *Chineſe*) he ſo expeditiouſly, vigorouſly, and ſucceſsfully made War againſt the *Tartars*, that in the Space of ſeven or eight Years, he obliged them to evacuate the whole Empire of *China*. He fixed himſelf on the Throne, was proclaimed Emperor, kept his Court at *Nanking*, and died after having reigned thirty three Years, aſſuming the Name of *Hunguil*, i. e. the Excellency of Arms. He was the firſt of the Houſe of *Minchao*, (or *Tamincha*) which governed that Empire about two hundred and eighty Years. His Son ſucceeded him in the Empire, and removed the Imperial Seat from *Nanking* to *Peking*, in order to be nearer the *Tartars*, upon whom he fell with all his Force, and pierced through all *Tartary*, deſtroying all to which Side ſoever he turned his victorious Arms, and ſparing Nobody, purſuant to the Reſolution he had made if poſſible to extirpate all the *Tartars*; but finding none able to oppoſe him, he returned to *China*, where after a long and peaceable Reign he died; and his Deſcendants continued in the Throne till in or about the Year 1644, at which Time the Reign of that Family ended in the Emperor *Zunchi*, who by his miſerable End made Way for the *Tartar* to aſcend the Throne. It is indeed remarkable, that the very Family which about three hundred Years before had drove out the Weſtern, was driven out by the Eaſtern *Tartars*.

Before we enter upon the preſent Government and Revolution of the Empire, we ſhall by the Way only hint, that the *Tartars* in the Reign of the Emperor *Vanli*, one of the laſt of the *Taiminchian* Race, who died in 1620, aged 58, after a Reign of forty-eight Years, made an Irruption into *China*, and were repulſed by him: And that about the Year 1680, in the ſame Emperor's Reign, the Chriſtian Religion began to be received in *China*. *Francis Xavier* attempted firſt to travel thither from *Japan*, in Hopes of promoting the Kingdom of Chriſt; but died on his Way in the Iſle of *Sancham*, a Place dependant on the Province of *Canton*. Then the Fathers *Herrado*, *Marino Alfaro*, and ſome *Franciſcans*, viz. *Martin Egnatio*, *Rogero*, *Paſio*, *Ricci*, and other Fathers, undertook this Work with the ſame ardent Zeal; but Father *Ricci* proved the moſt ſucceſsful of any of them, for having long reſided at *Macao*, having ſtudied the Religion, Laws and Cuſtoms of that Empire, and being very well verſed in their Language, theſe Accompliſhments gained him the Eſteem of the Emperor and the whole Court, and rendered his Miſſion ſucceſsful; he obtained a Grant of buying a Houſe and a Burying-place, as alſo Leave to ſettle there, which was the firſt Foundation of the ſpreading of the Goſpel here. But the Lord's Vineyard at *Macao*, was once very near an utter Extirpation by a cruel Perſecution, if the Hand of God had not ſtopped it by puniſhing the Perſecutors.

After the Death of the Emperor *Vanli*, reigned his Son *Taichan*, a valiant Prince, who by raiſing a great Army againſt the *Tartars*, that began to be in Motion, diſcovered his earneſt Deſire of heroically attacking them, but his Deſign was fruſtrated by his ſudden Death, after a Reign only of four Months. He was ſucceeded by his Son *Thienſki*, who not in the leaſt degenerating from the Valour of his Anceſtors, as ſoon as he was on the Throne, aſſiſted by his Allies, beat the *Tartars* out of *Leaotung*, in which Province they had made an Irruption and maſtered ſeveral Cities, and after a Reign of about ſeven Years Duration died in Peace, and was ſucceeded by his Brother *Zungchi*, a mild negligent Prince, who, fond of Eaſe, repoſed too great Truſt in his Officers, who inſtead of a faithful Service repaid his Credulity with Treachery, and after an unfortunate Reign brought their Maſter to a miſerable End, which was followed by the Empire's falling into the Hands of a foreign Family.

“ The Cauſes of the Revolution in *China*, and the utter Extinction of the laſt Race of *Chineſe* Emperors, beſides thoſe alledged by our Author, are by ſeveral Writers obſerved to be: That the Court (or the Emperor) was plunged in luxurious lazy Eaſe; his only Care being employed how to paſs his Days with the greateſt Pleaſure, with the beautiful Virgins which were ſelected for his Uſe all over the whole Empire: For the Prince being abſolute, it was forbidden to marry any young Women before they were proffered to him. This Courſe has ruined more Courts than one, it naturally adminiſtring Occaſions for Inſurrections within, and Foreign Invaſions, whilſt the Emperors, drowned in ridiculous Pleaſures and Diverſions, never trouble themſelves with the Government, but intruſt it in the Hands of worthleſs Eunuchs. Others add, that this Prince was alſo very covetous.”

The *Tartar* was driven out of *Leaotung* and *China* by the abovementioned Emperor *Thienſki*, and beſides made a Tributary to him; but the Sparks of civil Diſſention were not ſo extinguiſhed as to prevent their breaking out into a more raging Flame, which was kindled by the *Chineſe* Governors exorbitantly treating and plundering the *Tartars* and *Tartarian* Merchants, and not in the leaſt ſcrupling the Practice of any Manner of Injuſtice againſt them, in order to exaſperate that Nation, and oblige themſelves with the Opportunity of fiſhing in troubled Water. The Merchants and others that were abuſed by the Governors, petitioned againſt them; but the Emperor and the Court turned a deaf Ear to all their Complaints. The *Tartarian* King, in Reſentment, armed himſelf, and at the Head of his Army diſpatched a Letter to the Emperor, before he had Recourſe to coercive Means, or backed his Words with his Sword. He laid before him the unjuſt and partial Practices of his Governors and Officers; and ſet forth, that all the Remonſtrances of his Merchants were ſlighted at Court; deſiring the Emperor would be pleaſed to puniſh his Governors and exorbitant Robbers, and provide againſt ſuch pernicious and corrupt Practices for the Future, and excuſe him his annual Tribute, in order to reimburſe him the Military Expences he had been at; upon refuſal of which he declared, that he ſhould be obliged to take ſuch Meaſures as the continual Complaints of the Violence and Injuſtice daily exerciſed upon his Subjects ſhould oblige him to. The Emperor, inſtead of examining into this Affair, utterly diſcharges himſelf of it, and leaves it to his Council; who, keeping him blind, play'd their Game according to their own Pleaſure, and without any great Oppoſition ſuffer'd the *Tartar* to ſeize Part of *Leaotung*. After the Conqueſt of which, he endeavoured to ſubdue the whole Province, but was interrupted in his Career by a too vigorous Reſiſtance; and the War betwixt the two Nations laſted a long Time, Victory ſometimes inclining to one, and at other Times to the other Side: But at laſt the Strife ended in a Peace, in Favour of the *Tartar*, the Emperor being obliged to leave him in the quiet Enjoyment

ment of his Conqueſts; by reaſon that the Robbers and ſeveral of the Nobility had made ſuch a formidable Inſurrection, that the Emperor ſeemed to apprehend more Danger from them than from the *Tartars* themſelves: Which was indeed afterwards confirmed by the Event; for the Robber *Licoung*, after taking ſeveral Cities and whole Provinces, grew ſo inſolent as to preſume to attack even the Emperor himſelf in *Peking* his Metropolis, which he knew to be empty of Forces, or at leaſt, that thoſe there were commanded by thoſe who would betray their Prince. The Emperor finding himſelf betray'd on one Hand, and deſerted on the other, being unwilling to fall into the Robber's Hands alive, after he had killed his Daughter with his Sword, ended his own miſerable Life with a Rope.

The Conqueror attempted to fix himſelf on the Throne; but Prince *Ouſangouei*, who commanded the Army at the Great Wall, and kept a Watchful Eye on the *Tartar*, deſigning either to fall on him with his great Force, or engage him on his Side, gained over to his Party the *Leaotungers*, and all thoſe who were either baniſhed, or had fled to that Province; but though they were added to his Army, he did not think himſelf ſtrong enough to deal with the almoſt infinite Numbers, and conſequently ſuperior Force of the Uſurper: Wherefore he, by a Treaty with *Tſonte* or *Zunte* the *Tartarian* King, obliged him to join his Forces againſt the Uſurper, in order to revenge the Death of his Father, whom the Robber had cruelly murthered: He ſucceeded in his Deſign, and after a bloody Fight perſued him; and it is at preſent utterly unknown where *Licoung* periſhed. During this Purſuit of the Robber, *Tſonte* enters the Empire, in order to ſupport Prince *Ouſangouei* on Occaſion, to clear the Empire of *Licoung*'s Followers, and diſperſe the Conſpirators. He advanced to *Peking*, where finding the Coaſt clear, and the Throne empty, he aſcends it, and, aſſiſted by his *Tartarian* Forces, cauſed the *Chineſe* (whoſe Hearts he had already won by his engaging Deportment) to proclaim him their Emperor, without making any other Alterations in the Government, than putting it in the Hands of an equal Number of *Tartars* and *Chineſe*, and introducing the *Tartarian* Habit and Hair, to which he had in a Sort inured and engaged the *Chineſe* by dreſſing them in that Manner, by a martial Stratagem, in order to deceive the Enemy, and the eaſier to beat *Licoung*.

“ What *Nieuhoff* relates of this Prince is very re-
“ markable, and conduces to the Illuſtration of this
“ Story. This Prince, (ſaith he) ſeemed naturally en-
“ dowed with all Manner of Perfections, and if he
“ had any vicious Inclinations, he very artfully cor-
“ rected them by Practice. Before he aſcended the
“ Throne, he gave plain Indications of his Excel-
“ lencies. In his tender Age his Father ſent him in
“ *Chineſe* Habit into *China*, under the Direction and
“ Care of ſome of his Counſellors. He there learned
“ not only their Language, which his apt Capacity
“ ſoon muſtered, but became ſo tinctured with their
“ politer Manners and Morals, that he ſeemed utterly
“ to have forgotten the *Tartarian* Roughneſs and Bar-
“ barity. As ſoon as he was got into full Poſſeſſion of
“ the Throne, he changed the rigid Manner of go-
“ verning into a milder, knowing very well that the
“ former would prevent his gaining his Ends on the
“ *Chineſe*. He ſo eſtabliſhed himſelf on his new
“ Throne, rather by his Tenderneſs and good Man-
“ ners than by Arms, which endeared the Hearts of
“ his Subjects to him. He careſſed the *Chineſe* that
“ came over to him, as much as his own Countrymen;
“ thoſe he took Priſoners, if they pleaſed, he enter-
“ tained in his Service, and ſuffered thoſe who were
“ unwilling, to depart, diſmiſſing them with obliging
“ Expreſſions and a ſafe Conduct; thus he won their
“ Hearts, and tendered a kind Refuge and Protection
“ to the Exiles, or thoſe who had before fled out of
“ their Country; and they indeed were very aſſiſtant
“ to him in gaining the Empire. There were alſo
“ ſome amongſt them, which had diſtinguiſhed them-
“ ſelves in his Service; theſe he rewarded with Places
“ or Preſents that far exceeded their Expectations.”

After this, *Ouſangouei* returning from the Purſuit of his Enemies, finds the *Tartar* upon the Throne, and, purſuant to the Treaty concluded betwixt them, the Empire being now in Peace, and the Rebel totally defeated, deſired him to return to *Tartary*, tendering him the Preſents promiſed for his Aſſiſtance at the Beginning of the War. To this the Emperor putting on an obliging Air, anſwered, that it was yet too ſoon, ſince the Rebel was not ſo enfeebled, but that hearing of his Departure to *Tartary*, he might poſſibly attempt a freſh Inſurrection, and carry all before him; which he ſhould not be able to prevent, as not being at Hand to help them; wherefore it was much better firſt to deſtroy utterly the Rebel and all his Adherents, and revenge on him all the Evils which he had drawn on his Kingdom as well as the *Chineſe* Empire; and withal, to reduce them to ſo low a Condition, that it ſhould be impoſſible for them to make any new Attempts. The Prince either was or pretended to be ſatisfied with this Anſwer, and applied himſelf to the Deſtruction of the Rebels, which he ſo warmly purſued, that he did not leave the ſmalleſt Body of them together, but reſtored the Peace of *China*.

The Emperor *Tſonte* was ſcarce well ſettled on his Throne before he died in the Year 1644. He was the firſt of the Race of *Taicim*, who annexed the Imperial Crown of *China* to his Royal one; and govern'd both his own Nation called *Mantcheou*'s and the *Chineſe*, thereby tracing out a Way for the greater Glory of his Deſcendants.

He left a Son named *Chunchi*, who was but ſix Years of Age, to ſucceed to his Crown, and committed the Care of his Perſon and Education, as well as the Government of the Empire, to his Brother *Amavang*; who was as careful in the farther Subjection of the refractory Provinces on one Side, as *Ouſangouei* was in the Purſuit of *Licoung*, in order to take his juſt Revenge of him on the other: And we are accordingly told by ſome, that in an Engagement *Ouſangouei* himſelf cut *Licoung* to pieces, in Sacrifice to the *Manes* of his Father.

Amavang, to whom was entruſted the ſupreme Direction and Adminiſtration of the War and Empire, acquitted himſelf with ſo much Honour in all his Undertakings, that the Reduction and Maintainance of the Empire is to be aſcribed to him as much as his Brother: He gave continual Proofs of his Wiſdom and Prudence in the Direction of the State, and Forbearance of his Enemies: As he did alſo of his Valour and amazing Vigilance, in Beating of Thouſands of his Enemies; but he gave yet greater Evidences of the true Senſe of the moſt exalted Honour which animated his elevated Soul, utterly untainted with any ſiniſter Ends, or private Intereſt, in ſurrendering as willingly and freely the Empire to the young Prince as ſoon as ever he came of Age, as he had reduced, governed and preſerved it to that Time. This Action alone is ſufficiently famous, becauſe there are very few parallel Examples can be produced.

Chunchi's Reign was but ſhort, for he died in 1662, and after his Entry upon the Government, met with very few other Difficulties than thoſe common to the Exerciſe of Sovereign Juriſdiction, and the Care of the State. In his Intervals of Relaxation he diſcovered a ſtrong Propenſity to Arts and Sciences, particularly to thoſe which were Mathematical: It was this that engaged him to promote Father *Adam Schaal* to be Preſident of that Tribunal, and graced him with his Favour, notwithſtanding that he was a Stranger, and a Chriſtian; this gave Encouragement to hope that the Chriſtian Religion would encreaſe; for when Princes begin to beſtow their Favours on its Teachers, it opens a Door to their ingratiating themſelves not only with the Commonality, but with the Nobility themſelves.

“ *Le Comte* ſaith, that the Emperor *Chunchi* came in
“ Perſon to viſit Father *Adam* above twenty Times within
“ the Space of two Years, that he granted him Leave
“ to

“ to build two Churches in *Peking*, and conſented to
“ every Thing that might contribute either to the Eſta-
“ bliſhment or Propagation of the Faith; inſomuch
“ that prodigious Advances would have been made, if
“ a too violent Paſſion had not made an Alteration, by
“ depriving us of this Prince, at a Juncture when we
“ moſt wanted his Protection. He died, ſaith he, of
“ Grief for the Death of one of his Concubines, who
“ ſo ſtrongly inclined him to the Service of the falſe
“ Gods, that he would not hear of any other; upon
“ which followed a ſevere Perſecution, the Ground of
“ which was laid by his Miſtreſs. Nor did ſhe ſtrike
“ at the *Chriſtians* alone, but her Reſentment was alſo
“ fatal to the *Bonzi*'s, who narrowly eſcaped utter De-
“ ſtruction by her Means.”

His Son *Cambi*, or *Canchi*, which ſignifies *Peaceable*, ſucceeded him, being but eight Years of Age when his Father died. This is the preſent Emperor, whoſe Reign is crowned with ſuch univerſal Elogies. He is a Lover of Arts and Sciences, and hath indulged to the Chriſtians ſuch great Immunities all over *China*, that it is to be hoped this mighty Empire, may in Time, through the divine Grace, be wrought upon entirely to quit their erroneous Pagan Doctrine, and embrace the ſaving Faith of Jeſus Chriſt; which the good God grant.

His Father ſaw in his Infancy his excellent Endowments, and therefore paſſing by all his elder Brothers, declared him his Succeſſor in the Imperial Throne. During his Minority, the Chriſtian Church was in a ſuffering Condition, the four Regents being bitterly incenſed and prejudic'd againſt that holy Religion; and then the Chriſtians were obliged to try their Patience. Father *Adam Schaal* was thrown into Chains, and condemned to Death; but mercifully delivered by the wonderful Hand of God; and he died not long after, full of Years and Honour: whilſt his Enemies fell into Diſgrace, and ſome of them being caught in their own Traps, died ſhameful Deaths. After his Deceaſe Father *Verbieſt* came into the Favour of this preſent Emperor, and held the ſame Place in his Grace to his laſt Hour, as well as that of Preſident of the Mathematicks. And after his Death Father *Grimaldi* ſucceeded in his Stead, and to the Favour of this Prince, whoſe Praiſes are below his real Merit.

For if thoſe Perſons may be believed, which ſpeak their own Experience, and nothing but what they are Eye and Ear-witneſſes of, he is a Monarch of whom it is much better to be ſilent, than to ſay but little. His Virtues are too great to be comprehended in a narrow Compaſs, and my Pen too mean to do him or them Juſtice. Wherefore I ſhall by my Silence excuſe myſelf from this too difficult Taſk, and only repeat and ſum up the Lives of the Princes of his Race, that have ruled the Empire. His Grandfather *Tſonte* ſcarce enjoyed his new Acquiſition ſo long as was requiſite for him to travel through it, and died in 1644, leaving to ſucceed him *Chunchi*, a Prince of ſix Years of Age, but great Endowments, who died in 1662, after that he had declared the preſent Emperor his Heir, the greateſt Action that he ever did, or could do. He was eight Years of Age at the time of his Father's Deceaſe. *Canchi*, or *Peaceable*, is his Name, who now quietly enjoys and rules his Empire, and is equally honoured, feared, and loved by his Subjects. In the Beginning of his Reign he ſtruggled with ſeveral dangerous and rough Seas, which moſt young Princes are obliged to break through before they reach a ſafe Harbour. Shortly after, and when he had ſcarce reached the Age of twenty, Prince *Ouſangouei* roſe up in Arms and carried on a vigorous War againſt him; and *Canchi* being by Deſcent a *Tartar*, and on the other Side *Ouſongouei* a *Chineſe*, and conſequently more agreeable to the Populace, they the more blindly followed him, and ſuch Numbers crouded to join him, that it was not a little ſurprizing, that having already one half of the Empire, he did not carry the Remainder. But the young Emperor, by his extraordinary Qualifications, ſo engaged the Hearts of his Subjects, that he at laſt concluded an honourable Peace with this Prince, which held ſeveral Years; and after his Death the Emperor was wiſe enough to allure his Sons to Court, and make a proper Uſe of their Weakneſs to his own Advantage; and thus by one Means or other he again ſubjected all Parts of this Empire under one Head, and is now their ſole Emperor. The Kings of *Canton* and *Fokien* alſo took Advantage of *Ouſangouei*'s Inſurrection, and began to make War againſt him; but he knew how to draw off their Forces, and to raiſe Diſcord amongſt theſe three Princes, (to which *Coxinga* may be added as a fourth) to divide them, and make them help to pull down each other; whereas poſſibly if they had all drawn one Way, how brave a Soldier, and how accompliſhed a Stateſman ſoever he is, he had been defeated, dethroned and expelled. Thus by his wiſe Conduct, and great good Fortune, gaining of Time, and outliving his Enemies, he hath poſſeſſed himſelf of their Kingdoms. After the Death of their Fathers, alluring the young Princes to him, or ſubduing them as ill Neighbours, he clear'd his Field of all the Seed that might infeſt it, and thereby reaped a full Harveſt of Obedience.

Having reduced his Empire to a peaceable State, he applied himſelf to the perfect Regulation of it; to which End he choſe the beſt Men for his Miniſters and Officers, honouring thoſe that did well, and puniſhing thoſe who miſbehaved. He ſhewed them, by his own Example, how great his Averſion was to Idleneſs, and how well-diſpoſed he was to Induſtry and Action. After the diſpatching of State-affairs, he employs himſelf either in Hunting, Fiſhing, or the Study of the Sciences; for being a learned Prince, he protects and favours thoſe who excel in the learned Arts, whether his Subjects or Strangers, preferring them to the higheſt Dignities, and not diſdaining to make uſe of the *Europeans* in the moſt important Services, and to beſtow on them the greateſt Poſts; nor is he aſhamed to learn from them Aſtronomy, and other Mathematical Arts, Anatomy, Medicine, and Natural Philoſophy; in all which the Jeſuits are his Inſtructors, from whom he daily condeſcends to receive Leſſons; *Grimaldi*, *Gerbillon*, and *Pereira*, are three of that Society whom he has made uſe of in Embaſſies. The firſt of them was ſent alone to *Muſcovy* in 1686, and the two latter were added to the great Embaſſy which proved ſo ſucceſsful by their Negociations in 1689, for the adjuſting all Differences betwixt the Great Czar and this Emperor at *Nogovium* or *Nipchou*. The Fathers *Schaal*, *Verbieſt*, and ſome of the above-mentioned, he hath diſtinguiſhed by the honourable Charge of Preſidents of Tribunals, and the Dignity of *Mandaryns*, and himſelf as well as the Prince his Son, always heard them diſcourſing of Arts and Sciences with the utmoſt Pleaſure.

This mighty Emperor is not content perſonally to excel in Arts and Sciences, but endeavours to implant them in his Children, eſpecially *Heangtaiſe* the Prince, his Heir-apparent, whom he himſelf particularly inſtructs. And the Education of Children, and reverencing their Parents, being one of the fundamental political Maxims of the *Chineſe*, this great Prince pleaſeth himſelf with it; and the Son diſcovers ſuch pregnant Signs of a good Genius, that far from degenerating from his illuſtrious Father, he gives juſt Reaſon to hope that he will make as great Advances in Wiſdom as his ſo great Predeceſſor.

Whence it is, that if it ſhould pleaſe God, that the *Chriſtian* Religion ſhould ever take Root in the Hearts of this great Father and Son, it might reaſonably be hoped that *China* would ſoon ſubmit to the Obedience of the Croſs. The Learning of the Jeſuits furniſhes them with an Opportunity to endear themſelves not only to theſe two Princes, but likewiſe ſeveral others, who by the Reſpect paid to theſe Learned Men, grow into a favourable Opinion not only of their Perſons, but of their Doctrines, which is heightened by their Abilities manifeſted in both the former *Muſcovite* Embaſſies, which was the Foundation of the favourable Edict promulgated in 1691, (about three Years before the writing of this) relating to the *Chriſtian Religion*; by which a Door is opened without Diſtinction to all Perſons of all Degrees,

Degrees, to embrace that holy Faith. And what enhances the Value of this Favour is, that if *China* could be converted with the Bleſſing of God, we may unqueſtionably expect the Converſion of all *India*, and all the more remote and diſtant Nations; of which *China* being the Head, the leſſer Members, as Politicians obſerve, would of Courſe follow; to which the Lord give his Bleſſing.

In this Manner our Author concludes his Work, written in the true Patriot Spirit of a *Chineſe*, and with all the Piety of a Chriſtian, ſhowing himſelf equally concerned for the Proſperity of his Country, and for the Propagation of the Goſpel in his Country, which is a new Argument in Favour of his Writings, ſince publick Spirit, and religious Zeal, without Views of Intereſt, which cloſely conſidered, will be found to be very near the ſame Thing, are the true Springs of the moſt noble and heroic Conduct, as well as the moſt candid and ingenious Writings; and though theſe may be ſometimes diſſembled, yet to do this, ſo as to deceive, requires a much greater Meaſure of Art, than our Author ſeems, from his Book, to have been endowed with by Nature, or to have acquired by Practice. It remains to compleat our Author's View, and the Deſign of this Section, to continue this Hiſtory as low as we can, that the Reader may be acquainted, as near as poſſible, with the *Chineſe* Hiſtory down to the preſent Times.

This great Emperor *Canghi* reigned about twenty ſeven Years after the Concluſion of our Author's Hiſtory, and in that Space of Time, had ſeveral Diſputes which were terminated by as many Negotiations with the late *Czar*, *Peter* the Great. The Deſigns of theſe two mighty Monarchs were in a Manner oppoſite; the *Chineſe* Emperor was deſirous of preventing the Encroachments of the *Ruſſians* upon his Territories, and on the other Hand the Czar propoſed to himſelf the eſtabliſhing a regular Commerce in *China*. It was in order to accompliſh this, that by a new Treaty he regulated the Confines of the two Empires, upon Condition of a free Paſſage for the Caravans from *Ruſſia* to *Peking*, which ſubſiſted, tho' not without ſome Interruptions, during the Reign of *Canghi*, who, directly contrary to the *Chineſe* Maxims, admitted a *Ruſſian* Reſident to remain conſtantly at *Peking*. The *Sieur de Lange* who had that Character, has publiſhed his Memoirs, but they contain nothing that is very material; on the contrary, they conſiſt chiefly of his Diſputes with the Emperor's Miniſters, who on the one Hand diſliked the Trade by Caravans upon the old Principle of deſpiſing all foreign Trade, which produced a Balance in Favour of Foreigners, and on the other were in a Manner diſtracted at having a *Ruſſian* Miniſter in their Capital, who ſometimes had Audiences of the Emperor, whoſe Notions with Reſpect to theſe Matters were not at all agreeable to his Miniſters, that Monarch foreſeeing, that without ſome Conceſſions in Favour of the *Ruſſian* Trade, he ſhould ſometime or other be expoſed to a War with a Prince, capable of giving him infinitely more Trouble than the reſt of his Neighbours; of which however the *Chineſe* Mandaryns, wedded to their old Maxims, and preſuming on the irreſiſtable Power of their Armies, had not the leaſt Conception.

All this Time the Emperor of *China*, was engaged in an obſtinate and bloody War with the Weſtern *Tartars*, which was ended by a compleat Victory gained in the Year 1720. in Conſequence of which the far extended Country of *Thibet*, and all its Inhabitants ſubmitted to and acknowledged him for their Sovereign, by which Peace was eſtabliſhed on that Side. This was a Thing of prodigious Conſequence to the Empire, as well as an Event remarkably glorious for the reigning Monarch. In the ſucceeding Year, the *Chineſe* Inhabitants of the Iſland of *Formoſa*, reſolved to make a briſk Effort, in order to ſhake off the Yoke of the *Tartars*, in Hopes that lying at a Diſtance, they might be able to preſerve their Independency, and by the Acceſſion of their Countrymen from different Provinces, become powerful enough to eſtabliſh themſelves in the Dominion of that and the adjacent Iſles. In Conſequence of this wild and ill concerted Scheme, they made a ſudden Inſurrection, murdered all the *Mandaryns*, and drove the Imperial Troops out of moſt of the Cities in that Iſland. When the News of this Revolt was brought to *Peking*, the Miniſtry would have perſuaded the Emperor; that the People had been excited to it by the *Dutch*, and this with a View to irritate him againſt Foreigners, but he was too wiſe to entertain any ſuch Notions, and immediately ordered Part of the Forces in the Provinces oppoſite to *Formoſa* to be tranſported thither, which in a very ſhort Space of Time extinguiſhed the Rebellion, by extirpating the greateſt Part of thoſe who had any Concern in it, and forcing the reſt to fly for Shelter into the Mountains, where they lived by Rapine and Plunder, till by Degrees they were rooted out as Robbers and Thieves; inſomuch that this, like all Rebellions, that are ſuppreſſed, ſerved only to fix the Government, they intended to throw off, more ſtrongly. The Year after the Suppreſſion of this Rebellion, the Emperor being at his Country Palace, mentioned by his Excellency Mr. *Ysbrants Ides*, and going according to his uſual Cuſtom to hunt early in the Morning in a very rigorous Winter, he found himſelf ſuddenly ſtruck with a Chilneſs, which diſabled him from continuing on Horſeback, ſo that returning to his Palace, he took his Bed immediately; and his Phyſicians declaring that his Blood was coagulated, and that there was no Hopes of his Life, he ordered his principal Miniſters to attend him, and appointed his fourth Son to be his Succeſſor in the Government, ſoon after which he expired. This happened on the 9th of *September* 1722. according to our Stile, about eight in the Morning, in the ſeventieth Year of his Age, and the next Day his Corps was tranſported to *Peking*.

The new Emperor, who was about forty five Years of Age, took the Name of *Yong Tching*, which ſignifies, ſettled Peace, and from the Day of his Acceſſion, diſcovered not only great Abilities, but a very ſteady and reſolute Temper; he found the Imperial Family very numerous, and many of his Brethren were poſſeſſed of the firſt Employments in the Government, in which relying on the paternal Tenderneſs of the late Emperor, they had not behaved with ſo much Circumſpection as they ought, more eſpecially the ninth Brother, who had the Direction of Part of the Publick Revenues; him the Emperor called to a ſevere Account, and not ſatiſfied with his reſtoring Part of what he had embezzled, he cauſed him to be baniſhed into *Tartary*, where he died not long after. Another of his Brothers, who was at the Head of the Army, had likewiſe the Misfortune to incur his Diſpleaſure, was deprived of his Poſt, and otherwiſe puniſhed. Theſe Acts of Juſtice, his conſtant Application to Buſineſs, and his great Tenderneſs to his Subjects in general, gained him univerſal Reputation, and procured him the ſtricteſt Obedience. In his Father's Life-time he had never ſhewn any Liking to, or Confidence in the Miſſionaries, but on the contrary, behaved towards them with great Coldneſs and Reſerve, and yet the Jeſuits themſelves confeſs, he was as great a Lover of Learning as his Father, and as much inclined to protect and promote the Sciences as any of his Predeceſſors.

There is a great Probability, that the Reaſon of his Diſlike to the Chriſtian Fathers was owing to their Influence over the deceaſed Monarch, and of his obſerving that they made Uſe of that Influence, not only in regard to publick, but even to Family Affairs, and a Jealouſy perhaps they were averſe to, and had employed their Intrigues for preventing his Succeſſion. We find this aſſerted by one who was in the Train of a *Ruſſian* Miniſter at his Court, and it is the more probable, becauſe an *Italian* Monk, of great Simplicity of Manners, of exemplary Piety, and who amuſed himſelf with Painting, continued ſtill in his good Graces, and was not removed out of the Palace. Nay, Father *Kegler*, who was Preſident of the Tribunal of Mathematicks, enjoyed alſo his good Graces, and was treated not only with all the Reſpect due to his Character, but even promoted to a ſuperior Rank; which ſhews that he diſtinguiſhed between Religion and Manners, and knew how to ſet a juſt Value upon worthy Men, notwithſtanding they were of a different Religion.

Whatever the Cauſe might be of his Diſtaſte to the Jeſuits, it was not long before it became fatal to the Chriſtians in general; and yet this did not immediately ſpring from his own Will and Pleaſure, but from a Memorial preſented to him by one of his chief Miniſters, ſetting forth abundance of Enormities of which theſe Men had been guilty, more eſpecially in the ill Uſe they made of their Favour with the late Emperor, and of the Influence they had over their Converts, which they repreſented as highly prejudicial to the State, and dangerous too, if not deſtructive of their ancient Conſtitution. This Memorial was followed by ſeveral others of the ſame Nature, and not long after by a much warmer Paper, tranſmitted by the Viceroy of *Fokien*, containing his Reaſons for expelling the Miſſionaries out of that Province; and concluding with a Requeſt, that the Emperor would iſſue his Orders for exiling them out of all the reſt of the Provinces, and ſend them either to Court or to *Macao*.

This laſt Memorial was referred to the Tribunal of Rites, and by their Advice the Prayer of the Petition was complied with, notwithſtanding all the Endeavours the Jeſuits could uſe, and the Interceſſion of their Friends and Patrons, who in this unlucky Situation could do them no farther Service than to procure a ſmall Alteration in this Meaſure, which was to ſubſtitute *Canton* inſtead of *Macao*; and accordingly all the Miſſionaries throughout the Provinces were obliged to abandon their reſpective Places of Reſidence, and were either ſent to the laſt mentioned City, or to *Peking*. Not long after this, a Proſecution was commenced againſt a Prince of the Blood and all his Family, purely on the Score of their being Chriſtians, which notwithſtanding it was very numerous and deſcended from an elder Brother of the Founder of the Empire, was carried ſo high, that by the ſupreme Tribunal of the Empire they were condemned to ſuffer Death; which however the Emperor was pleaſed to commute, and ſent them into perpetual Exile, as ſome ſay, or as others aſſert, directed them to be kept Priſoners during Life.

One would imagine from theſe Accounts, that the Emperor *Yong Tching* was of a very ſevere Diſpoſition, and had either conceived ſome frightful Idea of the Chriſtian Religion, or thought he had good Grounds to ſecure himſelf againſt any Attempts that might be made to the Prejudice of his Authority by ſome of his own Family. Yet nothing of this Kind ever appeared, for with reſpect to the Chriſtians that made uſe of *Chineſe* Prieſts, and performed their divine Worſhip without Oſtentation, he allowed them much the ſame Kind of Indulgence they had under his Predeceſſors; ſo that it ſeems it was not the Precepts of the Jeſuits, at leaſt in a Religious Senſe, that he feared, but their Dominion over Conſciences, their ſecret Intrigues and hidden Practices. As to the Imperial Family, he behaved towards ſuch as were in a private Condition, with all the Reſpect and Tenderneſs due to his Relations; but in regard to ſuch as were in publick Stations, he expected from them as clear and as candid Accounts as from others in the like Employments, and if theſe were wanting, he puniſhed them without any Reſpect to their being of his Blood, which he conſidered only as an Obligation on them to be more circumſpect in the Diſcharge of their Duty. An Inſtance there was which put the Rectitude of his Behaviour entirely out of Diſpute. The next Brother to him had been thought of for the Succeſſion, being a Prince of great Wiſdom and Prudence, and he was ſet aſide only from his affecting a ſedentary Life. Yet the Emperor his Father admitted him into his Cabinet Council, took his Opinion upon all Matters of Importance, and very ſeldom or never acted contrary to his Advice. This Brother, when *Yong Tching* came to the Throne, he made the Partner of his Cares and of his Power; he did nothing but according to his Counſels, and was ſo conſtant in this Reſpect, that he ſeemed rather his Brother's Miniſter than his Prince.

When he died, which was in the Month of *June*, 1730, *Yong Tching*, according to the Cuſtom of the Country, ſhewed his Reverence and Eſteem for the Deceaſed, by the Solemnity of his Funeral, and the Length of the Mourning, both of which rather ſuited the Companion of his Throne, than the Prince of his Blood. After the Death of this Prince, the whole Weight of Affairs devolved upon the Emperor, and he attended to them with Patience beyond Example, and behaved, whenever he gave Audience, with an Affability beyond the Reach of Deſcription. The Jeſuits at *Peking*, who would have been glad to have diſcovered any Miſtake in his Conduct, or Error in his Policy, very freely acknowledge this, and that inſtead of indulging his Eaſe, or purſuing his Pleaſures, he was temperate in the higheſt Degree, and dedicated more Hours to Buſineſs than almoſt any Man in his Dominions. He made uſe of his Revenues purely for the publick Service, and in Caſe of Dearths, or any other publick Calamity, he was ſure to prevent any Applications for Relief by an early and adequate Aſſiſtance. He gave an extraordinary Inſtance of his paternal Affection for his Subjects on the happening of an Earthquake, *November* 19, 1731, by which a great Part of the Imperial City of *Peking* was demoliſhed, and upwards of a thouſand People buried in the Ruins. He was at the Time it happened at one of his Palaces in the Country, not far from that City, and was taking the Air in a Boat upon one of the Canals, from whence he had the Mortification to ſee the greateſt Part of the Buildings, which had coſt his Predeceſſors immenſe Sums, ſubverted in an Inſtant. Upon this he immediately went a-ſhore, proſtrated himſelf upon the Ground, implored the Mercy of the Great God of Heaven and Earth for his Fellow Creatures, and beſought him, if that Puniſhment was due to any Crimes of his, that he might rather be removed, and become the Object of the Divine Vengeance, than that it ſhould fall upon an innocent People, criminal only from their being his Subjects.

As ſoon as the Danger was over, forgetting the Ruin of his Palace, he appointed Commiſſioners to enquire into the Loſſes which the People of *Peking* had ſuſtained, relieved the Families of thoſe who were killed, and iſſued a prodigious Sum of Money for repairing the Houſes, and rebuilding the publick Edifices that had been thrown down, and which is a very ſtrong Proof of his having no Pique or Prejudice to the Chriſtian Religion; being informed that the great Church of the Jeſuits was in a Manner totally ruined, he ſent for the Miſſionaries, treated them with great Humanity and Tenderneſs at their Audience, recommended to them the Repair of their Church as ſoon as poſſible, and made them a Preſent of one thouſand Taels in Gold, which amounts to 666 *l.* of our Money, for that Purpoſe.

We need not wonder that a Monarch, who reigned ſo worthily, ſhould be beloved and revered, as well as obeyed with the utmoſt Submiſſion by all his People; and it is univerſally allowed, that the *Chineſe* ſhewed their Duty to this Prince in a Manner ſuitable to the Obligations which he daily conferred upon them, and teſtified upon all Occaſions as ſincere and tender Affection for him, as if he had been their natural Parent. We have no certain Accounts ſince theſe, except only the Misfortune that befel the Chriſtians in 1732, when the Miſſionaries that had been hitherto allowed to remain at *Canton* were of a ſudden ordered to retire to *Macao*. They had this Notice given them on the 6th of *Auguſt*, and on the 9th they were embarked, to the Number of thirty Perſons, and thoſe who accompanied the Miſſionaries, were treated with the utmoſt Indignity; the only Reaſon aſſigned was, becauſe, contrary to the Emperor's Orders, they had endeavoured to propagate the Chriſtian Doctrine. But various Diſputes having ariſen between the *Dominicans* and the *Jeſuits* reſiding in *China*, and ſeveral Books having been lately printed in *Popiſh* Countries relating to theſe Diſputes, we may from thence in ſome Meaſure gather what have been the Motives to this new Perſecution.

In order to ſet a Matter ſo obſcure, in a Light as diſtinct as may be, it will be, in the firſt Place, right to obſerve, that it is not abſolutely certain, whether it can be, with greater Propriety aſſerted, that the *Jeſuits* have taught the *Chineſe* a new Religion, than that the *Chineſe* have taught them one; it is very reaſonable to believe, that the firſt Miſſionaries, even of this Order, ſtudied the *Chineſe* Literature very innocently, and only with a View to enable themſelves to preach the Faith of Chriſt more effectually. But by Degrees, it ſeems, they have taken ſuch a Liking to the *Chineſe* Philoſophy, and the *Chineſe* Manners, that they indulged their Diſciples in Practices, which they ſtile idle Ceremonies, but which the *Dominicans*, who ſeem to have no farther View than barely doing their Duty, conſider as rank Idolatry. This has occaſioned a long and warm Controverſy at *Rome*, which has been at laſt decided againſt the *Jeſuits*, who notwithſtanding proceed ſtill in their own Way, without paying that Reſpect to the *Roman* See, of which they boaſt ſo much in *Europe*.

In a Word, the *Jeſuits* finding that the Study of the *Chineſe* Learning was the high Road to Preferment in that Country, and that theſe Ceremonies were neceſſary to the acquiring it, could not find in their Hearts to block up either their own or their Diſciples Way to Power, to Credit, and Court Intereſt. Their Politicks, to be ſure, were right; but the Queſtion is, Whether they were conſiſtent with their Religious Intereſts; or whether it would not have been full as well for Chriſtianity, if they had been more ſolicitous about teaching the People the Path to Heaven, and leſs careful about their Succeſs at Court? Certain it is, that the great Influence this Order always have over the temporal Concerns of thoſe to whom they become ſpiritual Guides, is ſufficient to awake Attention, and even to alarm any Government, and more eſpecially a Government ſo watchful and ſuſpicious as that of the *Chineſe*. Their particular Applications to Women alſo, and that Itch which they too frequently diſcover of gaining Wealth to the Church, cannot but be prejudicial to them in the Opinion of all ſenſible People, more eſpecially when they find it ſo apparently repugnant to the Principles of that Doctrine they pretend to teach.

We may be allow'd alſo to obſerve, that the Propenſity of theſe Fathers to a Relaxation in Morals in Favour of thoſe who are intirely at their Diſpoſal, is another unlucky Circumſtance in Regard to the Propagation of the Goſpel, which has always prevailed moſt, where Men's Lives have been ſtrictly agreeable to its Precepts, and where the Converts to the Faith have ſhewn themſelves rather ſolicitous of obtaining the Bleſſings of another Life, than the Conveniencies of this. At leaſt two Things are very certain; one, that, by purſuing their particular Plan of promoting a temporal as well as ſpiritual Intereſt, that Perſecution was brought on in *Japan*, which extinguiſhed Chriſtianity, and therefore a like Conſequence may be juſtly feared in *China*. The other is, that in *Paraguay* the Jeſuits have actually eſtabliſhed, under Colour of promoting the ſpiritual Intereſt of the Natives, a temporal Dominion ſo abſolutely independent of the Crown of *Spain*, that it is very doubtful whether the People have the leaſt Notion of their being his Catholick Majeſty's Subjects. Now whatever Motives that Monarch may have to wink at this Behaviour of the Jeſuits, and to ſuffer them to maintain ſuch a diſtinct Kind of Government in *America*, it cannot be conceived, that the *Chineſe* Emperors will ever enter into any ſuch Notions of falſe Policy, or permit the Obedience of their Subjects to be withdrawn in this World, under Colour of conſulting their Happineſs in the next.

Theſe Hints will very probably lead the Reader to the Knowledge of the true Cauſes of the ſudden Change that has happened in the Condition of the *Chineſe* Chriſtians, and will account for a Perſecution, by a Monarch, who even thoſe whom he thus perſecutes, acknowledge to be a Prince of great Equity and Moderation, and neither an Enthuſiaſt nor a Bigot.

To ſpeak impartially, the Jeſuits themſelves do not much diſſemble theſe Things in their Memoirs. We ſee throughout, that they are charmed with their Court Life at *Peking*, the Reſpect ſhewn them by, and their Influence over the Emperor, the Titles with which they are honoured, the great Employments to which they are advanced, their living within the Walls of the Palace, and being admitted to the Imperial Preſence, at the Seaſons, when ſo great a Monarch is moſt diſengaged, the Preceptors of his Studies, the Companions of his literary Amuſements, the Perſons (who as Foreigners) are chiefly called upon to fill up the Vacancies in his leiſure Converſations. All theſe Particulars they relate at large, with a long Train of Circumſtances, and in Terms which moſt evidently ſhew their Senſibility with Regard to the Things which they relate. So that on the whole, we cannot help ſeeing that all the loud Boaſts of the Popiſh Writers, as to this Miſſion of the Jeſuits, are built upon a very ſandy Foundation, and that the Converſions they make are very precarious Things, reſembling rather the Gaining Men over to a Faction, than reconciling them to a new Religion, and conſequently tending to awaken the Suſpicions and Jealouſies of the moſt dark, ſubtle, and deſigning People on the whole Earth, except it may be——the Jeſuits themſelves.

As it is impoſſible the Goſpel Doctrines ſhould be effectually ſpread by theſe Miſſionaries, who are ſo much taken with the Kingdom of this World, ſo it is not at all likely, that the *Chineſe* Trade will ever become beneficial to this Part of the World, till it falls under ſome new Regulation. In Reality, Nobody trades there upon a free or equal Footing, but in a ſubmiſſive ſlaviſh Manner, by the Grace and Favour, as it were, of the Emperor, and upon ſuch Terms preciſely as he is pleaſed to preſcribe; by which ſuch Advantages are ſecured to his Subjects, that the Profits of a *China* Voyage reſult entirely from the Sale of the Goods returned, and conſequently are gained, by *Europeans* from *Europeans*; a very conſiderable Balance on each Cargo being in the firſt Place left behind in *China*. Theſe are plain and unqueſtionable Facts, and therefore deſerve to be maturely weighed, and thoroughly conſidered, by ſuch as look upon Commerce as a Thing of the utmoſt Importance. If the *Dutch* had remained Maſters of *Formoſa*, or if we had continued our Factory at *Chuſan*, Things might have changed their Face, and the Trade to theſe Countries been carried on in a more advantageous Manner.

As it ſtands at preſent, I will venture to hazard a Thought of my own, which I deſire may not be deſpiſed, till the Arguments I offer in Support of it are clearly refuted. It is this, I am apprehenſive that while we are contending about the Balance of Power, and ſacrificing each others Trade to a Spirit of mutual Jealouſy, Trade itſelf will remove to the North; and when it is too late we ſhall perceive that not only the *French* and *Spaniards*, but the *Engliſh* and *Dutch*, have been doing the Buſineſs of the Nations bordering upon the *Baltick*, and putting it in their Power to become rich and potent at our Expence. For to me, it is a Thing paſt all Doubt, that if the *Swedes* had not an actual and immediate Benefit accruing to them annually from the Trade with *China*, they would not carry it on, ſince *Sweden* is a Country that cannot afford to export great Quantities of Bullion, as all the other Nations engaged in this Trade actually do; and if by the bare vending their own Manufactures, they can make this Trade turn to Account, it muſt be viſible to all who have a true Inſight into Commerce, that ſooner or later they will become entire Maſters of this Branch of Traffick, or at leaſt, whatever Share we have in it, muſt be a dead Weight upon us, as furniſhing the Inſtruments of Luxury only in Exchange for our Coin; and when once this comes to be the Caſe, we may pleaſe ourſelves with the Thoughts of the *China* Trade, but conſidered in a national Light, it would be better for us that we had none.

There is nothing more common, than for ſuch as are actually concerned in Commerce, to ſmile at and deſpiſe Speculations upon that Subject; but I believe it would on due Search be found, that though Companies of Merchants and private Traders may be enriched by purſuing their own Schemes, and contriving to make the Management of them an impenetrable Myſtery; yet with Reſpect to National Advantage, the Notions of ſpeculative Men have been, generally ſpeaking, right. It is agreed on all Hands, that Trade is a Thing of a nice and delicate Nature, that from ſecret and imperceptible Cauſes it ebbs and flows, is poſſeſſed now by one Nation, and then by another; and that when it is once loſt, it is very hard to be regained. If therefore we obſtinately perſiſt in the old Road till the Northern Nations actually become poſſeſſed of this and other Branches of Traffick, and in Conſequence thereof, of a great Naval Force, it will be to no Purpoſe to look back, or to conſider by what Means this might have been prevented. There is a natural Vigour that attends an increaſing and growing Trade; and there is alſo a natural Supineneſs and Negligence which accompanies the Declenſion of Trade; ſo that when Nations in theſe different Circumſtances come to contend with each other, it is no difficult Thing to perceive which muſt go to the Wall.

We well know, that there was a Time when we had very little Trade, that it was with great Difficulty we firſt raiſed and then extended it, and that our doing this, made Way for the Declenſion of the *Spaniſh* and *Portugueſe* Trade, which have never recovered ſince. We alſo know, nay we even remember, when the *Swedes* and *Danes* had little or no Trade, and when themſelves conſidered it as impracticable for them to interfere with us, or the *Dutch* in the Trade of the *Eaſt-Indies*; but we now learn from Experience, that they are able to do it, and we cannot but be ſenſible, that the greateſt Obſtacles to ſuch Endeavours are felt at the Beginning; and that when theſe are once got over, as in Reſpect to them, they are already got over, Things go on a-pace, that is to ſay, Exportation increaſes, Navigation is extended, Wealth rowls in, Shipping multiplies, and a naval Power is ſuddenly raiſed. The Buſineſs therefore is to reflect in Time, and to make Enquiries into the propereſt Means for preſerving what we have got, while it is yet in our Hands. Opportunities once ſlipt, are never to be retrieved; we are ſtill a naval Power, and a great naval Power; but if we imagine that this depends upon the Nature of our Government, upon the Supplies granted for the Navy, and the Orders iſſued from the Admiralty, we ſhall very ſoon become ſenſible of our Miſtake. *Philip* II. of *Spain* fell into this Miſtake; he fancied that naval Power might be maintained, as well as employed, by Policy; but what followed? In 1588, the Efforts of *Spain* were terrible to *Europe* in general, and to us in particular; in leſs than twenty Years the Returns from the *Indies* became abſolutely precarious, the *Spaniſh* Fleets were the Contempt of their Enemies, and in half that Time both we and the *Dutch* inſulted the Coaſts of *Spain*. The Source and Support of a naval Power is Commerce, and if we cannot keep this, we muſt loſe that, let the Adminiſtration in this Country be ever ſo honeſt, or ſo wiſe; from whence my Concluſion is, that though there may be other very important Concerns, yet the moſt important of all is our Trade; and may Providence incline us to ſee this in Time!

But that we may not ſeem to be always complaining, and never thinking of any Means of removing the Evils of which we complain, let us conſider a little with ourſelves, if ſomewhat may not be thought of, which may afford us rational Hopes of preſerving the Commerce we have left, and even of extending it. Such an Attempt as this would be ſerviceable many Ways; it is peculiarly adapted to our preſent Situation; we have a rich and powerful Company, who are intruſted with the Commerce in theſe Parts, and who might be excited by the Deſire of expreſſing their Gratitude to the Publick for what they have received, to try what might be atchieved on this Side.

We have in the former Volume mentioned ſomewhat of the Poſſibility of venturing once more into the Iſland of *Japan*. But if that ſhould be thought too hazardous, what can hinder ſome of our Ships from viſiting *Formoſa*? a fruitful, pleaſant, and well ſituated Iſland. Are there not a thouſand Pretences that may be ſuggeſted for putting in there? and if the Veſſel that makes this Attempt be a Ship of Force, and well manned, is there any Reaſon to doubt, that ſhe would be able to procure that Reſpect which would make way for Trade? It may be replied, that the *Chineſe* Laws are ſo ſtrict, that there is no Trading in *Formoſa* without the Emperor's Leave. To which I reply, that it is very well known the *Chineſe* inſiſt upon their Laws in the moſt peremptory Manner, where they are ſure they have Force enough to ſupport and carry them into Execution. On the other Hand, where this is not to be done, they are very ſlow in coming to Extremities, and had rather bate ſome of their Punctilio's, than run the Hazard of a Diſpute that might be attended with bad Conſequences.

In Times paſt, the *Dutch* made the Conqueſt of this Iſland, or rather the *Dutch Eaſt-India* Company made it, and kept Poſſeſſion of it in Spite of the whole Force of the *Chineſe* Empire. I am very far from ſaying, that this ſhould become a Precedent to our *Eaſt-India* Company, or that they ought to attempt either a Conqueſt, or a Settlement by Force; all I contend for is, that if the *Dutch Eaſt-India* Company conquered it, the *Engliſh Eaſt-India* Company might find a Way to trade there. They would find their Account in it, and the Nation would find their Account in it; and though it might coſt ſome Time and Trouble to bring it about, yet this very Time and Trouble would, for ſo long a Space, exclude other Nations, and we might perhaps find a Means of putting the Trade there on ſuch a Foot as to keep it wholly and for ever to ourſelves.

If we never try, it is certain we ſhall never ſucceed; and if the *Swedes* or *Danes* had been diſcouraged by ſuch Obſtacles, there is no Doubt that they had never brought that Trade to bear which they now enjoy. Beſides, when our *Drakes* and *Cavendiſhes* undertook thoſe perilous Voyages in the Dawn of our Navigation, they had much greater Difficulties to ſtruggle with, and much leſs Aſſiſtance to hope for, yet they overcame them all; and to their Boldneſs and Intrepidity we owe that Figure we have ſince made as a Maritime Power. If therefore a Spirit of this Kind could be raiſed, or rather revived, why ſhould not we expect ſome ſuch-like Effects? or why ſhould we reſt ſatisfied with the preſent State of Things, and lay aſide all Thoughts of improving or extending our Commerce, when we ſee other Nations, far leſs able and powerful than our own, and under much greater Difficulties than we have any good Grounds to fear, making ſuch Attempts, and making them with Succeſs?

But to put this Matter out of all Doubt, and to ſet the Thing in ſo clear a Light that every Reader of tolerable Underſtanding may be able to judge of it, I have added another Section, which relates to a Country that hitherto we have little or no Knowledge of, with which we never attempted any Trade, and to which, notwithſtanding there is the higheſt Probability that an advantageous Commerce might be carried on. Whether this be practicable or not; whether it will be ever attempted by this Nation; or whether the Hints here given may prove uſeful to ſome more conſiderate and enterprizing Nation, muſt remain in the Womb of Time.

Yet till this ſhall be diſcloſed, I ſhall have the Satiſfaction of knowing that I have done my Duty; and that with infinite Pains and Trouble I have collected and reduced into their proper Order, all the ſcattered Hints and Paſſages relative to a very large and fruitful Peninſula, not leſs wealthy, not leſs populous in Proportion to its Bigneſs, than *China* itſelf, and of which there is not hitherto extant any regular or tolerable Deſcription in any Language; ſo that if I ſhould miſs in my great Aim, and which ought to be every Man's Aim, that of doing Good to and improving the Trade of my Country, I ſhall at leaſt ſucceed as an Author, by enriching with a new and curious Section this great Work, which I commit to the Peruſal and Conſideration of Poſterity, and more eſpecially of thoſe heroick and enterprizing Spirits deſtined to ſtrike o[illegible] of the common Path, and to acquire immortal G[illegible]y by bringing new Advantages to Mankind.

SECTION VII.

A curious and conciſe Deſcription of the Country, Hiſtory of the Inhabitants, and Account of the preſent State of the Kingdom of *Corea*, together with ſome Hints of the Eaſe with which Commerce might be eſtabliſhed in its Ports, the Benefits that might be expected from thence, the great Likelihood of Gaining an Entrance from thence into *Japan*, or at leaſt an Intercourſe with the *Japoneſe*; and many other entertaining and inſtructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of *China*.

Collected chiefly from Memoirs hitherto unpubliſhed, and compared with all the printed Hiſtories and Travels, in which any Mention is made of this Country, its Commerce or Inhabitants.

1. *Of the Situation, Extent, Climate, and Boundaries of the Kingdom of* Corea, *with Remarks and Obſervations.* 2. *Of the Hiſtory of this Country, as delivered in the* Chineſe *and* Japoneſe *Authors, which, for any Thing that is hitherto known, are the only Writers upon that Subject.* 3. *Of the Soil, Produce, Commodities, Manufactures, and Riches of this noble* Peninſula. 4. *Of the Provinces, Cities, Ports, Fortreſſes,* &c. *in* Corea, *and of the Iſlands that lie upon its Coaſts.* 5. *Of the Inhabitants, their Stature, Complexion, Habit, Cuſtoms, Manners, Temper, Learning, Diverſions,* &c. 6. *Of the Commerce of the* Coreans *with the* Chineſe, *the Commodities they import and export, and the Reaſon why the laſt mentioned Nation are ſo exceſſively jealous of them.* 7. *Of the Commerce of the* Coreans *with the* Japoneſe, *the Commodities and Manufactures they export and import, and of the natural Averſion between the two Nations.* 8. *An Enquiry into the Probability of the* Coreans *trading by Stealth into other Countries, and ſome Conjectures of the Countries to which they trade, and the Commodities for which they deal.* 9. *Reaſons why it is not at all impoſſible to enter into a Trade with the* Coreans, *as alſo why this Commerce might anſwer, notwithſtanding any Umbrage it might give to the* Chineſe. 10. *Some Arguments tending to prove, that a Trade with* Corea *is the moſt probable Method of recovering ſome Degree of Intercourſe with* Japan; *with a few Hints of the Means by which this might be effected.* 11. *A ſuccinct Repreſentation of the Advantages that might reſult from ſuch a Commerce as this, with Reference to the Diſcovery of unknown Countries, that are probably richer than any to which we trade at preſent.* 12. *A Hint that we may receive Satisfaction this Way, as to the Poſſibility or Impoſſibility of finding a North Eaſt Paſſage.* 13. *Miſcellaneous Remarks and Obſervations on the principal Points mentioned in this Section.*

1. THERE are two different Methods by which Commerce may be promoted, the one derived from the Improvement of the Lights afforded by Experience, which is indeed certain and ſure, but generally ſpeaking ſlow, and producing only a moderate Profit; the other ariſing from Science, and the endeavouring to ſtrike out a new Road to freſh Markets, by a comprehenſive Knowledge of Coſmography, Navigation, and the Manner of conducting foreign Trade. In Reference to the firſt, the *Spaniards* reſolved to attempt a diſtant Navigation, after the Example of the *Portugueſe*; the *Dutch*, when oppreſſed by the *Spaniards*, and denied a Share of the *India* Trade in *Europe*, reſolved to attempt a Paſſage thither themſelves; and in like Manner, when we perceived the Advantages reſulting to *Spain*, from her Colonies in the *Weſt-Indies*, determined to try what might be done in the ſame Way. In Regard to the latter, *Columbus* was the firſt, who had the Courage to propoſe going in Queſt of all thoſe Iſlands and Continents, that his own Sagacity had diſcovered on the other Side the Globe, and we very well know, what mighty Things followed from the Queen of *Spain*'s accepting his Propoſal. In like Manner, *John Cabot* firſt formed a Notion of a North weſt-Paſſage, which hitherto has not, but I perſwade myſelf will, ſometime or other, be diſcovered. *Ferdinand Magellan* was happier in his Project of going to the *Indies* by a South Paſſage, which he accompliſhed; all theſe were with Reſpect to the human Species in general, and with Regard to the Inhabitants of *Europe* in particular, very great and important Diſcoveries, and thoſe chiefly that in the Eye of important Reaſon ſet this Part of the World in a much fairer and better Light than any of the reſt.

But notwithſtanding the manifeſt Advantages reſulting from this high Prerogative of viſiting and commanding in all the other Quarters of the Globe, it ſeems in this laſt Century to have been leſs regarded. Far from proſecuting that noble Plan, which in the Midſt of ſuch Obſcurity our Anceſtors had the Wiſdom to draw, and the Courage to carry into Execution, we are diſpoſed rather to make the moſt of what they have left us, and even to quarrel with each other about our Shares; ſo that *Aſia* and *America*, inſtead of wondering, as they were wont to do, at the Boldneſs of our Voyages, and the Expertneſs of the *Europeans* in whatever relates to Traffick, are juſtly aſtoniſhed at our Feuds, and ſee with Amazement, that we labour to deſtroy Settlements already planted, inſtead of making new; that we employ our Pains in decrying and diſcrediting each other, in publiſhing our Imbecilities and Misfortunes, and in exciting the *Indians* to ſhake off that Fear, which the Exploits of the *Europeans*, in the two laſt Ages, impreſſed, and to exert that Power, which themſelves always poſſeſſed, but hitherto have been afraid to employ, in thruſting out thoſe, who, not contented with trading, have ventured to play the Maſters ſo far from Home.

If inſtead of ſo weak, ſo raſh, and ſo impolitick a Behaviour, we had forborn every kind of Diſpute, ſupported each others Settlements, and gone on in making Diſcoveries, we had been in a much better Condition by this Time than we are. Theſe diſtant Countries would have furniſhed us with Places enough to have diſcharged thoſe uſeleſs Hands that we have employed, not to terminate, but to continue our Diſputes with each other. By their Labour, our Power, our Wealth, our Fame might have been extended, and theſe Countries that are now poor and deſolate, might have been then rich, populous and happy. It is ſome Excuſe for Barbarians, that they live in continual Enmity againſt, and in perpetual Wars with each other; but in us who pretend to have Policy that teacheth us better, and profeſs a Religion that requires a Conduct oppoſite from this at our Hands, it is as impious and iniquitous as it is ridiculous and abſurd. We diſclaim by this Behaviour, all Title to Wiſdom, Moral or Divine, and put ourſelves upon a Level with the Savages; we deſcend to, or rather ſink ourſelves beneath them, by doing preciſely thoſe Things, for which we eſteem them Savages and deſpiſe them.

The only Apology we ever hear made for ſo irrational a Practice, is a very ill grounded Pretence of Neceſſity; our Anceſtors, it is ſaid, have done ſo much, that there is nothing left for us to do; they diſcovered, they conquered all, and thereby made Way for our Diſputes with each other about Titles; in ſhort, they were fortunate and glorious, and we unhappy, and precluded from acquiring Fame.

But theſe are all the ſimple Pretences of Indolence, or the falſe Colours of Avarice, which when we come to examine with impartial Strictneſs by the Light of Truth, will totally diſappear. Amongſt other Diſcoveries of our Anceſtors, we may reckon this as none of the leaſt important, that they diſcovered, that after all they had done, much more remained to be diſcovered. What a Scandal is it then to us, that having not only their Example to encourage us, but their Conjectures to inſtruct us, we have neither followed the one, nor made uſe of the other. They left us an exact Survey of the beſt Part of *America*, and we have left the reſt totally unſurvey'd. They ſaw Reaſon to believe that a South-weſt Paſſage might be found to the *Eaſt Indies*; they attempted and diſcovered it; they left us better Reaſons to prove that there is a North Weſt Paſſage, and though by Fits and Starts we have made Trials, yet ſtill it remains undiſcovered. If we ſet down and conſider with Attention, in how ſhort a Tract of Time, from the finding a Paſſage by the Cape of *Good Hope* to the *Eaſt Indies*, all the ſubſequent Diſcoveries were made, how ſuddenly they ſtopt, and how long it is ſince any thing has been done of this Kind; it muſt induce us to believe that we either fall very far ſhort in Point of Courage and publick Spirit of our Forefathers, or that there is ſome ſecret Reaſon why we are ſo backward in ſpite of the Encouragement we have received. This ſecret Reaſon is no other than our managing our Trade into theſe diſtant Parts by excluſive Companies, ſuch as the *Eaſt India*, the *African*, the *South Sea*, and the *Hudſon's Bay* Companies, the Diſcoveries under the Auſpices of all which, may I preſume be contained in a Volume of no exorbitant Size. It may be aſked, Do our Companies reſtrain the reſt of the World? To which I anſwer, No: But their own Companies do, and that Diſcoveries are attempted in no Kingdom in *Europe* by an old Company, but either where there are no Companies, or by a Company expreſly erected for that Purpoſe.

Now to ſhew that ſomething may be done, without any mighty Hazard, towards extending our Trade and our Knowledge at the ſame Time towards the North Eaſt, I have, by the Aſſiſtance of Lights and Memoirs communicated to me from Abroad, compoſed the following Deſcription and Hiſtory of the Peninſula of *Corea*; from whence it will appear, that it is a fine and fertile Country; that it is exceedingly populous, and inhabited by a civil, humane, and courteous People; that they are much given to Commerce, and would in all Probability rejoice at, and encourage any Attempt made by us to commence a Trade with them; that this Trade might be made highly beneficial to the Nation; that it is far from being improbable it might procure us both *Chineſe* and *Japan* Goods at a more reaſonable Rate than we have them at preſent; and laſt of all, that it muſt open a Paſſage to Diſcoveries of much greater Conſequence than any that have been yet made.

2. The *Peninſula* of *Corea*, ſo little known to, and therefore ſo little conſidered by the *Europeans*, is one of the largeſt, and in all Reſpects one of the fineſt, nobleſt, and beſt ſituated *Peninſulas* upon the Globe. The *Tartars*, who are at preſent poſſeſſed of *China*, and who, before they conquered that Empire, were Maſters of the Country of which we are ſpeaking, call it in their Language *Solbo Kouron*, which is as much as to ſay, the Kingdom of *Solbo*. There is no Doubt that they have ſome ſufficient Reaſon for this Appellation, though for Want of being acquainted with the *Tartar* Hiſtorians, we are able to ſay no more, than that they are reported to call it ſo by the *Chineſe* Geographers. As for this laſt mentioned Nation, they have been pleaſed to beſtow upon this Country the Name of *Kao li koue*, which we ſhall endeavour to explain as well as we can. This *Peninſula* was originally inhabited by various Nations, each governed by its particular Chief, until they were all reduced under the Subjection of one Monarch, whoſe Name was *Kao*. As for the Word *li*, it has many different Significations in the *Chineſe* Tongue, and amongſt the reſt, it implies *obeying*, being ſubject to, or under the Obedience of. The Word *Koue* is properly tranſlated by that of *Kingdom*; ſo that taking this Title as it ſtands in the *Chineſe* Maps *Kao li koue* altogether, it may be very faithfully rendered thus, *the Kingdom ruled by* Kao, or, in our Manner of ſpeaking, *Kao's Kingdom.* It is true, that in the modern Records of the *Chineſe*, it is called *Tchao ſien*, from another Prince, or rather from another Race of Princes; but however this Name has never grown into common Uſe; but the *Chineſe*, whenever they mention it in Converſation, or in Writing, call this *Peninſula Kaoli*, which they pronounce in ſuch a Manner, that from thence by Corruption the Word *Corea* has been formed, by which it is univerſally known in *Europe*.

After adjuſting as well as we can the Name, let us proceed to ſay ſomewhat of the Nature of this Country, which has been variouſly repreſented to us by different Authors, ſome treating it as a Kingdom diſtinct from, others, as a Part of *China*; many affirming it to be an Iſland, but the beſt modern Writers aſſerting it to be what it really is at this Day, a *Peninſula*. At firſt Sight theſe Differences ſeem to be the Effect of Ignorance, but at the Bottom there is ſome Colour of Truth for every one of theſe Repreſentations. According to the moſt ancient *Chineſe* Hiſtories, though the Thing is not affirmed in direct Terms, yet it may be fairly inferred, that *Corea* was once joined to *China* on the Weſt-ſide, though it is now divided from it by a large Gulph. For thoſe Hiſtories ſay, that the Ocean broke in with great Violence on that Side, and overwhelmed a vaſt Tract of Country, and when this happened, it is not at all improbable, that *Corea* became an abſolute Iſland. For the ſame Hiſtories ſay, that a very ancient Emperor, whom they call *Yu* the Great, formed a Deſign of recovering at leaſt a Part of theſe Countries, by drawing Canals to a vaſt Channel, and by piercing a Mountain, opened a Paſſage for the great River *Hoang ho*, which finding by this Means a Vent into the Sea, carried off a great Part of the Inland Waters, and the eby left the Northern Country dry, which now connects *Corea* with the Continent; and in this Manner we are told it became a Peninſula.

This Country in the State it now is, is bounded on the North by the Country of *Nieuchew*, or the ancient hereditary Dominions of that *Tartar* Monarch, who is now Emperor of *China*; on the Weſt it has the Gulph of *Leao tong*, which ſeparates it from the Provinces of *Petcheli* and *Chan tong*, which are Part of *China*; on the Eaſt lies the Sea of *Japan*, and on the South it is waſhed by the Ocean. It extends from th[illegible] four Degrees thirty Minutes, to forty two Degrees thirty Minutes, of North Latitude, and from one hundred and forty two, to one hundred forty ſeven Degrees of Longitude; it is in Length from North to South, four hundred and fifty of our Miles; in Breadth from Eaſt to Weſt, about three hundred; the Form of it is that of a Parallelogram, the upper Part towards the North being ſomewhat narrower than the Southern Part of it. It is from hence apparent, that it lies in the fifth and ſixth temperate Climates, the moſt Southern Part of it being in the ſame Parallel with *Perſia*, *Cyprus* and *Barbary*, and the moſt Northern in that of *Portugal*, *Sicily*, and the *Maderas*; the longeſt Day in the South is fourteen Hours and a Quarter, and in the North about fourteen Hours three Quarters.

The preſent Capital of it *Han ching*, is in the Latitude of thirty ſix Degrees North, and in the Longitude of ten Degrees Eaſt, from the City of *Pekin*, the Capital of *China*. It is repreſented by all the *Chineſe* Geographers, as a Country full of Mountains, more eſpecially towards the North, or rather towards the North-weſt, where there is a Ridge of high Hills that ſeparates it from that Part of *Tartary* which depends on *China*, and theſe Hills are rocky and barren, but the other Mountains, more eſpecially thoſe towards the South, are of eaſy Aſcent, covered with a fine Turf, ſhaded by beautiful Groves, and refreſhed by a Multitude of pleaſant Brooks. It is alſo furniſhed with ſeveral large and navigable Rivers, of which we ſhall take particular Notice only of four; the firſt is the *Yalou* on the North-weſt Side of *Corea*, which falls into the Yellow Sea, or that which divides this Country from *China*; the Mouth of this River is in the Latitude of forty Degrees North, and is there about thirty Miles over. The River *Li* falls alſo into the Yellow Sea, and is a large, beautiful and navigable Stream; the *Tatong* falls into the Eaſtern Sea, or the Sea of *Japan*, and at the Mouth of it there is a noble Port; the River *Han* is in the South Part of *Corea*, and falls into the Ocean, and is alſo large and navigable; in a Word, when we conſider that this Country is waſhed by two great Seas, and by the Ocean, and that its Coaſts are fifteen hundred Miles in Extent, we cannot Doubt of the Excellency of its Situation.

3. It is very certain, that the People of *Corea* are much inclined to Letters, and that they have very ancient and very authentic Hiſtories, and ſome Books ſtill more ancient, but theſe are full of Romances and Fables. They are very ſenſible of this, and ſay that they contain ſome inſtructive Truths diſguiſed, of which having loſt the Key, they are no longer able to decypher them. Thoſe which they regard as true Hiſtories, go between two and three thouſand Years higher than the Birth of *Chriſt*, and yet are ſaid to contain nothing in them that carries the leaſt Air of Fiction or Falſhood. They aſſert that their Country was at firſt inhabited by three or four different Nations, which however they admit to have been of *Tartar* Original; that theſe in a long Courſe of Years, and after various Wars with different Succeſs one againſt another, were at laſt reduced under the Power of one Monarch. That his Poſterity degenerating from the Virtues of their Anceſtors, behaved themſelves ſo ill as to occaſion civil Wars, which weakened the Country to ſuch a Degree, that it fell under the Dominion of the *Chineſe* Emperors, who ſometimes governed it as a Province, and at others, appointed Kings, from whom they received only an annual Tribute.

It is remarkable that theſe ancient Hiſtories ſpeak of the Capital of this Kingdom, a thouſand Years before *Chriſt*, as ſituated in *China*; from whence it ſeems highly probable, that this muſt have been before the Inundation that has been mentioned, for otherwiſe it is not eaſy to conceive, why this Prince, even ſuppoſing him Maſter of that Part of *China*, ſhould chuſe to reſide in a narrow Slip of Country, divided by a wide Sea from the reſt of his Dominions. The ſame Hiſtories ſpeak of a Country lying to the North-Eaſt, but ſtill on the ſame Continent, from whence one would imagine, that ſome Alteration has happened on that Side, and that ſome Earthquake or Inundation ſeparated *Corea* from the Land of *Yedſo*, which is no other than the Southern Part of that great Peninſula, known to the *Ruſſians* by the Name of *Kamkatſka*. The greateſt Part of their Hiſtory is taken up in accounting for their Diſputes with the *Chineſe*, from whom they often revolted, and were as often reduced; and in them likewiſe they give a large Account of their having attacked and ſubdued the *Nieuchieu Tartars*, or at leaſt a Nation that formerly inhabited their Country.

Towards the latter End of the fifteenth Century, the *Japoneſe* invaded *Corea*, and were at firſt very ſucceſsful, driving the King from his Capital, and becoming Maſters of the greateſt Part of his Dominions; but he having Recourſe to the *Chineſe*, they, after a long and bloody War, drove out the *Japoneſe* from all except two Provinces. Soon after this, another great Army landing from *Japan*, the War was carried on with greater Vigour than ever, but at laſt the *Coreans* and their Confederates had ſo much the better of theſe Invaders, that they concluded a Peace, and agreed to quit the Country, which they did. Before this Time, the *Coreans* and *Japoneſe* had always lived, not only in Peace, but in perfect Harmony with each other, inſomuch, that many of both Nations were reſpectively ſettled in the others Country; but theſe Wars occaſioned ſuch an implacable Spirit of Reſentment, which ſometime after the Concluſion of the laſt, the *Japoneſe* took an Opportunity of maſſacring all the *Coreans* that were ſettled in their Dominions. All theſe Events, and many more are found in the *Japoneſe* Chronicles, and are briefly ſet down in the Hiſtories of that Country, written by the Chriſtian Miſſionaries, which is a very ſtrong Confirmation of the Veracity of the *Corean* Hiſtories.

About the Beginning of the laſt Century, the *Man tchou Tartars*, after they became Maſters of *Leontong*, attacked and reduced the Kingdom of *Corea*, that is, obliged the King to acknowledge their Khan for his Sovereign, and to pay him Tribute; which the *Coreans* reſented as the moſt grievous Indignity, having, as we obſerved before, been once Maſters of this Country themſelves; but ſince theſe *Tartars* have reduced *China*, the *Coreans* no longer conſider their Subjection as a Diſgrace, but remain well ſatisfied with their Condition, as indeed they have good Reaſon, ſince it has preſerved them for the Space of one hundred and fifty Years, in a State of conſtant and ſettled Peace. All the Marks of Submiſſion required from them, is, to ſend annually an Embaſſador, or rather an Embaſſy, for ſometimes there are three or four Perſons charged with equal Powers to *Pekin*. Theſe have alſo a Commiſſion in Reference to Trade, are intruſted with all the Commodities and Manufactures which the *Coreans* are allowed to tranſport into *China*, and are impowered to ſettle and receive the Price or Equivalent for them.

The only ſenſible or uneaſy Mark of Dependance which this Nation feels, ariſes from the Uſage this Embaſſador and his Retinue meets with, for they are aſſigned a Dwelling-Place in *Pekin*, which the *Chineſe* are pleaſed to call a Palace, but from its Outſide Appearance, and the Care with which it is guarded, it might better paſs for a Gaol; there they remain from the Time they come, to the Time they leave this Capital of the *Chineſe* Empire, without ſo much as ſtirring, except to Audience, and without ſeeing any but ſuch as are firſt examined by their Guards. The Reaſon of all this Jealouſy, which of late Years has increaſed rather than abated, is the Dread the *Chineſe* are under of the *Coreans* coming to have any Intercourſe with the *Ruſſians*, who are their very near Neighbours, and might find an eaſy Acceſs into their Country, in Caſe they had Notice of it, and of the Advantages that might accrue from their ſettling a Trade with theſe People.

The *Chineſe* are the more uneaſy about this for two Reaſons; firſt, becauſe they know that the *Coreans* are naturally hoſpitable, deſirous of ſeeing Strangers, and very willing to entertain and trade with them; and ſecondly, becauſe this would place the *Ruſſians* on both Sides their Empire, and in ſome Meaſure between them and *Japan*, which is what they could not bear, and muſt be attended with a long and dangerous War, to remove an Evil of which they are ſo apprehenſive. It was for this, and no other Cauſe, that they inſiſted ſo peremptorily on making the River *Amur* the Northern Boundary of their Dominions, becauſe they judged that this would effectually cut off all Communication between the *Ruſſians* and the *Coreans*, or rather all Poſſibility of a Communication, as by Land it really does. But they made uſe of a very plauſible Pretence, which was, that the *Ruſſians* diſturbed them in their Pearl Fiſhery in that River, a Thing in itſelf of no great Conſequence to either Nation, and which therefore the *Ruſſians* readily gave up in Hopes of a ſettled and quiet Trade with *China*. This was alſo the ſecret and true Reaſon, why the *Chineſe* Miniſters would not long endure the Preſence of a *Ruſſian* Reſident at *Pekin*, notwithſtanding that they kept him in full as great Reſtraint, as they do the *Corean* Ambaſſadors, and at laſt led them to inſiſt upon the ſending away the *Sieur du Lange*, who had that Character from the Czar of *Muſcovy*. But after all, theſe Precautions need be no Bar to the *Ruſſians*, whilſt the Paſſage is open and eaſy by Sea, as will be ſhewn hereafter; the *Coreans* themſelves making Uſe of it to carry on a ſmall and inconſiderable Trade with the Subjects of *Ruſſia*, without knowing from what Country they come, or of what Nation they are.

4. The Reader has been already told, that there is Reaſon to believe, this Country made formerly quite a different Appearance from what it does at preſent; and that the whole Gulph, which ſeparates *Corea* from the oppoſite Coaſt of *China*, and which extends to full ſeven Degrees of Longitude, was formerly dry Land. The Reader has been alſo told, that in the moſt ancient and authentick Hiſtories, this Country is ſaid to have been inhabited by various Nations; and in the Accounts we have of the Provinces into which *Corea* is now divided, we are told to which of theſe ancient Nations they belonged; but at the ſame Time we find the Names of other Nations whoſe Dwellings are not to be found, and who from the Actions recorded of them appear to have been all ſettled on the Weſt Side of the *Peninſula*, which affords another Argument to prove, that a vaſt Tract of Country was anciently either ſubverted by an Earthquake, or overflowed by the Sea.

Our preſent Buſineſs is with what remains, and with the Kingdom of *Corea* as it ſtands at this Day, when it is divided into eight Provinces; the firſt of theſe is *Hien king*, which is as much as to ſay, *the proſperous Court*; it is the North-eaſt Quarter of *Corea* ſtretching all along the Sea of *Japan*, which by the Way is almoſt as cloſe ſhut up as the *Black Sea*; and this is the Reaſon that when there are any Kinds of Winds, the Navigation is extremely dangerous, the Waves running exceſſively high, and beating with prodigious Fury upon the Coaſt, which is but bleak and inhoſpitable, except at its very Extremity, where it is divided from the Country of the *Man tcheou Tartars* by a very large River, on the Banks of which are ſeveral good Towns, and the Diſtricts round them are very well cultivated. This Province was the native Seat of the *Kaſkiuli*, a Nation that in Proceſs of Time overcame all the reſt, and ſtretched their Sway over the whole Country. It is from this Province, 'that the Inhabitants in their ſmall Veſſels glide along the Coaſt under a Notion of Pearl Fiſhing, but in Reality that they may trade with their Northern Neighbours, and ſometimes with the *Ruſſians*, who take them for *Japoneſe*.

The next Province to this is that of *Ping ncan*, which makes the North-weſt Side of *Corea*, or, ſtrictly ſpeaking, of the Continent of *Corea*, for this with the Province before-mentioned, lie to the North of the *Peninſula*, and make a Part of the great Continent of *Aſia*. This Province, the Name of which ſignifies *the peaceable Land*, or *the Country of Quiet*, is bounded on the Weſt by the Province of *Leaotong*, and on the South by the *Yellow Sea* or *Corean Gulph*. It is through this Province that the River *Yalou* rolls its Courſe, till it falls into the *Yellow Sea*; and it may not be amiſs to obſerve; that according to the *Chineſe* Cuſtom of diſtinguiſhing their Rivers by the Colour, this has received the Name of *Yalou Kiang*, that is as much as to ſay, the *Green River*, from the Tincture of its Waters, which are ſuppoſed to be mineral, and are therefore ſeldom drank till they have been boiled, and have ſtood ſo long as to precipitate a Kind of yellow Sediment. This is a very large, populous, and well-built Province, which is chiefly owing to the River, that is navigable above ninety Miles, and has ſeveral large trading Towns upon its Banks. It was the ancient Habitation of the *Tchao ſſien*, which, as we have heretofore obſerved, is the Name now beſtowed in the Records of *China* upon the whole Country of *Corea*.

The Province of *Kitang yuen* lies on the North-eaſt Side of the *Peninſula*, and the Name ſignifies the River's Source; it ſtretches along the Sea of *Japan*, and has under its Juriſdiction a great Number of ſmall Iſlands, inhabited chiefly by Fiſhermen. The Climate of this Country is remarkably pleaſant, being neither exceſſively cold in the Winter, nor ſcorching hot in the Summer. It is finely diverſified with Hills and Plains, and the beſt Timber in *Corea* for Houſe and Ship-building grows here. It is very populous, but the People live moſtly in Villages and ſmall Towns, as being addicted chiefly to Paſturage, Tillage, and Fiſhing. In the Time of the Wars between the *Japoneſe* and *Coreans* this Country was the principal Scene of Action, and conſequently ſuffered extremely; and therefore to this Cauſe we may reaſonably refer there being no Cities, and but very few great Towns within its Limits; and perhaps to this likewiſe is owing the Activity, Hardineſs and martial Genius of its Inhabitants, who are all well diſciplined, and remarkably ſkilful in military Exerciſes. This Province is likewiſe famous for a good Breed of ſmall but ſerviceable Horſes.

The oppoſite Province, or the North-weſt Side of the *Peninſula*, is ſtiled *Hoang hai*, which is as much as to ſay, *the Yellow Sea*, from its ſtretching along the Coaſts of it. It extends Northwards as far as the Mouth of the River *Yalou*, and ſtretches from thence Southwards for the Space of two hundred Miles. It is for the moſt Part a flat and fruitful Country, abounding with People who live in Cities and large Towns, and are much addicted to Trade and Manufactures; on the Coaſt there are ſeveral very large Iſlands, particularly, *Tſiao tong* and *Tſiang hoa*, the latter deriving its Name from a great City, the Inhabitants of which are chiefly employed in making a Kind of Stuffs that are very thin and light, but withal very cloſe and warm. This was anciently the Seat of a Nation called *Mahans*, tho' they ought rather to be regarded as a Tribe, for the true Name of the Nation was *Han*, the largeſt of all thoſe ſeparate People that originally inhabited this Country, and therefore divided into three Tribes, inhabiting as many different Diſtricts.

The middle Province is called *King ki*, the former ſignifying, as we have often before obſerved, a *Court*, the latter a *Region*, *Province*, or *Diſtrict*; and it is ſo called, becauſe the City of *Kingki tao*, which was the ancient Capital of this Country, ſtands therein. This is the only Inland Province in *Corea*, and lies preciſely in the Heart of the Country, being about two hundred Miles from North to South, and near an hundred from Weſt to Eaſt. There can be hardly imagined a Country more pleaſant, more fruitful, or better peopled than this is, full of large Towns and almoſt innumerable Villages, and containing beſides ſeveral great and well-built Cities. The Inhabitants are remarkable for Learning and Politeneſs, and the Buildings in this Country are little, if at all inferior, to thoſe of *China*, even in its beſt Provinces. The King has in this Country m[illegible] noble Palaces, adorned with fine Gardens, and ſp[illegible]ous Parks well ſtocked with Game. The People [illegible] this Province are a Mixture of all the Nations tha[illegible]ormerly inhabited *Corea*, and it appears from the[illegible] Hiſtories, that this is a new Province taken out o[illegible] the reſt, and peculiarly ſubject to the Tribunals of [illegible]e Royal Cities, from whence Mandaryns are ſent t[illegible] govern the ſeveral

Diſtricts into which it is divided; but the chief Cities are under the Direction of particular Mandaryns, and the Troops both here and in the reſt of the Provinces, are commanded by the Nobility or Perſons of Eſtates, who raiſe them amongſt their Vaſſals, holding moſt of their Lands from the King by a Sort of Military Tenure. The Corn and Fruits that grow in this Country are the beſt in *Corea*, which perhaps is chiefly owing to the great Care taken in their Cultivation.

The South-eaſt Province of *Corea* is called *Kin chan*, which is bounded on the Eaſt and on the South by the Sea of *Japan*, abounds with Cities and great Towns, and there are five large and commodious Ports in this Diſtrict; the Southern Extremity, which is directly over-againſt the two great Iſlands that form what we call *Japan*, is diſtanced from thence about one hundred Miles, and there are Veſſels that paſs regularly from one Country to another thrice in a Week. It is neceſſary to obſerve, that in theſe Streights which ſeparate *Corea* from *Japan*, there lie two ſmall Iſlands, *Key* and *Der*, which are as it were in the Middle; from the Mountains, in both of them, the Coaſts of each Country are very eaſily diſcovered. Theſe Iſlands are ſmall but very fruitful, and it would be no difficult Matter to erect on either a Fortreſs capable of reſiſting any Force that theſe People could employ againſt it; ſo that if any *European* Nation ſhould ſettle themſelves here under the Direction of a wiſe and prudent Governor, and with a competent Body of ſeaſoned Troops, he might maintain himſelf, and provided he attempted Nothing upon the oppoſite Continents, might very ſoon compaſs a free Trade with one, if not both Nations.

The Province of *Tchu ſin* occupies the South-weſt Side of the *Peninſula*, lying over-againſt the Province of *Chan tong* in *China*, from whence the North-eaſt Extremity of it is diſtant about forty Leagues, whereas the South-weſt Point of it is full two hundred Leagues diſtant. The Name of this Province ſignifies *Ever Faithful*, and alſo *without Blemiſh*; and it was ſo called, becauſe in the Wars with the *Japoneſe* it was never conquered. The Air here is ſoft and temperate, for the moſt Part, and though their Summers are pretty hot, the Soil is very fruitful; it is watered by ſeveral fine Rivers, and beſides a Multitude of Villages, and a great Number of good Towns, there are in it four great Cities. The People are very induſtrious, not only in the Cultivation of their Land, but alſo in Manufactures, in Navigation and Fiſhing, which makes them very ſtout and hardy, ſo that the beſt Infantry in *Corea* are thoſe raiſed from thence. There are ſeveral conſiderable Iſlands along the Coaſt, and at the Diſtance of about ten Leagues from the South-weſt Corner is the great Iſland of *Fong* or *Fong ma*, which is near ſeventy Miles in Circumference, and upon which, if the *Europeans* could make a Settlement, it would lie conveniently enough for the Trade of *China* and *Japan*, as well as *Corea*, ſince it is not above eighty Leagues from the former, and not quite ſixty from the latter.

The eighth and laſt Province in this Country is *Tſuen lo*, which lies between the two Provinces laſt mentioned, and takes up the Middle of the Southern Extremity of the *Peninſula*, the Ocean waſhing its Coaſts, which extend about one hundred and fifty Leagues. It was anciently the Country of the *Pien han*, which was the third Tribe of that Nation, and is at preſent inhabited by a very robuſt and induſtrious People, who are naturally civil and courteous to Strangers, and much addicted to Commerce. The whole Courſe of this Country is, as it were, covered with Iſlands, ſome of which are rocky and uninhabited, others equally fruitful and populous. There are many great Towns, and two large Cities, in this Province, and it is generally believed that there is more ſhipping belonging to it than to any of the reſt. The Iſland of *Ke'paert* lies about twenty four Leagues due South from its Coaſts, and is much larger than any of the Iſlands hitherto mentioned, but notwithſtanding this great Diſtance, it is in a Manner united to *Corea* by an *Archipelago* of Iſlands that lie to the North-weſt of it, and reach to the very Shore. We ſhall have Occaſion to mention this Iſland hereafter, and ſhall not therefore dwell any longer upon it here.

Thus the Reader has as clear and diſtinct a Geographical Deſcription of the whole of this Country as we have been able to give him, after comparing together a Multitude of different Accounts, ſome of which were written above an hundred Years ago, when it ſeems that *Corea* was better known to the *Europeans* than it is at preſent. Within the Compaſs of theſe eight Provinces they reckon forty Cities, to whom *Mandaryns* are ſent directly from the Court, and of which there are generally three in each. Beſides theſe, there are thirty three great Towns of the firſt Order, like thoſe which in *China* are called *Fou*, upon which are depending ſixty of the ſecond Order, equivalent to thoſe which the *Chineſe* call *Tchou*, and no leſs than ſeventy *Hien*, or Towns of the third Order, every one of which has at leaſt ſix or ſeven, ſome of them upwards of twenty Villages in their Diſtricts. The Northern Provinces are mountainous, and the Air ſharp and cold, notwithſtanding which they produce all the Neceſſaries of Life, have Woods of moſt excellent Timber, in which are Abundance of wild Beaſts that produce Furs, little if at all inferior to thoſe of *Siberia*; and on the Frontiers of thoſe Provinces towards *Tartary*, the greateſt Plenty of *Gin ſeng* is found, of which they make a great Profit by ſelling it to the *Chineſe*. There are alſo Mines of all Sorts, and even of Gold, of which a conſiderable Quantity is annually ſent to *China*. The Southern Provinces, that is to ſay, the three laſt mentioned, are as rich and fruitful in Grain and Corn as any in the World.

The Reader is to obſerve, that when we ſpeak of Corn, it is to be underſtood, in the Northern Parts, of Barley, and in the Southern Parts of Rice; and though they want not other Grain of various Sorts, they have alſo excellent Roots, ſome of which in Taſte reſemble the Potatoe, but are of a much larger Size. As for Fruits, they have thoſe of *Europe*, ſuch as Apples and Pears, in the Northern Provinces, and the richeſt Fruits of *China* in the Southern. As for their Timber, it conſiſts of Oak, Cheſnut, Pine, Fir, and of ſeveral Sorts that are not known in *Europe*. Silver and Lead they have in great Plenty, but the latter is not ſo good as that of *Europe*, which in all Probability is owing to their Want of Skill in managing the Ore, for its Defects conſiſt in being hard and brittle. Horſes and Cows are in vaſt Abundance, and they make uſe of Oxen to plough their Land, and to draw their Carriages; in the Woods they have Bears and Foxes, Zibbelins and Caſtors, wild Boars in great Numbers, a good Breed of tame Swine, chiefly black. Their Rivers are well ſtored with Fiſh, and would be much better ſtocked if they were not infeſted with Crocodiles, and thoſe too of a moſt enormous Size, ſome of thirty Foot long. They have alſo great Plenty of all Sorts of Fowl, ſuch as Swans, Geeſe, Ducks, Storks, Herons, Pidgeons, Woodcocks, Pheaſants, and tame Fowl, that are excellent. They have likewiſe Eagles, Falcons, Kites, and other Birds of Prey, and many Kinds of very beautiful Birds, which are not known in *Europe*, ſome of great Value, with party-colour'd Feathers in their Tails which are three Foot long, and theſe are commonly either exported to *China* or *Japan*, and make alſo Part of the annual Preſent ſent to *Pekin* for the Emperor.

5. The Inhabitants of the Northern Provinces are generally tall, active, well ſhaped, healthy, robuſt People, with very little about them of the *Tartar*; but thoſe of the South are of a more ſickly Complexion, weaker Bodies, and in their Perſons and Temper very much reſembling the *Chineſe*. In the Northern Provinces, moſt People wear a Kind of Furr Caps, ſilk Veſts, which in the Winter are lined with Lamb-ſkin; and the Women wear their Jackets and Petticoats flounced and fringed with Gold Lace. Moſt Perſons of Quality affect to have their Robes of Violet-colour'd Silk; in the other Provinces both Men and Women are dreſt in painted Linen or Chinces, but are, generally ſpeaking, adorned with Silver and Gold Ornaments notwithſtanding. As they have Hemp and Flax in the Nor-

thern Parts in Plenty, they make vaſt Quantities of Cloth, but none of the Memoirs that I have ſeen make any Mention of Cotton. They are very neat in their Dreſs, and the better Sort affect Magnificence, yet they are far from being vain, and can be hardly ſaid to have any Faſhions amongſt them. Their Cities are walled and fortified, but neither ſo ſtrongly nor ſo neatly as in *China*; their Houſes are commonly no more than one Story, with a Kind of Cock-loft over them, in which their Merchants keep their Goods; and in private Families they ſerve for their Fruit. In their Villages they build with Earth, but in all their great Towns and Cities with Brick; but they thatch every where either with Straw or Reeds, which is the only Kind of Covering they have. The People are courteous, modeſt, and well behaved, yet their Morals are not quite ſo regular as in Times paſt, when Robbery, Murder, and Adultery, were Crimes unknown amongſt them. They have common Women amongſt them as in *China*, and none of their young Men are aſhamed of converſing with, or being ſeen in their Company. They allow their Wives much greater Liberties than in *China*; and for this Reaſon the *Chineſe* eſteem them *Barbarians*, though in all other Reſpects they ſpeak of them not fairly only, but with Reverence.

In point of Learning they fall little, if at all, ſhort of the *Chineſe*; and here, as well as in *China*, none but Scholars are preferred to Employments. They beſtow Degrees once in three Years, and all who are Candidates for them undergo a very rigorous Examination; ſo that it is very difficult to obtain any Promotion but by Merit. With Reſpect to Religion, People of Diſtinction are generally bred up in the Sentiments of *Confucius*, and are a Sort of moral Deiſts, who make an uncorrupted Probity their Point of Honour. The common People are Idolaters of the *Indian* Sect, and have amongſt them a vaſt Number of *Bonzes*; they have alſo Monaſteries of both Sexes, where People lead ſingle Lives, but are reſtrained only by their own Choice, for they may marry if they think fit, and ſometimes they do.

As to their Eſtates, the King has the ſole Property in the Land, which is granted out to every Man in Proportion to his Family, but perſonal Eſtates deſcend from Father to Son. The *Mandaryns* have alſo Lands aſſigned them for the Support of their Dignity, which they let out in Farms, but receive their Rent in Kind and not in Money. The Monarchs of *Corea* are abſolute, except the Homage they pay to the Emperor of *China*, from whom they receive the Inveſtiture of their Dominions by their Ambaſſadors; and though the Heir apparent enter immediately on the Adminiſtration from the Deceaſe of his Predeceſſor, yet neither he nor his Conſort aſſume Regal Titles till they have the Emperor's Conſent, which is always given; and as the whole Ceremony upon this Occaſion is very exactly regulated, as well as the Tribute paid, which amounts to eight hundred Taels; ſo there never happens any Diſputes.

Each Province maintains a certain Number of Horſe and Foot, except that in which the Capital City ſtands, and which is exempted on the Score of maintaining the Court. The Troops of each Province ſerve annually about the King's Perſon, ſo that he ſees the whole Force of *Corea* once in ſeven Years; but proportionable Detachments are ſent from every Province to guard that whoſe Forces are about the King. They are remarkably mild in their Puniſhments for common Crimes; they are bamboo'd or baſtinado'd, but with more Modeſty and leſs Severity than in *China*. Adultery, Murder, and Treaſon, are puniſhed by Beheading; and for other Offences capital in their Nature, the Criminals are baniſhed into the adjacent Iſlands.

Poetry and Muſick are their principal Amuſements, more eſpecially publick Spectacles, ſuch as Comedies, Tragedies, and Operas, in the Performance of which they ſpare no Expence. It has been ſurmiſed that they were very ignorant, becauſe they fetched their Kalendars annually from *Pekin*, but in Reality this is a Point of Submiſſion to the *Chineſe* Court, which is alſo paid by the Inhabitants of every Province of that Empire from political Conſiderations, and they go in the tenth Month of every Year to receive their Kalendars for the next. The People of *Corea* are the moſt dutiful in the World to their Parents; it is ſaid that Diſobedience is capital by the Laws, but that there has been no Inſtance of any Puniſhment of that Sort, the very Law preventing any ſuch Offence. They mourn for their Fathers and Mothers three Years, during all which Time the Corpſe is kept embalmed in their Houſe; at the End of that Space the Body is interred, and the Wearing Apparel, Horſes, Dogs, and whatever elſe belonged to the Perſon of the Deceaſed, are diſtributed among the Relations at the Funeral. The Mourning for a Brother laſts in the ſame Manner for three Months.

The common People are plainly clad, and ſo are their Soldiers, who carry a Pole-axe, a Firelock, and have a Sabre at their Sides; they live, generally ſpeaking, ſoberly, though they have great Plenty of every thing, and make very good Ale, or if you pleaſe to call it Wine, of Rice, from whence alſo they diſtil Arrack, which is preferable to that of the *Eaſt-Indies*, being a clearer and ſtronger, as well as a better flavoured Spirit. Tea is much drank in the Northern Provinces, but leſs uſed in the South, where their Rivers are bright and clear, ſo that they have every where good Water, which is wanting in *China*, and of which there is alſo a Scarcity in *Japan*.

6. We have obſerved, that the Subjection of the *Coreans* to the *Chineſe*, is very far from being burthenſome to them, but this muſt be underſtood of their Condition in their own Country; for in Reference to the Deputies that are ſent once a Year into *China*, and who are generally accompanied by about threeſcore Merchants, they are certainly treated with as much Severity and Indignity as People well can be. The Months in which they travel are *March* and *Auguſt*; in the former they ſometimes croſs the Gulph of *Corea* upon the Ice with their Carriages; but in *Auguſt* they come in pretty large Veſſels, and having debarked their Cargoes, convey them by Land to *Pekin*. The Commodities they bring are principally theſe that follow:

A coarſe Kind of Paper made of raw Silk, very thick, ſmooth, even, and ſtrong, which is made Uſe of in *China* inſtead of Glaſs to cover their Windows. A very fine, thin, white, and ſmooth Paper for Writing. A third Sort of Paper thick like the firſt, and ſmooth and fine like the laſt, with large Figures emboſſed in Gold and Silver, made uſe of for Hangings. It may not be amiſs to obſerve here, that eight hundred Years ago the *Chineſe* had that black ſhining Stick Ink, which they now make themſelves, from the *Coreans*, and they acknowledge that they were three hundred Years before they arrived at the Art of making it in the ſame Perfection. Umbrelloes of all Sorts, very ſtrong and very neat. Fine Matts, beautifully wrought and of many Colours. Tobacco of a ſmall Cut for Smoaking; this they had from the *Japoneſe*, to whom it was brought by the *Portugueſe*; it is of the *Brazil* Kind, and the *Chineſe* eſteem it much more than their own. Striped Cottons of ſeveral Kinds, Furrs of various Sorts, dried Fiſh, which are taken out of large Shells in the Sea of *Japan*.

They bring with them likewiſe vaſt Quantities of Silver and Gold, Part in Ingots, and Part in *Spaniſh* Piſtoles. They are cloſe ſhut up, as in a Priſon, all the while they remain at *Pekin*; and the *Mandaryn* who has the Guard of them, ſells the Liberty of trading with the *Coreans* to the Merchants who give moſt; and yet theſe have not the Liberty of conferring with them but in the Preſence of a Soldier and two Interpreters. Whenever they ſtir abroad they have a Guard about them with Whips in their Hands, who laſh any that come near, or offer to ſpeak to them.

The Goods they purchaſe are fine Silks in prodigio Quantities, but raw; a Kind of Damaſk, which y take off alſo in great Quantities; a Sort of ve thin Silk for Linings, which the *Chineſe* call *Fa*; Tea and China-ware, white Copper Veſſels of al orts, vaſt Quantities of Cotton, Part of which the anufacture in ſuch a Manner, that they bring it b and ſell it in *China* at a high Price.

The *Coreans* likewiſe bring as Curioſities, fine Pencils made of the Hair of their Wolves Tails; a Sort of yellow Varniſh that ſhines like Gold, made of the Gum of a Kind of Palm-tree, as alſo ſeveral Iron and Steel Wares. Once in three or four Years, when the Seaſon affords them a ſafe Paſſage over the Mountains, they bring their Caravans by Land, and in them great Quantities of Silver, that they may buy up the more raw Silk, which they manufacture for their Trade, though the *Chineſe* prohibit them dealing with any foreign Nation whatever, and have a *Mandaryn* at the King of *Corea*'s Court to ſee that this Probibition is obſerved; and he is very careful in this Particular in all Caſes but where he is largely paid for not being ſo.

It is not eaſy to enter into the Reaſons why the *Chineſe* are ſo exceſſively jealous of the *Coreans* having any Commerce with Strangers, except the Dread they have of Foreigners eſtabliſhing themſelves in that Country, from whence they might ſo eaſily paſs over into *China* itſelf. But of all Nations they moſt dread the *Ruſſians*, and it is not ſo much through Ignorance as Cunning, that all their Maps of the Frontiers of *Corea* are ſo incorrect. But this Kind of Precaution can only be of Uſe in deceiving the *Europeans*, for as to the Natives of *Corea*, they have ſo much of the *Chineſe* in them, that they have falſified their Maps and Charts likewiſe, and repreſent the North-eaſt Coaſt of their Country as utterly innavigable, on Account of Shallows, Rocks, and Banks of Sand, which is only with a View to cover their Trade on that Side, in which they employ a great Number of Veſſels under the Pretence of the Fiſhery. For in the *Japoneſe* Sea there are Shell-fiſh of a moſt enormous Size, which being broke ſo as to get out the Fiſh, they hang up and dry it, ſprinkling it from Time to Time with Salt Water; this dried Fiſh, which in Taſte reſembles Codſouns, are held a great Delicacy in *China*, and are ſold at a pretty good Price; but the *Coreans* will tell you that they get Millions by them, which alludes to their clandeſtine Trade, that is chiefly covered by Preſents of theſe Fiſh made to the *Chineſe Mandaryn* reſident in *Corea*.

7. In ancient Times, as has been already obſerved, the Intercourſe between the People of *Corea* and of *Japan* was very great, and highly beneficial to both Countries; and we have likewiſe ſhewn how this Intercourſe was interrupted, and the Means by which it was followed with Hatred as implacable on both Sides, as their former Friendſhip was cordial and ſincere. In Proceſs of Time however, and by a Suſpenſion of Injuries on all Sides, this Enmity is again in a great Meaſure wore out, at leaſt among the People of both Nations, for the Governments ſtill keep at their old Diſtance, the *Japoneſe* from political Jealouſy of all Strangers, and the *Coreans*, becauſe the Court of *China* has ſtrictly forbid all Traffick between them and the *Japoneſe*.

But for all this, the Commerce is conſtant, regular, and even public enough between the two Nations, and the Manner in which it is managed is this: There is a pretty large Iſland between *Corea* and *Japan*, but nearer to the Coaſts of *Japan*, which in our *European* Map is called *Suſima*, but by the *Coreans Tui la tao*; and this by the *Japoneſe* Government has been yielded to the King of *Corea*, with an evident Intention to facilitate the Trade between their Subjects, notwithſtanding the Prohibitions on both Sides. In this Iſland, the Property of which, as we have obſerved, belongs now to the *Coreans*, the *Japoneſe* Merchants have vaſt Magazines, ſo that all Ships that come hither are very ſpeedily laden; and on the other Hand, the *Coreans* have their Magazines at *Tſin tchſion*, in the Province of *Tſuen lo*, from whence they are brought by two navigable Rivers, one of which falls into the other, and the Mouth of the latter is directly over-againſt the Iſland of *Tui la tao*, at the Diſtance only of eighteen Leagues.

It remains now to give an Account of the Merchandize in which the Traders of both Countries deal; and firſt with Regard to the *Japoneſe*; their Magazines are conſtantly full of Pepper of *Sapan*, and other ſweet-ſcented and fine Woods, Bouffiers Horns, which the *Coreans* burn, and uſe the Powder in making their Ink; of Deer and Goat-ſkins, and of various *European* Commodities, which they purchaſe partly from the *Dutch* in their own Country, and partly from the *Chineſe*. The *Coreans*, on the other Hand, barter with the *Japoneſe*, Tyger Skins, Furrs, Lead, Ginſeng, ſeveral Sorts of Varniſh; and the Balance of this Trade, generally in Favour of the *Japoneſe*, is paid in Ingots of Silver. They likewiſe change their Ingots for *Spaniſh* Ducats, upon which they receive a Premium of Six or Seven *per Cent.* and the Deſign of this is to carry theſe Ducats to *China*, to conceal the better that Plenty of Silver which they have of their own; but the Ducats produced by this Trade are believed not to amount to a tenth Part of what the *Coreans* carrry to *China*; and how they come by the reſt will be explained hereafter.

Beſides this Trade with the *Japoneſe*, they carry on a Sort of ſmuggling Commerce at the Iſland of *Kelpraet* or *Quelpraet*, where there are alſo Magazines of both Nations, but not near ſo great as thoſe of *Tui ta lao*; for, as we ſhall hereafter inform the Reader, this Iſland is chiefly remarkable for a Kind of Smugling or contraband Trade, for which there never was a Place better ſituated or diſpoſed by Nature, as having convenient Ports on all Sides. Some modern Writers ſay, that the *Coreans* exchanged this Iſland with the *Japoneſe* for that of *Tui ta lao*, which is a Point that hitherto is not ſupported by ſufficient Evidence. The *Dutch* Seamen that were ſhipwrecked here in 1662, and whoſe Account of *Corea* is almoſt the only one publiſhed, make this a Place of much too great Conſequence to be exchanged; and as other Accounts we have from the *Philippines* admit there are great Numbers of *Japoneſe* ſettled here, perhaps this may be thought Foundation enough for ſuch a Report.

It is indeed very certain, that the printed Relations of all theſe Countries are very ſuperficial, and are to be read with great Caution; the Miſſionaries in *Japan* were able to give no Account of *Corea*, but as they met with it in *Japoneſe* Books; ſince they fairly acknowledge, that none of their Fathers ever went there, and if they had, perhaps they would not have learned much more than thoſe who went to *Jedzo*, and yet were not able to ſay whether it was a Continent or an Iſland. The laſt of the Miſſionaries Account of *China* admit, that what is contained in the *Chineſe* Maps and Books concerning *Corea*, cannot well be depended upon. His Excellency Mr. *Yſbrants Ides*, who with vaſt Pains and Difficulty made a large Map of his Travels, which he ſent to Burgomaſter *Witzen*, and who ſettled his Geographical Faith upon it, though he is very accurate in deſcribing the Countries through which he paſſed, is miſerably miſtaken in all thoſe that he has ventured to lay down from Information. As for *Corea*, he makes it a ſmall Iſland, with a Strait to the North between it and *China* almoſt as broad as the Gulph, by which it is really divided from that Country on the Weſt; and as to the North-eaſt Continent of *Aſia*, it is laid down within the ſame Longitude with *Corea*, whereas the Country of *Kamſkatſka* ſtretches ſeveral Degrees to the Eaſt, and if produced, would lie in a Manner parallel to *Corea*, as the *Peninſula* of *Corea* lies parallel to the Continent of *China*. The *Dutch*, while they were poſſeſſed of *Formoſa*, had great Opportunities of becoming acquainted with the Coaſt of *Corea*, and accordingly, by the Favour of a very worthy Perſon, I have ſeen ſeveral remarkable Paſſages in the Journals of a Perſon in a diſtinguiſhed Station at *Formoſa*, which are vaſtly clearer than any Thing publiſhed of late Years, though written above a Century ago.

As far as I know, there is Nothing of this Sort printed; and as for the Shipwreck of the *Dutch* Seamen on *Quelpraet*, it will be a uſeful Thing to thoſe who have read this Section, becauſe they will then ſee the Reaſon of the Treatment thoſe Seamen met with from the *Coreans*, and of the great Dread theſe People had of the *Tartars*, by whom they had not then been ſubdued full thirty Years. We might expect ſome tolerable Account of theſe North-eaſt Parts of *Aſia* in the *Spaniſh* Hiſtories of the *Philippines*, if there were any ſuch, of modern Date, but we know only of one, and that printed at *Madrid* in 1733, and ſuppreſſed for

Reaſons of State. The Truth of the Matter is, that the *Spaniards* are as ſuſpicious and jealous of that Colony as the *Chineſe* are of *Corea*; and with ſome Reaſon, for *Manila* is incredibly rich, and the Trade driven there is not of a Nature to be diſcloſed, as appears from ſome Memoirs lately tranſmitted from *Batavia*, in which we are told, that if this Country was in the Hands of any but the *Spaniards*, it would produce as much Benefit to *Europe*, as all the other trading Settlements in the *Eaſt Indies* put together.

8. After what has been already ſaid of the many Difficulties that occur in obtaining Accounts that may be depended upon of the Commerce of the *Coreans*, the Reader will, no Doubt, be pleaſed with whatever can be rationally given him upon this Subject, though it is not quite ſo full, ſo clear, or ſo certain as either he could deſire, or we could wiſh; but upon this he may depend, that we ſhall ſet Things before him in a juſt Light, and leave that to his Deciſion, which perhaps ſome Writers would have delivered with a greater Degree of Confidence, and conſequently leſs Reſpect to Truth. In the firſt Place, we lay it down as a Thing abſolutely certain, that notwithſtanding all the Precautions of the *Chineſe*, the *Coreans* carry on a very large Trade; which appears thus:

They purchaſe vaſt Quantities of raw Silk in *China*, beyond the Degree of Conſumption in their Country, which they muſt manufacture and diſpoſe of ſomewhere, otherwiſe their Trade with *China* would have declined, whereas it increaſes. They take off large Quantities of manufactured Silks in *China*, more eſpecially of that Sort of Damaſk, which from its being chiefly in Demand from them, the *Chineſe* call *Kao li Toanza*, i. e. *Corean Damaſk*, very little of which however is worn by them. They pay for moſt of their Goods in *Spaniſh* Silver, which *Spaniſh* Silver muſt be acquired by Trade. They purchaſe no *European* Commodities at *Pekin*, and yet they are common enough all over *Corea*; they muſt therefore have them ſome other Way. They purchaſe ſome ſmall Quantities of *Ruſſian* Furrs, when they are to be had, in *China*, and yet the fineſt *Ruſſian* Furrs are commonly worn by Perſons of Diſtinction in *Corea*, which therefore they muſt obtain by ſome other Channel. They have Spices and other *Indian* Commodities amongſt them, though none of theſe are bought from the *Chineſe*; and they have alſo Amethiſts and Emeralds, which is a Proof of their having Correſpondence with ſome Nations that trade to *America*. We will endeavour to give a probable Account of the Manner in which they come by all, or at leaſt moſt of theſe Commodities and Manufactures, and in ſeveral Inſtances we ſhall confirm our Conjectures by indiſputable Teſtimonies, which in a Matter of this Nature is all that we pretend to do, and is much more than has hitherto been done.

The Country of *Corea*, or to ſpeak with Strictneſs and Propriety, the *Peninſula* of *Corea*, excluding the two Provinces that belong to it upon the Continent, is very carefully laid down in the modern Maps of *China*; but the ſame thing cannot be ſaid of the adjacent Countries to the Eaſt and North-eaſt, as will appear to any competent Judge who will compare the ſeveral Maps of thoſe Countries that are extant, hardly any two of which are alike, and conſequently, tho' it is very poſſible they may be all falſe, yet it is impoſſible they ſhould be all true, and more than probable the greateſt Part have no Reſemblance to Truth.

In the Sieur *Bellin*'s Map, of the laſt Diſcoveries made by the *Ruſſians*, there is a large Gulph which he calls the Gulph of *Kamſchatſka*, which ſeparates that Country from the Continent to which *Corea* is joined, and from this Map it appears to be very eaſy for the *Coreans* to ſail along the Coaſt as high as the River *Amur*, the Mouth of which is there laid down in the Latitude of 46 Degrees, and paſſing up this River they trade with the Subjects of the *Ruſſians*, and ſometimes with the *Ruſſians* themſelves, as appears from what Mr. *Ybrant Ides* tells us of People who come thither dreſt in Robes of blue Silk, with long Beards, who pretend that they dwell in an Iſland lying North-eaſt of that Coaſt. Now, in the firſt Place, we know that the *Coreans* actually dreſs in this Manner, and on the other Hand it is very certain, that the Inhabitants of any Iſland lying to the North-eaſt of the River *Amur*, could not well have Silk of their own Growth, or purchaſe it in *China* without our hearing of them.

The Reaſon why the *Coreans* make uſe of this Method to deceive the *Ruſſians*, is to prevent their Commerce coming to be made known to the *Chineſe*, which they are very ſtudious to avoid, as the *Chineſe* appear to be much more jealous of the *Ruſſians* than of any other Nation. It may be enquired, how it is poſſible for them to avoid a Diſcovery, ſince the *Chineſe* Dominions are now extended to the River *Amur*? To which the plain Anſwer is, That theſe Countries do not belong to the Emperor of *China* in that Quality, but as he is the Sovereign of the *Man tchou Tartars*, and theſe People are not of ſo jealous and ſuſpicious a Nature as the *Chineſe*, and therefore content themſelves very probably with ſuch Accounts, as for their own Conveniency the *Coreans* are pleaſed to give. It is alſo not at all unlikely that they may trade with the Inhabitants of the oppoſite Coaſt of *Kamſchatſka*, but what Commodities they obtain from them we cannot pretend to ſay.

After having thus ſhewn how they obtain rich Furrs, and other Northern Commodities, we will endeavour to deſcribe their Trade to the South, in reference to which the Reader is to obſerve, that under Colour of ſailing to the Iſland of *Quelpraet*, they take in from the Magazines there full of *Chineſe* Commodities, a proper Cargo for the *Philippines*, and paſſing behind the Iſland of *Formoſa* by the Help of the proper Trade Wind, they come ſafely to the Port of *Manila*, where they trade under the Name of *Chineſe*, and by this Means it is that they obtain ſuch Quantities of *Spaniſh* Silver, without which they would find it very difficult, if not impracticable, to carry on their *Chineſe* Trade. Here likewiſe they purchaſe Spices and other *Indian* Commodities; nor is it at all improbable that they trade in their Paſſage home with the Inhabitants of thoſe Iſlands that lie between *Manila* and *Formoſa*.

It may be aſked, What Certainty we have of this? To which I anſwer, That ſince we are certain they have *Spaniſh* Silver, and ſince we are as certain that no *European* Nation trades with them in their own Ports, we may be ſure that they have it this Way, becauſe they can have it no other Way. Beſides, I am ſure they did carry on this Trade above an hundred Years ago, and this from the Lights given me by ſome Papers relating to the melancholy Maſſacre at *Amboyna*, ſeveral of thoſe who were ſtiled *Japoneſe*, and who ſuffered with the *Engliſh* for their pretended Conſpiracy againſt the *Dutch*, were in Reality *Coreans*. If therefore they were expert enough to enter into this Navigation then, what Reaſon is there to doubt that they carry on the ſame Commerce now; more eſpecially ſince we know, that ſo late as the Year 1702, their Merchants brought a large Quantity of *Spaniſh* Silver to *Pekin*.

It may alſo be enquired, how the *Coreans* eſcape being diſcovered by the *Chineſe* at *Manila*? And the Anſwer to this is very ſhort and eaſy. The Trade to *Manila* is as much a contraband Trade to the *Chineſe* as to the *Coreans*, and therefore it would be impoſſible for them to diſcover ſuch an Offence to their Government, without confeſſing themſelves guilty of the ſame Crime; and every body knows that the *Chineſe* are much too cunning to do that. I foreſee alſo that it may be demanded, why, if they trade to *Manila*, they may not alſo trade to *Batavia*? To which I can only ſay, that there are no Proofs of it, nor any great Probability, whereas with Reſpect to their other Commerce we have both Evidence and Probability.

I have already obſerved, that we are far from having diſtinct Accounts of the Commerce at *Manila*, we only know in general Terms, that Veſſels from almoſt all the Countries in the Eaſt reſort thither, not only for the Sake of trading with the *Spaniards*, but with each other. It may indeed be ſaid, that *Macao* lies more conveniently for the *Coreans*, and that they might be furniſhed there with *European*, and perhaps alſo with *Indian* Commodities. But when it is conſidered that this Place is under the Power of the *Chineſe*, who have a *Mandaryn* conſtantly reſiding there, it will appear no proper Port for *Corean* Veſſels; and therefore their not making uſe of it, cannot be eſteemed an Objection of any Weight to the Truth of what I have delivered; neither am I conſcious to myſelf of having concealed any thing that might make againſt the Account which I have given, and which therefore I hope will be thought to deſerve Credit, at leaſt till we can obtain a better.

9. The Pains taken to deſcribe this Country, to digeſt the ſcattered Remains of the Hiſtory of its Inhabitants, to explore their Manners and Cuſtoms, and to inveſtigate the Nature and Circumſtances of their Commerce, might paſs for a very rational Amuſement, even ſuppoſing no higher End to be propoſed, than that of ſupplying the Deficiency of other Writers, and placing in a tolerable Point of Light a Subject that had remained in the Dark before. But I muſt confeſs this was not my Motive, or at leaſt it was not my only Motive; and when I ſay this, I perſuade myſelf that the Reader will not be at all at a Loſs to diſcover what was my Motive. At the Time when an Application to Parliament was deſigned for altering the Method of collecting the Duties upon Tea, which ſince that has in ſome Meaſure taken Place, I remember, among other Suggeſtions this was one, that for many Years paſt our Trade to *China* was declining; and this firſt put me upon enquiring whether there might not poſſibly be ſome Method found of ſupplying this Deficiency in our *India* Trade; and this Hint produced the Thoughts of carrying on a Commerce on the Coaſts of *Corea*; for which I ſought and procured Materials, with an Intent to have publiſhed them by themſelves; but after engaging in this Work, I thought they might be better preſerved here.

The Reaſons which induced me to think a Scheme of this Sort practicable, were chiefly theſe: The Situation of the Country, which being a *Peninſula* with a vaſt Extent of Coaſt, made it probable that ſome convenient Port might be met with to which *Britiſh* Ships might reſort. If upon Trial this ſhould be found either impracticable or difficult, it appeared to me, that as the whole of this Coaſt was ſurrounded by Iſlands, ſome of them might afford ſuch a Port, without the Hazard of navigating a Coaſt which I know ſome of the *Dutch* Charts repreſent as very dangerous, though I am not altogether certain that theſe Charts are to be abſolutely depended upon. Something of this Kind might undoubtedly be undertaken, for as theſe Iſlands are very numerous, it is not to be conceived that in none of them a good Port, a tolerable Bay, or a ſafe Road ſhould be found; becauſe Experience ſhews us, that there is no ſuch Thing to be met with in the reſt of the habitable World. When I found, upon Enquiry, that the *Coreans* were much addicted to Trade, and very deſirous of correſponding with Foreigners, which obliged the *Chineſe* to take ſo many Precautions to prevent their Deputies from indulging this Propenſity during their Stay at *Pekin*; I concluded, that if an Attempt of this Sort was made with proper Care and Diligence, it could not well fail of ſucceeding; and that though very poſſibly the firſt Trials might not be attended with any great or any extraordinary Profit, yet they muſt of Neceſſity afford us great Lights, and enable us by Degrees to open a new Branch of Trade, which in the End muſt tend greatly to our Benefit.

I was confirmed in theſe Notions, by conſidering, that the Inhabitants of the Northern Part of this *Peninſula* live in a very cold Climate; for all the Writers of Credit, in Relation to the Affairs of *China*, agree, that the upper Part of the *Corean* Gulph is entirely froze over almoſt every Year; that therefore the People might very probably be pleaſed with ſome Kind or other of our Woollen Manufactures; and I was the rather induced to entertain this Opinion, when I found that we formerly ſent conſiderable Quantities of Cloth to *Japan*. It occurred to me farther, that as the *Coreans* had a great many valuable Commodities and Manufactures much eſteemed in *Europe*, the Returns could not but be valuable in Caſe ſuch a Trade could be brought about; or if we found ourſelves diſappointed in that Reſpect, as it is certain that theſe People have amongſt them Plenty both of Gold and Silver, we could not fail of being very well paid, in Caſe our Commodities and Manufactures could be introduced. I was indeed aware of the Umbrage this might give to the *Chineſe*, and that very poſſibly it might put them upon taking every Meaſure in their Power to diſtreſs, and even to deſtroy this Trade; but on the other Hand, when I reflected, that in Spite of the Endeavours of the *Chineſe*, the *Coreans* were in actual Poſſeſſion of a conſiderable domeſtick, and no very deſpicable foreign Trade, this did not appear any formidable Objection, there being no Reaſon why the *Chineſe* ſhould exert themſelves with greater Vivacity to hinder the *Coreans* from trading with us than with the *Japoneſe*, which they tacitly permit, though they openly prohibit; and as they are a very ſubtle Nation, I could not help thinking they might be rather induced to connive at our Trade, in Hopes of its deſtroying, in a great Meaſure, the Inclinations which the *Coreans* are known to have for carrying on a Correſpondence with the *Ruſſians*.

It is very eaſy to penetrate the Cauſes that alarm the Government of *China* upon this Head; and as they have been before ſet forth, there is no Occaſion for repeating them here; but whoever conſiders them, muſt at the ſame Time diſcern, that our Trading upon the Coaſts of *Corea* would be attended with none of thoſe Inconveniencies. It could not be feared that we ſhould aim at diſcovering in order to conquer the Country; it could not be apprehended that we ſhould excite the *Coreans* to revolt; it could not be ſo much as ſuſpected, that under Pretence of Commerce we ſhould attempt any thing to the Prejudice of thoſe Rights which for a long Courſe of Years the *Chineſe* Emperors firſt, and the *Tartar* Monarchs ſince, have eſtabliſhed over this Kingdom and its Inhabitants. I am well enough acquainted with the *Chineſe* Government, to be very ſenſible that Nothing of this Kind can be ſuggeſted by any Ambaſſador in our Favour; but I know very well, that whatever we may imagine in *Europe*, there are no Reſolutions taken in the Cabinets of the *Chineſe* Monarch till the Conſequences are thoroughly conſidered; and therefore we have good Reaſon to believe, that amongſt other Circumſtances attending a new Trade, theſe might fall under their Cognizance; and as the Inference I make is drawn from their own Maxims, there is Nothing abſurd in ſuppoſing that they may ſee it as well as we; but I muſt deſire the Reader to obſerve that what I contend for is not a Permiſſion, or a Toleration to trade to *Corea* in the ſame Manner as we do to *Canton* in *China*, but a bare Connivance only, founded upon prudential Motives, which to be ſure the *Chineſe* will not think proper to declare, and into which it will be as little neceſſary for us to enquire. But beſides all this, let us but remember a little what paſſed in former Times. The *Dutch* actually poſſeſſed themſelves of *Formoſa*, when it was more ſtrongly connected with *China* than *Corea* is at this Day; nor does it appear from any thing recorded in Hiſtory, though I muſt confeſs that we are pretty much in the dark as to what paſſed in this Iſland, that the *Chineſe* Government ever made any conſiderable Attempt to recover it out of the Hands of the *Dutch*; but it was taken from them at laſt by a Multitude of deſperate Perſons, who, when they were themſelves driven out of *China*, were to ſeek for a Habitation, and reſolved to fix themſelves here, which however not with great Difficulty they did.

It is indeed true, that we have ſome imperfect Accounts of an Attempt made by the *Dutch* to fix themſelves at *Amoy*, on the Continent of *China*, in which they were repulſed with conſiderable Loſs; but as the Point I am labouring is not at all of this Nature, and as I do not apprehend there is or will be any Occaſion for proceeding to Force in order to fix a Trade, or even an Eſtabliſhment in one of the Ports, or on ſome of the Iſlands about *Corea*, there will be no Danger of a Quarrel with the *Chineſe*, though if there were, I preſume that their naval Force, which never appeared terrible to any other *European* Nation, would not very much alarm us; and yet nothing but a naval Force, and that too, acting at ſome Diſtance from their Ports, could be employed to diſpoſſeſs us of this Trade, in Caſe we were once poſſeſſed of it.

Taking therefore the whole of this Matter together, there is nothing viſionary, romantick or abſurd, in ſuppoſing that it might be worth the while of our *Eaſt-India* Company, to make an Experiment of this kind, in which if they ſucceeded they could have no Cauſe to repent; and if they did not ſucceed, we ſhall hereafter ſhew, that the Diſcoveries with which ſuch an Attempt muſt be attended, would very well compenſate the Expences which ſuch a Tryal would require. I likewiſe beg leave to add, that it would be no bad Policy for a great trading Company to make now and then ſuch an Attempt, for the Sake of National Advantage, becauſe it would be a juſt and rational Recommendation of their Intereſts to this, as to a trading Nation, and take off in a great Meaſure that Load of Envy, which has long ſat hard, and muſt otherwiſe continue always to ſit hard upon every excluſive Company.

10. Whenever a Deſign of this Sort ſhall come to be maturely weighed, in order to its being put in Execution, it will be natural to endeavour at deriving from it all the Advantages that are poſſible, and amongſt theſe I apprehend there is none more obvious, than the reviving thereby in ſome Meaſure our Commerce with *Japan*, which has been now interrupted for a long Series of Years, and I believe was never ſo much as thought of, at leaſt as a Thing any way practicable, ſince the Reign of King *Charles* II. We have already ſhown how the Trade is carried on between *Corea* and *Japan*, and from thence, I think, there naturally ariſes a Proſpect of no leſs than three different Methods of making an Attempt of this Sort, favourable to ſo important a Scheme. In the firſt Place, we might hope for ſomething by eſtabliſhing a Factory upon the Iſland of *Quelpraet*. It is very true, that the *Dutch* loſt a Ship there, in the Year 1653. but according to the Deſcription given us by thoſe that eſcaped that Shipwreck, there is a tolerable Harbour on the South-ſide of that Iſland, and more than one good Road on the Eaſt-ſide towards *Japan*.

If therefore we could introduce a Trade there, we might in all Probability either enter into a direct Commerce with the *Japoneſe* who frequent that Iſland, or at leaſt purchaſe many of their Commodities from the *Coreans*, out of their Magazines. This I ſay is the firſt Method, and we are pretty ſure that no great Difficulties could attend it, for by the Help of the *Dutch* Charts, and we might poſſibly have the Help of *Dutch* Seamen too, this Navigation either is or might be very ſoon tolerably well known, and therefore I ſhould imagine that this might be firſt tryed. The ſecond Method is attempting the Iſland of *Tui la tao*, which, as I have ſhewn, is the direct and capital Seat of Commerce, between the *Coreans* and the *Japoneſe*, and if upon this Iſland we could make a tolerable Eſtabliſhment, there can no Doubt ariſe, that we ſhould be from thence able to carry on both the *Corean* and *Japan* Trade with equal Advantage, and this without giving any Umbrage either to the *Chineſe* or to the *Japoneſe*. For with Reſpect to the former, they have never hitherto pretended to conſider this Iſland as dependant upon them, and therefore could not take any juſt Colour of Offence at any Nation's trading thither, and as for the *Japoneſe* they ſeem to conſider this Iſland in the ſame Light, and as a Place that affords their Subjects an Opportunity of gratifying their Deſire for foreign Commodities, without Danger to the State; one might therefore hope, that from the ſame Views we might eſtabliſh a Factory there, without being at all expoſed to thoſe uneaſy and mortifying Circumſtances that attend the Commerce of the *Dutch* in *Japan*, and which perhaps have been the chief Cauſes, that for ſo long a Tract of Time, no other *European* Nation has ever judged it expedient ſo much as to attempt interfering with them.

The third Method by which we might poſſibly come to a good Concluſion in this Affair, might be by ſettling upon one or other of thoſe two little Iſlands, that lie to the Eaſtward of *Tui la tao*, and which in the *Chineſe* Maps are ſtiled, *Doro ſima* and *Key ſima*. Theſe are indeed very ſmall Iſlands, but withal they are very conveniently ſituated, are within a Day's Sail of one of the beſt Ports in *Corea*, in leſs than a Day's Sail of the *Japoneſe* Coaſts, and ſo near *China*, that it would be very eaſy to detach an annual Ship from thoſe that are conſtantly ſent to *Canton*, and for that Ship to join the Company's Veſſels from that Port at *Macao*, in order to return in Conſort to *Europe*. With Reſpect to this third Method, I do not think it difficult, though at the ſame time, I muſt confeſs, I ſhould not adviſe it to make a Deſcent upon, and a Conqueſt of which ever Iſland ſhould be held moſt convenient. We have already mentioned more than once, the *Dutch* Conqueſt of *Formoſa*, which in Compariſon of either of theſe Iſlands, is much the ſame as *Jamaica* and St. *Chriſtophers*, or of *Ireland*, and the Iſle of *Man*; ſo that methinks, if the *Dutch* Company could undertake and maintain ſuch a Conqueſt as the former, there is nothing unreaſonable in ſuppoſing we might be able to atchieve the latter. Beſides, the ſmaller our Acquiſition was, the leſs Umbrage it would give, and the eaſier it would be to keep.

It may indeed be objected, that if any Thing of this Kind was practicable, it is highly probable the *Dutch* would have long ago undertaken it. At firſt Sight, there is ſomething in this plauſible enough; but, when thoroughly examined, this Objection will be found to have very little in it. For the *Dutch* have no Temptation to a Thing of this kind, as they are already poſſeſſed of a ſettled and profitable Trade with *Japan*; and we are too well acquainted with the wiſe Maxims of that People, to ſuppoſe that they would riſk a Certainty for an Uncertainty, or quit the Monopoly, which they now enjoy, for a kind of Trade in which they might be rivalled by ſome other Nation. But this is not at all our Caſe; we had formerly a Share in this Trade as well as they, from which we are now excluded, and are like to remain forever excluded, unleſs we ſhould make ſome ſuch Attempt as this to recover it; and though perhaps at firſt, the *Japoneſe* might be a little intractable, and forbid their Subjects holding any Correſpondence with us, yet by Degrees, and in Proceſs of Time, we might very well hope to overcome their Jealouſy and Averſion; for when they found that we aimed at nothing farther than a Settlement for the Sake of Trade, and did not propoſe any Encroachment upon their Dominions, they might be brought to conſider us in the ſame Light they do the *Dutch*, and admit, for their own Sakes, a regulated Commerce, under certain Reſtrictions; at leaſt there are two Things morally certain, firſt, that if we were ſo eſtabliſhed, we might be able to ſubſiſt by our Correſpondence with the *Coreans*, who have a natural Propenſity to Trade, whether we had any Intercourſe with the Inhabitants of *Japan* or not; and ſecondly, that lying thus at a Diſtance from their Coaſt, we ſhould be in very little Danger from the whole Force of the *Japoneſe* Empire; which was not the Caſe, when we were actually ſettled on the Continent by their Permiſſion, and under their Protection.

We may likewiſe add, that the Caſe of the *Portugueſe* at *Macao*, is a kind of Parallel to ſuch an Eſtabliſhment; and though it is very true, that in its preſent Situation, that muſt be allowed to be both a ve mean and a very precarious Settlement, yet it was ot always ſuch, nor is the Force of the *Portugueſe* the *Eaſt-Indies* at this time any way comparable t ours; ſo that if they, even with the little Power y have, are ſtill in a Capacity of maintaining th ſelves on the Coaſt of *China*, we who have a much eater Power, might very well hope to compaſs an upport a better Settlement upon the Coaſts of *apan*. At leaſt, there is no Harm in thinking of it in ſtating the Arguments in Favour of ſuch a ing, or in looking into and enquiring after the A vantages with which it might be attended.

If the *Europeans* had never entertained much bolder and more romantick Schemes than theſe, we had never known more of *Japan* than what was handed to us in *Marco Polo*'s Travels; and why our Anceſtors in Cock-Boats, in Compariſon of our Ships, and with few or none of the Advantages which we poſſeſs, ſhould attempt Diſcoveries, eſtabliſh Colonies, and make Conqueſts that we ought not ſo much as to entertain any Thoughts of, is paying ſo high a Compliment to them, and throwing ſo depreciating a Character upon ourſelves, as with all our Faults I think we can hardly deſerve. But ſuppoſe we did take it for granted, that we were ſuch mean-ſpirited daſtardly Creatures as this Compariſon would make us, let us not expect that our Poſterity muſt follow our Examples, or that we are to decline and grow downwards to the End of Time. If ſoftened by Luxury, if enervated by Corruption, if hampered by private Intereſts, and the Chains of excluſive Companies, the preſent Generation dare act nothing that is great and noble, let us at leaſt preſerve our Thoughts free, and diſcover, ſettle, and conquer in Imagination; nor need we debar ourſelves the poor Pleaſure of hoping that thoſe who come after us may be better than we, as well as thoſe that went before us.

11. When ſuch a Race of Men ſhall ariſe, the Advantages that we have already propoſed will in all Probability appear ſufficient to engage them either to chuſe one of theſe Methods which we have offered, or to think of ſome other which may be preferable to any of them, and which at the ſame Time may do Honour to their own Invention. They will alſo in all Probability puſh Things ſtill farther, and entertain Hopes of new Diſcoveries, when they once find themſelves ſettled on the Frontiers, as it were, of the known World. I beg my Readers will now reflect, that I ſpeak of thoſe who ſhall live when we are no more, and that I do not pretend to expect any modern Supercargoes, who can make great Fortunes in two or at moſt three Voyages, Factors at *Buenos Ayres*, *Panama* or *Jamaica*, who in the Space of a few Years can riſe from Indigence to Opulence, though now and then their Practices may plunge the Nation in a ſeven Years War or ſo; or thoſe active and buſy Spirits, who know how to fiſh golden Treaſures out of the troubled Waters of *'Change-Alley*; I ſay, I do not expect that theſe ſhould ſo much as reliſh my Propoſals, much leſs concern themſelves in their Execution; indeed I ſhould be ſorry if they did, for I ſhould then have the Mortification to ſee the Trade to *Corea* made a Bubble; or, the Revival of our Commerce to *Japan*, a Job. No, I pleaſe myſelf with the Proſpect of a new Race of Men, who when our Confuſions are over, and our Animoſities buried in Oblivion; when Parties, Factions, Intrigues, Corruption and Stockjobbing ſhall be no more, may inhabit under a new Heaven as it were on a new Earth.

It is from theſe Men, full of the good old *Engliſh* Spirit, that ſent *Drake* and *Cavendiſh* round the World, that inſpired the great Sir *Walter Raleigh* with the View of peopling *Virginia*, and even in our degenerate Times, excited another Gentleman I need not name, to an Attempt which will be the Wonder of future Ages, as the Neglect of it will be the Reproach of ours; from theſe Men, I ſay, I expect that when they have fixed ſuch an Eſtabliſhment as I have been ſpeaking of, that they would conſider what it is makes the *Japan* Trade ſo dear to the *Dutch*, in Spite of the Dangers, the Difficulties, and the diſagreeable Circumſtances with which it is attended. They will find, that it is the rich Copper they receive from thence, by which they always make fourſcore, and ſometimes *Cent. per Cent.* that it is the Silver of which they likewiſe make a Profit, and that a great Part of the former, and almoſt all the latter, came to the *Japoneſe*, from Countries to the North-eaſt of their own, and of theſe Countries, wherever they lie, I make no Doubt but ſuch *Engliſhmen*, upon theſe Informations, will go in Queſt.

Theſe Countries muſt be inhabited, otherwiſe their Mines could not be wrought, and from the Climates in which they lie, the People muſt ſtand in Need of warm Cloathing, ſo that without Queſtion, our woollen Manufactures would be very acceptable to them; when theſe Countries are found, they will lead to the Diſcovery of new, for Countries without doubt there are, from *Japan* to *California*; and as the wiſe *Columbus* rightly foreſaw, that a Weſt Courſe muſt of Neceſſity carry Men from *Europe* to the *Eaſt-Indies*; ſo with equal Security we may pronounce, that this North-eaſt Navigation will ſooner or later bring them to that North-weſt Paſſage, which, whenever it is diſcovered, will ſet the Name of *Dobbs* on a Level with that of *Magellan*. I do not wiſh that theſe Diſcoveries ſhould lead to Conqueſt, or that the *Engliſh*, like the *Spaniards*, ſhould employ their Force in ſubduing the Natives, and bury Millions in digging to ſupport their Luxury. No, from ſuch Men I expect better Things, and that they will place their Glory in what all-wiſe Providence has made their Intereſt, in civilizing the Savages they may find, in teaching them Humanity, and the Truths of the Goſpel, and in Exchange for the Bleſſings their own fruitful Countries enjoy, bring back the Tribute of thoſe new diſcovered Lands.

Theſe are high and noble Sentiments, which, however ſlighted and deſpis'd by ſuch as have no Principle but Gain, and no God but Gold, are thoſe that tend to make a People truly great, and to eſtabliſh that Greatneſs upon a Foundation never to be ſhaken. If the modern, narrow and ſelfiſh Notions had prevailed in former Ages, the *Eaſt-Indies* and the *Weſt* had ſtill remained unknown; and if they had not been propagated in ſucceeding Times, there would not remain at this Day a full third Part of the habitable Globe to be diſcovered. At the ſame Time that we know this with as much Certainty as it is poſſible that a Thing of this Nature ſhould be known, we cannot but be ſenſible that it is ridiculous to complain of Want of Trade, while ſo many Branches remain unopened; we likewiſe know, that within a ſhort Time after their being firſt diſcovered, Trades are the moſt profitable, and are at the ſame Time eaſieſt kept, as appear'd by our preſerving for a long Time our Commerce with *Ruſſia*, in Conſequence of our finding the Route thither by *Archangel*, and our quiet Enjoyment of the *Hudſon*'s Bay Trade, in Virtue alſo of our being the firſt Diſcoverers.

To ſuch Men as I have deſcribed, to thoſe who have ſound Heads and honeſt Hearts, theſe will be perſuaſive Arguments; and far from conſidering the Revival of the Trade to *Japan*, as the utmoſt Limits of their Hopes and the *Britiſh* Commerce, they will embrace every Opportunity to carry their own Knowledge, and the Commodities of their Country farther, and try every Method that Art can dictate, or Genius can deviſe, for gaining freſh Information. Nor will they have any Apprehenſions that their Labours may prove fruitleſs, or their Diſcoveries ineffectual, ſince this will be ſuſpecting Providence, and ſuppoſing that God would create Countries, and place Men in them beneath the Notice, and unworthy the Converſation of their Fellow-Creatures; which, impious at it is, may be agreeable enough to the Pride of corrupted Minds, but muſt ſeem equally abſurd and ſhocking to every well ſeaſoned Underſtanding. Beſides, Experience tells us, that never any Diſcovery was yet made, which proved utterly uſeleſs or ineffectual, when properly purſued.

The Coaſt of *Guinea*, when firſt viſited by the *Portugueſe*, did not promiſe any mighty Things, and yet it proved the Way to the *Indies*. The Country about the Cape of *Good Hope* was deſerted by more Nations than one, as abſolutely worthleſs and incorrigible, and yet in the Hands of the *Dutch* it is a kind of terreſtrial Paradiſe. We may ſay the ſame of the Shores of the *Magellanic Straits*, which are inhoſpitable to the laſt Degree; but they open into the *South-Seas*, and are, if I may be allowed the Expreſſion, the Gates to a new World. As theſe are Wonders diſcloſed by paſt Diſcoveries, they may well provoke Men of high Spirits and true Courage to proſecute the ſame Road, and endeavour, by freſh Expeditions of the ſame kind, to rival

val the Reputation of old Diſcoveries, by the more ſurprizing Scenes they unfold, in making new.

12. It is a very juſt Obſervation of the wiſe Lord Chancellor *Bacon*, that there are many People, who chuſe to put the moſt material Part of their Letters in their Poſtſcripts; I muſt confeſs, I do not enter into the Reaſon of the Thing, though without adverting thereto, I have fallen into the Practice, of which I ſhall give the Reader very ſincerely and without Reſerve my Motives. When I undertook to give this Hiſtory of *Corea*, and to recommend an Eſtabliſhment upon the Coaſts of it, I propoſed to ſpare no Pains in order to recommend it to my Countrymen, as a Thing highly advantageous, and that could not poſſibly fail of amply rewarding their Endeavours; but at the ſame Time it was my Intention to have concealed the capital and ſtrongeſt Reaſon, which had induced me to preſs this Matter ſo warmly, not out of the leaſt ill Will or Jealouſy of my Countrymen, not from any private View to my own Advantage, but becauſe I was apprehenſive, that the diſcloſing this Matter might give other Nations an Opportunity to profit, by an Invention which I could wiſh to ſee in the Poſſeſſion of the *Britiſh* Nation alone. This I the rather apprehended, becauſe of that ſupine Indolence, which for many Years has locked up our Faculties, with Reſpect to Diſcoveries, while other Nations that we ſeem to deſpiſe have crept ſo faſt into Naval Power, as already to tread upon our Heels; for the *Swedes* this very Year have deſtined thirty five thouſand able Seamen for the Service of their Navy, and at the ſame Time have renewed the Charter of their *Eaſt-India* Company for twenty Years, and diſpatched two large new Ships to *China*.

But being well informed, that thoſe worthy and publick-ſpirited Men, who were at the Expence of the laſt Expedition, for the Diſcovery of a North-weſt Paſſage, continue in their Reſolution to proſecute that Deſign, which ſooner or later I am convinced will be attended with Succeſs; I was from thence determined to alter my Plan, and to acquaint the World, fairly and truly with the Secret of this Buſineſs; and the principal Reaſon of my contending ſo much, not only for the Expediency, but even for the Neceſſity of making an Attempt on this Side, and ſecuring a ſolid Eſtabliſhment on ſome or other of the Iſlands between *Corea* and *Japan*. The ſetting this Affair in a clear and proper Light will take up ſome Room, and require a little Attention; but every ingenious Reader, I am confident, will allow me the one without complaining, and gratify me in the other with Pleaſure, ſince what I have to offer, carries along with it the prevailing Charm of Novelty, at the ſame Time that it is equally curious and important.

The Hopes of diſcovering a North-eaſt Paſſage have been long laid aſide, from a great Variety of Reaſons, but chiefly on Account of thoſe advanced by the laſt Adventurer for that Diſcovery our Countryman Captain *Wood*, who like many other great Navigators, having failed in his Expectations, conſoled himſelf for that Diſappointment, by labouring to take away Expectation itſelf. I muſt confeſs, that this Method, however common, is very far from being ſatisfactory to me, inſomuch that I could wiſh it was diſuſed, and that ſuch as are for the future employed in any Expeditions of this Kind, would content themſelves with the Vindication of their own Conduct, in giving a fair Detail of their Miſcarriages, without laying it down as a Thing certain, or even probable, that no Man ſhould ever ſucceed where they failed. But notwithſtanding all the Diſappointments, and, I muſt confeſs there have been many of them in attempting this North-eaſt Paſſage, the Reaſons for believing it remain yet unanſwered, and particularly a Matter of Fact which belongs properly to the Subject of this Section, and therefore I will report it in the Author's own Words.

The Perſon, whoever he was, that wrote an Account of the Shipwreck of the *Dutch* Sailors on the Iſland of *Quelpraet*, has added a ſhort Deſcription of the Kingdom of *Corea*, in which he has the following very remarkable Paſſage. "On the North-eaſt it is bounded by the vaſt Ocean where there is every Year a great Number of Whales taken, ſome of them found with the *French* and *Dutch* Harping-Irons, thoſe People uſing to follow that Fiſhery. There are Abundance of Herrings alſo catch'd there in *December*, *January*, *February* and *March*. Thoſe taken the two firſt of theſe Months, are as large as ours in *Holland*, but what they catch afterwards are ſmaller, and like thoſe in *Holland*, called Frying Herrings, which are eaten in *March* and *April*. Hence we infer, that there is a Paſſage above *Corea*, *Japan* and *Tartary*, which anſwers to the Streights of *Weigats*. For this Reaſon we often aſked of the *Coreſian* Seamen, who uſe the North-eaſt Sea, what Lands were beyond them, and they all told us they believed there was nothing that Way but a boundleſs Ocean."

This very Paſſage is alledged by Captain *Wood*, as one of the ſeven Reaſons which induced him to attempt finding this Paſſage, but as at the Time of Writing his Book, he had two very different Objects in View, *viz.* the Showing that he did not venture upon the Expedition without good Grounds, and the Proving that, notwithſtanding their fair Appearance, theſe were in Effect no Grounds at all; he is ſo far from citing the Paſſage as I have done, that he gives a very inaccurate, I might ſay, falſe Account of it; for he ſays, that the *Dutch* Writer reports, that in a certain Bay of the Kingdom of *Corea*, dead Whales drive in with *Engliſh* and *Dutch* Harping-Irons in them, which, if true, he owns had been a great Argument of a Paſſage.

The Reader may ſee, that the *Dutch* Writer ſays no ſuch Thing, and if he had ſaid it, the Abſurdneſs of theſe dead Whales floating ſo far, would have rendered the Paſſage ridiculous; and this, very poſſibly, Captain *Wood* intended by making the Change. Of the Herrings he ſays not a Word, and therefore giving him up the dead Whales for his own Uſe, I preſume the living ones, and the Herrings, may ſtill paſs for two very ſtrong Arguments of ſuch a Paſſage, and in its proper Place, I have produced theſe and many more. If therefore there be any ſuch Paſſage, it is very manifeſt from hence, that making ſuch a Settlement as I contend for, is the likelieſt Method to find it. For ſuppoſing that we had a good Colony, or at leaſt a ſtrong Fort and Factory, upon the Iſland of *Tui la tao*, we might from thence annually endeavour to diſcover along the Coaſts of *Kamſchatſca*, at the moſt favourable Seaſon of the Year, and thereby obtain a fairer Opportunity than has yet offered, of getting round into the *European* Seas; for as *Dampier* very rightly ſaid of the Northweſt Paſſage, that it was more likely it ſhould be found by thoſe who attempted it from *California*, than by ſuch as ſought it from *Hudſon's-Bay*; ſo I may ſay, with Regard to this Diſcovery, that they have infinitely a better Chance, who ſeek this Paſſage from *Japan*, than thoſe who proſecute it from the North of *Scotland*; and for the very ſame Reaſon, becauſe this is proceeding from the Unknown to the Known, and making the latter Part of the Voyage ſafe and eaſy, which in the other Way is always dangerous and uncertain; to which we may with much Probability, attribute moſt of the Diſappointments that have been met with.

But if, contrary to all Appearances, if in Spite of all the Reaſons, Phyſical, Phyloſophical and Coſmographical, that countenance this Opinion, and which hitherto remain altogether unrefuted, there ſhould, after all, be none ſuch, we ſhould make this negative Diſcovery earlier, and with greater Certainty than other People and even from hence there might very great Advantages ariſe, that have not hitherto been conſidered; for though it would be impoſſible to tranſport Goods, yet Letters and Intelligence might be carried over Land; a Sloop in the Space of three Weeks, with a fair Wind, in much leſs Time, might proceed from *Quelpraet*, up the River *Amur*, and ſo the Packets might be conveyed to *Nipchou*, from whence there are frequent Opportunities of ſending to *Moſcow*, and by this Means, in the

Space of ſix Months, Letters would reach *Hamburgh*, from a Factory upon the Coaſt of *Japan*; in this there is nothing dark or unintelligible, nothing that reſts upon Suppoſition or Conjecture, the whole is juſt as certain, as that the Dominions of the Czarina border upon thoſe of the Emperor of *China*.

Thus then, whether a North-eaſt Paſſage, or no Paſſage, ſuch a Settlement would be highly uſeful, highly advantageous, and highly convenient. But I have ſomething farther to ſay, ſuch a Settlement as this might be of Uſe, if not to the Diſcovery, yet to the Preſervation and Improvement, even of a North-weſt Paſſage; for though I am not ſo ſanguine, as to imagine, that thoſe who ſhall be ſo lucky as to make that Paſſage, would afterwards have the Courage to make ſuch an enormous Stretch, as from *California* to *Japan*; yet I preſume, that in Proceſs of Time, ſuch a Diſcovery being once made, Endeavours might be uſed on both Sides, by diſcovering to the Eaſt one Way, and to the Weſt the other, to facilitate a Junction in ſome middle Port; for to me it appears a Thing certain, that there are Countries, at leaſt Iſlands all the Way. This double Diſcovery would lay open the Whole, in half the Time that would be otherwiſe neceſſary, perhaps in leſs than half the Time, for in both Caſes our Seamen having reaſonable Hopes of reaching an *Engliſh* Port, would make infinitely greater Efforts than could be expected from them in a State of Uncertainty, and proceeding conſtantly through unknown Seas, without any View of being ſafe at laſt.

It is to be obſerved, that all I have advanced under this laſt Head, is abſolutely independant of what was ſaid before; ſo that if the Advantages firſt propoſed are ſuch as may encourage the attempting ſuch a Settlement, by proving the great Probability there is of its being advantageous to the *Britiſh* Nation, then theſe additional Conſiderations ought very much to ſtrengthen and confirm the Reſolution of doing ſomething of this Sort in Time, and before any other Nation lays hold of what we neglect. To ſome poſſibly this may appear highly improbable, but to remove that, as I would willingly do every other Objection, I beg Leave to take Notice of three Things, which, in my Apprehenſion, are ſufficient to ſhew, that a Suſpicion of this kind is not altogether groundleſs, much leſs chimerical. In the firſt Place then, I preſume Nobody will doubt, that if we are ſo happy as to find the North-weſt Paſſage, it will excite a great Spirit of Emulation, in all the trading Nations of *Europe*, more eſpecially, if we ſhould, as there is great Probability we muſt; reap very great Advantages from that Diſcovery. Now to balance this, the moſt natural Expedient they could recur to, would be attempting the Diſcovering of the North-eaſt Paſſage, towards which, the finding the other would be the ſtrongeſt Encouragement.

But, ſuppoſing this to be utterly impracticable, yet without any greater Knowledge than they have already, the *Ruſſiaus* might be tempted to make Uſe of the Advantages they already poſſeſs, in order to be beforehand with us, in opening a Commerce with *Japan*, and thereby precluding us from thoſe Benefits, which from a little Induſtry and Pains we might now ſecure to ourſelves againſt all other Nations, at leaſt for a conſiderable Space of Time, during which we might eſtabliſh ourſelves ſo effectually, as to preſerve thoſe Advantages for ever, in Spite of any Attempts to diſpoſſeſs us.

My ſecond Obſervation is, that the *Ruſſians* have this very Point already in View, that it is what they aim at by all the Diſcoveries they have been for many Years making; that this is confeſſed in all the Accounts, that they have hitherto publiſhed of their Progreſs; that it is the true and only Reaſon of their not making their laſt Diſcoveries as publick as they did thoſe of Captain *Behring*; and though I am very far from ſaying, that we have any Right to take this ill, or to be offended with the Conduct of the *Ruſſians* in this Particular, yet I cannot help thinking, that it is worth our Obſervation, and that there is full as good Reaſon we ſhould make Uſe of the Experience and Advantage, derived to us from our *Eaſt-India* Trade, as the *Ruſſians* of the Situation of their Territories, and the Diſcoveries which they have made by that Means.

In the third Place, I muſt remark, that ever ſince the *Swedes* ſucceeded in their Attempt of opening a Communication with the *Eaſt-Indies*, they have had ſomething of this Kind in their Head, I mean making a Settlement upon ſome Iſland near the Coaſt of *China*, or to the Eaſt of it; nor are we at all certain, that the Ships which have ſailed from *Gottenburgh*, while this very Section was printing, may not have Inſtructions to make, or at leaſt attempt making ſuch a Settlement. Why then we ſhould ſit ſtill with our Arms before us, while other Nations, more eſpecially the Northern Nations, who are avowedly and earneſtly endeavouring to render themſelves maritime Powers, uſe ſo much Vigilance and Activity to compaſs their Ends; or why, according to the old, but true and ſenſible Proverb, *We are to take no Care of the Stable-Door, whilſt the Steed is unſtolen*, I am at a Loſs to comprehend? Sure I am, that whatever Reception theſe Remarks may meet with at preſent, it will not be many Years before the World will ſee, that I am not altogether miſtaken in my Eſtimate, and that the rich Goods of *Japan* will find their Way to *Europe* in ſome other Bottoms than thoſe belonging to the *Dutch Eaſt-India* Company; and I am ſatisfied, that the *Dutch* themſelves will not blame me, for wiſhing, that in ſuch a Caſe they might be freighted in *Britiſh* Veſſels.

There is a natural Connection between the Intereſts of the maritime Powers in the *Indies*, as well as in *Europe*, and though it is certainly true, that as Trade is our common Miſtreſs, we muſt in many Caſes be conſidered as Rivals; yet it is no leſs true, that if our Intereſts be well underſtood, we ought to avoid Quarrelling even upon that Account; for though it may be in our Power to deſtroy each other, yet we have this Comfort, that if it is never in our Will, we may preſerve our Commerce and our Naval Force in Spite of all our Enemies; and this is a Topick that can never be too much preached upon, either in *England*, or in *Holland*; and as a Proof of this, we need only conſider, that ſuch as are Enemies to both, never fail to inſinuate the contrary. Whoever looks into the Pamphlets, publiſhed here in the Reign of King *Charles* the IId, and whoever has read, and remembers the celebrated Letters of *Van Hoey*, cannot but acknowledge the Truth of this Obſervation, which I the rather make, becauſe in ſome Parts of this Work, I have expreſſed myſelf very freely, in Regard to the Practices of the *Dutch* in the *Eaſt-Indies*; but I deſire that it may be underſtood, that I diſtinguiſh between the Servants of the *Eaſt-India* Company, and the Subjects of the *States-General*; for though they are the ſame Men, they are under different Directions, and this Diſtinction is none of my coining, but one I learned from my old Maſter *John de Witt*, whoſe Maxims firſt gave me a true Notion of Trade, and taught me to look upon it, not in the narrow Light of a Scheme to acquire Wealth, but as a generous Syſtem, of diſtributing through all Climates the Bleſſings beſtowed by Nature, and thereby promoting the common Happineſs of Mankind.

13. After having thus finiſhed the Buſineſs of the Section, with the Readers good Leave, we will take the Liberty of making a few Remarks and Obſervations upon it. It conſiſts in a Deſcription of *Corea*, which is entirely new, and conſequently cannot be thought either uſeleſs or unentertaining. It ſhews from the Deſcription laid down of this Country and its Inhabitants, that there is nothing improbable, in ſuppoſing that we may become better acquainted with them; it is true, we lie a great Way from them, but we viſit the *Chineſe* very often, and theſe ſame *Coreans* live but at next Door: It exhibits alſo ſome Reaſons that may induce us to think of calling upon them, and amongſt others, that of opening by their Aſſiſtance the Way to renew our Acquaintance with the *Japoneſe*, with whom we had ſome Dealings in Times paſt. It farther lays open ſome additional Advantages that may reſult from our entering upon this Commerce; and finally it brings to Light ſome very curious, and if they were well weighed, ſome very cogent Reaſons for our not ſleeping over

an Affair, which, if well managed, may be attended with ſo many good Conſequences.

The Plan, it is true, is very extenſive, and I will readily grant is much ſooner conceived and thrown out upon Paper (though that too has coſt a good deal of Time) than carried into Execution. But it may be a very good Plan for all that, and I have the better Opinion of it, becauſe it may be executed Step by Step, and be made to bear its own Charges into the Bargain. If the Trade to *Corea* ſhould be found practicable and profitable, I ſhould certainly incur no Blame for pointing it out; but ſay, that Experience ſhould juſtify the former only, and not the latter: In that Caſe I ſhould think we might eke out Matters from *Japan*, not in two or three Years perhaps, but in half a Score much might be done; and in the mean Time ſome Trials might be made towards other Diſcoveries. The old Proverb ſays, that *Rome was not built in a Day*, and this Proverb was never better verified than when applied to Trade, to Settlements, and to Colonies. They are, to be ſure, neither adjuſted, fixed, or rendred beneficial in a Moment; but in Matters of this Nature, Time and Patience will do all. Let us look at *Virginia* and *New-England*, thoſe Siſter Plantations, that have grown up to be fine comely Perſonages, though they were ſomewhat difficult in the Rearing; and let us remember how often this Nation was told, while they were at her Breaſts, that it was all Labour in vain, and that they would never live to go alone. But Thanks be to God, we were not terrified by theſe old Womens Prophecies, we continued our Care of them notwithſtanding theſe untoward Prognoſtications, and we have had no Cauſe to repent of it; the young Women, as they grew up, throve apace; they have been long ſince able to get their own Living, and have made us very grateful Returns for the Pains we took in nurſing them.

The Danger is not ſo great in undertaking extenſive Projects, as that which ariſes from the Folly of abandoning them too ſoon. We ought moſt certainly to examine Things maturely before we reſolve upon them; as I ſaid once before, I am not vain enough to imagine, that I have pointed out all the Methods, or even the beſt Methods for accompliſhing this Deſign, but if upon Trial it ſhould be found that I have been ever ſo much miſtaken, and that the Thing muſt be gone about in quite another Way, it will not afflict me much provided the Thing can be done. That, and that alone, is my View; let the Project be decried, let the Projector be thought a Fool, if his Folly proves an Inſtrument to his Country's Good, and his Countryman's Glory, that Fool will be happier than all the *Indies* could make him. The Vanity of knowing much, the Ambition of making a Figure in the learned World, the aſpiring Hopes of ſtriking out new Paths, are Weakneſſes without Doubt, but they are Weakneſſes that are often beneficial to Mankind, and in that Light are excuſable. I deſire this may be conſidered in no other, though in Truth I am not much concerned in what Light it is conſidered, if it is but productive of any Good.

Extenſive as the Plan is, yet we ſee plainly that it conſiſts of Parts; though it is propoſed at once, yet it may be effected by Degrees. We are told that *Milo*, a famous Lubber of Antiquity, began with carrying of a Calf, and was able to jog about with it upon his Shoulders when it grew up to be an Ox, which he afterwards knocked on the Head with a Blow of his Fiſt; and then I think the Story ſays, he eat it, not at a Meal, I preſume, but in Joints. This ſhews us, that Time and Application will atchieve Wonders, and provided we make an Eſſay to take up the Calf all in good Time, we may come to have many a good Dinner out of the Ox. But we muſt ſet our Shoulders to it, that was *Milo*'s Beginning, and it muſt be ours. If we can but carry the Calf, and do not fling it down in a Paſſion, there is no doubt of its becoming an Ox, or that our Strength and his will keep Pace, and that we ſhall be able to carry him when he is an Ox. The Compariſon is familiar and coarſe, but it is very apt, and if I was ſure that the Criticks would not be angry, I would ſay that *Homer* himſelf has made uſe of ſome that are not a bit more clumſy or leſs cleanly.

It may be farther objected, and indeed I cannot deny, that though I ſtile it a ſingle Propoſition, yet there is a great Variety of Objects pointed out; but if from this Conceſſion it ſhould be ſaid that any Diſtraction ariſes, againſt that I ſhall enter my Proteſt. It is very certain that one Machine may anſwer a Variety of Purpoſes, and therefore becauſe a Man affirms, that if a certain Thing be done, it may prove the Means of doing many other Things, it does not at all follow that what he propoſes is the more difficult, much leſs that it is impracticable. To judge of this, we muſt conſider the Relation between the Means he propoſes, and the Ends which he affirms may be anſwered by them: for if there be a proper Connection between them, he may be ſtill in the right, tho' at the firſt Appearance he may ſeem to promiſe large. To apply this general Doctrine. When I ſay that *Corea* is happily ſituated for Trade, the Reader need only turn to a Map to know whether I ſpeak Truth. When I affirm that the Inhabitants are addicted to Commerce, he may have Recourſe to the Authorities I have cited, and upon due Examination the Witneſſes will be found to ſpeak my Senſe. When I lay it down that there are Iſlands very conveniently ſituated between *Corea* and *Japan*, I mention alſo their Names, ſo that it may very eaſily be ſeen, whether I imitate that Painter, who to gratify his Wife that did not love to ſee ſo much white in one part of the Globe, ſprinkled a few Iſlands through it, which are called the Painter's Wife's Iſlands to this Day. When I hold forth about Countries beyond *Japan*, I muſt confeſs I am a little aſhamed to appeal to Father *Charlevoix* and his Brethren the *Jeſuits*; but however, if their Teſtimony ſhould be rejected, I believe I could produce ſome Proteſtant Witneſſes to the ſame Facts. And laſtly, when I talk about a North-eaſt Paſſage, there is Captain *Wood* will bear me out in all that I have advanced. Thus I reconcile my Means to all theſe ſeveral Ends, or at leaſt I put it into the Reader's Power to ſee whether I reconcile them or not.

In the next Place it is to be obſerved, that I do not pretend to ſay, that the Moment a Settlement is fixed, it will fulfill all that I have promiſed in its Behalf, or that it is requiſite we ſhould attempt to fulfill them the very Inſtant that we have made ſuch a Settlement. This I am ſo far from affirming that the principal Reaſon of my introducing this Remark, is to ſhew that it ought not to be expected. I maintain that there is a Connection between this Settlement and all the Ends I have alledged it may anſwer; but we muſt touch but one String at a Time, otherwiſe we ſhall produce Diſcord inſtead of Harmony. We muſt take each in its Order, and if we do not immediately ſucceed, we muſt drop that Deſign for a Time, and drive only the Nails that will go, and thus by Degrees there is no Room to fear we ſhall come to drive them all at laſt.

When the *Canaries* were firſt diſcovered, and toſſed about from Hand to Hand, whoever thought that from thence a new World might be diſcovered? Why truly *Columbus*. And what then? He propoſed it to the *Portugueſe*, who were thought to be the beſt Judges of ſuch Projects, and they rejected it as an idle Dream. But as good Judges as they were, they miſtook the Point, and as much as they thought him miſtaken, he hit the Mark. Not at once indeed, but gradually; he firſt reached the *Bahama* Iſlands, then the Continent of *America*, and as ſoon as he heard of a *South Sea*, he pronounced that the *Indies* he ſought lay beyond that. By Degrees every End was anſwered, and the Spices brought home in *Magellan*'s Ships, though many Years after *Columbus*'s Death, proved that his firſt Conceptions were right; and give me Leave to ſay they would have been juſt as right if *Magellan* had not ſucceeded in his Voyage. All the Ends of a Propoſition may not be anſwered in a very long Tract of Time, and yet they may be all truly laid down. We have not yet ſquared the Circle, but the *Dutch* Mathematician that had a Line and half of Decimals inſcribed upon his Tomb went very near it.

Without doubt many a one will ſay, that the Scene is laid at a prodigious Diſtance, that there are a Multitude of Obſtacles lie in the Way, and that it would be a wild Waſte of Wealth to undertake any of theſe enormous Schemes, which are out of the Reach of any but whimſical People's Obſervations. As to the Diſtance, I proteſt I can't tell what to ſay. It is moſt certain, that I can't bring *Corea* nearer, but where it is there Providence placed it; and if it had been placed any where elſe, it would have been ſo much the worſe, for all the Ends that I have propoſed, and I muſt even have had Recourſe to any other Country that ſtood in its Room. But then if a North-eaſt Paſſage ſhould be diſcovered, though it would not bring *Corea* nearer, or ſhorten the Diſtance a Yard, yet we ſhould get ſooner there by very near two thirds of the Time. Well then, there is ſomething in Alleviation of the Diſtance; and as to the Difficulty, why that is not much greater than muſt be got over to get at a Pound of Hyſon Tea, and not ſo great as is actually got over, before *Europeans* can make themſelves Maſters of a *Japan* Tea-board. Whence I infer, that any Body who ever drank Tea upon ſuch a Tea-board muſt allow that the Thing may be done.

King *Philip* the IId, who was a very wiſe Man, framed far more extenſive Projects, and durſt think of encountring Difficulties, to which all that I have mentioned are but Mole hills. He conceived an Idea at leaſt of univerſal Monarchy in *Europe*, and a Monarchy as univerſal on the Ocean. He knew all the poſſible Paſſages to the *Indies*, and reſolved to be Maſter of them all; with a View to this he actually attempted to fix a Settlement, and build a City on the miſerable Coaſt of the Streights of *Magellan*, where one of our Men of War's Boats Crew could not ſubſiſt during their Paſſage; and it fell out with Reſpect to his Colony, as might be expected, that is, ſuch as did not drown or hang themſelves were fairly ſtarved. He had it likewiſe in his Head to put it out of every Body's Power to look either for North-eaſt, or North-weſt Paſſages, by reducing the *Engliſh* and *Dutch*, the only Nations that had thought of ſuch a Thing. Nay to ſuch a Degree did he carry this kind of Imperial Madneſs, that he was even for locking up the *Baltick*, and with that View actually took Meaſures for making himſelf Maſter of the Sound.

Theſe were prodigious and impracticable Projects, and yet they enter'd into a very wiſe Man's Pate; they were purſued with the utmoſt Vigour, and with the Aſſiſtance of as much Power as *Europe* ever ſaw, and yet they miſcarried. But all this happened by aſſigning to their Accompliſhment the Life of a ſingle Man. Had *Philip* contented himſelf with framing his Plan, executing any one Part of it, and by cultivating the Arts of Peace, raiſed the Power of his Subjects to a Degree proportionate to the next Branch of his Scheme, what he left unaccompliſhed, might have been performed by his Poſterity, ſuppoſing them to have made no more Haſte than good Speed in compleating this ſtupenduous Fabrick, which like the Tower of *Babel*, being conſecrated to the Uſe of Slavery, the divine Juſtice of Providence tumbled to the Ground. Thus the Reader ſees, that there are great Projects practicable, and greater Projects impracticable; that wiſe and powerful Kings may be miſtaken and defeated; and that an Adventurer, like *Columbus*, without a Freehold as big as his Hat, or Half a Crown in his Pocket, may bring his Deſire to bear, even when that Deſire was ſo ſeemingly improbable, as to look for a new World. But after all, the Difficulty in this Caſe is not ſo great as to exceed the Power even of the *Eaſt India* Company; they can do much more than I have propoſed; that they will do it, though I am bold enough in prophecying, I ſhall not venture to foretel.

There is another Thing that I apprehend may be called in Queſtion, and that is the Streſs I lay upon the Expeditions made by the Northern Nations to the *Eaſt-Indies*. What does this Fool mean, will ſome great Politician ſay, by being in ſuch a Panick about the *Swedes* and *Danes* ſending now and then a Ship to *China?* Will erecting an *Eaſt-India* Company eſtabliſh a Maritime Power? Truly I can't ſay that, but this I will ſay, and can prove, that no Nation ever carried on a Trade to the *Eaſt-Indies*, but became a maritime Power. I have written half a Folio Volume to evince this, and I defy all the Men in the World to ſhew the contrary. Within the Compaſs of theſe laſt five hundred Years, did not the *Venetians* and *Genoeſe* become maritime Powers by the *Eaſt-India* Commerce, though they carried it on at ſecond Hand. What made *Portugal* a maritime Power, but the *Eaſt-India* Trade? What made *Spain* a maritime Power, but the Deſire of the *Eaſt-India* Trade, which threw the *Weſt-Indies* in her Way? it is true, ſhe ſtood ſtill to pick them up, but then ſhe went on, as the *Philippines* will bear me Witneſs? What made us? What made the *Dutch* maritime Powers? This very Trade. And when have all maritime Powers declined? When they loſt their Trade to the *Eaſt-Indies*. Judge then Reader for yourſelf, whether my Conjectures be raſh or vain, or whether I have not too good Grounds to ſuſpect, that thoſe who have overcome greater Difficulties, than in Reſpect to Navigation was oppoſed to other Nations, will in a ſhort Time become maritime Powers alſo.

I may be miſtaken, and ſhould be glad to be miſtaken; I ſay no more, and I wiſh I had never had Occaſion to ſay ſo much. Yet even this affords a Juſtification of my Scheme; for if I point out the Diſeaſe, I have likewiſe preſcribed a Remedy. If there be any Maxim in Politicks, certainly it is this, that if a maritime Power does not increaſe, it muſt quickly decline. We are every Day complaining that our old Branches of Trade fail, that one turns to no Account, that in another we are ſupplanted, that a third is quite wore out. What Medicine then ſo natural, and at the ſame Time ſo eaſy as to ſtrike out new Branches? We have Strength and Power enough to do that, but whether we have Force ſufficient to abet ſuch an Attempt as that of King *Philip's*, I mean to reſtrain all the reſt of the World from Trading, I ſuppoſe, I need not ſay; but if we really had, that very Force would ſink and crumble to Pieces in the Attempt. This Remedy then or none muſt cure us; it is the Tar-Water of the State, and if it will not help us, we may die according to the regular Practice, as other maritime Powers have done before us.

Theſe are melancholy Conſiderations, but however they may lead to a merry Purpoſe. There is a Time for every Thing, and we muſt be ſometimes grave as well as gay; and if heretofore we had no Rival but the *Dutch*, we muſt not now flatter ourſelves that we have no other Rival, when every *Dutch* Mail that brings us Papers and Letters from the North, ſhow the contrary. I might ſay ſomewhat of the *Pruſſian* Pretences, but I don't care to talk of Lovers in Leading Strings, or pretend to think of ſtrangling a hopeful Babe in its Cradle, for fear when he grows up he ſhould prove our Rival too. Yet it may not be amiſs to obſerve, that while there is a ſtrange Spirit gone Abroad, and that while every Body is looking after Trade, it becomes us who ſubſiſt by it, to look about it too. This indeed is a very obvious Remark, but the more obvious it is, the more neceſſary; if none but a blind Man could miſs ſeeing it, what muſt he be who miſſes the right Uſe of it? The Queſtion is eaſily anſwered, and it is the Anſwer that I will recommend to the ſerious Conſideration of our Superiors.

One Obſervation more and I have done; ſome Objection may be made as to the Seaſon in which I made this Propoſal; we are engaged in a dangerous, doubtful and deſtructive War, this therefore cannot be thought fit Time for thinking of new Schemes, or for aiming at Diſcoveries. But alas, I am ſorry this is ſo eaſily anſwered; we have already loſt a great deal of Time, and it is our own Fault that we did not think of theſe Things ſooner; that we ſhould not chuſe ſuch a Time as this, I will readily agree; but it is not left to our Choice, the Situation of Things has made it neceſſary, and as Neceſſity, in Fact, has no Law, ſo Neceſſity in Argument will admit of no Anſwer.

It is indeed true, that in a Time of War the Thoughts of our Stateſmen are much occupied, and Money is not eaſily found for Expeditions of this Sort, where neither immediate Neceſſity, nor inſtant Gain ſeem to require or excite them. But Men who ſee further will perceive, that notwithſtanding theſe and ſome other Inconveniencies that might be pointed out, yet upon the whole a Time of War may be eſteemed the moſt proper, becauſe Ships of Force may be diſpatched into thoſe Parts, firſt without Suſpicion, and next without any Loſs; for the Situation of Things is Reaſon ſufficient to account for our ſending Ships of Strength to the *Indies*, without leaving it in the Power of any to diſcover what our true Intentions in ſending them may be; and next they may actually render ſuch Service to our Commerce in thoſe Parts as may effectually indemnify us for our Expences in fitting them out, even if we ſhould be ſo unlucky as in the firſt Trial not to ſucceed. Beſides, whatever Acquiſitions we make in Time of War, may be fortified and ſecured by a ſubſequent Treaty of Peace, ſince none of our Neighbours are ſo much intereſted in thoſe diſtant Parts as to refuſe to accomodate us, if in Return we gratify them in Matters in which they have a nearer Concern, and which it is very poſſible, may not affect us, or at leaſt not ſo much.

For though, without Doubt, we have a very high Intereſt in the Balance of Power, and therefore ought to be careful in ſecuring it, yet there is no Means ſo ſure for compaſſing this as enlarging our Trade, and thereby extending the Foundation of our Naval Force. Whatever therefore tends to this Point is our higheſt Concern; and if there be any thing that merits more than ordinary Expences, even at a Juncture when we have ſo many good Reaſons to be frugal, moſt certainly Projects of this Sort ought to be regarded in that Light. We ſhould be the more ſenſible of this, if we would but conſider ſeriouſly, and reflect frequently upon what firſt gave us that wide Power, that high Credit, that great Influence amongſt our Neighbours, of which we have been ſo long poſſeſſed. It was not moſt certainly the deep Schemes of our Miniſters, for theſe have been ſeldom laid, and when-ever they were laid, have been commonly diſappointed; for though no Nation has a greater Proneneſs to talk Politicks than the Inhabitants of *Great Britain*, yet ſince the Reign of Queen *Elizabeth*, we have had no great Reaſon to boaſt of very refined Stateſmen; nor at the Bottom, perhaps, has this been any Misfortune to us, any more than to our Neighbours. It was not our military Exploits that raiſed us to this envied Station, for though the Bravery of *Engliſh* Troops was never conteſted, yet we have ſeldom ſeen it employed ſo much in our own Service as in that of our Allies. But the Foundation both of our Grandeur and of our Glory has been, on the one Hand, our great maritime Force, which, generally ſpeaking, whether well or ill employed, has maintained its Superiority; and on the other, our immenſe Wealth, accruing from an extenſive Commerce, of which indeed we have ſeen many, and ſome very large Computations made, and yet I am convinced, that none of them exceeded the Truth, from this plain Reaſon, that as yet we are not undone, after waſting in other Folks Quarrels ſuch a Proportion of Wealth, as Nothing but foreign Trade, ſuperior even in Profit to what it was ever thought, could poſſibly have ſupplied.

This then ſhould be our great Concern, for if we ever hope to diſcharge our Debts, to leſſen our Taxes, and thereby recover thoſe Branches of Commerce that have been loſt in *Europe*, it muſt be by opening new Channels, through which, notwithſtanding the Burthens they have upon them, our Manufactures may be carried to Markets where we may ſet upon them what Value we pleaſe. This Point is of all others that of which we ought to be moſt jealous; for if our Neighbours ſhould get the Start of us in this, we ſhould find our Misfortunes grow upon us, and our Proſperity decline apace. It is neceſſary therefore that we ſhould be very ſtrict in examining what others may do, and what it is in our Power to do, while we have yet a ſuperior Naval Force; for to provide early, and to prevent Miſchiefs, is the Part of a wiſe and of a prudent People; but to ſtay till they come upon us, is the very Reverſe. It is very evident, that notwithſtanding the vaſt Profits of our Commerce, we have been compelled to run in Debt; and it is as plain, that other Nations, fully poſſeſs'd of Naval Stores and valuable Commodities, are now ſetting up Manufactures, and launching into a Commerce more diſtant from them than *Japan* is from us. Does it not then become us to weigh the Conſequences of ſuch a Conduct, both with Regard to them and to ourſelves? Would it not be right to prevent the Effects of their Induſtry by reſuming our own? Is there any Thing that can better employ the Thoughts of ſuch as are at the Helm? Can they anſwer it to their Country, if they neglect Matters of ſuch high Conſequence, for the Sake of Things that are nearer, but at the ſame Time inconſiderable when compared to theſe? Or can we have any Right to blame them, if from a ſenſeleſs Spirit of Faction, a groundleſs and unreaſonable Oppoſition, we keep them continually upon the Watch for their own Safety, and leave them not either Time to contrive, Power to provide, or Means to execute what is required for the Publick Good? How many Nations have been undone by ſome or other of theſe Miſtakes? And if we purſue their Errors, what Reaſon is there to expect, or even to hope, that we ſhould eſcape their Fate?

I muſt indeed acknowledge, that in point of Compoſition I have offended greatly, by recurring ſo often to Remarks of this Kind; I am ſenſible that in this I have acted weakly, ridiculouſly, abſurdly, as an Author; but alas! what is my Character in that Reſpect to the Duty I owe my Country? Periſh all private Advantages, all Views of Intereſt, all Hopes of Fame, when it comes in Competition with a Nation's Good. Let every Man who has the happy Fortune to gain the publick Ear, in any Meaſure, in any Manner, or upon any Terms, ſtrive to turn that Attention to the publick Benefit. Let his Endeavours at leaſt ſpeak him a Patriot, whatever his Succeſs may do; and let me have Leave to remember by Way of Excuſe, for what may be accounted my Failing, the Anſwer of the *Athenian* Philoſopher who was charged with the ſame Fault, *I repeat*, ſaid he, *over and over again my Admonitions, to a People, who commit over and over again, the ſame Faults.*

SECTION VIII.

A diſtinct Account of Part of the North-eaſt Frontier of the *Ruſſian* Empire, commonly called the Country of *Kamſchatka* or *Kamſchatska*, including the Voyages of Captain *Behring* for diſcovering towards the Eaſt; with many curious and entertaining Circumſtances relating to thoſe diſtant Countries and their Inhabitants; and alſo an Enquiry into the Probability of the Country which he diſcovered, being connected with *North America*; with a Variety of other Points of great Conſequence in Relation to the Deſigns now on Foot in various Parts of *Europe* for making a thorough Diſcovery of the ſuperior Parts of the Northern Hemiſphere, which would be of the utmoſt Conſequence to Trade and Navigation in general, and to thoſe of *Great Britain* in particular.

Collected from the beſt Authorities both Printed and Manuſcript.

1. *A general Introduction, in which is ſhewn the wonderful Change made in the Affairs of* Ruſſia *by the Czar* Peter the Great, *and his having firſt conceived a Notion of opening a Trade between his Country and* North America. 2. *A Deſcription of the Country of* Kamſchatſka, *as deſcribed by the* Ruſſians *in the Time of* Peter I. *ſhewing its ſuppoſed Situation, Boundaries, and Extent.* 3. *The Motive of Captain* Behring's *Expedition, his Departure from* Peterſbourgh, Feb. 5, 1725, *and Journey through* Siberia. 4. *An Account of the Preparations and Expeditions made for furthering his Diſcoveries in the Year* 1726, *with various other Circumſtances relating to the Produce and Inhabitants of the Countries through which he paſſed.* 5. *A Detail of the many Miſeries and Hardſhips ſuſtained by this Gentleman, and the Inferior Officers and Soldiers under his Command, to the Time of his Arrival at* Kamſchatſka, 6. *A large Account of the Country, the* Ruſſian *Settlements, Fortreſſes and Garriſons there at the Time of Captain* Behring's *Arrival.* 7. *His Preparations in order to proſecute his Diſcoveries to the Eaſt; and an Account of his Diſcoveries and Return to* Peterſbourgh. 8. *Some Account of this Gentleman's ſubſequent Expedition, and of the Diſcoveries that have been ſince made on that Side by Direction of the* Ruſſian *Court.* 9. *A Repreſentation of the new Hypotheſis ſaid to be built upon theſe Diſcoveries, collected from the Memoirs of the Royal Society.* 10. *The Improbability of that Hypotheſis fully ſhewn, from a great Variety of Circumſtances, which amount to a Proof, that nothing advanced on this Subject ought to prejudice our Hopes of finding a North-weſt Paſſage.* 11. *Hiſtorical, Phyſical, and Critical Remarks upon the principal Points in this Section.*

1. THERE could not be a more proper Subject choſen for the ſhutting up a Collection of this Kind, than the Hiſtory of the Diſcoveries made by the *Ruſſians* in the Northen Parts of their Dominions. In Point of Matter they are far more important than any which have been attempted within our Memory, the finding out a North-weſt Paſſage only excepted. In Point of Time alſo they are later, for the laſt Account of their Diſcovery is, if I may be allowed ſo familiar an Expreſſion, dated but the other Day, and theſe Diſcoveries are ſtill proſecuted, perhaps with greater Skill and Conſtancy, and with more Vigour and Induſtry than has been commonly imagined.

It is generally looked upon as the Foible of inquiſitive Minds, that they are apt to make ſuch Excurſions into the Realms of Fancy, as ſometimes to fall under the Power of Superſtition, and to be enſlaved by Enthuſiaſm at others. I am very much afraid I ſhall run the Riſque of one, if not both Imputations, from what I am going to ſay; but that gives me little Concern, for I had rather be laughed at for ſpeaking what I take to be Truth, than applauded for diſſembling it.

There ſeems then to me to have been a very ſingular Kind of Providence diſcernable in all the Diſcoveries that have been hitherto made, by which I mean, that from their Conſequences they appear to have been conducted by another Spirit than that of human Wiſdom; for in Proportion as the Nations who made Diſcoveries have abuſed the Advantages they derived from them, thoſe Advantages have gradually ſunk, and that Spirit of Diſcovery has been loſt, of which I could give various Inſtances, if it was not wholly unneceſſary, ſince upon the bare Mention of the Fact the judicious Reader will inſtantly recollect them.

It is from the conſidering Things in this Light, that I am led to apprehend the late Czar *Peter the Great*, of glorious and immortal Memory, was one of thoſe ſignal Inſtruments, raiſed up by the immediate Power of the Divine Ruler of all Things, to fulfil the great Purpoſes of his unſearchable Providence. Before his Reign, the People who inhabited the vaſt Country of *Ruſſia*, were very little or ſcarce at all known to the reſt of the World by their Actions or Performances. It was owing to that Spirit of Diſcovery which reigned here in the Time of Queen *Elizabeth*, that the Importance of their Situation came to be at all conſidered. The *Dutch* indeed quickly followed the Lights we gave them, and converted to their own Advantage that Route which with infinite Pains and Hazard we firſt deſcribed.

But this great Monarch was born to be not only the Governor, but the Legiſlator of his People; his Genius was the Gift of Nature, or to ſpeak with greater Piety, and at the ſame Time with more Propriety, the Gift of the great Author and Lord of Nature, and appeared

appeared with all the Luſtre worthy of its Author. That knowing, that well-meaning, that Patriot-Monarch of the North, drew, or rather forced his Subjects out of that Obſcurity in which for many Ages they had remained. He enlightened them by his Exhortations, he animated them by his Example, he compelled them by his abſolute Power to ſhake off the Chains of Barbarity, to come forth out of a State of inſenſible Ignorance, and to appear upon the bright Theatre of the Univerſe, not only as a great and powerful Nation, but as one of the greateſt and moſt powerful Nations that have been the Object of Hiſtory.

He it was that made the World know the Importance of the Country he poſſeſſed, and this in Spite of Obſtacles that would have amazed and terrified an Inferior, that would have tired and overcome a leſs vigorons Genius. It was this wiſe, this active, this heroick Prince, that raiſed his People from being the loweſt to the higheſt of the Northen Powers. It was he that taught them to triumph by Land, and opened them a Paſſage to the Sea; In ſhort, it was he that conceived and executed the amazing Project of making them a Maritime Power, and this too in a ſurprizing Extent.

From a People unacquainted with a Veſſel bigger than a Bark, and who knew no Navigation but that of their own Rivers, he not only taught them the Uſe of Ships, but put it into their Power to build and to equip them; nay, he did more than all this, he was not content with opening Ports on one Side only, he opened them on all; his Frigates, ſecured him the Poſſeſſion of the *Caſpian* Sea, his Men of War ſurprized with their Appearance the Nations inhabiting the Coaſts of the *Black Sea*, and even the ſupine Pleaſures of an Eaſtern Prince were diſturbed by the Thunder of his Cannon, that alarmed the Inhabitants of *Conſtantinople*; after trying theſe Experiments, he aſpired to ſtill greater Things, and not only built the City of *Peterſbourg*, but opened various Ports upon the *Baltick*, which he covered with his Fleets, and came in Perſon as their Admiral to *Copenhagen*, where not ſome Ages only, but ſome few Years before, they would have as ſoon expected a Viſit from the Emperor of *Japan*.

His Predeceſſors hardly comprehended the Extent of their Dominions, but the Czar *Peter* not only diſcover'd that his Dominions were the moſt extenſive in the World, but that he had a Mind more extenſive than theſe. He ſaw the Advantages that might be made of every Province, every Port, and every River in his Empire, and in the Courſe of a ſhort Reign, a very ſhort Reign indeed, compared with the great Events to which it gave Birth, he convinced his Subjects, his Neigbours, and all the conſiderate Men in every Part of the World of the Truth of this; and that he perfectly knew how to have puſhed his Greatneſs on all Sides, if the puſhing it had not exceeded the Strength and Limits of a ſingle Life.

But within the Compaſs of that ſingle Life what did he, or rather, what did he not! He exhauſted the Power of *Sweden*, the only Means of taming the lion-like Spirit of his Enemy *Charles* XII. He put it out of his Power to conquer, for to conquer him was not even in *Peter*'s Power. He protected *Poland*, to which before his Time his Empire was inferior. The *Tartars*, to whom his Predeceſſors were Tributaries, he frighted into Quiet. He encountred alone, and when they had no other Enemy to deal with, the Forces of the *Turks*. He extended his Dominions on the Side of *Perſia*. He ſometimes encroached upon their Territories, he ſometimes ſought to conciliate by Conceſſions, the Friendſhip of the *Chineſe*.

He did more than all this, for after making himſelf firſt known, and then admired in all Parts of the civilized Earth, he began to look beyond the Bounds of the habitable World itſelf, and to propoſe after ſhowing his Subjects ſo many new Seas and new Countries, to point them out the Way to the *Eaſt Indies* and to the *Weſt*. Such were the Cares that occupied the Thoughts of this great Prince, while other Monarchs were complimented with high Titles for diſturbing the Peace of Mankind about Trifles, for ſtealing little Provinces, and buying now and then a Town.

It is very true, that he did not live to perfect his laſt great Deſign, but that he framed it was ſufficient for his own Glory, and to amaze all who are capable of forming a competent Judgment of the Circumſtances that muſt attend the perfecting this Deſign when-ever it ſhall be brought about. To ſhew that this is no Chimera, but a very wiſe and well laid Scheme, and which ſooner or later will be certainly carried into Execution, is the Buſineſs of this Section, in which we are to ſpeak of the North-eaſt Limits of the *Ruſſian* Empire, and of the Country of *Kamtſchatka* or *Kamtſchatska*, for it is written both Ways, of which though we have but lately heard, it imports us as much to be well acquainted with as any Country upon the Face of the Globe; for though we cannot boaſt much of the Figure it makes at preſent, yet as it is the Poſſeſſion of this Country that put it more in the Power of this Nation than any other to make Diſcoveries, and as the moſt important Diſcoveries that ever were made, may very probably be made from hence, we muſt be content to take a little Pains in the Explanation of this Point, and in becoming Maſters of a Subject, as curious and entertaining as it is uſeful and important; ſo that however great they may be, we ſhall have no Cauſe to regret the Labour they coſt, to think our time ill beſtowed, or our Trouble not well laid out.

2. It is not eaſy to diſcover at what time the *Ruſſians* became acquainted with that Part of their own Dominions which borders North-eaſt upon the *Icy Sea*; but it ſeems very evident, that though the Name of *Kamſchatska* was given to ſome very remote Parts of their *Aſiatick* Dominions, then commonly included under the general name of *Siberia*, yet were they very indifferently and very indiſtinctly known at the Cloſe of the laſt Century, as appears by the Map of Mr. *Ysbrant Ides*, which is very far from agreeing with later Diſcoveries. But after the Czar *Peter* had travelled, and had acquired a competent Knowledge of Coſmography and Geography, he began to be extremely deſirous of having theſe Parts more thoroughly examined, as having now ſome Notion of their Importance. He took great Pains to make himſelf well acquainted with the Route to *China*, and alſo cauſed a very accurate Map to be drawn of the Countries lying about the River *Amur*, as far as the *Peninſula* of *Corea* on the South, and as high as he had any certain Accounts of his own People to the North.

He likewiſe directed the ſtricteſt Enquiries to be made into the State of *Nova Zembla*, and the Country about the Streights of *Wygatz*, and ſo along the *Icy Sea* as far as poſſible to the Eaſt; and of theſe alſo he had Maps, in which the Mountains and Rivers that had been carefully examined, were laid down; but the whole was not compleated at the Time of his Death; ſo that he enjoyed not the Satisfaction of beholding a diſtinct Repreſentation of his Dominions on that Side. He had the Pleaſure however of diſcourſing frequently of the Diſcoveries that might be made, and of the Trade that probably might be carried on from theſe Countries, bounded by the Sea of *Japan*; and as he would ſometimes diſcourſe of theſe Matters a little hyperbolically, which was however no more than neceſſary to awaken the Curioſity and Attention of his Countrymen and Subjects; ſo by Degrees it had Effect, and many of his Miniſters, eſpecially Prince *Menzikoff* and Admiral *Apraxin*, entered pretty well into his Sentiments, and endeavoured all they could to puſh their Colonies as far as *Kamſchatska*.

It was however with infinite Difficulty that they prevailed, and the Relations that were tranſmitted from thence ſeemed to deſtroy all Hopes of doing any thing there to the Purpoſe; for the Soil was repreſented the moſt ſterile that could be poſſibly imagined, the Climate ſevere beyond Expreſſion, binding not only the Brooks and Rivulets, but even the Earth itſelf in ſuch Icy Chains, that it was as practicable to dig a Rock, as to make a Spade enter it. It was ſaid that Wild-fowl were frequently killed by Cold, and that ſometimes even the wild Beaſts periſhed by the exceſſive Severity of the Weather; neither do the very lateſt Accounts that we have received contradict this, though they lay the Scene of theſe tragical Effects of Cold on Countries to the North-eaſt of *Kamſchatska*.

The firſt Accounts of *Kamſchatska* that had any Appearance of Clearneſs or Certainty, reached this Part of the World about the Year 1723, and were brought by an *Engliſhman*, whom the Czar *Peter* had employed in erecting a Glaſs-work; and they amounted to no more than this, that it was a vaſt Tract of Country, extending from the Polar Circle down to ſixty Degrees of North Latitude, I make uſe of the Perſon's Words from whom I had it; that it contained thirty Degrees of Longitude; and that the North-eaſt Extremity was either a Promontory ſhooting into the *Icy Sea*, or the Beginning of a long Ridge of Mountains that were ſuppoſed to run out Eaſtward, and join the Continent of *North America*.

Wild and extravagant as this Account may ſeem, I am very certain it was the beſt that at this time could be given by the moſt experienced Perſons in *Ruſſia*; and that from this Account, and the Conjectures founded upon it, a Reſolution was taken for puſhing their Diſcoveries on that Side in Hopes of ſome beneficial Conſequences. It was allowed, that no Country could be more wretched than this, that it produced only a few Roots, that no Kind of Grain would grow there, and that a ſmall inſignificant Colony of *Ruſſians*, that had been forced thither in Obedience to the Czar's Orders, ſubſiſted entirely upon Fiſh, and ſuch ſmall Supplies of coarſe Rye Bread as could from Time to Time be ſent them; that it was certain they had not any Black Cattle, Horſe, or Deer, but that however ſome Animals they had, of the Skins of which they made their Cloathing. This was the Sum total of what was known of this Country before the Expedition of Captain *Behring*; upon which we are next to enter, and of which I ſhall give as clear and plain an Account as it is poſſible.

3. It was in the laſt Year of the Life of *Peter* the *Great*, that Captain *Behring* received Orders from Count *Apraxin*, Admiral of *Ruſſia*, to traverſe the vaſt Country of *Siberia*, to penetrate its utmoſt Extremities to the Eaſt or North-eaſt, in order to obtain a diſtinct Notion of its Bounds, and of the Diſtance between them and the Continent of *North America*. The better to enable him to fulfil theſe Inſtructions, which were given him in the Month of *February* 1725, a Lieutenant was diſpatched with twenty five Men, and ſuch Baggage and Tools as could be carried upon twenty-five Horſes before him; and as ſoon as he could make the neceſſary Preparations, the Captain followed with a Retinue of about thirty-three Perſons. He came up with his Lieutenant at *Wologda*, and continued his Journey to *Tobolsky*, which is looked upon as the Capital of *Siberia*, where he arrived on the 16th of *March*.

The Seaſon being too far advanced for him to make an immediate Progreſs, he continued there for two Months, and then having received a conſiderable Reinforcement, he proceeded on his Expedition on the River *Irtiſh* till it falls into the River *Oby* or *Obb*, and then remounted that River as far as the Town of *Narin*. All the Country through which he paſſed was inhabited by the *Oſtiacks*, formerly *Pagans*, but a little before converted to the Chriſtian Faith by the Care of the Metropolitan of *Tobolsky*. He proceeded from thence to the Monaſtery of *Makofsk*, and from thence went by Land to the City of *Jeniſciski*. He embarked there with thirty Perſons on board of four ſmall Barks, in order to continue his Voyage on the River *Jeniſa*, and afterwards on that of *Tunguska*; from whence with much Difficulty he reached *Ilimski*.

There he determined to winter, and to ſend his Lieutenant to make the neceſſary Preparations for continuing their Voyage upon the *Lena*, directing him to employ his Time in conſtructing a ſmall Squadron of Barks for that Purpoſe. The Captain himſelf, during the Winter, took all the Care he could to inform himſelf of the Countries that he had ſtill to paſs through, before he reached that which was the proper Object of their Enquiries. And the Accounts that he received, were ſuch as gave him to underſtand that a more difficult Taſk could ſcarce be impoſed on any Man than that which had been lain upon his Shoulders. The Country where he now was belonged to the *Tunguſees*, a Nation of *Pagans*, who lived very miſerably along the Sides of the great Rivers, which they navigated in ſmall Boats, or rather Canoes made of the Barks of Trees. When the Severity of the Seaſon was a little over, he reſolved to proſecute this tedious and dangerous Expedition with all the Diligence and Caution in his Power.

4. In the Beginning of the Spring he began to deſcend the *Lena* with his ſmall Squadron of fifteen flat-bottom'd Boats, and arrived ſafely at *Jakutsky*. Both Banks of the *Lena* below the River *Witem*, are inhabited by the *Jakuts* and ſome few *Tunguſees*. As for the former, they are well provided with Horſes, and have great Herds of Black Cattle, that is to ſay, ſuch as are in a tolerable Situation in the World; and as for the poorer Sort, they maintain themſelves as well as they can by Fiſhing. As for their Religion, they are Pagans and groſs Idolaters, worſhipping the Sun and Moon, and ſome Kind of Birds, ſuch as the Swan, the Eagle, and the Crow. They are famous for having many Conjurers among them, and for praying to a Sort of diminutive ugly Idols, called in their Language *Saitans*. In other Reſpects they reckon themſelves, and are eſteemed by others, a Tribe of *Tartars*. Upon his Arrival at *Jakutsky* the Captain demanded a Reinforcement, and having obtained it, he gave Inſtructions to a Lieutenant to proceed with the beſt Part of his Troops and all the heavy Baggage upon the *Lena*, to its Confluence with the River *Aldan*, in Order by remounting that, and the Rivers *Maya* and *Judoma*, to reach *Judomska Kreſta*, that is, the little Fort of *Judomska*, and by this Route he was in Hopes of leſſening the Fatigue of ſo long and toubleſome a Paſſage.

As for himſelf, he ſet out on Horſeback, attended by the few People that were left about him, and ſome Horſes laden with Proviſion, to go by Land to *Ochotski*, though the Road was very far from being tolerable. The Captain alſo left a Lieutenant at *Jakutski*, with Orders to paſs the Winter there, and to follow him at the Beginning of the Spring over Land to *Ochotski*. Upon his arriving in Perſon at that Fortreſs, he found it in a very poor Condition, and no more than ten *Ruſſian* Families reſiding there or in its Neighbourhood. About the End of the Month of *December* he received Advice from his firſt Lieutenant, importing that he had been ſurprized by the Ice at his Entrance into the River of *Gorbea*, diſtant above one hundred Leagues from *Judomska*; and that this obliged him immediately to conſtruct ſome long and narrow Sledges for the Carriage of his Proviſions and Baggage; but as for himſelf and his Men, they continued their Rout on Foot. Upon receiving this News, the Captain thought proper to advance from *Ochotski* to receive his Lieutenant, carrying with him a Convoy of Proviſions laden upon large Dogs. By this wiſe Precaution he brought his Lieutenant and the Remainder of his Detachment ſafe to *Ochotski*, upon *New Year's Day* 1727.

5. The Account which this Officer gave him of the Miſeries they ſuſtained in their March was equally melancholy and ſincere. They quitted the River of *Gorbea* on the 4th of *November*, and not being able to carry with them a ſufficient Quantity of Proviſions, were very quickly conſtrained to feed upon the Fleſh of their dead Horſes. They afterwards burnt off the Hair from their Skins with Lime, and then converted them into Coats and Shoes. They were forced to abandon their Baggage in three different Places, and had certainly periſhed at *Judomska Kreſta*, if it had not been for a ſmall Quantity of Meal which the Captain had been obliged to leave there by Reaſon that ſome of his Horſes died. The Nation of *Jakuts*, who inhabited the Banks of the *Lena*, dwell alſo on thoſe of the Rivers *Aldan* and *Maya*, but on the Sides of the River *Judoma*, and in the Neighbourhood of the Fortreſs of *Ochota*, reſide the Nation *Lamutki*. Theſe People have tame Rain-Deer, which they employ in drawing their Carriages, as well as to furniſh them with Cloaths and Subſiſtence. In the Neighbourhood of the Lakes and of

the Sea, dwell the *Tunguſes*, for the Conveniency of Fiſhing. Theſe People are as barbarous and as much Idolaters as the *Jakuts*.

In the Beginning of the Month of *February*, the Captain diſpatched a Lieutenant and 90 Men, with ſome Dogs, to fetch off the Baggage that had been abandoned in the Manner before-mentioned; he returned with a part of it in *April*; and another Detachment being order'd on the ſame Service, they brought the reſt back in *May*. In this Country the Snow falls in ſuch prodigious Quantities, that it commonly lies about two Yards thick, and ſometimes more, upon the Ground, which obliges People, for three or four Months, to travel on Foot, and to drag their Baggage on little Sledges, which will carry 6 or 700 Weight. In this Manner the Lieutenant marched that came to *Ochotski*, and during his whole Paſſage, the poor People had no other Relief in the Night-time, or when the cutting icy Winds blew, than to cover themſelves as deep as they could in the Snow. This is practiſed on the Coaſts of *Hudſon's Bay*, and in other cold Countries as well as here; and if Credit may be given to ſeveral Narrations written by thoſe who have viſited theſe frozen Climates, it is a very convenient and effectual Screen from the extreme Fury of the Weather, which will be the leſs wondere'd at, if we conſider, that both Gardeners and Huſbandmen acknowledge very diſcernable Heat in Snow, by which Corn, Fruit and Flowers, are defended from the Rage of Winter, in the Earth, and are enabled by this kindly Covering to puſh out and diſcover that they are alive in the Spring.

On the 30th of *June* the Captain ordered Lieutenant *Spanberg* to croſs the Gulph to the Mouth of the *Balchaia rerca*, or Great River; he was to perform this Voyage in a new ſtout Veſſel built by their own Workmen, and had Orders to carry over with him the ſecond Architect, and a ſufficient Number of Men to cut down Timber, and to build a new Veſſel there, which when they had performed, they were inſtructed to give the Captain Notice of it at *Ochotski*. While they were thus employed, the other Lieutenant *Creziboff* returned, bringing with him 2300 Pound of Meal, that is about 800 Weight, which was immediately embarked on board the new Veſſel that was returned from *Kamſchatska*. The Captain then ordered all the heavy Baggage and Proviſions to be embarked without Delay, and on the 21ſt of *Auguſt* he went on board himſelf for the Port before-mentioned. He left behind him a Pilot, and a ſmall Number of Perſons, with Inſtructions as to the recovering and ſecuring the Proviſions that had been left behind, which they were to bring with them if they could, but if not, they were to deliver them to the Goverment of *Jakutsky*, and to take a Diſcharge for them; after which, the Pilot, and thoſe under his Command, were to join the Captain; and bring with them a ſmall Supply of Proviſions, Iron, and Tar. However, he ſaw nothing of them till the Year 1728.

The Captain being come to the Mouth of *Bolchaya rerka*, tranſported his Proviſions and other Neceſſaries to *Bolchay reeski oſtrog*, or the Habitation of the Great River. The heavy Baggage was from hence conveyed in ſmall Boats, that were drawn againſt the Stream for 120 Werſts, to the higher Settlement in *Kamſchatska*. This Journey they performed themſelves by Land, making uſe of the little Sleds before-mentioned, that were drawn by Dogs, for the Carriage of what was neceſſary for them during the Journey. On this Occaſion, they had thorough Experience of the extreme Rigour of the Climate, being obliged to have Recourſe to the Method before-mentioned, that is to ſay, towards Night, or when-ever thay had a mind to reſt, they run a very deep Trench or Ditch through the Snow; at the Entrance of this Trench they hung up Deer Skins, and then lay down under the Snow, either to ſleep or to take Repoſe. The Intent of hanging up the Skins, is to prevent thoſe ſudden Storms which are common in theſe Parts, and to which they give the Name of *Purgi*, from being fatal to them, as they often are to leſs cautious Paſſengers, by bringing with them ſuch prodigious Quantities of Snow as bury theſe unfortunate Victims under it, paſt all Poſſibility of extricating themſelves or eſcaping.

As we have now conducted the Reader into that Country which is the proper Subject of this Section, and which, for any thing that is yet known, ſeems to be the very Extremity of the Continent, on this Side, tho' there is a very wide Country behind it, extending directly North for above 15° of Latitude. I ſay, as we have followed him hither, the next thing is to ſee what Account he gives us of this ſtrange Place, which lies ſo far out of the Reach of the reſt of Mankind, and which could never have been viſited, much leſs planted and poſſeſſed by any but the *Ruſſians*, and even theſe had not been long fixed there at this Time.

The *Ruſſians* have three Settlements, or to ſpeak with greater Propriety, have occupied three Poſts in this Country. In the Fortreſs which is in the upper *Kamſchatska*, there are ſeventeen, in the lower Fortreſs there are about fifty *Ruſſian* Houſes, excluſive of thoſe that are about the Church, which may be about fifteen in Number. At the Mouth of the River before-mentioned, there were at this Time fourteen Houſes. In theſe three Poſts there were about 150 Soldiers in Garriſon, and the principal Point aimed at by fixing them here, was to collect the Tribute from the neighbouring Nations. The Captain, to reward thoſe that had aſſiſted him in tranſporting his heavy Baggage, his Stores and Ammunition, and who had likewiſe furniſhed him with Carriages, gave them about an hundred Weight of Train Oil, which he extracted from a Whale the Sea left upon the Coaſt at the warm Seaſon of the Year; and with this and a little *Chineſe* Tobacco, they were better contented than if he had given them Money. To the South of this Country inhabit the Nation of the *Kuriles*, and to the Northward dwell the *Kamtſchadales*, the Languages ſpoke by theſe Nations are ſo different, that they hardly underſtand each other; ſome of them are addicted to Idolatry; among others there are no apparent Signs of any Religion; and to ſay the Truth, hardly any convincing Tokens of Humanity.

The *Ruſſians* that are ſettled in *Kamtſchatska*, as well as the Natives or original Inhabitants, are deſtitute both of Cattle and Corn; inſtead of the former they make uſe of Dogs, which are very large and ſtrong; and by the way, this is likewiſe the Cuſtom in *Groenland*, and in the Countries bordering upon *Hudſon's-Bay*. As to Proviſions, they live chiefly upon Fiſh, Roots, and Pears; they have likewiſe Carrots and Beans, and in ſome Seaſons of the Year tolerable plenty of Wild-fowl. As to their Cloaths, they are made of Dogs-ſkin; it is however worth obſerving, that in the Country about the Convent of *Pakuſſiska*, which is not far from the Church, they have a little Barley, as alſo ſome Hemp and Radiſhes, and in the Plantations about the *Ruſſian* Houſes, they have Turnips of a prodigious Size, that is to ſay, of five or ſix Pounds Weight apiece. The Captain, while he was there, cauſed ſome Rye and Oats to be ſowed, but he did not ſtay long enough to ſee whether they came up. The Froſt ſets in here very early, and the People, who are tributary to the *Ruſſians*, pay their Taxes in ſeveral Sorts of Furs.

The Cuſtoms of theſe People are barbarous in the higheſt Degree, of which a very few Inſtances may be ſufficient to convince the Reader. If a Womrn happens to have two Children at a Birth, one of them is deſtroyed as ſoon as it is born, and it would be eſteemed a Crime to preſerve it. Nor are they cruel only to Children, for if the Father and Mother of a Family happens to fall ſick, tho' the Diſeaſe does not appear to be mortal, yet they drag them away preſently to a Wood, let the Weather be what it will, and there they leave them, not indeed without Proviſions, for they commonly carry them as much as will ſerve them for a few Days, but they very ſeldom hear any more of them. When People die ſo ſuddenly that they cannot be thus removed, they drag the Body into the Woods, and leave it there to be devoured by the Dogs. There ſeems to be a good deal of Superſtition in this, for ſome of them will quit the Place of their Reſidence, if a Man happens to breathe his laſt in it. The Nation of the *Koratkes* burn their Dead, and though they have been often admoniſhed to leave off this Practice, yet hitherto there has been no breaking them of it.

Since the Time our Author wrote, it appears from ſeveral Books that have been publiſhed at *Petersbourg*, that this Country, at leaſt the *Ruſſian* Settlements in it, have been greatly improv'd; ſo that in the Latitude of 56, and even higher, they have Barley, Oats, and Rye, in tolerable Plenty. The Number of Houſes alſo are greatly increaſed, and the Fortreſſes are in much better Order, which is owing to the Hopes that are ſtill entertained of opening on this Side, ſome Time or other, a very advantageous Commerce. We have been promiſed, and were in Hopes of receiving a large and accurate Deſcription of this Country in its preſent Condition, but as yet it has not been publiſhed; many People may poſſibly think, that conſidering the Rigour of the Climate, the Barrenneſs of the Soil, and the Thinneſs of its Inhabitants, that it is no great Matter whether it be ever publiſhed. Yet notwithſtanding all this, it is not impoſſible, or even improbable, that in Proceſs of Time Things may change their Face here, for the Country now Called *Kamtſchatska*, is not that vaſt Northern Continent that extends from 60 to 73 Degrees of North Latitude, which was formerly included under that Name, but the Peninſula only which extends from the Latitude of 51 to 60, and lies between 80 and 95 Degrees Longitude Eaſt from *Tobolski*; ſo that if a ſufficient Number of People were ſent thither to cut down the vaſt Foreſts with which it it incumber'd, and enabled to till, manure, and cultivate the Earth, it might be render'd a Place far enough from being deſpicable; and then the great Importance of its Situation would very quickly appear. But to return to our Narrative.

7. Upon the Captain's Arrival at the lower Fortreſs, he found Wood enough cut for the building a Veſſel, which was put upon the Stocks *April* 4, 1728, and was intirely finiſhed the 10th of *July* following. It is certain that a properer Perſon could not well have been employed, ſince he thought nothing a Difficulty, nor was afraid of any kind of Hardſhip or Danger that ſtood in the Way of the Execution of his Orders, but with infinite Addreſs, and almoſt incredible Patience, got over thoſe Difficulties, that to another Man would have appeared unſurmountable. All the Timber that was uſed in Building, was conveyed to the Place where his new Veſſel was conſtructed, upon Sledges drawn by Dogs, and conſequently with infinite Pains and Trouble. The Supply of Tar he expected not being arrived, was another great Inconveniency, but the Captain, who had a Brain very fertile in Expedients, obſerved a Tree there, called by the Natives *Liſniſchink*, which he fancied would ſupply them either with Tar, or ſomething like it; accordingly he cauſed great Quantities of it to be cut and burned, and, as he expected, the reſinous Matter that run from it anſwered the Ends of Tar, if not perfectly, at leaſt tolerably.

The Veſſel being built, the next Thing was to victual her, and that for a Voyage, the Length of which was altogether uncertain; and to do this in a Country in a Manner deſtitute of Proviſions, was none of the eaſieſt Undertakings. The Captain however went about it, and, in the firſt Place, having collected a vaſt Quantity of Plants and Herbs, he diſtilled from them a pretty ſtrong Spirit, upon which he was pleaſed to beſtow the Name of Brandy, and of this he laid in a plentiful Stock. Inſtead of Meal or Corn, he furniſhed himſelf with Carrots or other Roots. By Boiling the Seawater, he procured as much Salt as he wanted. Fiſh Oyl ſerved inſtead of Butter, and dry and wet Salt-fiſh took the Place of Beef and Pork. Theſe Proviſions, ſuch as they were, he embarked in ſuch Quantities as would ſerve his Crew, conſiſting of forty Men, for a whole Year.

Thus equipped, he undertook the Execution of the Inſtruction given him by his Sovereign *Peter* the Great, under his own Hand, and of which the following is a Copy taken literally from his Journal.

I. You ſhall cauſe one or two convenient Veſſels to be built at *Kamſchatska*, or elſewhere.

II. You ſhall endeavour to diſcover, by Coaſting with theſe Veſſels, whether the Country towards the North, of which at preſent we have no diſtinct Knowledge, is a Part of *America*, or not.

III. If it joins to the Continent of *America*, you ſhall endeavour, if poſſible, to reach ſome Colony belonging to ſome *European* Power; or in caſe you meet with any *European* Ship, you ſhall diligently enquire the Name of the Coaſts, and ſuch other Circumſtances as it is in your Power to learn; and theſe you ſhall commit to Writing, ſo that we may have ſome certain Memoirs by which a Chart may be conſtructed.

On the 14th of *July*, having recommended himſelf to the Protection of Almighty God, he ſailed out of the River of *Kamſchatska*. On the 8th of *Auguſt* he found himſelf in the Latitude of 64 Degrees, 30 Minutes, and being perceived by the Inhabitants on Shore, eight Men put off in a Boat made of Skins, and came to the Veſſel, that is to ſay, to the Side of it, where they enquired whence he came, and to what Purpoſe. After he had anſwered them, they acquainted him in their Turn that they were *Tzuktſchi*, which is the Name of a Nation with whom the *Ruſſians* have been for ſome Years acquainted. It was with ſome Difficulty that he got one of them to come to him, but he was ſoon followed by the reſt. They informed him that the Coaſt, for a conſiderable Extent, was inhabited by their Nation, and that the Land tended to the Weſt. They likewiſe gave him Information of an Iſland that was not far off, which he accordingly found on the 10th of *Auguſt*; and as that is the Feaſt of St. *Lawrence* in the *Ruſſian* Kalendar, he thought fit to beſtow that Name upon the Iſland. He ſent an Officer on board a Shallop of four Oars thither twice to examine it, but he could not find any Inhabitants, though there were ſome Houſes upon it; which ſufficiently ſhewed that it was inhabited, though the People, out of Fear, or from ſome other Motive, thought proper to conceal themſelves.

He continued his Courſe to the 15th of the ſame Month, when he found himſelf in the Latitude of 67 Degrees 18 Minutes, and conceiving that he had now fully executed the Emperor's Orders, as he ſaw no Land, either to the North or to the Eaſt, he reſolved to return, as thinking it to no Purpoſe to continue his Voyage towards the Weſt, or to run the Hazard of being driven by a contrary Wind beyond the Poſſibility of getting back during the Summer to *Kamſchatska*, and to winter in a Country where he was ſure of meeting with little or no Wood, and which might very poſſibly be inhabited by ſome Nation, Enemies to the *Ruſſians*, was, in his Opinion, running a very great, and, at the ſame Time, unneceſſary Hazard.

From the Mouth of the River *Kamſchatska*, to the utmoſt Point of their Voyage, they ſaw nothing upon the Coaſt but great Ridges of Rocks, the Tops of which were covered with Snow, though it was Summer. They traverſed, according to their Computation, about ten Leagues of Latitude, and thirty of Longitude, that is to ſay, the fartheſt they ſailed Eaſt, was 372 *German* Leagues. On the 20th of *Auguſt*, in their Return, they ſaw forty Perſons on board four ſmall Boats rowing towards them from Shore with all their Force; they lay by for them, and upon their coming near them, they concluded them, from their Appearance, to be of the Nation called *Tzuktſchi*. They had with them a good Quantity of dry'd Fleſh, Fiſh, and Water contained in Whales Bladders, 15 Fox Skins, and four Narval's Teeth, which they ſold, or rather exchanged for Pins and Needles with the Seamen. Theſe People told them, that their Nation travelled with Rain Deer as far as the River *Koblima*, which runs into the North Sea, but that they never had attempted any Paſſage by Sea. That their Nation inhabited a very long Tract of Country upon that Coaſt, and had been poſſeſſed of it for many Years; one of them particularly ſaid, he had been at the Fortreſs of *Anadirſki*, where they had traded with, and been very well treated by the *Ruſſians*. They had very great Hopes of obtaining conſiderable Intelligence from this Man, but notwithſtanding all the Queſtions they propoſed, they could gain from him no more than a Confirmation of what they had formerly learned from the *Tzukiſchi*.

On the 29th of *Auguſt* they met with a great Storm, attended with a thick Fog, by which they were driven upon the Coaſt of ſome Country Eaſt of *Kamſchatska*, and where they were oblig'd to come to an Anchor. Upon their endeavouring to weigh it the next Day, their Cable broke; however, they were ſo lucky as to eſcape with no other Loſs than that of their Anchor. On the 2d of *September* they arrived ſafely in the Mouth of the River of *Kamſchatska*, where they landed, and having ſecured their Veſſel in a Creek, went to the lower Fortreſs, where they paſſed the Winter. There they met with the reſt of their Companions, who brought them a conſiderable Supply of Proviſions, which, after the Fatigues they had ſuſtained, were very acceptable. In this Place they ſpent the Winter, without meeting with any thing worthy of our Notice. On the 5th of *June* 1729, they repaired their Veſſel and put to Sea, ſteering due Eaſt from the Mouth of the River *Kamſchatska*, in Hopes of diſcovering that Land, which the Inhabitants affirm'd might be ſeen in a clear Day; which, however, they were not ſo happy as to meet with, though they continued that Route for 30 Leagues, and then meeting with a Storm at Eaſt-North-Eaſt, they were obliged to return to the Mouth of the *Bolſchay reeſchi*, after having paſſed round the South Point of *Kamſchatska*, which was a Voyage that was never performed before. They went from thence by Sea to the Fortreſs of *Ochotsky*, where they delivered up their Stores of Proviſion, conſiſting of Flour, dry'd Fleſh, and Salt, to the proper Officers. On the 20th of *July* they arrived at the Mouth of the River *Ochota*, where they delivered up the Veſſel, with the Materials and Tools on board her, to the Governor. The Captain then hired Horſes for himſelf and Company, to go by Land to *Judomska kreſta*; thence they proceeded by Water in ſmall Boats and Rafts, along the River *Aldan* to the Paſſage of *Beloya*, and thence they went on Horſeback to *Jakutski*; all this they performed exactly in a Month, arriving there on the 29th of *Auguſt*.

On the 20th of *September* they left that Place, and went in two Veſſels up the River *Lena*, as far as the Village of *Peledun*, where they arrived on the 10th of *October*, and there they were obliged to ſtay for about ten Days, becauſe the Rivers began now to be covered with Ice. The Snow falling in great Quantities, and the River being thoroughly froze, they ſet out on the 29th of *October* for *Ilimski*, and from thence by the Rivers *Tungus* and *Jeneſci*, which where now covered with Ice, they came to the Town of *Jeniſckiski*; from that Town, paſſing through ſeveral Villages of *Ruſſians* and *Tartars* newly converted, they reached *Tomski*, and paſſing over the great Deſerts of *Bambinski*, they reached *Tara*, and from thence mounting the River *Irtiſch*, they came to *Tobolski*, *January* 10, 1730. In this City they remained till the 25th of the ſame Month, and then ſet out by the Road before deſcribed, for *Petersbourg*, where the Captain ſafely arrived on the firſt of *March* following.

This Detail which we have given our Reader, is not barely copied from the Accounts that have been publiſhed in *German*, *Low-Dutch*, *French*, and other Languages, but hath been compared with a Copy of Captain *Behring*'s original Journal, which has been of very great Service; we have alſo examined his Map very carefully, and conſidered, at the ſame Time, how far it was conſiſtent with prior and with poſterior Diſcoveries, of which more ſhall be ſaid hereafter. At preſent I will crave Leave to add here, from a Manuſcript Copy of the Journal, a very curious Table of the Places mentioned therein, with their Latitudes and Longitudes from *Tobolski*, the rather, becauſe it has never been publiſhed, at leaſt ſo far as I know, and becauſe it will ſerve as a Kind of Teſt, by which all ſubſequent Accounts may be tried with reſpect to their Veracity; for I make no Doubt at all, that this Table was framed with the utmoſt Care and Circumſpection, becauſe I find it was tranſmitted by the Author to the *Ruſſian* Court in 1728, immediately after his Return from his Voyage for Diſcovery, and while he remained at the Lower Fortreſs of *Kamſchatska*.

It is alſo neceſſary to take Notice of the Meaning of the *Ruſſian* Words made uſe of in this Table, which, as they are but very few, cannot burthen the Reader's Memory. *Krepoſt* ſignifies a Fortreſs, *Oſtrog* a little Fort, *Sloboda* a Borough or Place bigger than a Village, *Monaſteria*, a Convent or Monaſtery. It is true, we might have avoided theſe, and have given the Places in plain *Engliſh*, but as the Deſign of this whole Section is to facilitate the underſtanding ſuch Accounts as may be hereafter received of the *Ruſſian* Diſcoveries, I thought proper to preſerve the Names for that Reaſon, as well as becauſe we find them frequently occur in the Maps. Theſe Points being premiſed, the following Tables will be very plain and perſpicuous.

Names of the Remarkable Places.

	Latitude.		*Longitude from* Tobolsky.	
The Town of *Tobolski*, which is the Capital of *Siberia*,	58	5	—	—
Samarofsky Jam, upon the River *Obb*,	60	17	—	30
The Town of *Surgut* upon the River *Obb*,	60	51	5	18
The Town of *Narim* upon the ſame River,	58	48	14	35
Keetsky Oſtrog,	58	19	16	60
Loſinojarski Monaſtir,	58	17	22	—
Makowski Oſtrog,	58	3	23	13
The Town of *Tenriski* upon the River *Teniſci*,	58	20	25	12
Caſchin Monaſtir,	58	37	32	—
The Town of *Timakin*, near the Mouth of the River *Ilim*,	57	25	35	16
The Town of *Ilimski*,	56	40	36	44
Utkutsky Oſtrog,	56	40	38	23
Kirinski Oſtrog,	57	50	41	1
The Town of *Jakutski* upon the River *Lena*,	62	8	57	53
Ochotski Oſtrog, at the Mouth of the River *Ochota*,	59	13	76	7
The Mouth of the *Bolſchoyan Retſchka* in *Kamſchatska*,	52	48	89	51
Werchnoi Kamſchatska Oſtrog,	54	48	91	—
Niſchnoi Kamſchatska Oſtrog,	56	11	98	30
The Mouth of the River of the Apoſtle *Thadeus* and the Cape,	56	3	96	10
The Elbow of the River *Swetoi Kreſt*,	62	20	111	32
Eaſtern Point,	65	35	115	15
The Elbow of the *Swetoi Preobrazensky*,	65	1	120	30
The Eaſtern Point of *Sucbotski*,	64	25	122	55
The Iſland of St. *Lawrence*,	64	—	122	55
The Iſland of St. *Demetrius*,	66	—	125	42
The Place from which the Captain returned,	67	18	126	7
The Southern Point of *Kamſchatska* or *Oskoi*,	51	10	89	51

It may perhaps contribute to make this Matter ſomewhat eaſier to the Reader, if we obſerve that *Tobolski* is 86 Degrees of Longitude Eaſt from the Iſland of *Fero*, and about 68 Degrees Eaſt from *London*; ſo that to find the exact Longitude of any of the Places mentioned in the Table, there is nothing more neceſſary than to add the reſpective Numbers before-mentioned to thoſe which he has ſet down. As for Inſtance, the Place from whence he returned, is, in his Table, 126 Degrees 7 Minutes Eaſt from *Tobolski*; if therefore we add to this 86 Degrees, we find the Longitude from *Fero*, which is 212 Degrees, 7 Minutes, and in the ſame Manner by adding 68 Degrees, we find that Place to be 194 Degrees Eaſt from the Meridian of *London*.

It will not appear to one who barely peruſes this Account, without weighing and conſidering it attentively, that there is any thing in it very extraordinary; and yet to ſpeak impartially, there is hardly any thing more ſo in the Compaſs of this Collection; for, in the firſt place, this Gentleman was charged with a moſt arduous Employment, that of conducting a Number of Men over the greateſt Tract of Land that is perhaps in the World; in doing which he was to undergo the greateſt Hardſhips, as he actually did, and arriving at his Journey's End, found himſelf in one of the moſt inhoſpitable Spots upon the Globe, there he was to build a ſtout Veſſel, where hardly any but himſelf could have found Materials, and victual it in a Country where there were not a Duſt of Meal, or any other Animal but Dogs; and in this Veſſel, when finiſhed, he was to make Diſcoveries on an unknown Coaſt through an unknown Sea. It is very evident that he did all this with the utmoſt Spirit and Vigour, and without the leaſt Loſs of Time, and yet it was ſomewhat more than five Years before he reached *Petersbourg* again; which, excluſive of the Difficulties he met with in Travelling, will appear leſs ſtrange, if we reflect, that going and coming his Journey was very little ſhort of eighteen thouſand Miles.

He has likewiſe given us a Table of the Nations inhabiting the Countries through which he travelled, that is very curious, and which is a Circumſtance of ſtill greater Value, ſeems to be very accurate and authentick, and therefore I ſhall give it the Reader in the beſt Manner I am able, and as a Thing that may be of Uſe towards explaining any future Diſcoveries that may be made on this Side, the Credibility of which, as I hinted before, ought to be regulated by their Conſiſtency with his Accounts.

Table of the ſeveral Nations inhabiting the Countries between Tobolſki *and* Kamſchatſka.

Oſtiaks, living in Villages from *Tobolski* to the *Slaboda Domianska*.

Different Tribes of the ſame People on the Banks of the River *Irtiſch*.

Different Tribes of the ſame People in the ſix Villages on the Banks of the River *Oby*, from *Surgut* to *Narim*.

Different Tribes of this Nation intermixed with others as far as *Jeniſchiski*.

Tunguſes in one large Town, and twenty little Villages as far as the River *Tongus*.

The ſame Nation, amongſt whom there are two Fortreſſes, one Monaſtery, and thirty Villages of ſeveral Sizes to the Mouth of the River *Ilim*.

The ſame Nation, inhabiting one large Town and twenty-ſeven Villages, as far as the Town of *Ilimski*.

The ſame Nation, inhabiting forty-three Towns and Villages, of different Sizes, as far as *Kermya*.

The ſame Nation and the *Jakuts*, among whom there are two large Towns, two Fortreſſes, two Convents, and thirty Villages of different Sizes, along the River *Lena* to *Jakutski*.

Tonguſes, *Jakuts*, and *Lamutski*, from thence to the *Ochotski Oſtrog*.

Kamſchales and *Kutiles*, amongſt whom are two Fortreſſes on the River *Kamſchatska*.

From the Mouth of the River *Kamſchatska*, ſteering North-eaſt, the Coaſts are inhabited by the ſeveral Nations of *Kamſchatdales*, *Kurackes*, and *Tzuktchys*.

The North-eaſt Cape is diſtant from *Tobolski* ten thouſand five hundred and twenty-nine Werſts, twelve thouſand nine hundred and ſeventy eight from *Moſcow*, and thirteen thouſand one hundred and eighty-eight from *Petersbourg*.

We ſee from hence the true State of theſe vaſt Countries, and may from hence form to ourſelves, at leaſt, tolerable Ideas, as well of what they produce at preſent to the *Ruſſian* Government, as of the Improvements of which they are capable, in Caſe *Kamſchatska* ſhould be more fully ſettled, and the Diſcoveries made from thence render'd ſome way or other uſeful in reſpect to Trade. It is very poſſible, that within a few Years we may have very extenſive Hiſtories, or at leaſt very copious Geographical Deſcriptions of all theſe Countries made publick with the Stamp of Authority, and then by comparing them with theſe Tables, we may be very well able to decide whether they have alſo the Sanction of Truth, ſince at the Time Captain *Behring* wrote his Journal, the Scheme of concealing Diſcoveries was not adopted.

8. We need not at all wonder, that after the Return of this Gentleman, and the Relation of his Diſcoveries was made publick, it occaſioned much Speculation and a great Variety of Enquiries at *Petersbourg*, in Conſequence of which, it is ſaid, that they obtained certain and diſtinct Accounts of coaſting Voyages made by Sea from the Mouth of the River *Lena* by Cape *Suetonios*, or, as I find it laid down in Captain *Behring*'s Map, Cape *Shelleginski*, which he places in the Latitude of 72 Degrees 30 Minutes, and in the Longitude of 112 Degrees from *Tobolski*, and ſo down to the Coaſts which he had viſited. Upon ſome Memoirs of this Kind, I mean of theſe Voyages from the Mouth of the River *Lena*, the Sieur *Bellin* publiſhed at *Paris* in 1735, a Chart of theſe Diſcoveries, which the Reader may find in Father *Charlevoix*'s Hiſtory of *Japan*; but upon a ſtrict Examination, I think a proper Judge of theſe Matters will agree, that there cannot be any thing more romantick or incorrect. Inſtead of that vaſt Continent that Captain *Behring* lays down to the North-eaſt of *Kamſchatska*, we have this Peninſula enlarged vaſtly beyond its due Bounds, and hardly any thing of that Continent appears; and whereas Captain *Behring* poſitively lays down the moſt Southern Point of that Peninſula round which himſelf ſailed, in the Latitude of 51°. 10 Minutes, in this Map it is brought as low as 41, and by that Means appears to be the ſame Country heretofore called the Continent of *Jeſſo*, divided only by a narrow Channel from *Nephon*, the largeſt of the *Japan* Iſlands. As this Peninſula is produced ten degrees farther South then it ought to be, ſo the Continent is removed 12 or 14 Degrees Weſtward farther than it ought; and, in ſhort, the Whole of this extrordinary Piece, notwithſtanding the Accuracy that is pretended to, is equally abſurd and chimerical. It muſt however be allowed, that it was not poſſible to diſcover this without the Aſſiſtance of Captain *Behring*'s Voyage, and of ſome later Diſcoveries; and therefore the Author of that Chart is the more excuſable, and all the Concluſion I mean to draw from what I have advanced is, that we ought not to be too haſty in giving Credit to ſuch kind of Performances, for there is a very wide Difference between Charts drawn from Conjectures, and thoſe laid down by Men like Captain *Behring*, from their own Experience. But if the Reader will be directed to a better View of theſe Countries, I would recommend him to the Northen Hemiſphere publiſhed by Mr. *William Deſlile*, in which theſe Countries are very accurately laid down.

Before I ſpeak of the ſecond Expedition of Captain *Behring*, it may not be amiſs to obſerve, that if there be any Truth in the Accounts of Veſſels ſailing from the Mouth of the River *Lena* in the Manner before-mentioned, it amounts to a direct Demonſtration, that the *Dutch* Ships employed to diſcover a North-eaſt Paſſage in 1670, advanced far enough to have made that Paſſage; nor is it poſſible to admit one Fact and deny the other, which may deſerve Conſideration, ſince I think at this Day the North-eaſt Paſſage ſeems, without any juſt Reaſon, to be treated as a Thing known to be impracticable; and as from the Diſcoveries made by Land, we may in a great Meaſure perceive, that this is a Judgment made at Random; ſo there is the higheſt Probability, that if Diſcoveries by Land were properly puſhed, the very ſame thing would appear with reſpect to the North-weſt Paſſage. The ſudden Alterations of Government that have happen'd in *Ruſſia*, may be look'd upon as the principal Cauſe why theſe important Diſcoveries have not been proſecuted to the utmoſt; and yet it muſt be allowed that they have not been altogether neglected, as appears from the ſending Captain *Behring* back into thoſe Parts better ſupported than before.

It is not in my Power to ſay at what Time this was done, or to give any diſtinct Account, either of his Inſtructions or his Expedition. All we know of the Matter amounts to no more than this, That in the Month of *January* 1740, an Account arrived at *Petersbourg* from Captain *Spanberg*, who ſerved as a Lieutenant under *Behring* in his former Attempt, and who commanded a Veſſel now, importing, that at the Cloſe of the Summer of 1739, he had diſcovered, after ſailing fifteen Days, thirty-four Iſlands, ſome large, and others ſmall; that upon his approaching them, the Inhabitants ſent ſix of their Veſſels to obſerve them; that however he came to an Anchor, and they ſuffered him to land without any Reſiſtance; that in other Reſpects he met with a tolerable Reception; but as he knew nothing of their Language, ſo he was able to learn very little from them by Signs, only they ſhewed him conſiderable Quantities as well of Gold as of Copper Coin; and ſome Pieces of the latter he obtained from them, and ſent by the Courier who brought his Diſpatches to *Petersbourg*.

Mr. *Swartz*, who was then and is now Miniſter from their High Mightineſſes the States General at that Court, gave at that time the following Account, in a Letter dated from *Petersbourg*, *Jan.* 13, 1740, *O. S.* "On *Saturday* laſt arrived here an Expreſs from *Kamſchatska*, with the News, that Captain *Spanberg* having ſailed from thence with four Ships, after being fixteen Days at Sea, diſcovered thirty four Iſlands of different Sizes, the Inhabitants of which ſent ſix Gallies to reconnoitre him, notwithſtanding which they ſuffered him to land, and received him with great Affability; but as he underſtood not their Language, he could not converſe with them; however, they ſhewed him a conſiderable Quantity of Gold Coin. This was all that Officer would communicate to Commodore *Behring*, deſiring to come hither himſelf, in order to diſcover to her Imperial Majeſty Things of the laſt Importance, which may be highly advantageous to her Intereſt, and which he was reſolved to diſcover to no other Perſon. Upon which the Commodore ſuffered him to return, and he is expected here in the Spring. It is believed that theſe are Iſlands belonging to *Japan*. The Courier has brought hither with him ſome of the Money of this Country, of which I have ſeen a Piece; it is of a red Copper, round, and about the Size of a *Holland* Doit, but a little thicker, ſurrounded by a ſmall flat Border, and in the Middle there is a little ſquare Hole, on each Side of which, upon the Face of the Coin, there is imprinted a *Chineſe* or *Japon* Character; but on the Reverſe it is quite ſmooth.

Captain *Spanberg* at the ſame time wrote to one of his Friends, and the Reader will, no doubt, be glad to ſee an Extract of that Letter, which however is without a Date, and conceived in the following Terms. "I employed all the Month of *Auguſt* in the laſt Year in cruizing upon the Sea of *Great Tartary*. Amongſt the Iſlands I diſcovered, there were many that were only full of wild Beaſts. I anchored however near one that ſeemed more conſiderable than the reſt. There we thought fit to go on Shore, and ſoon after met with Inhabitants, who from their Figure and Dreſs appeared to be Savages. As ſoon as they ſaw us they made their Eſcape into a Wood. We did all that was in our Power to ſurprize ſome of them, but found it impoſſible to ſucceed in that Deſign. When they ſaw themſelves purſued, they fled into the thickeſt Part of the Wood and ſet up the moſt dreadful Cries. The Inhabitants of ſome of the neighbouring Iſlands were more communicative, as I have ſhewn in former Relations. I found the Country every where extremely fertile, and embarked on board my Ship large Quantities of the Fruits and other Productions of thoſe Iſlands. The Jonrnal which I ſhall publiſh of my Diſcovery, will contain Matters very ſatisfactory to the Curious, at the ſame time that it will render it evident, that the Commerce of the *Ruſſians* with the Inhabitants of *China* and *Japan*, will receive great Benefit thereby."

It is probable, that after this Captain returned to *Kamſchatska*, Commodore *Behring* continued his Voyage, of which all that we know is this, that he ſailed Southward to the Iſles of *Japan*, and from thence Eaſtward about eighty Leagues. At that Diſtance from *Japan* he diſcovered Land, which he coaſted North-weſt, ſtill approaching towards the North-eaſt Cape, without going aſhore until he came to the Entrance of a great River, where ſending his Boats and Men aſhore, they never returned, being either loſt, kil'ed, or detained by the Natives, which made his Diſcovery incompleat, his Ship being ſtranded, and he afterwards died in an uninhabited Iſland. Without doubt, the *Ruſſians* are endeavouring to improve and extend theſe Diſcoveries, and we very well know that Members of the Academy, Perſons of great Knowledge, and animated by the Deſire of Glory, and ſupported by whatever Aſſiſtance they can deſire from the Government, have been employed in this far diſtant Country; and, as I have before obſerved, Deſcriptions of it thus obtained have been actually compoſed, and may very probably be publiſhed at *Petersbourg* before this Time.

There is no Queſtion that this is a very right, as well as a very regular Method; for without knowing exactly the Situation and Bounds, the Climate and Soil, the Mountains and Rivers, in any Country, it is ſimply impoſſible that any Juſt Notion ſhould be formed of the Means by which it may be render'd uſeful; but that notwithſtanding all this Care and Caution, and notwithſtanding all the Lights they may have received from thence, and from any Accounts they may have had of ſubſequent Attempts, they are not yet very far advanced in reſpect to real Diſcoveries, may be eaſily ſhewn from the Notions that they ſtill entertain about them (ſuppoſing them in earneſt in what they ſay) which may be clearly demonſtrated to be altogether vain and chimerical, even from the very Lights that they themſelves have afforded, and from the Facts which they inſiſt upon as Proofs in Support of thoſe Notions.

We know from a Multitude of Inſtances, that there is no Weakneſs to which the human Mind is more ſubject, than to run into new Errors by running away from the old, notwithſtanding that both Reaſon and Experience teach us, that Truth ſeldom lies in the Extremes, but generally ſpeaking, in the Middle. When firſt the *Ruſſians* began to enquire carefully into the Extent of that Part of their Empire which lies in *Aſia*, they found it went much farther to the Eaſt than they had ever imagined, and the farther and the more carefully they ſearched, the greater Certainty they obtained of this Fact, and were ſtill carried farther and farther. In order to underſtand this clearly, it may not be amiſs to obſerve, that according to the beſt Maps of *Ruſſia* made thirty Years ago, the Town of *Jakutski* upon the River *Lena* was placed in the Latitude of 64 Degrees 50 Minutes, and in the Longitude of 120 Degrees, the firſt Meridian being placed in *Fero*; but according to the lateſt Obſervations, this Place actually ſtands in the Latitude of 62 Degrees 8 Minutes, and in the Longitude of 143 Degrees 53 Minutes. It was at that Time believed, that Cape *Noſs*, or the Icy Cape, laid down in the Map by the Name of Cape *Suitenos*, extended very far to the North-eaſt, and, as has been before hinted, might poſſibly be jointed to *America*. In Proceſs of Time however, this was diſcovered to be a Promontory only, and was placed in the Latitude of 66 Degrees, and in the Longitude of 160; but in the Chart of Captain *Behring*'s Voyages and Travels, where it is called Cape *Scheleginski*, it is laid down in the Latitude of 72 Degrees 38 Minutes, and in the Longitude of 198 Degrees 30 Minutes; ſo that it appears to be almoſt ſix Degrees farther North, and 37 Degrees and a half farther Eaſt than it was imagined.

But after all, this is not the fartheſt Stretch of the *Aſian* Continent; for the North-eaſt Cape, diſcovered by Captain *Behring*, runs almoſt 14 Degrees farther, lying, as he found by a very exact Obſervation of a Lunar Eclipſe, in the Latitude of 67 Degrees 18 Minutes, and in the Longitude of 212 Degrees 7 Minutes. This altered the Notions of the Mathematicians at *Petersbourg* extremely, ſince it appeared from hence plainly and certainly, that their Empire extended 48 Degrees farther Eaſt than it was held to do thirty Years ago, that is, upwards of 384 Leagues, and more than a thouſand Miles, which greatly ſtrenghthened the Opinion which they had before entertained, that the Extremity of their North-eaſt Frontier was at no vaſt Diſtance from the Continent of *North America*. They were indeed thus far right, that from theſe Diſcoveries it was put out of Diſpute, that the North-eaſt Cape was much nearer to the Coaſt of *California* than had been formerly imagined; but ſtill the Diſtance was very great, and not the leaſt probable Ground to believe that there was only a Paſſage of inconſiderable Breadth between them. Yet as this was the original Suggeſtion of the Czar *Peter* the Great, who very probably had no other Reaſon for giving it out, than to excite the Deſire of his Subjects to co-operate with his Views of diſcovering on this Side, by making them imagine they might by this Means become Maſters both of the *Eaſt Indies* and of the *Weſt*; they remained fixed in their Belief of it, ſeeing, as they thought, ſuch ſtrong Reaſon brought from theſe Diſcoveries to ſupport it. They flattered themſelves, perhaps, that as ſuch an enormous Miſtake had been made in ſettling the Geography of their own Country, it was not impoſſible but that a like Miſtake might be made as to the North-weſt Continent of *America*; and this indeed might have leſſened the Diſtance very conſiderably. Yet if they had reflected, that the neareſt Coaſt of *California* had been viſited and examined by Strangers, whereas their own North-eaſt Coaſt was totally unknown to every other Nation but themſelves, and but a little while before unknown to them too, they would have ſeen juſt Reaſon to reject ſuch a Suppoſition.

But ſo natural it is to ſee clearly what makes for our own Hypotheſis, and to ſee whatever makes againſt it, either doubtfully, or not at all, that we need not be much ſurprized at this Turn of Mind in the *Ruſſian Virtuoſi*. That this is really ſo, and that from hence there is a great Probability of their concealing moſt Part of their Diſcoveries for the future, will ſufficiently appear to any attentive Reader, from the following very curious Extract printed in the *Philoſophical Tranſactions*, N° 482. Page 421. being Part of a Letter from Mr. *Leonard Euler*, Mathematical Profeſſor, and Member of the Imperial Society at *Petersbourg*, to the Reverend Mr. *Charles Wetſtein*, Chaplain and Secretary to his Royal Highneſs the Prince of *Wales*, dated from *Berlin*, *Dec*. 10, 1746, which I ſhall take the Liberty of entirely tranſcribing.

“ As you are deſirous to hear ſomething more particular concerning the *Ruſſian* Expeditions to the North, and North-eaſt of *Aſia*, I will here give you an Account of all that has come to My Knowledge relating to the ſame. But as I ſhould, on the one Hand, be very glad that theſe Obſervations might give any Light concerning the Paſſage now ſought through *Hudſon*'s Bay; I ſhould, on the other, be very ſorry, if Mr. *Behring*'s Opinion, who believed that the new Land he had diſcovered was joined to *California*, ſhould rather lead us to doubt of the Succeſs of that glorious Undertaking. I wiſh however, that a happy Experiment may ſoon inform us certainly of the Truth. In the mean Time, you will not be ſorry to be acquainted with the Reaſons upon which Mr. *Behring*'s Suſpicions were founded, notwithſtanding the Objections you have been pleaſed to make, and to communicate to me upon that Head.

“ *Firſt*, This new Land which he fell in with at the Diſtance of 50 *German* Miles from *Kamſchatska* towards the Eaſt, was followed by him and coaſted for a great Way, though I cannot ſay how far: From whence alone it will appear, that an Abatement muſt be made in the Diſtance of 30 Degrees, or thereabouts, which you ſuppoſe to be between the laſt known Headland of *California* towards the Weſt, and the fartheſt Extremity of this new diſcovered Land towards the Eaſt. *Secondly*, Captain *Behring* having had the Opportunity of obſerving an Eclipſe of the Moon at *Kamſchatska*, concluded from the ſame, that that Place lay much farther off to the Eaſt than is expreſſed in any Map; and that to repreſent it truly, it ought to be transferred into the other Hemiſphere; as its Longitude is more than 180 Degrees Eaſt from the Iſle of *Fero*; for this Reaſon, Captain *Behring*'s new Land will be conſiderably approached to the laſt known Part of *California*, and will not indeed appear to be many Degrees from it.

“ What we have therefore ſtill to hope, is only that in this unknown Diſtrict there may be found ſome Streight, by which the Pacifick Sea may freely communicate with *Hudſon*'s Bay; but if it ſhall appear that there is no ſuch Paſſage, it muſt then be concluded, that whatever further Progreſs may happen to be made through *Hudſon*'s Bay, the Opening at laſt muſt only be into the Frozen Sea, from whence there could be no paſſing into the *Pacifick* Ocean, but by the Neighbourhood of *Kamſchatska*; and this Way would, without doubt, be too long and too dangerous to be maſtered in the Courſe of one Summer.

“ I very much doubt, whether the *Ruſſians* will ever publiſh the Particulars of their Diſcoveries, either ſuch as have been made from *Kamſchatska* towards *America*, or ſuch as have been made upon the Northern Coaſts of *Aſia*. And indeed it is but very much in general that I know the Succeſs of this laſt Expedition. What I do, was communicated to me by Order of the Court from the College of Admiralty, for me to make uſe of it in the Geography of *Ruſſia*, with which I was at that Time charged.

“ They paſſed along in ſmall Veſſels, coaſting between *Nova Zembla* and the Continent at divers times in the Middle of Summer, when thoſe Waters are open. The firſt Expedition was from the River *Oby*, and at the Approach of Winter the Veſſels ſhelter'd themſelves by going up the *Jeniska*, from whence the next Summer they returned to Sea in order to advance further Eaſtward, which they did to the Mouth of the *Lena*, into which they again retired for the Winter Seaſon.

“ The third Expedition was from this River to the fartheſt North-eaſt Cape of *Aſia*. But here they loſt ſeveral of their Boats, and a great Part of their Crew, ſo as to be diſabled from proceeding, and from making the whole Tour ſo as to arrive at *Kamſchatska*.

“ It was however thought, that a further Attempt was then unneceſſary, becauſe Captain *Behring* had already gone round that Cape, ſailing Northward from *Kamſchatska*.

“ The *Ruſſians* have not attempted the Paſſage round *Nova Zembla*, but as they have paſſed between that Land and the Coaſt of *Aſia*, and as the *Dutch* did formerly diſcover the Northen Coaſts of *Nova Zembla*, we may be now well aſſured that that Country is really an Iſland.”

There are ſeveral Points in this Letter that are very well worth our Obſervation. In the firſt Place, it is very evident, that from Captain *Behring*'s Diſcoveries the *Ruſſians* look upon it as a Thing certain, that a ſhort Paſſage may be opened from their Dominions to *North America*;

America; and that the Senſe they have of the great Advantages that may be derived from thence, is the Reaſon that induces them to think of concealing what may be diſcovered for the future, eſteeming ſuch Lights as they may receive thereby as Secrets of State, to which no Strangers have a Right to be admitted. In the next Place we may obſerve, though the Profeſſor ſpeaks very modeſtly, that he looks upon Captain *Behring*'s Syſtem as abſolutely deſtructive of our Scheme for diſcovering a North-weſt Paſſage through *Hudſon*'s Bay; which indeed is ſo far well founded, as that granting his Premiſes, and that the new diſcover'd Country of *Behring*'s lies contiguous to *California*, cannot be denied. *Laſtly*, It may be obſerved, that though he ſpeaks very cautiouſly, and therefore indeterminately of the Poſition of the North-eaſt Cape, which he ſays ought to be carried into the other Hemiſphere, as indeed it ought, yet he plainly enough inſinuates, that if this be duly conſidered, it will overturn the Arguments formerly offered in Favour of the North-weſt Paſſage. So that on the whole, if we attend to the Spirit rather than the Letter of this ſhort Diſcourſe, we muſt plainly diſcern, that the *Ruſſians* look upon themſelves as in full Poſſeſſion of that great Secret, ſo long and ſo ineffectually ſought by the Northen Maritime Powers, of a Short Paſſage to the *Eaſt Indies* and the *South-Seas*, and that too excluſively of other Nations, from a Perſuaſion, that by diſcovering this Paſſage, they have diſcovered alſo that the North-weſt Paſſage, by which only we could interfere with them, is impracticable.

10. But in the next Number of the *Philoſophical Tranſactions, viz.* 483. Page 471. there is a very curious Letter from the ingenious *Arthur Dobbs*, Eſq; to the before-mentioned Mr. *Wetſtein*, in which all this Reaſoning is very fully and fairly refuted; and it is chiefly from the Arguments advanced therein, that I ſhall be enabled to make good my Promiſe to the Reader, by ſhewing, that in the firſt Place, there is no Reaſon to apprehend that Captain *Behring* has made any Diſcovery at all, at leaſt with regard to the Point we are examining; by which I mean, that he has given no new Light whatever as to a new Continent, which may be reaſonably preſumed contiguous to *California*. *Secondly*, That the Argument drawn from the advanced Situation of the North-eaſt Point of *Aſia*, is abſolutely inconcluſive, and does not at all prove ſo much as the Probability of there being any ſuch Continent as the *Ruſſians* ſeem to be ſatisfied they have found. *Thirdly* and *Laſtly*, That taking every Thing they have advanced, as through this whole Section, I have taken them for indiſputable Truths, yet the North-weſt Paſſage by *Hudſon*'s Bay remains not only as probable as ever, but is in reality rendered more probable than ever from theſe very Diſcoveries. All this I hope to make out to the intire Satisfaction of the ingenious, inquiſitive, and impartial Reader, ſo as to leave not the leaſt Scruple upon his Mind in reference to this *Ruſſian* Syſtem.

As to the firſt Point; as there are no Longitudes or Latitudes mentioned in reference to Captain *Behring*'s ſecond Voyage; all we can poſſibly know of it amounts to this, that he ſailed South from *Kamſchatska*, as low, or pehaps lower than 50 Degrees, and there found Land 80 Leagues North-eaſt from *Japan*, for otherwiſe by coaſting it North-weſt, as it is expreſly ſaid he did, he could not poſſibly have approached the North eaſt Cape; to do which, had it lain due Eaſt from *Japan*, he muſt have ſailed North-eaſt. Now there is the higheſt Probability, not to ſay an abſolute Certainty, that this is the very ſame Land that was diſcovered by *Gama* ſo long ago, and is likewiſe that very Land to which *Martin Heritſzoon* of *Uriez* gave the Name of the *Company's Land* in the Year 1643, making the Weſt-ſide of the Straits of *Uriez*, which lie ſeven or eight hundred Leagues Weſt of any known Land in *America*, and above a thouſand Leagues Weſt of any Land in the Latitude of *Japan*; and conſequently, whether Continent or Iſland, there is Room enough for a very large Paſſage between this Country and *America*; neither did Captain *Behring* coaſt it ſo far as to come at any Kind of Certainty whether it was Continent or Iſland; all therefore that can poſſibly be collected from this Account, is no more than a Confirmation of the two former Diſcoveries, and perhaps of a third; for, as Dr. *Cromwell Mortimer* has very judiciouſly obſerved, the *Japoneſe*, in their Maps, have laid down two Iſlands, each as large as *Ireland* in this very Tract, as appears from the Map Dr. *Kempfer* brought from thence in 1666, and which is now in Sir *Hans Sloan's Muſeum*.

Taking therefore the whole of this together, what we learn from Captain *Behring*'s ſecond unfortunate Voyage, is ſo far from ſhewing that he diſcovered a Continent continuous to *America*, or that probably might be ſo, that, on the contrary, he only touched upon a Country which ſeveral *Europeans* had viſited before, and which there are very ſtrong Reaſons to believe is not a Continent, but an Iſland. Neither is this ſaid with any View of diſparaging the Induſtry or Abilities of that adventurous, brave, and indefatigable Perſon, whoſe Memory ought always to be revered, and to which I have raiſed the beſt Monument I was able; but in Things of this Nature, Truth is to be regarded before any other Conſideration; and there can be nothing plainer than this Truth, that his Diſcovery does not warrant any ſuch Suppoſition, as that the Country he touched was a great Continent making Part of *North America*; and if in any Accounts he left behind him, he ſurmiſed any thing like this, he muſt have been miſtaken.

As to the ſecond Point, the Argument drawn from the Proximity of the North-eaſt Cape, and the moſt weſtern diſcovered Coaſt of *America*, is eaſily diſcuſſed; for though, as has been already obſerved, the Diſcoveries and accurate Obſervations made by Captain *Behring* in his firſt Voyage, have really altered the Face of Affairs extremely, and ſhew us Things in quite a new Light, by proving that the North-eaſt Part of *Aſia* is a Country of much larger Extent, than, till it was thus examined, was ever ſuſpected, or would ever have been ſuppoſed true, if it had been ever ſo ſtrongly aſſerted without Proof; yet for all this, the North-eaſt Continent of *Aſia* has ſome Bounds, and Captain *Behring* has very accurately fixed thoſe Bounds, by aſſuring us, that the moſt North-eaſt Cape of the *Aſiatick* Coaſt is in the Latitude of 194 Degrees Eaſt from the Meridian of *London*. There might indeed have been ſome Diſpute about this, as Captain *Behring* did not examine the Coaſt any higher than to the Latitude of 67. 18 Minutes, if the Account which Profeſſor *Euler* has publiſhed had not plainly proved him in the right, by aſſuring us that his Obſervation was confirmed by thoſe who ſailed round Cape *Suitonos* to the North-eaſt Cape of Captain *Behring*, by which it was render'd perfectly certain, that he has fixed the Longitude of the Extremity of the *Aſiatick* Continent.

If therefore we add to its Longitude from *London* the Longitude of *Churchill* River in *Hudſon*'s Bay, which the ingenious Captain *Chriſtopher Middleton*, by a very accurate Obſervation fixed at 95 Degrees Weſt; I ſay, if we add theſe two Longitudes together, they will amount to 289 Degrees; and if we ſubtract this Sum from 360, there will remain 71 Degrees of Longitude, which is the Diſtance between the North eaſt Cape and that Part of *Hudſon*'s Bay. In order to reduce this into Leagues, we may compute a Degree of Longitude in the Parallel of 65 Degrees at the Rate of eight of thoſe Leagues, of which 20 make a Degree of Latitude; and from thence it will appear, that there are 568 ſuch Leagues, or upwards of 1700 of our Miles between the Extremity of the North-eaſt Continent of *Aſia* and *Hudſon*'s Bay; and this ſurely is Space ſufficient for many larger Iſlands, and a conſiderable Paſſage between the neareſt Coaſt of *America*, and the moſt Eaſtern of thoſe Iſlands, ſuppoſing all theſe Lands to lie in that Parallel, which however is a Suppoſition we are not obliged to make, there being not the leaſt Shadow of Proof of any Countries or Iſlands hitherto diſcovered ſo far to the North.

But farther ſtill from the ſettled Longitude of the North Cape of *Japan* in 40 Degrees Latitude, which is pretty exactly known from the Obſervations made by the Jeſuits at *Peking*, and is about 150 Degrees Eaſt from *London*, and from the beſt computed Longitude of *California* in 40 Degrees North Latitude, it lies in 130 Degrees Longitude Weſt from *London*, making together 280 Degrees, leaves 80 Degrees for the Diſtance of *California* from *Japan*, allowing 17 Leagues to a Degree of Longitude, in 40 Degrees North Latitude, the Diſtance would be about 1360 Leagues: By the ſame Calculation, *California* muſt be at leaſt 7 or 800 ſuch Leagues from the North-eaſt Cape of *Aſia*; ſo that in ſo great a Space there may be very great Countries or Iſlands, without ſuppoſing the new diſcover'd Country continuous to *California*, and might well allow of an open Channel or Sea from 50 to 100 Leagues wide between the diſcovered Coaſt and *California*.

The two Inſinuations, of which we have undertaken the Diſproof, have a viſible Connection with each other; and if either of them had been well founded, it might have been urged as an Evidence in Support of the other. But examining them ſeparately, we have ſhewn, that the Country diſcovered by Captain *Behring* in his ſecond Expedition, whether Continent or Iſland, does not render it at all probable, that the Land of which it makes Part, is continued to the North-weſt of *America*, and joined there either to *California*, or to the Continent lying farther to the North-weſt of that Country, now known not to be an Iſland, but Part of the main Land. What we have urged upon this Subject, is farther ſupported and rendered more credible by the Diſproof of the ſecond Suggeſtion, *viz.* That the Diſtance is but very ſmall between the North-eaſt Cape of *Aſia*, and the North-weſt Part of *America*; for with reſpect to this we have proved, and that from Captain *Behring*'s own Obſervations, the direct contrary, and have not only made it evident that the Space between them is very great, but have likewiſe ſhewn what that Space is; ſo that the Reader can decide for himſelf as to the Probability of this Poſition, that there is only a Paſſage by Sea between *Aſia* and *America*, near the Confines of the *Ruſſian* Dominions, and that the reſt of the Space is taken up by the North-weſt Continent of *America*, Part of which was coaſted by Captain *Behring* in his ſecond Voyage.

But we have undertaken to do ſtill more than this, and to make it appear that the *Ruſſian* Diſcoveries are ſo far from yielding any Colour of Proof as to the Probability of that Suppoſition that has been advanced from them, that in reality they rather prove the contrary, and add Weight to the oppoſite Opinion, which is a Point of very great Conſequence, becauſe it removes that Bar which has been thrown in the Way of our diſcovering a North-weſt Paſſage, which is a Thing of the higheſt Importance to us as a trading Nation. Of which, if we ſtood in need of Arguments to prove it, this alone is no inconſiderable Reaſon; that almoſt all foreign Nations are inclined to repreſent it as a Chimera, which is a Notion dictated to them by their Intereſts, and therefore ought to contribute to make us ſenſible of our own. When I ſay this, I have not the leaſt Intention to repreſent ſuch an Inſinuation as the Sentiment of the Profeſſor *Euler*, who ſpeaks as an indifferent Perſon, and in the Language of a Gentleman, and a Man of Learning; for I am only labouring to refute thoſe after whom he ſpeaks, whoſe Objections he has heard and repeats, and to which he ſhews himſelf very willing to hear what can be ſaid in Anſwer. To come to the laſt Point, and to ſhew that theſe Diſcoveries of the *Ruſſians*, inſtead of juſtifying their Notion of a North-eaſt Paſſage only, of which they look upon themſelves in Poſſeſſion, rather favour the oppoſite Sentiments, and afford probable Grounds to believe, that the Space between the North-eaſt Cape of *Aſia* and the oppoſite Continent of *America*, is filled up by broken Lands, and conſequently that there is alſo a North-weſt Paſſage, I ſhall make uſe of ſeveral different Methods.

In the firſt Place then, I muſt obſerve, that the concluding Paragraph of the Profeſſor's Letter evidently proves that he is of the ſame Opinion with me, in reſpect to a North-eaſt Paſſage, that is to ſay, that from the Expedition of the *Dutch* Ships in 1670, the coaſting Voyages of the *Ruſſians* from the Mouths of the Rivers *Obi*, *Jeniſca*, and *Lena*, and from the late Diſcoveries made by Captain *Behring* in his firſt Voyage, there is an inconteſtable Proof of ſuch a Paſſage. Now from hence I make two Inferences; the firſt is, that if the North-eaſt Paſſage, ſo long ago given up, and that too, if Captain *Wood*'s Arguments had ſignified any thing upon what might be called direct Evidence, as chimerical and impracticable, be at this Day known to be real and practicable, ſince every League of it has been ſailed over, I ſhould be glad to know, why even without the leaſt Degree of Evidence, it is to be thought reaſonable to conclude in the like haſty Manner, againſt a Poſſibility of finding a North-weſt Paſſage? It is an uſual and a very juſt Method of Argument, that after detecting one great Miſtake, one ought from thence to be doubly cautious of committing another of the ſame Kind; but it is a new and ſtrange Reaſoning to conclude, from the Detection of a Miſtake, into which Men were drawn by ſome kind of Evidence, that they may, without Danger of miſtaking, conclude the ſame Thing with Regard to another like Point, and this without any Evidence at all. My ſecond Inference is, that as the ſame Kind of Reaſoning is applied, I mean with reſpect to Coſmographical Topicks, to the North-weſt as to the North-eaſt Paſſage, and it is now found by Experience, that thoſe Arguments were well and rightly applied with reſpect to the Oeconomy of Providence in reference to one Paſſage; this ſhould therefore be taken, not as Evidence indeed, but as a very probable Indication that the ſame Arguments have not been wrong applied in regard to the other Paſſage. It is indeed true, that Nature effects the ſame End, when aimed at under different Circumſtances, by ſeveral Means; and this ſhews at once the Wiſdom and the Power of Providence, but in like Caſes ſhe generally takes the ſame Means; and therefore this being conſidered, our having a Certainty of a North-eaſt Paſſage, which Certainty is derived from theſe Diſcoveries, becomes a ſtrong analogical Argument for there being a North-weſt Paſſage.

I ſhall now beg Leave to offer quite another Method of Argument, and that ſhall be taken from the Nature of the Whale-fiſhing, or to ſpeak with greater Propriety, from the Nature of the Whale. Thoſe Fiſh reſort at a certain Seaſon of the Year from warmer to colder Climates, and the Reader is very well acquainted that it was urged as a ſtrong Reaſon why there ſhould be a North-eaſt Paſſage, that Whales were thrown upon the Coaſt of *Corea* with *Dutch* Harpoons in them. We now ſee that this was a juſt and a right Argument; for Captain *Behring* tells us, that he met with Whales caſt aſhore on the Coaſt of *Kamſchatska*, and I ſuppoſe no body can doubt that theſe Whales went thro' the North-eaſt Paſſage, now that ſuch a Paſſage there is known to be. But Whales are found, even in the latter End of the Summer, in the *Welcome* in *Hudſon*'s Bay. Inſtinct being an unerring Principal, I ſhould be glad to hear where theſe Whales muſt be going at that Time of the Year, if not into the *South-Seas*, and if into the *South Seas*, whether there muſt not be a Paſſage between the North-weſt Continent of *America*, and the Countries, whether Continents or Iſlands, between that and the North-eaſt Cape of *Aſia*. For to ſuppoſe that theſe Whales ſhould go round ſuch a vaſt Continent as that muſt be, if the new-diſcovered Land was continuous to *America*, and were to enter by that Paſſage in which Captain *Behring* was, is a palpable Abſurdity, becauſe in the advanced Seaſon of the Year, and in ſo high a Latitude, thoſe Seas would be frozen. This Argument I muſt inſiſt upon to be in a Manner deciſive; we know there are Whales upon the Coaſts of *Spitzbergen* and *Nova Zembla*; we now know that theſe Whales go through the North-eaſt Paſſage, and ſo deſcend into the warm Seas of *Japan*; we know that

Whales are found in the North Part of *Hudſon*'s Bay, and not in the South, why then ſhould we not think, or rather, how can we avoid thinking that they alſo find a Paſſage round into the warmer Seas?

Another ſtrong Motive there is to believe that this Country, upon which Captain *Behring* touched in his ſecond Expedition, muſt be an Iſland, and not any ſuch Continent as he is ſaid to have imagined, is this, that being ſo near *Japan* as himſelf places it, it is impoſſible the Subjects of that Empire ſhould not have been long ago acquainted with it, and with its Inhabitants; yet we are well enough verſed in the *Japoneſe* Hiſtory, to be thoroughly ſatisfied they know of no ſuch Continent; but on the contrary, have laid down two pretty large Iſlands in this Tract, one of which, in all Probability, Captain *Behring* coaſted. If all the Space between the North-eaſt Continent of *Aſia*, and the oppoſite Continent of *America*, is partly Sea, and partly Iſlands of ſeveral Sizes, we may very eaſily account for their remaining ſo long unknown to the *Spaniards* in *America*, and in the *Eaſt Indies*, as well as moſt of them are to the *Japoneſe*; whereas if the Continent of *America* extended in ſuch a Manner as the *Ruſſians*, ſeem to imagine it does, it muſt appear almoſt an Impoſſibility that it ſhould not have been long ago diſcovered, conſidering how often, in a long Series of Years, the annual Ships from *Manila* to *Aquapulco*, muſt have been driven out of their ordinary Route (which it muſt be confeſſed is not calculated for Diſcoveries) either outward or homeward bound. Yet nothing of this Kind has been ever heard of; but all the flying Stories we have of Diſcoveries made in theſe Tranſits, relate only to Iſlands, and thoſe too none of the largeſt, as appears from the Difficulty of meeting with them again.

One might add to all this, that the Conſideration of the vaſt and enormous Extent of this new Continent, which upon this Suppoſition would contain 140 Degrees of Longitude, renders it highly improbable, and this more eſpecially, if we conſider the Diſpoſition of other Parts of the Globe, and particularly that Part of *America*, the Coaſt on both Sides of which are perfectly well known. It was this uniform and wiſe Diſtribution of Sea and Land, that firſt induced Men of penetrating Parts and great Experience to expect, that ſo many different Paſſages might be found from one Part of the Globe to the other; and as we ſee that theſe Expectations have been perfectly anſwered in reſpect to the Paſſage into the *South Seas* by Cape *Horn*, and are now convinced that there is a Paſſage by the North-eaſt; ſo till they are abſolutely certain of the contrary, it cannot be ſuppoſed that the ableſt Coſmographers will be diſpoſſeſſed of the Notions they have entertained of finding a Paſſage by the North-weſt, to which I hope I have fully ſhewn, that theſe new Diſcoveries are ſo far from raiſing an inſuperable Bar, that on the contrary, they have made it more probable than it was before. For it muſt be obſerved, that the Advocates for a North-weſt Paſſage are very far from diſputing any of the Points that are actually ſettled by theſe Diſcoveries, and are only engaged in a Controverſy about the Probability or Improbability of this imaginary Continent, which is no Part of thoſe Diſcoveries, but a Suppoſition raiſed in Conſequence of them, without any juſt Grounds.

If it ſhould be enquired, why, conſidering the Induſtry and perfect Underſtanding of Captain *Behring*, with reſpect to Matters of this Nature, he ſhould be ſo deſirous of ſetting up a Fiction, like this, without any juſt Foundation or Authority, the Anſwer is not very difficult. He was inſtructed to find ſuch a Continent as we have already ſeen; ſo that he ſet out upon his firſt Expedition, with a Prepoſſeſſion that perhaps he could never get over. We have already ſeen in the Beginning of this Section, that before the North-eaſt Coaſts of the *Ruſſian* Dominions were thoroughly known, a Notion prevailed, that poſſibly they might be continued in ſuch a Manner as to join and make the ſame Continent with *America*; and when this was found to be falſe, notwithſtanding their extending ſo far into the other Hemiſphere, then his other Opinion was taken up; and becauſe Captain *Behring* had fully diſcovered that there was an open Paſſage round the North-eaſt Continent of *Aſia*, by his firſt Expedition, and the Conſequences that attended it; and becauſe in his ſecond Expedition he diſcovered new Land ſtill farther to the Eaſtward, it was from thence preſumed, that this muſt be Part of that Continent he was ſent to look for, becauſe had it been ſo, he would have fully executed his Inſtructions, and have found what the Court of *Peterſbourg* were deſirous he ſhould find. This is a very clear and candid Account of the Matter, and what I am inclined to flatter myſelf, will ſatisfy every ſenſible and impartial Reader.

But to make it ſtill plainer and more ſatisfactory, if poſſible, I will beg Leave to cite a parallel Caſe, which has been frequently mentioned in the Courſe of this Collection. The great *Chriſtopher Columbus*, as wiſe a Man, and as experienced a Coſmographer as he was, when he firſt framed his Scheme of Diſcovery, propoſed nothing more than to find out a new Route to the *Eaſt Indies* by ſailing Weſt, and when he met with the *Bahama* and *Lucaya* Iſlands, he flattered himſelf that he had obtained what he ſought, that he had performed what he promiſed, and that he had put the Crown of *Spain* in Poſſeſſion of a Part of the *Indies*; and from this Perſuaſion, when the Error was diſcovered, the Name of the *Weſt-Indies* aroſe, to diſtinguiſh theſe new-found Countries from the old, of which they now appear to be no Part. Thus we ſee how *Columbus* was deceived in imagining, that by ſailing directly Weſt he could not fail of meeting that Eaſtern Continent, which was then the Object of the Wiſhes and Searches of all Diſcoveries, by which indeed he made a great and glorious Diſcovery, that will and ought to perpetuate his Name; but at the ſame Time that he did this, he diſcovered his Miſtake, and that he was very far from having reached thoſe Countries for which he originally ſought. Yet he ſtill retained his firſt Purpoſe, and in ſome Meaſure his firſt Notion; for when he heard of a great Continent lying ſtill Weſt from thoſe Iſlands, his Hopes revived, but it was not long before he perceived that he was again miſtaken, and then finding there was a narrow *Iſthmus* which connected the Northen and Southern Parts of this Continent, he flattered himſelf there might be ſtill a Paſſage, and under this Perſuaſion he died.

Now, as the Criticks ſay, there is ſomething divine even in the Dreams of *Homer*; ſo in reſpect to the Sentiments of *Columbus*, of whoſe Memory I never ſpeak but with the utmoſt Reverence, there was always ſomething great and noble; and if I might be indulged ſo bold an Expreſſion, I would venture to ſay that there was ſomewhat of Truth in his Errors, and of Wiſdom in his Miſtakes; for notwithſtanding he was wrong with reſpect to Circumſtances, he was right in the main; for had there been no ſuch Continent as *America*, he might undoubtedly have failed, as he propoſed, from *Spain* to the *Indies*, though hardly with ſuch Veſſels as thoſe in which he made his firſt Diſcovery. However, it was upon his Thought that ſucceeding Diſcoverers built; it was from his Diſcourſes they collected thoſe Lights that led them to all they afterwards performed; and it was from the Scheme of *Chriſtopher Columbus* that Sir *John Cabot*, (for he was the Knight, and not his Son *Sabaſtian*) took the Hint of a North-weſt Paſſage, which is yet undiſcovered; that *Sebaſtian Cabot* framed his Deſign of finding a North-eaſt Paſſage, which has been but of late known to be poſſible; and that *Ferdinand Magellan* gathered thoſe Obſervations from whence he has ſo confidently undertook, and ſo happily accompliſhed, the finding a Paſſage to the *Spice Iſlands* through the *South Seas*.

In Matters of this Nature, as it is very eaſy to miſtake, as well as very hard not to miſtake ſo there is nothing ſhameful or injurious to a Man's Reputation, who from real Diſcoveries falls into erroneous Suppoſitions; the only Danger is, that the Fame and Credit of the Diſcovery ſhould give Weight and Authority to ſuch Suppoſitions; and this makes it both neceſſary and laudable to examine them with the ſtricteſt Attention, which muſt be my Apology to the Reader for the Pains I have made him take upon this Occaſion, in order, through all this Miſt of Obſcurity, to bring him out again into the Light, and to enable him to make the proper Uſe of Captain *Behring*'s moſt admirable and moſt important Diſcoveries, without being led away by that vain and idle Deluſion to which they have moſt unaccountably given Riſe. We may from this Examination of the Matter, very eaſily, and with ſome tolerable Degree of Certainty, perceive, what will be the Iſſue of this Deſign, in Caſe the *Ruſſians* ſhould continue, as in all Probability they will, to proſecute theſe Diſcoveries. What I mean by this, is, that in the Courſe of a few Years, they will probably find out all that is yet to be found on that Side, and paſs from one Iſland to another, till they have obtain'd an abſolute Certainty as to the Situation, Size, and Nature, of the Countries that Providence has placed between *Aſia* and *America*, amongſt which, I will not preſume to alledge there may not be one more conſiderable than the reſt, and extending much farther to the North, which in that Reſpect may deſerve to be ſtiled a Continent; neither will I diſpute, that when this ſhall be done, it may be both poſſible and practicable for the *Ruſſians* to obtain a Share in the Commerce of *America*, though for many Reaſons, ſome of which I ſhall hereafter mention; this ſeems to be a Thing far enough from being probable.

We may likewiſe diſcern from what has been ſaid, how very little the reſt of the World have to apprehend, from any Pains this Nation may employ to conceal their Diſcoveries; for, in the firſt Place, if they ſhould prove conſiderable in themſelves, and advantageous in their Conſequences, that will be a Thing abſolutely impoſſible; for whether they derive thoſe Advantages from Conqueſts, or from Commerce, they cannot be hid; and if we once learn that theſe Advantages are derived to them, the Manner in which they are derived cannot long remain a Secret. On the other Hand, if they proceed ſlowly in theſe Diſcoveries, and reap no great Profits from them, they need not take much Pains about the Matter, ſince no Secret is ſo eaſily kept as that which is hardly worth the knowing. But as we have already explained the true Cauſe of that erroneous Notion of the Continent of *America* being at no great Diſtance from the North-eaſt Coaſt of the *Ruſſian* Dominions, ſo it will be no hard Task to find out whence this other Sentiment of the Poſſibility of concealing Diſcoveries has its Original; the *Ruſſians* have, for the two laſt Ages, employed themſelves in making Diſcoveries and Conqueſts to the North-eaſt, and theſe they have taken great Care, and not without conſiderable Succeſs, to conceal, which they might very eaſily do, ſince it was not poſſible for any other Nation but themſelves to reach them. Yet while they were thus concealed, they proved of no mighty Conſequence to them; and the only Fruits of their Induſtry, in that Reſpect, at leaſt ſo far as we can learn, were Want of real Improvements, or ſo much as acquiring a juſt Notion of their Importance. When the Czar *Peter* came to have right Ideas, in reſpect to Government, Power, and Commerce, this little narrow unprincely Scheme of concealing was immediately baniſhed, and he not only took all the Methods poſſible to make himſelf and his Miniſters thoroughly acquainted with the remoteſt Parts of his Dominions, but with equal Care and Induſtry publiſhed the Reſults of his Enquiries to all the World; and from thence it was that he not only raiſed a juſt and never-fading Reputation, but likewiſe reaped many Advantages, in a very ſhort Space of Time, that otherwiſe muſt have coſt whole Ages in the Form of ſlow and ſilent Methods to attain. By this Means principally he reached the great Point at which he aimed, and came to have a right, diſtinct, and thorough Notions of the Value of the Diſcoveries made in the Reigns of his Predeceſſors, which were not known to them from their being addicted to that barbarous Policy of hiding and making a Myſtery of what muſt be uſeleſs in the very ſame Proportion that it is concealed.

This ſhews the Folly and Abſurdity of ſuch a Principle, while confined to Diſcoveries upon the Continent, in which it was very poſſible it might be purſued with Succeſs; but there is nothing eaſier than to ſhew, that it is not barely ridiculous, but abſolutely impracticable, with reſpect to ſuch Diſcoveries as are made by Sea. We already know enough of their Diſcoveries not to be much, if at all in the dark, as to the Sources of any Advantages they may reap from them hereafter; and, as I obſerved at the Cloſe of the former Section, ſo long as we preſerve our Naval Force, it will be always not only practicable, but a very eaſy Thing for us to acquire a Share of theſe Advantages, let them be what they will, in ſpite of any Pains, or any Means they can poſſibly uſe to prevent it. For it will be always poſſible for us, while we have ſuch large Poſſeſſions in the *Eaſt-Indies*, to fit out Ships; or if it was neceſſary, Squadrons of Ships, and that with as great or greater Advantage than can be done by the *Ruſſians*, and with theſe we may at any Time retrace all their Diſcoveries, and make them our own, in Caſe there ſhall appear any good Cauſe to expect that Expeditions of this Kind may turn to our Profit.

Neither is it Reaſon alone that teaches us this; for the ſame Leſſon may be learned in the School of Experience. The *Spaniards* and the *Portugueſe* were the original Diſcoverers of *America* and the *Eaſt Indies*, but how long did they remain the ſole Proprietors of thoſe valuable Poſſeſſions? And yet they were poſſeſſed of an Advantage which the *Ruſſians* have not, and which it is in a great Meaſure out of their Power to attain; that of being the greateſt Maritime Powers in *Europe*, indeed almoſt the only Maritime Powers in *Europe*, at the Time they made them. Therefore if with this ſingular Advantage, and when making Diſcoveries was a Thing new, thoſe Nations found it impoſſible to conceal their Diſcoveries, or to exclude Strangers from ſharing with them, how ſhould the *Ruſſians*, who on this Side of their Dominions neither have, nor in any reaſonable Space of Time, can raiſe any formidable Naval Force?

Yet after all that has been ſaid, I muſt confeſs, that if the *Ruſſians* continue to proceed in theſe Diſcoveries, with that Vigour which their great Importance deſerves, and which the Succeſs they have lately met with may well incourage them to do, they may poſſibly make a Diſcovery of the higheſt Conſequence, and perhaps conceal it to, and that to the great Advantage of themſelves, and the great Detriment of the reſt of the World, and of the *Britiſh* Nation in particular; and to this I attribute all that Air of Darkneſs and Myſtery that has been of late thrown over moſt of their Relations. In ſhort, I apprehend, and am very ſure, that I have good Reaſon for my Apprehenſions, they are already pretty well ſatisfied; or rather, the few judicious Heads amongſt them, are convinced, not of the Poſſibility or Probability, but of the Reality of a North-weſt Paſſage; and this it is that makes them ſo very deſirous of promoting a Belief of the running out of the two great Continents, till they almoſt meet each other, and hath alſo put them upon the Scheme of ſtifling their future Diſcoveries, that they may make the moſt of what they have already diſcovered, and not lead others to the Knowledge of a Route, which would make them Maſters of theſe Diſcoveries, and of many more.

XI. After having examined as thoroughly as poſſible theſe *Ruſſian* Diſcoveries, which have made ſo much Noiſe in the preſent Age, and which it is not impoſſible may make ſtill more Noiſe in the next, let us proceed to a few Obſervations on what has been ſaid in order to render it more uſeful and more intelligible to the Readers. It is now about two hundred Years ago, ſince our finding out the Navigation to *Ruſſia*, was conſidered, as a more ſurpriſing Diſcovery, than any of which the *Ruſſians* are now in Purſuit; but then it muſt be conſidered that they had no Dominions upon the *Baltick*, nor hardly any Intercourſe with their Neighbours, except the *Poles* and the *Swedes*. It was preſently foreſeen, that from *Archangel*, which was the Port frequented by us, a Paſſage might be conveniently ſought round *Nova Zembla* to the *Eaſt Indies*, and accordingly various Attempts were made that Way, as in its proper Place has been ſhewn. It could however hardly be foreſeen, that ſo long a Series of Years ſhould elapſe, before the *Engliſh* Nation received any Certainty as to the North-eaſt Frontiers of this ſpacious Empire, and yet it is purely owing to the great Wiſdom and ſuperior Genius of the Czar *Peter* the Firſt that we are acquainted with them now, ſo late have we been inſtructed as to the real Boundaries of that Part of the Globe, with which, during ſo long a Space, we have had almoſt a conſtant Correſpondence.

But now we are acquainted with them, let the Queſtion be put, What are we the wiſer or the better for this Piece of Knowledge? For that is the Touch-ſtone of all Acquiſitions of this Sort; ſince if our Knowledge ſerves only to amuſe the Learned, and to ſurpriſe the Ignorant, it is of very little Conſequence, and indeed hardly deſerves the Name. If, on the other Hand, it gives us a juſter Notion of Things than we had before, delivers us from the Miſts of ancient Errors, affords us a Proſpect of new Truths, and enables us, by theſe Helps to decide judiciouſly of our own Intereſts, and thoſe of other Nations; then, without doubt, our Enquiries are to ſome Purpoſe, and the Iſſue of them may be well ſtiled uſeful and ſolid Knowledge.

In the *firſt* Place then, we are now able to rectify our Miſtakes, which to be ſure were great enough concerning the Country of the *Ruſſians.* We conſidered them heretofore as a rude and barbarous Nation, thruſt up into a Corner of the Globe, of little Conſequence to their immediate Neighbours, and who were almoſt in a State of Inability of making themſelves ſo much as known, much leſs reſpected and feared by the reſt of the World. We ſee them now in quite another Light; we ſee, that in Point of Extent and of Compactneſs, no Empire, either ancient or modern, can enter into Compariſon with that of *Ruſſia*, which is at once equal to any *European* Power, and ſuperior to that of any Potentate in *Aſia*. We ſee, that inſtead of being unknown or diſregarded, even by her Neighbours, ſhe has made herſelf courted as well as reſpected by the greateſt Powers in both *Europe* and *Aſia*, as being equally formidable to the *Turks*, the *Tartars*, the *Perſians*, the *Chineſe*, and, it may be, the *Japoneſe*, on one Side, and to all the Powers in the North, on the other.

We may from hence learn how eaſy ſuch Miſtakes are, and how much Time and Pains it coſts to rectify them; which ought to render us more careful in other Reſpects, how we ſuffer ourſelves to be impoſed upon by crude and indigeſted Opinions, or how we give into that common Source of great and dangerous Errors, the haſty rejecting as weak, abſurd, and chimeral, ſuch Propoſitions, of which, from their Novelty and the Want of preſents Lights, we cannot immediately ſee the clear and diſtinct Grounds. Of this I ſhall preſently give a very ſtrong, and hitherto unnoticed Inſtance with reſpect to this very Nation, and the Conſequences of our Correſpondence with them. It is very well known, that but a few Years ago, an Act of Parliament was obtained in Favour of the *Ruſſia* Company, to enable them to carry on, through that Empire, a Trade with *Perſia*; and that this was not obtained without Oppoſition, though the Advantages of ſuch a Trade were then ſet in a very clear Light, and have been ſince felt by Experience, notwithſtanding the unforeſeen and inevitable Difficulties to which this new Trade has been ſubjected by the great Troubles and frequent Revolutions in the Country laſt mentioned. It would be no difficult Thing to ſhew, that Projects of the ſame Kind had been many Years ago ſet on Foot in *Italy* and in *France*, but I believe it will be News to moſt of my Readers, that it was with a View to an Eſtabliſhment of this Sort, that King *James* the Firſt propoſed to ſend Sir *Thomas Overbury* into *Muſcovy*; and that ſome who looked upon themſelves as very penetrating People, and above the ordinary Rank of Politicians, valued their own Sagacities in ſeeing through this Project, as they imagined, and treating it as a Thing altogether impracticable; and fit only to amuſe the Minds of Speculatiſts; by which, very probably, the Nation was defrauded of a Branch of Commerce that might have proved highly beneficial.

I am too well acquainted with the Temper of the preſent Age to advance ſo ſtrange, and, to moſt People, ſo unheard-of a Thing as this, without Proof; and therefore I ſhall cite a Letter from Mr. *John Chamberlain* to Sir *Ralph Winwood*, preſerved among that Gentleman's State Papers, who was afterwards Secretary. It is dated *May* 6, 1618, and the Writer having firſt obſerved, that it was the urging Sir *Thomas Overbury* to go to *Muſcovy*, that drove him to that peremptory and unmannerly Anſwer for which he was committed to the Tower, he proceeds thus: "Indeed we have great "Doings in Hand, and ſtrange Projects for that Place, "which I doubt will all prove Diſcourſes in the Air, "for they be grounded upon certain Speeches of ſome "of the Nobility to an *Engliſh* Merchant about two "Years ſince; but *tempora mutantur*, and the Caſe is "much altered there ſince that Time. Yet the King "apprehends the Buſineſs very earneſtly, and hath "cauſed Sir *Henry Nevile* to confer with ſome of the "Council about it divers Times, wherein, they ſay, he "hath ſhewed great Sufficiency, and diſcourſed at large "what Commodity might ariſe by bringing the whole "Trade of *Perſia*, and the Inland Part of the *Eaſt* "*Indies* up the River *Hydaſpes*, and ſo with a ſhort Cut "down the River *Oxus* into the *Caſpian* Sea, and then "up the River *Volga* to a Straight of Land that will "carry all into the River *Dwina*, that runs down to "St. *Nicolas* and the Town of *Archangel*, the ordinary "Port and Station of our Shipping in thoſe Parts. "Theſe are goodly ſpecious Diſcourſes of Things not ſo "eaſily done as ſpoken." If we have found a nearer, ſhorter, and more expeditious Method of carrying on and improving this Trade, it is becauſe, as our Author ſays, *Tempora mutantur*; and that with regard to us and the *Ruſſians* alſo, we are no longer under the Neceſſity of making the long Voyage to *Archangel*, nor are they obliged to take the Courſe before laid down for bringing *Perſian* Commodities into the Heart of their Empire. Yet for all this, it is no hard Matter to diſcern this Project was both very poſſible and very practicable at that Time, and might have been attended with very great Advantages to both Nations.

We may learn from the Contents of this Section, more eſpecially if we compare them with thoſe of the foregoing Sections, what are the true Reaſons why, with all the ſeeming Advantages of which the *Ruſſians* are now poſſeſſed, they make, notwithſtanding, but a very ſmall Figure in Commercial Affairs. It is very true, that from the advantageous Situation of their Empire, they have a Variety of different Proſpects of extending and promoting their Trade; but perhaps this Variety has been, and ſtill is rather detrimental than beneficial. We find them ſometimes intent upon eſtabliſhing their Navigation on the *Black Sea*, and in a few Years this is dropped, and their Efforts are made upon the *Caſpian*; then the trade by Land with *China*, and the ſuppoſed Advantages that may be derived from regular Caravans ingroſſes their Thoughts, till on a ſudden they are turned to more diſtant Diſcoveries and a Naval Correſpondence with *Japan*, which is again dropped for the Sake of purſuing, a ſtill more diſtant, and more uncertain Scheme of opening a new Route to the Coaſts of *America.*

Thus by running from one Thing to another, and by a prepoſterous graſping at many Things, Nothing is attained, if we except this, that from theſe Attempts it has been made very apparent, that all, ſave the laſt, might have been attained. For while *Peter* the Great was poſſeſſed of *Aſoph*, he not only opened to his Subjects the Commerce, but, as we hinted before, eſtabliſhed a Naval Force in the *Black Sea*, and thereby terrified the Grand Signior in his Seraglio, but this however inſpired the *Turks* with a Reſolution of depriving him of that Fortreſs, and of the Power of making him uneaſy on that Side; which they had the good Luck to accompliſh; yet there may come a Time, when, if the *Ruſſians* ſhould be content to proſecute one Point at once, they may again become Maſters of *Aſoph*, and of that advantageous Commerce that might be carried on from thence. Nay, it is not at all impoſſible that they may conquer *Crim Tartary*, which, with reſpect to Trade and Naval Power, would be the moſt important Acquiſition they could make; but it would require much Time and no ſmall Application to render ſuch a Conqueſt as advantageous as it might be made to their Empire, and indeed to the Chriſtian World in general.

On the *Caſpian* alſo *Peter* the Firſt built Veſſels of various Sizes, and conquered ſome of the moſt valuable Countries in *Perſia*; he likewiſe formed Projects of Diſcovery in the moſt diſtant Part of that Sea; where, for the Encouragement of his People, he gave out there were Gold Mines; but all theſe Projects, partly by other Accidents, but chiefly by his Death, came to nothing. The ſame great Emperor actually opened a Trade by Land to *China*, of which we have given a large Account, and of the Reaſons of its Declenſion. Reaſons that ſtill ſubſiſt, and will always ſubſiſt, while the *Chineſe* Goverment is carried on in Conformity to the Maxims that having prevailed there for many Ages, are not likely to be laid aſide in haſte. It remains that we ſhould examine the Cauſes that have hindered the Accompliſhment of the two laſt Deſigns.

With reſpect to theſe, there is nothing clearer than that the vaſt Diſtance of *Kamſchatska*, the preſent Condition of that Country, and the great Difficulty of eſtabliſhing any certain and eaſy Communication between it and the weſtern Provinces of the Empire, are Obſtacles of ſuch a Nature as muſt render it very hard to ſurmount. On the other Hand, we are very well apprized of the ſettled Averſion which the *Japoneſe* have to any Correſpondence with the *Europeans*, which there are good Grounds to believe may riſe higher with regard to the *Ruſſians*, whom, notwithſtanding their vaſt Dominions in *Aſia*, they will always conſider in that Light. I ſay, that we have good Grounds to believe, that their Averſion will riſe higher againſt them than any other Nation, becauſe their Apprehenſions, in reſpect to their Power, will be greater and better founded. Thus we ſee that there is no great Cauſe to be ſurprized, that the Court of *Petersbourg* has not been able to make any great Progreſs hitherto in that Commerce, of which Captain *Spanberg* gave them ſuch mighty Expectations.

Yet great as theſe Obſtacles are, they ſeem to be ſtill inferior to thoſe that lie in the Way of this ſo much wiſh'd-for Commerce with the Northen Continent of *America*; for which, as we have ſhewn, they are utterly unqualified, until ſuch Time as *Kamſchatska* is much better improved than we have any Reaſons to believe it is at preſent; becauſe, as we have already ſhewn, the Space is much larger between the two Continents than they apprehend; and if it were much leſs, it is not very eaſy to conceive either with what Commodities they would trade from *Kamſchatska*, or where they would find Men to undertake any thing in the Way of Conqueſt. The Reader will obſerve, that I ſtate theſe only as a very great Difficulties, which it will be hard, but not impoſſible to overcome. The Method they are now in of ſurveying theſe Countries, diligently inquiring into their Produce, and framing from thence natural Hiſtories, tracing the ſeveral Rivers from their Sources to their Mouths, bringing the barbarous Inhabitants under Obedience, and uſing every other Means poſſible to come at an exact Knowledge of their vaſt Dominions, though very ſlow, is out of Compariſon the ſureſt to attain Succeſs.

It is not at all improbable, that in Proceſs of Time they may find either Mines or Drugs, or ſome other Commodities of Value, that may make the Plantation and Improvement of theſe Places, at leaſt bear the Expences, and ſo by Degrees extend their Settlements and Fortreſſes in a regular Manner from *Tobolski* to *Ochotski*; and then, no doubt, the peopling and improving *Kamſcatska* will be found far eaſier than is generally imagin'd; for, as I hinted before, there ſeems to be good Reaſon to believe, that there is nothing, either in the Climate or the Soil, ſo incorrigible, as to take away all Hopes of making it a tolerable Habitation. It is indeed true, that ſome Hints have been given of taking a ſhorter Way, by ſettling a Port at the Mouth of the River *Lena*, and opening the Navigation to *Kamſchatska* by Veſſels of conſideradle Burthen. I might object to this, what *Ysbrant Ides* tell us of the Northen Seas being choaked with Ice for ſeveral Years together, ſo as to render ſuch a Paſſage abſolutely impracticable; but as I am ſtrongly inclined to doubt the Truth of this, I cannot think it fair to alledge any ſuch Thing. But ſuppoſing the Paſſage to be always practicable in the Summer, which is the utmoſt that can be contended for, yet the thorough ſettling of *Kamſchatska* will remain a Thing abſolutely requiſite before any Diſcoveries of Importance can be undertaken with any tolerable Advantage on that Side, ſince after ſo long a Voyage as that round the North-eaſt Cape, it cannot well be imagined that Veſſels ſhould be in a Condition to proceed, without putting into ſome Port for Refreſhment.

If therefore this could be done at *Kamſchatska*, and proper Magazines of Proviſions and Naval Stores were erected there, no Doubt need be made, that in the Courſe of a few Years, Things in this Part of the World would change their Face, and a Commerce of very great Conſequence might be ſoon ſettled. Whenever this ſhall be effected, and ſuch a Navigation from Practice and a Perfect Knowledge of the proper Seaſons made common, if not convenient, I cannot help hazarding a Conjecture, that the Court will call to Mind a Project formerly ſet on Foot for reviving and reſtoring the Trade of *Archangel*. It may be ſaid, that to ſuppoſe the Poſſibility of an eaſy Paſſage to the North-weſt of *Nova Zembla*, which muſt be the Courſe from any Port eſtabliſhed at the Mouth of the River *Lena*, is abſurd and romantick, but this is eaſier ſaid than proved; the *Dutch* Ships that were ſent in 1670 for the Diſcovery of the North-eaſt Paſſage, actually paſſed round *Nova Zembla* the other Way, and therefore it is very plain the Thing is not at all impoſſible; and to People who inhabit the Country that borders upon the Sea, have an Opportunity of making Choice of the fitteſt Seaſon, and may have ſuch Aſſiſtances from the Nature of their Government, as cannot be expected in Places, where not only the Climate, but the Laws are milder; this may, in Proceſs of Time, and that no very long Time neither, be render'd very practicable, and *Archangel* become once more the Centre of the *Ruſſian* Trade, as in former Times. The Reaſon that the Czar *Peter* the Great, who delighted ſo much in Improvements, made it in ſome Meaſure a Point to ruin *Archangel*, by withdrawing the Trade from it, may be very eaſily learned. In the firſt Place, it had been inſulted by the *Swedes*, which made him apprehend, that the Richer this Port grew, the more likely it would be to tempt his Neighbours to make it ſuch Viſits. Beſides this, he was very intent upon whatever might contribute to the eſtabliſhing, enlarging, or enriching of the new City of St. *Petersbourg*, which he was building, and which he was equally deſirous of rendering the Centre of Commerce, and the Capital of his Empire.

Both theſe Reaſons are, in a great Meaſure, taken away; for with Regard to the Power of the *Swedes*, and the Safety of *Archangel*, there are no longer any Apprehenſions, or indeed the leaſt Grounds for them; and with reſpect to *Petersbourg*, it will always remain the Center of the *Baltick* Trade, as well as the Weſtern Capital of the *Ruſſian* Empire; ſo that inſtead of ſuffering, it would in reality receive great Advantages by the Revival of the Commerce at *Archangel*; and ſtill greater, if ſuch a Communication could be opened, as that which I have deſcribed. We were heretofore very well acquainted with that Port, as having a regular as well as conſtant Navigation thither; but of late we ſpeak leſs of it, and conſequently, are ſo much the worſe Judges of its Conſequences, which is in reality very great, ſince there is no Place in the whole Dominions of *Ruſſia* that lies ſo conveniently for uniting the Commerce of the moſt diſtant Countries in the Eaſt with that of *Europe*. Of this a remarkable Specimen has been given from our own Hiſtory, and that too in a moſt extraordinary Period, as I could very eaſily ſhew, if it was proper at this Time; another I have exhibited from my own Conjecture, in Caſe theſe Diſcoveries to the North-eaſt ſhould be proſecuted with Effect; and a third ſhall be taken Notice of hereafter, but in the mean Time, I believe it may contribute to the Amuſement and Relief of the Reader, and at the ſame Time prove no great Interruption to the Courſe of our Reaſoning, if we inſert a very ingenious and lively Deſcription of this Port, when in its moſt flouriſhing Condition, written upon the Spot by Sir *Dudley North*, a Man of remarkable Abilities, and no leſs diſtinguiſhed for his Accuracy in obſerving, and his Veracity in relating whatever he met with worthy of Notice, in the many Years that he ſpent Abroad.

This Gentleman, after a very pleaſant and humorous Deſcription of this Voyage, which not being to our Purpoſe I paſs by, proceeds thus in ſetting forth the State in which he found the Port that is now under our Conſideration. “ We went aſhore to live in Houſes built with Trees laid along one upon another, and let in at the Ends, the Streets are paved with Trees, and the Houſes covered with Birch Bark. The Ground where the *Engliſh* are appointed to dwell, is paled round with great Trees ſet upright; the like there is for the *Dutch* and *Hamburghers*. The Emperor of *Ruſſia* ſends down every Year a Governor, and a Gort or Judge to keep the Peace, and decide all Differences. Their Law is in their Heads, and what comes out of their Mouth is without Controul or Appeal. So that whatever Difference ariſes between one Man and another, it is ſure to be fully decided in leſs than an Hour. After the Parties have once ſpoke, he gives the deciſive Stroke, and there's an End.

“ Now this is a fine Place to live in, Victuals of all Sorts plenty, and brave Sunſhine Weather: As we ſailed along the Coaſt of *Norway*, I fancied the Clouds, though loſt in the Horizon, were but a ſmall Diſtance from us, which this place confirms, elſe one place could not be ſo very ſerene, and another ſo cloudy, and that almoſt conſtantly. For at the North Cape it is rare to ſee the Sun, and here at *Archangel*, about two hundred Leagues diſtant, not a Cloud to be ſeen for ſeveral Months together; when we were two Leagues diſtant from the huge Mountains on the Coaſt of *Norway*, we could plainly diſcern the Clouds to paſs between the Mountains and us.

“ One of the Inconveniencies that lie on thoſe who dwell in this Country, is, that the People are ſo given to Naſtineſs, that nothing can be eaten out of their Hands; you ſhall have perhaps four Brothers and as many Siſters, with their Father, Mother, Huſbands, and Wives, all dwell in one hot Houſe, (*Wisbe*) they call it. They have nothing but a little Straw ſtrewed on the Ground to lie upon. They wear looſe Garments above, with Linnen Drawers, which go down to their Heels, and a ſhort Shirt underneath like a Coat. To this in the Winter, they add a Caffian as they call it, which is an Under-Coat, the Upper they call a Shube. And for their Boots, and huge thick Stockings, and double Mittens for their Hands, they never alter but continually wear them. The Women I think are the moſt deformed Creatures that ever were ſeen, generally ſhort, and by Reaſon of their lying in Wiſbies and Baſtoes, very ſwarthy. Their Wear is for the labouring Women, Boots, but for them that keep Houſe, neither Shoes nor Stockings; they wear a Linnen looſe Garment next their Skin for the moſt part, without any Thing elſe, but ſometimes they have another of blue Callico over the former, but that is all.

“ The Men account it a Sin to have either long Hair or a ſhort Beard. They are extremely ſuperſtitious, every Man has his Object of Worſhip, but ſome twenty or more. They are Commodities ſold in the Market, and they will not ſell any to a Stranger, or ſuffer him ſo much as to touch them. Theſe are Pictures of the Saints, and that of our Saviour. The great Men burn Lamps before them Day and Night, and adorn them richly with Gold and Pearl, but when theſe are worn out, and they cannot ſee any Thing of them, they hold it not lawful to burn them, but in a ſolemn Manner carry them to the Sea, and there ſet them a-drift to ſhift for themſelves.

“ Theſe People are generally Thieves from the firſt to the laſt, and ſteal not only from Strangers, but Neighbours; and Poſſeſſion is all the Law they have among themſelves. Drinking is their only Paſtime, and he that is not drunk on a Holiday, or Sabbath-day, is not either a Friend to their God, or Emperor. They are all left to get their Livings the beſt Way they can. He that is a Carpenter To-day, is a Labourer To-morrow. Every Man breeds up his own Sons, and it is a Shame to be wiſer than their Forefathers.

“ This Town of *Archangel* ſtands on a Bog, and if you offer to walk out of Town, (except one Way, which is by the Water-Side, leading to a ſmall Grove of Trees, that are of a competent Height, and moſtly Pine, Fir, and Birch) if the Way be not paved with Planks, as ordinarily is done, to make a Paſſage from the Town to ſome Windmill, you are preſently over Shoes and Boots. Among the reſt of the Iſlands, ſome are very good Grounds, and bear Corn of all Sorts, which after it is turned Colour, as it will in five Weeks after it is put in the Ground, they cut down and lay in the Sun to ripen or harden, and thus they often have two Crops in a Year.

“ You ſhall not ſee in all this Country, one hundred Acres of good Ground without a Monaſtery or two or three in Sight of it; who will may ſhave himſelf a Fryar, but it is ſeldom done unleſs in Sickneſs, for they think, whoever dies without the laſt Unction cannot be ſaved, and he that recovers, and lives after he hath received that Sacrament is a Friar all the reſt of his Life.

“ In this Country the Huſband is the ſole Commander of the Wife, who differs very little from his Servant. Many will marry their Sons very Young to luſty Baggages, on Purpoſe to gain able Servants.

“ I ſhall add (though not very material) the Proceſs of making Tar, the Product of this Place. They dig a Hole in the Ground of a competent Size, ſome two or three Fathom deep, and a little lower than the middle they make a Platform of Wood, and thereon heap Earth about a Foot deep, except in the Middle, where an Hole is left in the Form of a Tunnel. Then they fill the Pit with Fir Billets, piled up from the Platform, and riſing about a Fathom or more above Ground, which part they wall about with Turf and Clay to keep in the Fire. They command the Fire by quenching, for which Uſe they make a *Lixivium* of the Aſhes of Fir. When all is ready they ſet Fire a-top, and keep the Wood burning, but very leiſurely, till it comes within a Foot or two of the Partition, and then they heave out the Fire as faſt as it is poſſible, for if it once lay hold of the Tar, which is ſettled down into the lower Pit it blows up all forthwith. Theſe Tar-Pits occaſion a great deal of Trouble, and require many Men to tend them during the Time of their Burning, that the Fire may deſcend even and leiſurely, whereby the Tar may have Time to ſoak out of the Wood, and ſettle down into the Pit. As it comes from the Wood it is pure Tar, but in the Pit it mixeth with Water, which iſſues from the Wood alſo, therefore it muſt be clarified from it once or twice.

“ The Manner of their Baſtoes or Baths is worth Notice. They are made as a ſquare Room, in one Corner of which is built a Sort of Oven, the Top of which is covered with great round Pebble-

" Stones laid very thick one upon another, without any " Mortar. In this Oven they burn an Arm-full or two " of Billets, and, during the Fire, leave the Door open " for the Smoke to go out, which elſe could not paſs " for the Cloſeneſs of the Room. When the Fire is " out, and the Stones thoroughly hot, you go into it " ſtark naked, and the Heat is ſo extraordinary, that " in leſs than a Quarter of an Hour the Sweat ſhall " run from you like Water, and the Heat almoſt ſtifle " you. There are ſeveral Benches, which are the De- " grees of Heat; on the Ground it is tolerable, but " very few are able to hold up their Heads to the Top " of the Room, to ſtand upright. They heat the " Room to what Degree you pleaſe, by daſhing cold " Water upon the Stones, which doth wonderfully " augment it. Theſe Baſtoes are ſuch common Things, " that there is ſcarce an Houſe, however poor, that " wants one. They ſeldom or never lie with their " Wives but in the Baſto; the Women are always " brought to Bed in it. It is common to ſee Men " ſtand at the Church Door, not daring to enter, be- " cauſe they have not waſhed ſince they lay with their " Wives, ſo nice is their Devotion.

" All the Tools they work with about Wood is an " Hatchet, and all of a Bigneſs, ſo that the largeſt " Trees, and ſmalleſt Pieces of Wood are wrought " upon with the ſame Tool. I believe they are the beſt " Hatchet-men in the World, for except a Shave, they " have no other Tool to do all Manner of Work. " Moſt Houſes in the Country are of Wood, and have " no Sort of Materials elſe about them: And ſome " again, as at the City of *Moſcow*, for Prevention of " Fire, have not a Stick of Wood about them, the " very Doors and Windows are of Iron. Moſt of our " Warehouſes here have Fire-houſes under them; it is " a perfect Houſe under Ground, built as others are, " and covered with great Trees, with a Fathom of " Earth laid over it. The Door is deep and laid " round with Brick. When a Fire happens, the " Goods are flung down at that Door, and there al- " ways ſtand ready about a Dozen Barrels of Sand, " which ſerve to dam up the Door. Then the Houſe " may be burnt to the Ground, and all the Goods re- " main ſafe."

This ſhort and entertaining Account demonſtrates to us ſufficiently the Poſſibility of rendring *Archangel* a very commodious Place, a good Port, and a well fortified Town; ſo that in all theſe Reſpects it might very well ſerve as a middle Place for the Reception of the Commerce of *Europe* and *Aſia*; and if the *Ruſſians* can tell how to bring it thither, of all the Iſlands between *Aſia* and *America*, and even of *America* itſelf. It has been before hinted, that another Propoſition has been made for ſettling the Trade of the Eaſt here of late Years, that is, in the Reign of the Czar *Peter*, of a different Nature from either of thoſe which the Reader has yet met with; the former, he muſt remember, went upon this Suppoſition, that the Commodities and Manufactures of the *Indies* might be brought through *Perſia* to the *Caſpian* Sea, and ſo by various Rivers to *Archangel*. The other ſuggeſts a Poſſibility of carrying on a Trade from *Kamſchatska* to the Iſlands near *Japan*, to *Corea*, *China*, *&c.* and carrying the Produce of this Trade round by Sea to *Archangel*.

This other Propoſal goes upon the old Suppoſition, that a North-eaſt Paſſage was impracticable; and therefore two Merchants laid a Scheme before the Senate, to make a Communication between ſeveral navigable Rivers and Lakes, by the Means of which, the *Ruſſian* Merchants might carry their Goods from *Archangel* to the Eaſtern Ocean, and ſo by an eaſy and ſhort Way trade to *Japan* and the *Eaſt Indies*, to the incredible Advantage of the *Ruſſian* Dominions. The Connection was to be by the Rivers *Dwina*, *Faſta*, *Irtis*, *Oby*, *Keta*, *Teniſra*, *Angur*, the Lake *Baikal*, the Rivers *Schulka*, and *Amur*, the latter of which runs through *Dauria* into the Eaſtern Ocean. It would perhaps be no difficult Thing to ſhew, that though this Scheme is not impoſſible or impracticable, yet it would be much harder to accompliſh, than that of opening a Communication by Sea; and the only Reaſon I mentioned it was to ſhew how many different Methods have been contrived to transfer the *Eaſt India* Trade, at leaſt in a great Meaſure, to the *Ruſſians*; according to all which, *Archangel* has been the Port preferred; ſo that ſome Time or other, perhaps, it may obtain what has been ſo long ſought, in different Times, by different Heads, and from ſuch different Ways.

To conclude this Subject, and to ſhew how great a Sacrifice was made in the eſtabliſhing of *Petersbourg*, I ſhall preſent the Reader with a Memorial, ſhewing the Inconveniencies that would ariſe by transferring thither the Trade from *Archangel*. It was drawn up by a Committee of Merchants, who were the beſt acquainted with the Intereſt of *Ruſſia*, and of the reſt of the Nations in *Europe* trading thither, and though it had no Effect, yet the Facts contained therein are very curious; they were briefly theſe:

1. That at *Wologda* only, a Town ſituate between *Moſcow* and *Archangel*, there are three *German* Merchants, who at their own Charge maintain 25000 Perſons and upwards in dreſſing and preparing Hemp to be ſent to *Archangel*, and from thence into foreign Countries: But ſhould they be obliged to keep ſuch a Number of People at *Petersbourg*, where every Thing is five Times as dear as at *Wologda*, that Trade not only would turn to no Account at all, but they would even be Loſers by it. 2. That the greater Part of the Exportation of *Archangel* is of the Growth of the neighbouring Country of *Wologda*, from whence thoſe Commodities are with a great deal of Eaſe carried by Water to *Archangel*; whereas were they to be tranſported to *Petersbourg*, it muſt be done a great Way over Land, and with far greater Expences to the Merchants. 3. That the Soil at *Petersbourg* is ſuch, that the Hemp cannot be kept there a few Months without growing damp.

It is hoped, that from theſe Remarks and Reflexions, the Reader will be led to a perfect Acquaintance with the Conſequences of the *Ruſſian* Diſcoveries, the Nature of the ſeveral Projects that have been formed for improving and extending the Commerce of that Empire, and the Effects that theſe muſt neceſſarily produce upon the Trade of *Europe* in general, in caſe they ſhould ever be brought to any tolerable Degree of Perfection, than which it would be hard to find a Subject more uſeful or more entertaining to ſuch as are deſirous of acquainting themſelves with the real and ſubſtantial Knowledge that is, the Reſult of Enquiries into the paſt and preſent State of diſtant Countries, and of learning from the Compariſon of the Situation and Products of the ſeveral Parts of the Globe, how they may be beſt connected and made uſeful to each other.

But it may poſſibly be objected, that all theſe Things are at a very great Diſtance, in as much as hitherto the *Ruſſians* have ſcarce entered into any Kind of Commerce with other Nations, or at leaſt with other Nations who inhabit Countries lying at a Diſtance from them; ſo that to conſider them in the Light of a naval and commercial Power, ſeems a little premature; and conſidering alſo the Viciſſitude of human Affairs ſomewhat chimerical. But to this it is very eaſy to give a full and ſatisfactory Anſwer. It is ſcarce half a Century ſince this Nation became thoroughly known to the reſt of *Europe*, that is to ſay, known as an independent and great Power, capable not only of holding the Balance of the North, or rather of preſcribing to the Powers there, but alſo of having a conſiderable Influence upon the general Syſtem. Yet within this ſhort Space, and notwithſtanding ſeveral Revolutions in their Government, they have acquired, and that very juſtly, a very high Degree of Reputation, as well by a ſucceſsful War againſt the *Turks*, as by their important Conqueſt from the Crown of *Sweden*; and excluſive of this, have twice within the laſt twenty Years, given Check to the Power of the Houſe of *Bourbon*, and Peace to *Europe*, by marching their Troops into *Germany*, exactly in the ſame Manner, as when the over-grown Power of the Houſe of *Auſtria* engaged the *Swedes* in an Enterprize of the like Nature, and with the like Succeſs. If therefore it cannot be denied, that in ſo ſhort a Time, and notwithſtanding the many Obſtacles they had to ſurmount, this Nation has carried its Power to ſo unexpected a Height, and render'd its Authority and Influence ſo very extenſive, why ſhould we doubt, that upon turning their Thoughts to the promoting of Induſtry, encouraging Manufactures, and improving their Trade, all which, it is very certain, are Points that have for ſome Years occupied their Thoughts; I ſay, why ſhould we doubt, that in Proceſs of Time they ſhould become as ſucceſsful in this, as in the aggrandizing themſelves by their military Expeditions, and their political Negociations, for both which they were thought infinitely more incapable, but forty or fifty Years ago, than they can be now, with reſpect to Improvements in Trade and Navigation?

I know very well, that it has been eſteemed the Foible of this Nation, that they eſteem themſelves abſolutely Maſters of any Science, by that Time they have acquired the firſt Principles of it, and are apt to boaſt of Things as accompliſhed almoſt as ſoon as they have formed a Deſign of undertaking them; but as this is natural to all Nations, upon their firſt emerging out of a State of Barbarity, it may be probably concluded, that this is in ſome Meaſure worn off, and that in Conſequence of their being more familiar with the Sciences, and having a greater Intercourſe with other Nations, they are become both more knowing and more polite; which if it was at all neceſſary, might alſo be made good with reſpect to Facts, and that from the moſt authentick Evidence. But ſuppoſing they have ſtill ſome Remains of this Humour ſticking upon them, as has been before admitted in the Caſe of Diſcoveries, where, without queſtion, their Concluſions have been a little too haſty, and their Expectations not a little too ſanguine, yet this is no kind of Proof that they ſhall not ſucceed by Degrees, or that they may not acquire a very profitable and extenſive Commerce, though not quite ſo profitable and extenſive perhaps, as they have flattered themſelves.

For if we reflect, that notwithſtanding the Rigour of the Climate, and the Sterility of the Soil in ſome Parts of their Territories, yet there is within the Dominions of *Ruſſia*, not only as rich and fertile Countries as any in *Europe*, but a much larger Quantity of rich and fertile Ground than in the Poſſeſſion of any *European* Power whatever, we ſhall ſurely ſee ſome Cauſe to alter our Opinion. Another ſtrong Argument to this Purpoſe, may be drawn from the Staple Commodities of *Ruſſia*, which are very numerous, of general Uſe, and of great Value; they have Hemp, Flax, and Timber; Tar, Wax, Hides, Tallow, *&c.* in vaſt Quantities; and if their Lands were improved, they might have as great Abundance of Corn as any Nation in the World; neither are the worſt part of their Dominions unproductive of very rich Commodities, ſuch as vaſt Quantities of the fineſt and moſt valuable Furs, Iron in the greateſt Plenty, Salt, and many more Things than we have either Leiſure or Neceſſity to enumerate, ſince enough have been already mentioned to prove that they are in a Capacity of exporting as many and as valuable Commodities as their Neighbours, from the immediate Produce of the ſeveral Provinces of their vaſt Empire.

But farther ſtill, a third and no leſs weighty Argument may be advanced from their Inland Commerce, which is very conſiderable, as will appear from the Places in which their great Cuſtom-houſes are erected, and which are become ſo many Staples for different Branches of Trade. As for Inſtance, there is a Cuſtom-houſe at *Kiow* in the *Ukrain*, to which City there is a prodigious Reſort of *Turkiſh*, *Tartarian*, *Poliſh*, *Armenian*, and *Ruſcian* Merchants. At *Tomski* in *Siberia*, there are likewiſe great Magazines of rich and valuable Commodities, brought thither by all the various Nations inhabiting the Heart of *Aſia*, and with whom no other *European* Nation have any Intercourſe or Trade. Thither alſo and to *Tobolski* are brought the Commodities and Manufactures of *China*, *Corea*, and of all the Nations which inhabit to the North and North-eaſt of the River *Amur*. The City of *Aſtracan* is the Center of the *Perſian* Trade, and of what is derived from other Nations that inhabit either on or near the Shores of the *Caſpian* Sea; and from all theſe Places there is a conſtant and prodigious Reſort to the great City of *Moſcow*, where a very large Traffick is driven by Merchants of all Nations. I ſay nothing of the *Lapland* Trade, which centers at *Archangel*, or of what is ſtill carried on at *Novogorod* from *Courland*, *Poland*, *Lithuania*, and other Places; from all which it manifeſtly appears, that excluſive of their own, the *Ruſſians* may be able to export very large Quantities of foreign Commodities and Manufactures, which they procure in the Way of Exchange, and may conſequently enlarge their Trade that Way.

It may be indeed objected againſt what has been advanced, that as Luxury increaſes as faſt or faſter in *Muſcovy* than in almoſt any other Country, the Balance of Trade is not like to be much in their Favour; but to this it may be anſwered, that the general Notions about Luxury are very falſe, both with reſpect to the Thing it ſelf, and in regard to its Conſequences. In common Speech, we take Luxury for the Deſire of enjoying many Things that are not abſolutely neceſſary; whereas in Truth, Luxury only conſiſts in the Abuſe of Things, whether neceſſary or not neceſſary; and tho' it be true, that Luxury taken in either, or in both theſe Senſes, impoveriſhes and brings to Deſtruction particular and private Families, yet it may be juſtly queſtioned, whether Luxury is highly deſtructive to a Nation; for if we conſider it ſeriouſly, it will be found, that ſuch as aſſert this Talk in a Circle, and having firſt confounded their own Notions, labour next to diſturb thoſe of others. For what is it that encourages and promotes Induſtry amongſt the lower Sort of People, but the Luxury of their Betters? What has been the Source of all fine Manufactures at Home, of importing rich Goods unmanufactured or manufactured from Abroad, but Luxury? Or what Juſtice is there in reproaching a Nation as barbarous, that in their Entertainments, Cloaths and Buildings, fall infinitely below their Neighbours, and then charging them with Luxury for endeavouring to live like their Neighbours?

The Truth of the Matter is this, that if the *Ruſſians* confine themſelves to the bare Search of Neceſſaries, they may find them with very little Trouble, and remain as poor, as idle, and as barbarous as before the Reign of *Peter* the Great; or ſuppoſe they would confine themſelves to the bare Purſuit of Conveniencies, theſe alſo may be had without any great Dealing with their Neighbours. But if in Conſequence of travelling abroad, of receiving Foreigners hoſpitably at home, and of imitating ſuch as paſs for the wiſeſt and moſt polite Nations, they come to enlarge their Circle of Conveniences, and thereby create innumerable Wants that they never knew before, what will the Conſequences of this be? Not living in Huts, leaving their Lands untilled, and ſpending their Lives in eating dry'd Fiſh, and drinking Malt Spirits, or Mead, as they were wont to do; but in ſetting themſelves to improve their Country, to increaſe its Produce, to bring their Commodities to Light, to vend them to Strangers, and thereby acquire thoſe Goods that they want, or which is exactly the ſame Thing, thoſe Goods they think they want, from Strangers. That Spirit of Luxury therefore that is ſaid to prevail in *Ruſſia*, is ſo far from being an Impediment to their becoming a trading Nation, that in Reality the Prevalence of this Spirit will make them ſo.

Another Argument which plainly proves that this Nation begins to have a Turn, and that a very ſerious one too towards Commerce, is the ſeveral Treaties they have concluded both with *European* and *Aſiatick* Nations, for the encouraging, ſecuring, and promoting it; of which Treaties many Inſtances might be given. It is true, that by their laſt Treaty with the *Turks*, they are reſtrained from Trading in the *Black Sea*, except in *Turkiſh* Bottoms; but this is only an accidental Reſtriction ariſing from the Circumſtances of their Affairs at the Time the original Treaty in which this Clauſe is inſerted, was concluded. Before that Time, the Czar *Peter* had no leſs than 200 Sail of Men of War, Gallies and Brigantines of his own upon that Sea, and we need

no

not doubt, that the *Ruſſians* preſerve the Memory of this, and will take the firſt Opportunity that offers, of recovering a Trade which they once proſecuted with great Diligence and Spirit.

I will add to theſe Arguments but one more, and that is, the prodigious Pains taken, and the immenſe Expence the Czar *Peter* and his Succeſſors have been at in the Improvement of Roads, cutting Canals, rendring Rivers and Lakes navigable, purely for the Sake of facilitating the Communication of the different Provinces of their Empire with *Petersbourg*, and each other. Theſe are manifeſt Inſtances both of the Rectitude of their Conceptions on this Head, and of the Sincerity of their Intentions, which have been alſo attended with ſurprizing Conſequences; ſo that at preſent there is hardly a Country in the World where Carriage is either cheaper or more expeditious than in *Ruſſia*; and this in Winter more eſpecially, when by the Help of the Snow, their Sledges make an eaſy Paſſage from *Petersbourg* to *Moſcow* in four Days, tho' the Diſtance between theſe two Cities is between four and five hundred *Engliſh* Miles, a Thing that would be ſcarce credible, if it was not ſupported by as authentick and indubitable Proofs as any Fact whatever; ſo that as the Summer is favourable to their Navigation and foreign Commerce, the oppoſite Seaſon of the Year is no leſs ſo to their Inland Traffick, which is a very great Advantage; and tho' it is already much improved, is ſtill capable of being rendered more commodious.

But there may be another Objection ſtarted, which will at firſt Sight ſeem ſubverſive of all that I have been ſaying, and that is taken from the Nature of their Conſtitution, by which their Nobility, and indeed all Perſons of Property, are abſolute Lords over their Peaſants, who for that Reaſon abhor Induſtry, conſidering it as an Obligation to Labour, not for their own Profit, but that of their Maſters. In Support of this Objection, it may be likewiſe urged, that theſe Lords, who have ſuch a boundleſs Power over the miſerable People that live upon their Eſtates, are in their Turns expoſed, upon very trivial Offences, to feel the bitter Effects of the Reſentment of their Government; ſo that from this double Conſideration it cannot be reaſonably expected, that either the Peaſants ſhould alter their Courſe of Life without any Encouragement, or that the great Lords, from a meer Principal of Beneficence, ſhould put their Dependants upon a better Foot than themſelves.

But tho' it muſt be confeſs'd, that there is much more in this than in any other Objection that can be made upon this Subject, yet it is very far from being unanſwerable. For by Degrees, as a new Spirit prevails in the *Ruſſian* Government, and among the *Ruſſian* Nobility, new Maxims muſt alſo of Neceſſity take place; and as, on the one Hand, the great Men will find it requiſite, from no higher Principle than that of Intereſt, to deal more kindly, or at leaſt more humanely with their Vaſſals; ſo on the other Hand, the Government alſo will relax in its Severity; for in Proportion as the great Lords come to employ themſelves in attending to their own Affairs, managing their Eſtates, and taking Meaſures to live decently at home, and magnificently at Court, they will contract new Habits and new Notions, that will hinder them from running into Conſpiracies or deſperate Deſigns, and will conſequently contribute to fix their Government upon a firmer Foundation; and this by Degrees will beget a milder Adminiſtration, and in Proceſs of Time produce a better Conſtitution.

Thoſe who are acquainted with the preſent Situation of Things in *Ruſſia*, are very ſenſible that conſiderable Alterations have been made already, and that the Clemency of the preſent Reign has had very ſingular Effects, more eſpecially if we conſider, that as yet it has been of no long Duration. One Thing is particularly worth obſerving, that the Government is now altogether in the Hands of the Natives, from whence ſeveral Inferences may be drawn. Firſt of all, that evil Spirit which reigned among the People, and made them ſo averſe to all Kinds of Improvement, from a Notion that it ſerved only to ſubject them to Strangers, is in a great Meaſure worn out, and their natural Readineſs to pay an implicit Obedience to their Superiors, provided they are of their own Nation, makes them chearfully undertake thoſe Things to which they were formerly dragged with great Violence. In the next place it is evident, that the *Ruſſian* Nobility alſo have got pretty well rid of their Prejudices, begin to embrace other Notions, and to act upon Principles very different from thoſe by which they were governed in former Times. *Thirdly* and *Laſtly*, The happy Conſequences that theſe Alterations have produced, as well by eſtabliſhing great Regularity and a new Face of Things at Home, as by rendering them eſteemed and reſpected abroad, may be very well ſuppoſed to have raiſed ſo ſtrong a Barrier againſt their ever relapſing into their former Eſtate of Barbariſm, that we may rather expect to ſee them animated by a warm Ambition of carrying to the utmoſt Degree of Perfection that new Stile of Life, if I may be allowed ſo Metaphorical an Expreſſion, from whence they have already received ſo many and ſo conſiderable Advantages.

It may perhaps be alledged, and that with ſome Foundation of Truth, that there are ſtill many great Obſtacles to be got over in their Manners, Policy, and Views, both in private and publick Life; but when one conſiders how much greater Difficulties have been already overcome, and how much eaſier a thorough Reformation is effected when once well begun, than the ſlighteſt Alterations made, while a People are univerſally barbarous, we cannot ſuffer ourſelves to be much moved by any ſuch Repreſentations. Beſides, it is very well known, that the Impreſſions given us of the *Ruſſians*, by ſome who have remained ſeveral Years in that Country, in reference to theſe Points, have been falſified by Facts; for it is not a long Time ago that ſuch People inſiſted very poſitively on the abſolute Incapacity of the Government to march any conſiderable Body of Troops out of their own Territories, and this, notwithſtanding an Inſtance to the contrary freſh in every body's Memory, which has however proved an abſolute Untruth, that large Body of Auxiliaries having marched with greater Eaſe and Expedition, with more Chearfulneſs and Alacrity, and with better Diſcipline than the like Body of Men of almoſt any other Nation could have done, the Seaſon of the Year and other Circumſtances conſidered.

It is therefore better to found our Opinions upon Facts, than upon Conjectures; and we ſhall be leſs liable to be miſled, if we form our Sentiments of what this Nation may hereafter do from what they have already done, than from what Stateſmen or Travellers may believe, or pretend to believe, they can or will do.

But now it is high Time to collect from all that has been ſaid, ſome few Concluſions that may be applied to certain uſeful Purpoſes. It has been ſhewn, that notwithſtanding that Spirit of Diſcovery which has of late appeared in *Ruſſia*, and which in many Inſtances has been proſecuted with Zeal, Induſtry, and Vigour, yet there is little Reaſon to ſuppoſe that any great Progreſs can be made in ſuch Diſcoveries during our Times, and that for a Variety of ſtrong Reaſons which have been already given. That tho' from the Situation of this vaſt Country there reſult many, and thoſe too very conſiderable Advantages with reſpect to Commerce, yet there are many Difficulties that lie in the Way, and muſt render the turning theſe Advantages to any great Account, a Work of Skill, Time, and Labour. That notwithſtanding all this, there is a very high Probability theſe Difficulties will be got over, and that the beſt Uſe may be made of many, and in Length of Years, of all theſe natural Advantages, ſo as to render the *Ruſſians* by degrees a trading People, and that from theſe gradual Improvements, as well of the interior State of the Empire, as of its Intercourſe with Foreigners, the Face of Affairs will be continually altering for the better.

It is indeed no way impoſſible, that either from foreign Wars, or domeſtick Commotions, theſe Improvements may ſuffer ſhort Interruptions; but it ſeems to be a Thing abſolutely improbable, that the *Ruſſians* ſhould ever fall Back into their former State of Obſcurity,

rity, or relinquiſh that high Rank to which they have raiſed themſelves amongſt the Powers of *Europe*. Now if this ſhall be the Caſe, the preſent Syſtem of the Commercial World will be entirely altered. The bringing *Eaſt India* Commodities through *Ruſſia* into *Europe*, would as effectually ruin the Commerce now carried on by the Way of the Cape of *Good Hope*, as the Diſcovery of this demoliſhed the *Venetian* Trade by the Way of *Alexandria*, after it had ſubſiſted in the Hands of different Nations for the Space of ſeveral Ages, and for the very ſame Reaſons. When this is reflected upon a little, it will appear at once both evident and certain.

For firſt, with reſpect to the Evidence of it, whatever Method is taken, and I have ſhewn there may be three ſeveral Ways employed, two of which are not in the leaſt incompatible with each other; I ſay, which ever of theſe Courſes are taken, the Conſequence will be, that the Commodities and Manufactures of *India* will come at a more moderate Price at any Mart the *Ruſſians* ſhall eſtabliſh, than in the Way they are now brought into *Europe*, except, it may be, Spices, and a very few other Things hardly worth mentioning; and therefore, as the *Portugueſe* firſt, and the *Engliſh* and *Dutch* ſince, have ſupplanted the *Venetians* and the *Genoeſe* in this moſt valuable Commerce, thoſe who firſt fall into a Way of dealing with the *Ruſſians* for the Produce of *China* and the *Indies*, will in all Probability get the Start of other Nations, and thereby procure great Advantages to themſelves, notwithſtanding that the *Ruſſians* muſt alſo find their Account in this Manner of Dealing.

It may be indeed ſurmiſed, that all the Methods I have mentioned being attended with many and great Difficulties, and requiring a conſiderable Space of Time to be ſpent in Carriage, this will go near to render the Time of the Paſſage as long as that which is now in Uſe. But when we come to examine this Objection cloſely, it will not be found near ſo ſtrong as at firſt Sight it ſeems; for if this Trade can be carried on entirely by Sea, it would be no difficult Thing to prove, that Commodities might be tranſported from *Kamſchatſka* to *Archangel* in one Summer; and in Proceſs of Time, by raiſing proper Magazines in that Country, Supplies might be annually brought to *Archangel*, from whence this Paſſage is far from being long to certain Countries that I ſhall have Occaſion hereafter to mention. But if inſtead of taking this Method, they ſhould be brought, by embarking them on different Rivers to *Moſcow*, and from thence to *Archangel*, there will appear no Kind of Abſurdity in ſuppoſing this may be done in thirteen or in fifteen Months at the moſt; and after this Commerce ſhall be effectually ſettled, much ſooner. We muſt likewiſe conſider the Cheapneſs of Carriage through this Empire, and that Eaſe and Expedition with which the Court can bring any thing to paſs that is practicable, and may be attended with Profit.

I might upon this Occaſion take Notice of the Poſſibility there is, that the *Ruſſians* may one Day become Maſters again of *Aſoff*, or perhaps may conquer *Crim Tartary*, or at leaſt ſecure a Forteſs and Port there, which would open to them a new Channel for this Trade, as was ſhewn in the former Volume, in ſpeaking of the different Methods by which the Trade to the *Indies* is now, and has been formerly carried on. I preſume the Reader will eaſily grant, that if any one of theſe Attempts met with Succeſs, it would be an Encouragement to make more, and not only ſo, but would likewiſe furniſh the Means of making them, as well as raiſe the Spirits of the *Ruſſian* Court, and induce it to beſtow greater Attention upon Projects of this Kind, and make ſtronger Efforts for carrying them into Execution than it has hitherto done.

But it may be ſaid, To what Purpoſe is all this? Why ſhould we trouble ourſelves with foretelling or foreſeeing theſe Things, in regard to which, in the firſt place, there is great Uncertainty; and in the next, it is Time enough to concern ourſelves about them, when they ſhall actually come to paſs. To this I anſwer, That whoever has well weighed what has been advanced from the beſt Authorities, in this Section, will very plainly ſee, that the pretended Incertainty refers only to Time; for that the *Ruſſians* have turned their Thoughts this Way already, and that they have actually Variety of Means in their Hands to bring almoſt any Schemes of this Sort they can form to bear, are Points out of Diſpute. All that is in Doubt amounts to no more, than whether they ſhall fall into a Share of the *India* Trade within theſe ten Years, or whether another ten Years ſhall elapſe before they obtain it. This, I ſay, is the ſingle Queſtion upon that Head, and I refer it to the Conſideration of thoſe who make it ſo much a Queſtion, whether the Improbability of their attempting and ſucceeding in this Way, is near ſo great as that the *Swedes* ſhould attempt and ſucceed in the other Way, which we ſee they have actually done, and that their Trade to *China* is every Year increaſing.

Beſides all this, let it be remember'd that two new *Eaſt India* Companies are on the very Point of being ſet up, one at *Embden* in *Eaſt Frieſland*, under the Auſpice of his *Pruſſian* Majeſty, now become Sovereign of that Country; and the other at *Leghorn*, under the Protection of the Emperor in Quality of Grand Duke; and that it is no Secret there are Adventurers enough ready and willing to advance large Sums of Money for the Support of theſe Undertakings. Shall we imagine then, that ſo many Examples will not rouze the *Ruſſians* to look about them, and to put in their Claim, where they have at leaſt as good a Title as any; or ſhall we imagine, that thoſe who have the greateſt Advantages, ſhall be the only Parties in ſuch a Struggle that will meet with Diſappointments? No, certainly, whenever a Deſign of this Sort is heartily undertaken and vigorouſly purſued, it will not only ſucceed, but ſucceed ſooner, and in a higher Degree than can be eaſily imagined.

Now to the moſt material Point, which is to ſhew how far this touches us, and why we ought to intereſt ourſelves therein, ſo far as the early Conſideration of theſe Points may be called intereſting ourſelves rather than our Neighbours, tho' in Fact perhaps that may not be our Caſe, ſince we have not been of late over-ready in ſeizing Commercial Advantages that lay more immediately in our Way, than I muſt confeſs this does at preſent. I ſay then, it behoves us to be very attentive to what paſſes of this Kind in *Ruſſia*, for this plain and ſtrong Reaſon, *viz.* that we have better Grounds to hope we might avail ourſelves of ſuch a Change in the Commercial Syſtem than any other Country in *Europe*.

In the firſt Place, the Situation of our Iſland renders it very eaſy for us to carry on a large Trade with that Empire with mutual Advantage to both Nations? and in caſe it became very conſiderable in Compariſon of what it now is, we might very eaſily provide for the carrying it on ſucceſsfully, by enlarging and improving the Ports we have in the North-eaſt Part of this Iſland, by opening new ones, and by eſtabliſhing Magazines in proper Places; which by extending Navigation, promoting Induſtry, employing Thouſands of our Countrymen and Fellow-Subjects in ſeveral Ways beneficial to the Publick, who are now either idle and uſeleſs, or if at all employed, are in the Service of our Enemies, would turn to the great Profit of this Iſland, and to the inconceivable Advantage of its Credit and Influence. For there is Nothing we want ſo much as a due Diſtribution of Trade and Manufactures, that Wealth may circulate freely through every Part of the Iſland, and thereby diffuſe a kindly Warmth and lively Spirit, for Want of which, ſome diſtant Parts ſeem cold and uſeleſs, like decayed Limbs, which has tempted ſome Quack Politicians to talk of cutting them off, without conſidering that ſuch Amputations in the Body Politick are as abſurd and ridiculous as they are impracticable and unſafe.

Another Reaſon we have to expect that we might be preferred to moſt other Nations in ſuch a Caſe as this by the *Ruſſians*, is the many Years that not only a fair Correſpondence, but a cloſe Friendſhip has ſubſiſted between the two Nations; for from the Reign of Queen *Mary* to theſe Times, that is, from our firſt opening a

Paſſage to *Ruſſia* till now, we have dealt with its Inhabitants on the Foot of perfect Amity, except during the Uſurpation that followed after the Murder of King *Charles* I. when out of their Abhorrence of that Fact, all Intercourſe with this Empire, was ſuſpended. But after the Reſtoration, our Commerce with that Country again revived, and has continued ever ſince with little or no Interruption. It was here that the Czar *Peter* acquired the Rudiments of Ship-building, and from hence he drew moſt of thoſe Artificers which he employed in that and other Arts; not to mention the high Reſpect paid him by King *William*, and the many good Offices done to himſelf and his Family, by the Poſſeſſors of this Throne ever ſince.

We may indeed, with great Juſtice mention our Naval Power as a third Argument in Favour of what has been aſſerted; for, without all Queſtion, this muſt ever intitle us to be very highly conſider'd by ſuch as adminiſter the Affairs of that Empire, in as much as Experience has ſhewn what great Effects the Appearance of *Britiſh* Fleets have had in the *Baltick*, and how ſure that Cauſe is to triumph which they eſpouſe. As there is nothing clearer, than that the moſt certain Method of obtaining the conſtant Aſſiſtance of *Great Britain*, is to favour her Commerce, which *Sweden* heretofore, and *Portugal* has lately felt, ſo we may reaſonably preſume, that a Thing of ſuch Notoriety muſt be well known to the Politicians of *Ruſſia*, and cannot but have a proper Influence on their Councils, more eſpecially if we remember, that as *Ruſſia* has all things to hope from our Friendſhip, ſo ſhe has nothing to fear from the aggrandizing our Power.

This will be another Motive to increaſe her Readineſs to ſhare her preſent and future Advantages with us, becauſe it is impoſſible, from any Alteration of Circumſtances, or as far as can be foreſeen from any Viciſſitude to which all ſublunary Things are liable, that ever our Intereſt ſhould come to claſh with theirs; which is more than can be ſaid for almoſt any other Power in *Europe*. For this is one of the many Benefits that we draw from our being an Iſland, *viz.* that our Intereſts, as a great Power, muſt always be the ſame with our Intereſts as a trading Nation. It is indeed very poſſible, that ambitious enterpriſing Stateſmen may ſometimes pretend to divide theſe, and may perhaps find their Account in it; but as it is impoſſible the Nation ſhould, ſo it is at leaſt highly improbable that ſuch unnatural Notions ſhould long prevail. The *Ruſſians*, who have Senſe enough to know, and who have hitherto ſhewn Spirit enough to adhere to their true Intereſts, cannot fail of being ſenſible of this, and of affording due Weight to a Circumſtance of ſo great Importance which concerns them ſo nearly, and is of ſo permanent a Nature.

As Reaſon teaches this, ſo it has been hitherto juſtified by Experience, ſince in the ſeveral Revolutions that have happened there in our Times, every Government and every Adminiſtration have made it their firſt Care to renew their Engagements with *Great Britain*; and as they have always hitherto found their Account in ſo doing, we may from hence infer, that it will become a ſettled and unvariable Maxim in their Syſtem of Politicks.

Laſtly, in Conjunction with theſe there is another, and that no inconſiderable Argument, to induce the *Ruſſians* to grant us, rather than any other trading People, a Participation in whatever Advantages may accrue to them from the future Advancement of their Trade, or Improvement of their Dominions; and it is this, that we are moſt likely to take all their Commodities off their Hands, at the ſame time that we are able to ſupply them with whatever they can want or wiſh in Return. This is the natural Conſequence of that extenſive Commerce which we already poſſeſs, and which puts it fully in our Power to accommodate them with all thoſe Things which either Neceſſity requires, Convenience renders valuable, or Luxury deſireable; and all theſe too, ſuppoſing them enriched by a Correſpondence with the *Eaſt Indies*, in Exchange for other Commodities and Manufactures, without draining them of their Specie, and conſequently to the reciprocal Benefit of each Nation. Any one of theſe Arguments taken ſingly, might afford us very rational Hopes of attaining all that is propoſed; but if we take them all together, I think it will be very difficult for any one who is well acquainted with the true State of Commerce in general, and of theſe two Nations in particular, to avoid yielding to the Force of this Reaſoning, or not to confeſs that we have much to expect, and very little to apprehend from any Progreſs that the *Ruſſians* may make in the enlarging and Improvement of what Intercourſe they have at preſent with the Eaſtern Nations.

Yet I do not deny that ſome plauſible Objections may be made to this Syſtem; and to ſhew that I have thoroughly conſidered it, and to prevent the Reader's being much moved when-ever he ſhall hear them mentioned, I will briefly ſtate and remove them; yet I do not apprehend that any Syſtem, well ſupported by affirmative Arguments, ought to be rejected and treated as chimerical, even if there ſhould be ſome Difficulties incapable of a concluſive Anſwer; which however, in the preſent Caſe, I will be bold to ſay there are not. For it muſt be granted me, that all the Objections that can be made to this will either ariſe on their Side or on ours. I will begin therefore with ſuch as may be taken, or rather ſuch as may be ſuſpected, from the Syſtem of Power in *Ruſſia*, or from the natural Diſpoſiiton of the Nation.

In the firſt Place it may be ſaid, that if ever this comes to paſs, it will be a vain Thing to expect that the *Ruſſians* will take the Pains, which from what is laid down in this Section, it is apparent they muſt take, in order to obtain the Commerce of the *Indies*; and then from a Notion of Friendſhip and Alliances, transfer the Benefit of this hardly acquired Traffick to another Nation, which by exporting they might keep to themſelves. Now in Anſwer to this it may very well be obſerved, that as it muſt be a Work of Time, Application and Labour, for the *Ruſſians* to obtain this Trade, ſo the obtaining it will very fully employ their Endeavours, and leave them without either Leiſure or Abilities to attempt another and yet a harder Scheme to accompliſh, of opening a Trade to the other Countries of *Europe* at the ſame Time. Beſides, the one is very natural and agreeable to the People, who without ſtirring beyond the Limits of their own Territories, may convey all that is brought to them by their Subjects or their Neighbours to *Moſcow*, *Archangel*, *Petersbourg*, or ſome other Mart; where, no doubt, they will be glad to receive from another Nation ſuch Commodities and Manufactures as they really want or very much eſteem, in Exchange for the Superfluities of the Eaſtern Commerce, which would otherwiſe lie heavy upon their Hands. We ought likewiſe to reflect that tho' the Multitudes of barbarous Subjects they have, may be eaſily led, or if that ſhould be requiſite, without much Difficulty, be compelled to aſſiſt in promoting ſuch an inland Traffick, yet it will be a Thing morally impoſſible to make Seamen of theſe Savages, or to think of dragging them out of their Deſerts, which however horrible to others, are moſt deſireable to themſelves, in which, as a Matter of Fact, all Travellers agree.

In the next Place it may be ſuggeſted, that there is no Quality for which the *Ruſſians* are more remarkable, than their Jealouſy and Suſpicion of Strangers; and that therefore it is highly improbable they ſhould make it their Choice to deal excluſively with any one Nation, which I muſt confeſs ſeems to have much greater Weight than the former Difficulty. However, when it is maturely conſidered, it will be found to open a fair Anſwer to itſelf. For let the Jealouſy and Suſpicion of the *Ruſſians* be ever ſo great, it can only determine them not to deal with Nations that may be capable of turning what they acquire by their Trade to the Prejudice of their Intereſts, and to encourage the Commerce of any Nation that is in a Capacity to aſſiſt, and never can be under a Temptation to diſtreſs them, which we have already ſhewn to be preciſely the Caſe of the *Britiſh* Nation. This therefore, whatever it may be in Appearance, is in Reality and at the Bottom ſo far from being a concluſive Objection againſt my Syſtem, that in Fact it is a good Argument in its Favour; ſo that the better founded it is, the more Reaſon we have to believe, that their Succeſs, in regard to the *Indian* Trade, may become very beneficial to us, unleſs we are wanting to our ſelves.

The laſt Objection that I can foreſee, muſt be taken from the Nature of their Government, and in Reference to this it may be ſurmiſed, that there is no guarding againſt the ſhort Turns that may be made by a very ſelfiſh and a very arbitrary Power, and in ſupport of this, I know that ſeveral Matters of Fact may be urged, ſuch as, that *Peter the Great*, when he made his laſt Journey to *Holland*, ordered all the *Ruſſia* Leather to be delivered to his Factors at a certain Rate, and then ſold by them at a ſet Price to ſuch as would pay for it in Bills drawn upon *Amſterdam*. But this was in the firſt Place a very ſingular Thing, and if we ſtay till a *Ruſſian* Sovereign makes ſuch another Journey, it is not very likely to happen again. In the next Place it is very certain, that the *Czar* himſelf ſoon found the Inconveniency of that Proceeding, and revoked his Order, ſo that allowing it to be a Precedent, it appears at the ſame Time, a Precedent not like to be followed. Some certain Commodities there are which belong to, and are entirely appropriated to the Sovereign, who ſells them to the higheſt Bidder. This will hardly be the Caſe of *Indian* Commodities, for that would cramp the Trade, and turn to the Prejudice of the Sovereign. The new Trade to *Perſia* has been already once ſuſpended, which looks like a Caſe in Point. But when we remember, that this laſt Suſpenſion was occaſioned by an *Engliſhman*'s entering into the Service of *Shah Nadir*, and undertaking to build Ships of Force for him upon the *Caſpian* Sea, we ſhall not be much ſurprized at ſuch an Event, or fall into any Fear of our Countrymens traverſing *Siberia*, and the Countries beyond it, or tranſporting themſelves from *Kamſchatska*, into *Japan*, and creating Diſturbances there. Without doubt Difficulties may happen in this and in all other Trades; but for all this, Treaties of Commerce wiſely made, and punctually executed on our Part, will ſecure us from any real Danger, in caſe we are once poſſeſſed of this Traffick, from ever having it taken out of our Hands.

Thus far we have inſiſted only upon the Reaſonableneſs of Things, but there would be no Difficulty in ſhewing, that Experience is alſo in our Favour. In Reference to the firſt Objection we ought to reflect, that the *Swedes* and *Danes* actually diſpoſe of all their *Indian* Commodities to Strangers, and conſequently ſo muſt the *Ruſſians*. If we do not buy from them, it is becauſe it is not our Intereſt, and if we ſhould deal with the *Ruſſians*, it has been ſhewn, that it muſt be our Intereſt to buy, and theirs to ſell. As to the ſecond Objection, Treaties of Commerce have been ſet on Foot between *Ruſſia* and *France*, and between *Ruſſia* and *Spain*, but the Jealouſy of the Miniſters at *Petersburg*, and the Inconveniencies that were foreſeen, and in ſome Meaſure felt from thoſe Treaties, have rendred them ineffectual, whereas nothing of that Kind has happen'd to us. With reſpect to the laſt, we are towards the Cloſe of the ſecond Century of our Correſpondence with this Empire, and in that long Space, have not experienced any conſiderable Inconveniencies, from the ſhort Turns made by their arbitrary Government, and conſequently there is the leſs Room to fear for the Time to come; more eſpecially as the *Ruſſians* are ſo much altered, as their Cuſtoms are ſo much changed for the better, as the Intereſt of the two Nations are ſo thoroughly conciliated by repeated Alliances, and as we have all the Reaſon in the World to apprehend, that their Miniſters will conſult the Intereſt of their own Country, which while they do, they muſt be always Friends to ours.

We will now take a View of thoſe Objections that it may be ſuppoſed may ariſe on our Side, and as I have ſtated the former in their full Force, ſo I ſhall do the ſame Juſtice to the latter, as I have no other Thing in View, than to find Truth, and to point it out to others. It is not at all impoſſible, that, notwithſtanding all that has been or can be offered upon this Subject, the old Objection will ſtart up, and we ſhall be told, that ſuch a Trade as this would be altogether unneceſſary, that the Nation has no Need of it, that little Profit could be drawn from it, and that therefore it is wild and chimerical to talk about it. As this is abſolutely begging the Queſtion, I might very fairly diſpenſe with giving any Anſwer to it all.

But as I deſire to leave nothing unanſwered, I ſhall not make Uſe even of this allowable Advantage, but ſhall conſider it, as far as it is poſſible ſuch a Suggeſtion can be conſidered. We have already explained the Cauſes from whence it is probable, that, if ever a Trade is eſtabliſhed from *Ruſſia* to *China*, or the *Indies*, the Produce of that Trade will come cheaper than in the preſent Courſe of Things, and I preſume, it will be no difficult Matter, for an intelligent Reader to perceive, that it will behove us to think of finding out the cheapeſt Market, when ſo many new Companies are ſet up, by which it will be put out of our Power to vend the Commodities we bring directly from the *Indies* at a high Rate. An Opinion is propagated with great Warmth, that however is altogether erroneous, which is this, that the *Swediſh*, *Daniſh*, and other new Companies are under very great Difficulties for the Want of Settlements, that this renders their Trade very precarious, and has alſo a great Effect in diminiſhing its Profits. All this is very plauſible, and ſerves to give us hope, that theſe new Companies cannot long ſubſiſt, but in Reality the Caſe is far otherwiſe. The Want of Settlements is ſo far from being a Diſadvantage in Reſpect to National Commerce, that it is quite otherwiſe. We know very well, that the *Oſtend* Company, ſo long as it ſubſiſted, made large Dividends; we know that the *Swediſh* Company have ſometimes divided near Forty *per Cent.* and if this is thought at all incredible, or if credible, that there is ſomething of Art in it, let the inquiſitive, impartial, and judicious Reader, conſult the Table of Dividends of the *Dutch Eaſt-India* Company, inſerted in the Volume of this Collection, and he will find, that in the ſame Proportion the *Dutch* Company became potent in the *Indies*, their Dividends to their Proprietors have leſſen'd. My Inference from this, is, that when there comes to be a real Competition in Trade, the new Companies will be able to underſell the old Ones, and then I ſuppoſe the Neceſſity will pretty plainly appear, of having Recourſe to the cheapeſt Market, if we intend to preſerve this Trade at all. Now it has been ſhewn, that whenever the *Ruſſians* can bring their Deſigns to bear, they will have very great Advantages over their Neighbours; for either they will not be obliged to make any Settlements at all, or if they are obliged to make them, they will be made in their own Dominions, that is, either at the Mouth of the River *Amur*, or upon the River of *Kamſchatska*. In either of theſe Caſes, the Expence will not be very large, and whatever it may be, as it will be entirely laid out amongſt themſelves, it will in Effect be no Expence at all, as to the Nation. Theſe Circumſtances therefore maturely conſidered, will I preſume, go a great Way towards ſatisfying the candid Reader, that there is nothing chimerical, in ſuppoſing that before the End of the preſent Century, the *Ruſſians* may divert to themſelves, a very large Proportion of the *Eaſt-India* Trade, and when this comes to be the Caſe in Fact, which is now ſo only in View, what I have advanced upon this Subject, will be thought very well worth the Reading.

The ſecond Objection that may be raiſed in reſpect to ourſelves, will be taken from what is ſtiled a Fundamental Law in reſpect to our Commerce, by which I mean the Act of Navigation, which I very readily admit, is directly in the Teeth of what I propoſe, ſince the *Britiſh* Subjects are reſtrained by this Act, from importing Goods from other Countries, than thoſe in which they grow. Now in Anſwer to this, I do not pretend to ſay, that the Act of Navigation ought to be repealed, or that the Principle upon which it was made was wrong in it ſelf, or miſtaken by thoſe who made it; but this I ſay, that all Laws made upon a general Principle, are ever liable to ſome neceſſary Exceptions, as this Act has often been, and for that very Reaſon has been diſpenſed with. As for Inſtance, in the firſt *Dutch* War, under the Reign of King *Charles* II. that King by Proclamation gave Leave for all Foreigners to import Artillery, Ammunition, Timber, Hemp, and Flax, and in ſhort, all Sorts of Military and Naval Stores, in their own Bottoms; which if he had not done, that War could not have been carried on; and therefore this is among the Number of the few Actions in that Reign, which we find approved and commended by Mr. *Roger Coke*, who certainly was no Flatterer, either of that Monarch, or any of his Family. I might add to this ſeveral other Inſtances, but that I look upon them as unneceſſary, ſince there is an unwritten Law in regard to Commerce, as truly fundamental as the Act of Navigation, *viz.* That whatever will promote it, either is lawful, or ought to be made ſo. It is an abſurd Notion to ſuppoſe, that while Trade remains a fluctuating Thing, which it ever was, and ever will be, there can be any Laws made about it that ought to remain invariable.

It is indeed true, that with reſpect to the Act of Navigation, as with regard to every other Act made upon right Motives, and with due Deliberation, we ought to be very cautious in making Alterations; but provided they are made with Caution, no doubt ſuch Alterations ſhould be made when they appear neceſſary, or which is the ſame Thing, advantageous. This has been always thought allowable in Time of War, when done by the Royal Authority only, notwithſtanding the juſt Apprehenſions that have been entertained of allowing too great Latitude to the Prerogative; but with ſenſible People the Laws and the Prerogative both will ſtand upon the ſame Foot with regard to the publick Good; that is to ſay, it will be expected, that either, or both of them ſhould give Way upon ſuch an Occaſion, and the proper Judges of this Occaſion, are, without doubt, the Legiſlature. The Humour therefore of giving a peculiar, and, as it were, ſacred Authority to particular Acts, and treating them as ſuperior in their Nature to the reſt of our Laws, is, to ſay the beſt of it, no better than political Enthuſiaſm, which may be attended with very bad, and can be very ſeldom productive of any good Conſequences. There is no Doubt, that while Things remain in their preſent Channel, or any thing near it, and while there is no Danger that any of our Neighbours may ſupplant us, by drawing to themſelves the Diſtribution of *Indian* Commodities and Manufactures brought into *Ruſſia*, it would be very abſurd and chimerical to make any Change in the Act of Navigation relative to this Point by Way of Precaution. But on the other Hand, if ever ſuch a Trade through *Ruſſia* ſhould become practicable, it would be to the full as abſurd and ridiculous to pretend that no Alteration ought to be made in this Law, but that we muſt ſtill remain tied down to the old Method of carrying on this Commerce, though ever ſo much to our Diſadvantage.

I dare ſay, that no body will diſpute this with me at preſent, but will as readily grant the latter as I do the former; neither is it impoſſible that ſome may think it is to no Purpoſe to dwell upon this Head, which of itſelf is ſufficiently clear. So for any thing I know it may be, but when the Paſſions of Mankind are moved, when their Prejudices are thwarted, and both theſe happen when-ever their particular Intereſts are ever ſo lightly touched, all Things change their Faces, and what before was thought as clear as the Sun at Noon-day, begins to be obſcured, and in a very little time is not ſo much as diſcernable. So many Inſtances of this Sort have happened within the Compaſs of my own Obſervation, that I cannot help providing againſt them; and I muſt deſire my Readers to obſerve, that whatever Conceſſions are made me now, will remain juſt as reaſonable, when ſome People, for Cauſes that will be then viſible enough, may take it in their Heads to retract them, and ſet up once more this Notion, that the Act of Navigation is a fundamental and conſtitutional Law, no Part of which is to be repealed or altered on any Pretence, or for any Reaſon whatever.

The third Objection on this Side, will in all Appearance ariſe from the Privileges of the *Eaſt India* Company; and indeed, this I think by much the moſt formidable Objection of all, becauſe it is the moſt reaſonable. It will be ſaid that this Company hath great Merit; that it has rendered great Services to the Nation; that its Proprietors are a very conſiderable Body; that they have received high Immunities from the Favour of the Crown; and that theſe have been confirmed to them by the Legiſlature. To all this it might be anſwered in general, That all Privileges, thoſe of excluſive Trade not excepted, are granted in Truſt for the publick Benefit, and that tho' this may not be expreſs'd, yet it is always to be preſumed and underſtood; for a Law made for private Advantage to the Detriment of the publick, is void in itſelf; neither is this any Impeachment of the Power of the Legiſlature, becauſe it muſt be ſuppoſed that it was obtained by Deception, that is, by giving falſe Colours to Things, to which the higheſt Tribunals may be ſubject, becauſe the higheſt human Aſſembly cannot be infallible. Upon theſe Topicks, I ſay I might inſiſt, in order to furniſh a general Anſwer; but I declare I do not rely upon them, tho' at the ſame Time, I am very far from admitting that they are not juſt and reaſonable, for the Good of the whole ought certainly always to take place, and no Body of Men, however conſiderable, can have a Right to any Thing that is either dangerous or deſtructive to the Nation.

Yet the Anſwer I depend upon is this, That in ſuch a Caſe, Expedients are to be ſought for that may reconcile the Intereſts of the Company to thoſe of the Nation; neither will it be difficult to find ſuch Expedients; for when ſuch a Trade ſhall be found beneficial, Care may be then taken, firſt to fix it by a Treaty of Commerce, and then the Benefit of that Treaty may be made over to the Company, provided always due Care be taken that this Privilege ſhall not be abuſed, or ſo managed, as to turn to the Emolument of that Company, and the Prejudice of the Publick.

Thus I have taken the Liberty of diſcuſſing this Matter thoroughly, not from any preſumptuous Opinion of my own Judgment, or from a Deſire of dictating in a Matter of ſo high Importance, but merely becauſe I think any Man may ſpeak and write freely as to a Caſe that he thinks may happen, and which others, who are perhaps wiſer than he, will conclude may never happen. One of the moſt judicious Hiſtorians of Antiquity thought his Time not thrown away in examining a Matter ſtill more chimerical than this, which was, Whether *Alexander* the Great would have ſucceeded, if he had attempted to ſubdue the *Romans*? Some great Criticks have imagined, that all he meant was to pay a Compliment to his Countrymen. I ſhould be glad to have the ſame mild Cenſure fall for the preſent upon this Diſcourſe, in which I think it is moſt evident that I can have no private Views, and therefore hope it will be no inexcuſable Piece of Vanity, if I flatter myſelf upon this Occaſion, with, having thought for the Publick.

If after all I have ſaid, it ſhould fall out that nothing of this Kind ever happens, why then it is plain, that whatever I have advanced can do no Hurt. But if, on the other Hand, my Conjectures ſhould happen to hit the Mark, or even to come near it, no body will deny, that the previous Conſideration of the Subject may be of Uſe; for theſe Arguments, how little Authority ſoever they may derive from their Author, muſt neceſſarily carry with them this Weight, that they proceeded purely from a Spirit of Reaſoning, and were not dictated from any particular, private, or ſelfiſh Conſideration. I muſt alſo deſire it may be remember'd, that I have already conſider'd the Point of ſecuring, improving and promoting our *Eaſt India* Trade in many other Lights, which evidently ſhews my ſincere Deſire that we may avail ourſelves of our own Skill, our own Lights, our own Naval Power, and our preſent Circumſtances, rather than wait, till by our Indolence and Neglect we come to fall under the Neceſſity of being ſome way beholden to others. Until ſuch Time as this ſhall become the Caſe, there is no Need of recurring to this Syſtem; but if ever it ſhould become the Caſe, there will be no Harm in having this Syſtem to recur to, and in all Probability it will not then be thought a Crime that ſuch Notions as theſe, once upon a Time, enter'd into a ſpeculative Head, for the Benefit of thoſe who confine their Thoughts intirely to Things preſent, and care not to look forward into Futurity, or to trouble themſelves with contriving Schemes for the Service of Poſterity.

However I ſhall conclude this Section, with a full Proof, that I am far enough from being bigotted to any Syſtem of my own. For after all that has been advanced from Matters of Fact, from the Conſideration of *Behring*'s Diſcoveries, from the Hints that we have received of ſubſequent Diſcoveries, and from the Conſequences that we might rationally conclude may attend them, it muſt be acknowledged, that if we continue to proſecute that Deſign, which is the Glory of the preſent Times; I mean, the endeavouring to diſcover a North-weſt Paſſage, we ſhall infallibly deliver ourſelves from all Apprehenſions of ſeeing either the *Eaſt* or the *Weſt-India* Trade ingroſſed by any other Nation, but on the contrary, may have well grounded Hopes of extending our Commerce, and preſerving our Naval Power to the lateſt Times, and as long as we ſhall continue a Nation.

That there have been probable Motives to eſtabliſh the Belief, and conſequently to encourage our Endeavours for finding out a North-weſt Paſſage, I have ſhewn at large in its proper Place, have occaſionally inſiſted upon them elſewhere, and particularly in this very Section; that all the Diſappointments we have hitherto met with, ought not to deſtroy this Belief, or deter us from carrying our Enquiries as far as they will go, has I think been very clearly made out by others; but whether all that has been done and written upon this Subject, will be ſufficient to keep up that Spirit, which in the End muſt bring this long-hid Secret to light, is in the Womb of Time. However, as no Man wiſhes more to ſee it diſcloſed, or has done more within the narrow Sphere of his Capacity towards the promoting of it, without any Motive of Intereſt than myſelf; I cannot but think it my Duty, though it may ſeem a little out of the ordinary Manner of Writing, to finiſh this Section, by giving the Reader notice of ſome new Arguments, perſuading the Poſſibility, Probability, and Reality of this North-weſt Paſſage.

For who can tell into what Hands this Book may fall? Part of it has already travelled to the laſt diſcovered Parts of *Hudſon*'s Bay, and ſerved for an agreeable and not uſeleſs Companion to the Gentleman who carried it. It may be, that what I have farther to ſay, will be no leſs fortunate, perhaps more ſo, for what is there impoſſible, in ſuppoſing it may amuſe the leiſure Hours of him, who is ſo lucky as to make the Diſcovery? At leaſt this I will hope, and in the Warmth of that Hope, ſet down thoſe Reaſons, that, to the beſt of my Knowledge, have, in the long Courſe of this Diſpute been wholly omitted.

To begin then with an Argument of the Poſſibility of ſuch a Paſſage, that learned Naturaliſt, and moſt candid Enquirer after whatever had any Relation to rational Coſmography, Mr. *Ray*, in his excellent Diſcourſe upon the Deluge, aſſures us, that *Eaſt-India* Fruits have been found waſhed on Shore, on the North-weſt Iſlands of *Scotland.* Now if this be a Fact, as I believe indiſputable Evidence might be brought to prove it ſuch, then I preſume, it may be ſtil'd an Argument for the Poſſibility at leaſt of ſuch a Paſſage. Whoever conſiders how reaſonable and how natural it is to ſuppoſe, that theſe Fruits, of whatever Kind they be, are waſhed from the neareſt *Indian* Coaſt, to that upon which they are found, will readily confeſs, that a North-weſt Paſſage is the moſt likely Way for them to come. If we ſhould ſuppoſe that many Iſlands, great and ſmall, are ſcattered in the Space between *America* and *Aſia*, then it might be more probable, becauſe ſuch Fruits might be preſumed to grow in thoſe Iſlands, and being driven to the Coaſts of *California*, be forced by the high Tides that are now known to flow there into the Paſſage, and ſo round to the North-weſt Iſlands before-mentioned.

I treat this as an Argument of the Poſſibility only of ſuch a Paſſage, becauſe there are other Ways, by which theſe Fruits may be ſuppoſed to come; but then there are infinitely greater Difficulties that lie in the Way of ſuppoſing other Paſſages than can be poſſible objected to this. I will name only one. There can be no Reaſon in the World aſſigned, if they come by any other Paſſage than this, of the North-weſt why they ſhould not be found in other Places, and that in the ſame Plenty, or rather more ſo, than in theſe Iſlands of *Scotland*, which is however a Fact, that I never heard ſo much as pretended. But be that as it will, and allowing that there are other Paſſages by which they may come, it is at moſt but poſſible they ſhould come by theſe Paſſages, and I think no Man that is a Judge of the Subject, will deny, that till we have full Evidence of there being no ſuch Thing as a North-weſt Paſſage, it is likewiſe poſſible they may come that Way. Now though in itſelf, this is no very weighty Argument, yet in Conjunction with others it may become ſo; for in all Enquiries of this Nature, the firſt Step in the moſt regular and certain Method, is to prove that the Thing ſought for is poſſible, and the next, that it is probable.

In Reference to this alſo, I think, I can offer another Argument, that is in a good Meaſure new, and it is this. The moſt judicious Coſmographers are unanimouſly of Opinion, from the wiſe Diſtribution of Land and Water, in the Structure of this Globe, that not only the Centre of Motion, and the Centre of Gravity, but the Center of Magnitude alſo is very nearly the ſame, and conſequently that the Center of the Convex Superficies of the Sea is the true Center of the whole terreſtrial Sphere. It was from this Argument, that before any Diſcovery was made of a Southern Continent, of which a large Account has been given in the former Volume, it was judged highly probable, that ſuch a Continent there might be, and as we now very well know, that ſuch a Continent there is, it certainly adds both Weight and Strength to this Way of Reaſoning.

Before it was known that the Continent of *Aſia* extended ſo very far to the North-eaſt, we might with equal Probability have conjectured, that either it really was ſo, or that the Continent of *America* projected very far to the Weſt, in order to form a due Proportion between Land and Sea. But now that the Thing is put out of Diſpute, on one Side, and we have all the Certainty that can be deſired, that the North-Eaſt Continent of *Aſia*, extends above thirty Degrees of Longitude into the other Hemiſphere, there is the higheſt Probability, that the Balance of Sea is preſerved on the *American* Side, and that there is no ſuch projecting of that Continent, as till this Diſcovery was made, might with equal Reaſon have been preſumed. From this Conſideration therefore, one hath as good Cauſe, as the Nature of the Thing will allow, to aſſert, that the Space between *America* and *Aſia* is chiefly Sea, as we actually know it to be, between *America* and *Europe*, on the other Side.

This will appear ſtill the more probable, if we conſider the vaſt Breadth of *America* from the Coaſts of *Canada*, or of *Hudſon*'s Bay, to *California*, and how ſtrangely diſproportionate this would be, if the Continent ſhould be ſtill extended farther on that Side towards *Aſia*. I cannot tell what Degree of Evidence this may carry to other People, but I confeſs, it weighs very much with me, and I flatter myſelf, that whoever will ſeriouſly conſider the Figure of the Globe, with the new Diſcovevies of the *Ruſſians* properly laid down thereon, will incline to think as I do, and ſee plainly, that the Suppoſition of ſuch an extended Continent would in a great Meaſure deſtroy that Proportion between Land and Sea, which, for the Cauſes before aſſigned, we have the greateſt Reaſon to believe ſhould be always preſerved. If therefore this be ſo, it cannot be thought, that I carry Things too far, in alledging that this is a probable Argument in Favour of a North-weſt Paſſage.

To this I beg Leave to add another Conſideration, which will carry the Thing much farther. The greateſt Philoſophers have differed, at leaſt heretofore, about the Origin of Rivers; but in this I think they all agree, that as Rivers fall at length into the Sea, ſo from thence they are in a great Meaſure derived, whether by ſecret or ſubterraneous Paſſages, and the Percolation of Waters through the Earth, by the condenſing of Vapours, or the falling of Rain. I ſay, which ever of theſe Ways we ſuppoſe Springs, Fountains, and Rivers, to ariſe, or by a Conjunction of them all, ſtill the Vicinity of the Sea is neceſſary; and it is obſerved, that the Size of Rivers depends, in a great Meaſure upon the Extent of the Country thro' which they run, and of the Diſpoſition of the Seas in reſpect to that Country, of which *America* is a very pregnant Inſtance, for that Continent having a vaſt Ocean on each Side, the *American* Rivers, are the largeſt in the World.

If therefore the Continent of *America* ſhould be ſo extended as to join to that Land which was lately ſeen by Captain *Behring*, and before him by others, it would not be eaſy to conceive how ſuch a Continent as this ſhould be furniſhed, in any Proportion, with Rivers, in as much as there would be but a narrow Sea between that and *Aſia*, and its Diſtance from thoſe that we ſtile the North-Seas, would be prodigiouſly great. But if the Caſe, as I ſuppoſe it to be, is quite otherwiſe, and the Space between the two Continents is a great Ocean, interſpers'd with Iſlands of different Sizes, then the Diſpoſition of this Part of the Globe will correſpond perfectly well with the Diſpoſition of other Parts, and theſe Countries may be at once as rich, as beautiful, and as pleaſant, as any that are hitherto known, either in the Old World, or in the New.

Thus I have aſſigned two probable Reaſons in Favour of this Paſſage, or rather, I have ſupported one good Argument by another; for in Reality, this ſecond Reaſon is no more than aſſigning the Reaſon of the firſt. When we ſay that the Globe is ſo diſpoſed as to form a Ballance between Land and Sea, becauſe this ſeems to be neceſſary, or at leaſt expedient to preſerve the Equability of the Earth's diurnal Motion, we give a reaſon that reſpects the World in general; but when we ſay that Continents muſt be of a moderate Size, in order to render them convenient Habitations for Men, we give a Reaſon that accords to, and agrees with every known Portion of the Globe, and conſequently is more capable of being thoroughly examined and perfectly underſtood. I might add to this, as perfectly conſiſtent and agreeable to my Notions, the Obſervations made by thoſe who were laſt ſent to diſcover in *Hudſon*'s Bay; who finding the Rivers there ſhort in their Courſe, and of no great Breadth, very judiciouſly concluded that the Country could not be very broad, or the Rivers of a greater Length that fell into the *South Seas*. I ſay, I might inſiſt upon this, but as I have promiſed to dwell only upon new Arguments, I ſhall content my ſelf with the bare Mention of it.

From poſſible and probable Arguments, we will proceed, with the Reader's Permiſſion, to ſuch as actually prove a Paſſage, for ſuch there are, and thoſe likewiſe new, and hitherto not inſiſted upon. It was long ago obſerved, that the Tides in the Northen Parts of *Hudſon*'s Bay were ſo high, as put it out of Doubt that they could not be propagated from the *Atlantick* Ocean; it was then pretended by thoſe who oppoſed the Sentiment of there being a North-weſt Paſſage; that theſe extraordinary Tides were raiſed from a Communication with *Baffin*'s Bay and *Davis*'s Streights; in Anſwer to which, it has been ſhewn, that the Tide in the *Welcome* roſe 17 Feet, and not above 9 Feet in *Davis's* Streights; from whence it is juſtly concluded, that ſuppoſing ſuch a Communication, it would by no Means prove what it is brought to prove, becauſe the Effect would be then ſuperior to what is ſuppoſed to produce it.

Thus, I ſay, the Caſe has hitherto ſtood in reference to the ſeveral Opinions that have been advanced upon this Subject. For my Part, upon mature Deliberation, I am inclined to a Sentiment different from all theſe; for I think that there is a Communication between *Hudſon*'s Bay and *Davis*'s Streights, and that the Height of the Tides in the latter is not otherwiſe to be accounted for, than by allowing a free Paſſage into the *South-Seas* near the *Welcome*. I ſhall endeavour to prove this to ſuch as are Judges of the Thing, and well acquainted with the Facts, in very few Words. Captain *Baffin*, in his Letter to Sir *John Wolſtenholme*, obſerves, that the Tides in *Davis*'s Streights keep an equal Courſe, and riſe to about eight or nine Feet. Now this being the Fact, I ſay it is impoſſible that this Tide ſhould come from the *Atlantick* Ocean; for at *Cary Swan's Neſt* it riſes but ſix Feet, and therefore in *Davis*'s Streights ought not to riſe above three or four. Neither is it at all likely that it ſhould come from any Northern Ocean; for upon the Coaſt of *Nova Zembla* the Tide riſes but one Fathom, or ſix Feet, and not above half ſo high at *Spitzbergen*.

This equal and regular Tide therefore up *Davis*'s Streights, declining gradually till it riſes only a ſingle Foot in *Baffin*'s Bay, is as much out of the ordinary Courſe of Things, as the high Tides in the *Welcome*. As therefore ſuch extraordinary Effects muſt have a proportionable Cauſe, and as we have hitherto looked on every Side for ſuch a Cauſe in vain, it remains that a Paſſage by the North-weſt into the *South Sea*, is that Cauſe, for that will fully and perfectly account for both theſe Appearances. It ought, according to the known Law of Tides, to make them in the *Welcome* at the Time in which they are found to riſe, and if they are propagated from *Hudſon*'s Bay by any Communication into *Davis*'s Streights, they may very well enter from the Southward, that is, through ſome Paſſage on the Weſt-ſide of *Davis*'s Streights, and ought to riſe and to decreaſe in the very Manner which they are found to do; and if this will not paſs for an actual Proof of a North-weſt Paſſage, I am at leaſt intitled to expect from him who denies it, to give a more ſatisfactory Account than I have done, of the Tides both in the *Welcome* and in *Davis*'s Streights, for till this is done, I ſhall continue to look upon this Argument as unanſwerable.

As to the common Affectation of treating this Matter as a Chimera, and behaving towards thoſe who think it otherwiſe, as if they were either very credulous or viſionary People, ready to rely upon any Authority, or apt to be led away by whatever has ſo much as the Appearance of an Argument; I muſt ſay, that it is either an inſolent, or diſingenuous Way of treating them. Inſolent, if it comes from thoſe who have not ever looked into the Merits of the Cauſe, or are not competent Judges if they have; or diſingenuous, if being competent Judges, they haughtily reject an Opinion ſupported by ſtrong Reaſons, without deigning to refute thoſe Reaſons, which they ought to do if they are able, and if they are not able, they ought to confeſs it.

But I now haſten to a Concluſion, and ſo to leave the Reader in Poſſeſſion of all the Arguments that I can offer him in Support of this, which I am not aſhamed to own, is a favourite Opinion, becauſe I look upon it as equally tending to promote the Honour of Science, the Welfare of Mankind, the Extenſion of Commerce in general, as well as the Glory and Good of this Country in particular. How far ſoever this latter Conſideration may move us, who have, or ought to have, an extraordinary Zeal for whatever may turn to the Benefit of the Place of our Birth, yet I preſume it cannot be ſuppoſed that foreign Writers can lie under any Influence or Biaſs of this Kind, and therefore I ſhall crave Leave to mention a very ſingular Matter of Fact, inſerted by the very curious, and no leſs learned Father *Charlevoix*, in his Chronological Series of Diſcoveries, prefixed to the firſt Volume of his Hiſtory and Deſcription of *Japan*; in which he tells us, that in the Year 1609, he has read in ſome Memoirs, that a certain Ship ſailing from the Port of *Acapulco*, in the Kingdom of *New Spain*, in order to proceed in the uſual Courſe to the *Manilas*, being an annual Ship, was ſurprized almoſt as ſoon as ſhe was out of Port by a Tempeſt, that laſted long, and with ſuch Violence, that her Crew were forced to give her up to the Mercy of the Winds, which in two Months Time brought her upon the Coaſt of *Ireland*, and into the Harbour of *Dublin*; from whence ſhe ſafely returned to *Lisbon*, where, by Order of the King of *Spain*, all the Pilots Journals were taken from them and burnt, in order to prevent Strangers from becoming acquainted with ſo ſhort a Cut into the *South-Seas.* I have not added or altered, magnified or diminiſhed this Relation in the leaſt, but have reported it exactly as I find it my Author.

It is indeed to be wiſh'd, that we had a better Account of the Memoirs from which this Fact was taken, becauſe in them, perhaps, there might be other Circumſtances worth knowing, and which might be of Uſe to fix the Matter of Fact beyond Diſpute. In the mean time I muſt obſerve, that this has no Correſpondence whatever with the Relations heretofore publiſhed of Perſons who have made that Paſſage. The *Portugueſe* Pilot *Martin Chacke*, who publiſhed in 1573, an Account of his Return from the *Eaſt Indies*, through the ſame Paſſage to *Ireland*, from whence he went to *Lisbon*, places his Voyage in the Year 1567, and therefore it is abſolutely impoſſible that theſe two Voyages ſhould be confounded, as at firſt Sight might be imagined, from the Circumſtance of their both putting into *Ireland*, and returning from thence to *Lisbon*; on which, for the Reader's Satisfaction, it may not be amiſs to inſiſt a little farther.

In the firſt Place, There is a very wide Difference in the Place from which the Ships ſailed, the former from the *Eaſt Indies*, the latter from the *Weſt*; the Size of the Ships alſo are very different; the *Portugueſe* Veſſel was of the Burthen only of 80 Tons; the *Acapulco* Ship near ten times as big; the *Portugueſe* Pilot ſailed in Company with four Ships of very large Burthen for *Europe*; the *Spaniſh* Ship ſailed alone for the *Eaſt-Indies*; the *Portugueſe* did not put into *Dublin*, but into a Port on the North-weſt of *Ireland*, from whence he returned to *Lisbon* a Month or five Weeks before the other Ships in Company with which he ſailed from the *Eaſt Indies*: And beſides the Great Difference in Point of Time, which is no leſs than two and forty Years, it is very remarkable, that the *Portugueſe* Pilot returned home, and publiſhed his Book under the Reign of *Don Sabaſtian*, King of *Portugal*; whereas at the Time the *Spaniſh* Ship arrived at *Lisbon*, the Kingdom of *Portugal* was under the Power of the Crown of *Spain*; of all which Circumſtances the Reader may be convinced, by comparing this Relation with the Certificate relating to the *Portugueſe* Voyage, inſerted in this Volume, Page 401.

I muſt further obſerve, that if there be a North-weſt Paſſage, there is nothing incredible in the Voyage being performed in ſo ſmall a Time; for from the *Welcome* in *Hudſon*'s Bay to *Ireland*, is a Voyage only of three Weeks; and if there be a Paſſage, the like Time might have ſufficed for their coming through it from *Acapulco.* I might take Occaſion to add to this, what is mentioned by that great Mathematician Mr. *Henry Briggs*, of a *Spaniſh* Captain reported to have ſailed this Way to the *Moluccas*, in the Service of the Emperor *Charles* V.; but, as I am perſuaded, that he only made ſuch an Offer, and did not really attempt to perform it, I ſhall ſay no more of it. Upon the whole, having ſhewn the Poſſibility, Probability, and Reality of ſuch a Paſſage, by Arguments as concluſive as the Nature of the Thing either requires or will admit, I have Nothing more to add but my good Wiſhes, that the Spirit lately raiſed for Diſcovery may not be allowed to ſink, or the Light we have already obtained be left to extinguiſh, before this Matter be proſecuted to the utmoſt Extent, and all the Places thoroughly ſearched, where, with any Degree of Probability, ſuch a Paſſage may be look'd for. The Succeſs of ſuch an Undertaking would indeed contribute effectually to raiſe our Hopes, and efface our Apprehenſions, by opening not only a new, ſhort and eaſy but a commodious, pleaſant, and wholſome Paſſage to the *Eaſt Indies*, which would at once contribute to encourage and promote our Induſtry at Home, and extend our Commerce abroad, as well as increaſe our Shipping, and improve our Navigation.

Beſides all this, we have great Reaſon to hope, that ſo fortunate an Enterprize would recover us out of that State of Supineneſs and Luxury into which we are fallen, and inſpire us with a noble Deſire of tranſmitting Wealth and Reputation to our Poſterity, rather than live as we do at preſent upon the Riches derived to us from our Anceſtors, and the Credit that their known Succeſs in Trade has given us with all our Neighbours. Theſe are Conſiderations truly important, ſuch as ought to make Impreſſion on the Minds of all who have the Intereſt of their Country at Heart, who wiſh to ſee her thrive beyond, and yet not at the Expence of other *European* Nations. Theſe are Conſiderations that relate alike to all Ranks and Degrees of People, becauſe all Ranks and Degrees will receive Benefit from it, if properly weighed, carefully attended to, and puſh'd with Spirit and Succeſs, theſe Conſiderations would lead to the only effectual Methods of repairing paſt Miſtakes, and opening a wide Proſpect to future Advantages, the Conſequences of them would ſpeedily enable us to diſcharge our Debts, and thereby afford the Means of taking off our Taxes; they would alſo extinguiſh Party Animoſities, diſſipate Faction, and by opening ſuitable Employment to every different Genius, afford a proper Scene of Action to all, without giving Diſturbance to any.

It may be therefore juſtly preſumed, that thoſe whoſe peculiar Intereſt it is that their Countrymen may be made rich and happy by their Wiſdom and Care, and tranſmit the Memory of their glorious Adminiſtration to lateſt Times, will have a juſt Regard to whatever hath a Tendency to promote ſuch a Diſpoſition as this, which is always neceſſary, and which, however, may be ſaid to be more eſpecially neceſſary at this Juncture, when we receive repeated Accounts of the Pains, every where taken, to point out the Benefits of Diſcovery, to magnify the Advantages of Commerce, and to kindle a Spirit of Induſtry amongſt thoſe who have been remarkable for the Want of it through a long Series of Ages. How poſſible it is to enlighten even the cloudieſt Heads, how practicable to warm even the coldeſt Mind; and how ſoon ſuch an heroick Flame gathers Force and Strength enough to carry all before it, the former Part of this Section has fully demonſtrated. Neither would it be near ſo hard a Task to ſhew how eaſily Commerce may decline, how certainly Virtue may wear out, and how ſpeedily Frugality and Induſtry may decay, if not warm'd and cheriſh'd by proper Attention and due Encouragement, which are full as requiſite to preſerve them as Food to Animals, Fuel to Fire, or Exerciſe to Health.

Thus after a long but not unpleaſant Excurſion, I return again to my Subject, and having largely ſhewn when and how the firſt Notions of Diſcovery roſe, and how they have been conducted in *Muſcovy*, by what Hopes they have been promoted, how far they have been carried, what they have really brought to Light, what lies within, and what without their Reach, why they have been ſo much retarded, whence, at other times they have been advanced, what Improvements are practicable, and what Schemes of Extention are at Bottom but Chimeras; where the Aſſiſtance of their Government may be applied with Effect, and where all the Force that could be exerted would fail, what other Nations have to apprehend from this new Turn of their Temper, how probable it is that we are not amongſt the Number; and that on the contrary, we might ſhare in whatever Profits they obtain; I have, laſt of all, ſet before the Reader, the only Means of anticipating their Views, by bringing the Riches of both the *Indies*, by a ſhorter Route to all the Markets in *Europe*, than they can pretend to do, even if all their Efforts, ſhould be crowned with all the Succeſs they can wiſh; yet be it far from me to mingle with theſe Reflections any Spirit of Peeviſhneſs, Prejudice or Partiality; they have a Right, no doubt, to all the Acquiſitions they can make, but then we have the ſame. I repine not at their Power, their Projects, or their Progreſs; all I aim at, is to make a right Uſe of their Example, in order to hinder my Countrymen from changing Place with the *Ruſſians.*

CONCLUSION.

A retroſpective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Uſes to which the Contents may be applied.

I. *A general View of the whole Work, its End and Intention, and a Method propoſed for diſcovering how far this has been anſwered, not only in the Groſs, but in every Part ſeparately, throughout the Performance, as a Key to the Uſes of the Book.* II. *The Plan of the Hiſtory of the* Circumnavigators, *intirely new, and abſolutely comprehenſive; Advantages derived from that Hiſtory thus chronologically digeſted; and the Reaſons for rejecting two Works, that ſeem at firſt Sight to come within the Plan.* III. *The Scheme of the Hiſtory of the* Eaſt-Indies, *briefly and fully repreſented; the Probability of a late Suggeſtion, that the* Arabians *firſt opened this Commerce, ſhewn, and a ſhort Review of the Principal Points regarding the Commerce of the Antients in the Eaſt.* IV. *The Uſes that may be drawn from this regular Series, how they contribute to fix the Excellencies and Deficiencies of the Ancients compared with the Moderns; together with a curious Remark as to the Riches of* Spain *in ancient Times.* V. *The Care taken to relieve the Reader's Attention, by interſperſing the Deſcription, Natural Hiſtory, and moſt remarkable Curioſities of thoſe famous Countries; the Benefits reſulting from that Method, and the great Help it affords of bringing much uſeful Knowledge within a little Room.* VI. *The Manner in which the Hiſtory of Commerce is purſued after the Declenſion of the* Roman *Empire, and the ſinking of that of* Conſtantinople; *Digreſſion as to the Riſe, Progreſs, and Decay, of the Republicks of* Venice *and* Genoa; *and Remarks on their preſent State.* VII. *How the modern Hiſtory of the* Eaſt-Indies *is conducted; the Rules by which the Choice of Materials has been made; Difficulties and Deficiencies common amongſt our lateſt Writers; what might be reaſonably expected from them, and an Example given of the right Method of reporting Facts.* VIII. *A ſuccinct View of the Uſes ariſing from the Matters treated of in the firſt Volume, to Perſons in different Ranks and Stations, and a political Diſquiſition as to their Importance to the Nation in general, more eſpecially at this critical Conjuncture, when ſo many Attempts are making in all Parts of* Europe *for erecting new Companies to trade to the* Eaſt-Indies. IX. *A Review of the ſecond Volume of this Collection, in which is firſt ſhewn what was propoſed in treating ſo particularly the Diſcovery, Conqueſts, and Settlements made by the* Spaniards *in* America. X. *A ſhort Repreſentation of the Uſe of our Hiſtory of the ſubduing the Empire of* Peru, *the ſurpriſing Boldneſs and amazing Succeſs of that Attempt, with the famous Sir* William Temple's *admirable Survey of the Laws and Government of the* Ynca's, *the old Sovereigns of* Peru. XI. *The Manner in which the other* European *Settlements in* America *are treated, more eſpecially thoſe of the* Engliſh *and* French, *with an Acknowledgment of Communications receiv'd, and Approbations ſhewn of this Part of the Work, and an Apology for ſome Freedoms taken therein.* XII. *The Contents of the ſecond Book explained, the Rules eſtabliſhed in ſelecting the Voyages and Travels neceſſary to give a competent Idea of the Northern Parts of the Globe in general, and of the particular Countries in* Europe, *and the Reaſons of thoſe Rules ſet in a clear Light.* XIII. *The Scope of the third Book, and a diſtinct Detail of the ſeveral Pieces that regard the Deſcription, Hiſtory, and Commercial Concerns of the* Aſiatick *Empires; the Authorities on which they are founded, the Motives on which they were admitted, and the Means of applying them ſo as to anſwer the great End of this Collection.*

I. WE are now arrived at the Cloſe of a very large Work, undertaken upon a Plan more regular, and of far larger Extent than was ever propoſed, either in our own, or any other Language; and of the Execution of which many have deſpaired in the Progreſs of its Publication; but by the Bleſſing of God it is now finiſhed, and finiſhed with the very ſame Spirit with which it was begun; for I am perſuaded, the moſt critical Reader will allow there has been as much Pains taken with the laſt Section, as with any in the whole Collection. What now remains, is to caſt our Eye back a little, in order to diſcover what all this Enquiry, Labour, and Expectation, has produced.

A large Work of this Kind may be very well compared to a publick Structure erected for the Service of Society, as well as at the common Expence, and of the Value of which we may, with tolerable Certainty judge, by conſidering the Scheme or Ground-plot, that is to ſay, the Plan upon which it was erected, the End propoſed by it, and the particular Advantage that every Peruſer may expect from it. With regard to the original Scheme, there were never many Objections made to it, except that the Bounds were too large, the Materials hard to be acquired, and the Labour of putting them together a Thing ſcarce to be effected; ſo that ſpeaking with Propriety, theſe could not be ſaid to relate to the Work, but to the conducting of it; and our Buſineſs here is not to ſay only, but to prove, that if the Outlines were drawn as they ought to be, the Edifice has been finiſhed according to the Draught.

The great End propoſed, was reducing within a tolerable Compaſs the Subſtance of a Multitude of Books, well written upon uſeful Subjects, in order to render them thereby more eaſily purchaſed and read. Now it is hoped that this has been alſo done in as great a Degree as the Size of this Collection, and it is no ſmall one, would permit; and that due Care has been taken to make ſuch a Choice of our Materials, as that by the Peruſal of this ſingle Book, the Reader may acquire the practical Knowledge of Coſmography, obtain a perfect Notion of the Situation of different Countries in all Parts of the Globe, together with their Relation to, and Diſtance from all other Countries, the Manner of their Correſpondence, the Commodities furniſhed, and thoſe wanted by them.

In reference to the more particular and immediate Buſineſs of the *Engliſh* Reader, which we may ſuppoſe to reſpect the Intereſt and Commerce of his own Country, it may with great Truth be affirmed, that ſo much upon that Subject, and that too in ſo many different Lights, is not to be met with elſewhere, ſince within the Compaſs of this Collection lies all that has occurred within the Space of twenty Years, to one who has had his Head ever turned that Way, and has likewiſe had it no leſs at Heart, which will appear particularly from his never eſpouſing the Cauſe of any Party, but regarding the Independency, commercial Concerns, and Naval Power of *Great-Britain*, as her moſt eſſential Intereſts; which, if well minded, all other incidental Matters will fall in happily of Courſe. Thus much as to the Work in general; we will next conſider the Parts of which it is compoſed, from whence its Correſpondence with the Plan propoſed will manifeſtly appear.

II. The firſt Thing deſigned and executed, was the Hiſtory of the *Circumnavigators*, which the beſt Judges of Works of this Kind had always repreſented as equally important and neceſſary; ſo that it had been greatly deſired, often attempted, but never in its full Extent performed, in any Collection extant in any Language, which was owing to certain Difficulties that are occaſionally taken Notice of in the Progreſs of that Part of the Book, and therefore not neceſſary to be repeated here. It is ſufficient to obſerve, that this Hiſtory is abſolutely compleat, and that all the *Circumnavigations* in the Space of 225 Years, are particularly, circumſtantially, and impartially written.

The Merit of firſt forming this Deſign of ſailing round the Globe, is juſtly attributed to the great *Columbus*, and it is fully ſhewn, that to him of right it belongs, tho' he was not ſo fortunate, tho' very fortunate in other Reſpects, as to execute it. The Reaſons that induced him to think it practicable, and the Motives that led him to attempt it, are fully explained from the moſt authentick Memoirs, and the Obligations which Mankind owe him in that Reſpect, are ſet in a True Light. The particular Advantages ariſing from the Diſcoveries made by each of the *Circumnavigators* are conſtantly attended to, and from thence the gradual Extenſion of Commerce, and with it our moſt perfect Acquaintance with the Situation of the different Parts of the Globe, are manifeſtly ſhewn. But as it fell out that various of theſe Diſcoveries, which were only touched upon in theſe general Voyages, afforded afterwards Occaſion to cloſer Enquiries, and more diſtinct Deſcription of Countries very far diſtant, by particular Expeditions undertaken with that View, the moſt accurate and conſiderable of thoſe Expeditions are thrown in as Appendices in their proper Places, to render the great Point in View as clear and as perſpicuous as it was poſſible, ſo as that the Reader may be perfectly informed of what has been found, what there is good Reaſon to believe may be found, and what ſtill remains abſolutely unſurveyed and unknown.

In ſome Caſes, the Memoirs of *Circumnavigators* were ſo involved and confuſed, that their Names were ever hardly heard of as ſuch; as for Inſtance, the Officers in the *Naſſau* Fleet, that ſailed from *Holland* in the Year 1623, and Captain *John Clipperton*, who ſailed from *Plymouth* in the Year 1719, theſe we have drawn out of the dark, aſſembled all the Circumſtances relating to them, the beſt we could, and have given them as entire as it was poſſible, under ſuch Difficulties, to collect them. As for the Voyage of Commodore *Roggewein*, which, take it altogether, is one of the moſt entertaining, curious and inſtructive Pieces that was ever publiſhed, it never appeared in our Language till now, and never in any Language ſo fully as in this Collection, as we had an Opportunity of conſulting a very candid, and knowing Perſon, who made that Voyage and who was very deſirous that upon every Part of it, the Publick ſhould receive as ample an Account of it as poſſible.

We have likewiſe given, ſo far as was neceſſary, and ſo far as we could come at, with any Degree of Certainty, the principal Points of the perſonal Hiſtories of all the *Circumnavigators*, which cannot but be very ſatisfactory to the inquiſitive and judicious Reader, ſince there is nothing ſo natural as to deſire to know, what became of a Man who ſo remarkably diſtinguiſhed himſelf as by conducting an Expedition of this Sort, of which there have not been more than fifteen in the whole, from that of *Ferdinand Magellan*, who ſailed from *Seville* in *Spain*, *Auguſt* 10, 1519. to that of the preſent Lord *Anſon*, who ſailed from St. *Hellens*, *September* 18, 1740.

The Diſpoſition of all theſe Voyages, in their regular and natural Order, renders them infinitely more uſeful, than when read ſeparately, as they reflect reciprocal Lights upon each other, and at the ſame Time afford an Opportunity of throwing out many needleſs and uſeleſs Repetitions. It was upon theſe Principles that two Pieces, which from their Titles might ſeem to claim a Right of being conſidered in that Part of our Work, were, after mature Deliberation, rejected.

The firſt of theſe is in the Voyages and Travels of Dr. *Gemelli Carreri*, a very large Work, already tranſlated into our Language; ſo that the judicious Reader will eaſily judge of the Solidity of thoſe Arguments upon which it was left out. In the firſt Place, what-ever the Title Page may ſay, this cannot, ſtrictly ſpeaking, be conſidered as a Circumnavigation, ſince the Author went from Place to Place by Land, and embarked as his Occaſions required, or his Inclinations led him, aboard ſeveral Veſſels which carried him from Port to Port, and the Sum total of theſe Travels and Voyages, is what he is pleaſed to call a Tour round the World. All our *Circumnavigators* were other Sort of Men, and made their reſpective Voyages on board the Veſſels they commanded, or of which they had the Direction, ſo that each Account is the Hiſtory of a diſtinct Expedition, and not a Detail of Adventures by Land and Sea. In the next place, the Doctor is a very voluminous Writer, and takes in ſuch a Variety of Matter, beyond what it was poſſible ſhould fall under his own immediate Knowledge and Inſpection, as render'd his Performance very improper to be ranged with thoſe in which there is little or nothing related but from the Authority of Eye Witneſſes. Laſtly, it has been aſſerted by Authors worthy of Credit, who inquired upon the Spot in *China*, more eſpecially, as to the Opportunity the Doctor had of ſeeing thoſe Things which he relates, as very particularly examined by himſelf, that they were thoroughly informed that he took them upon Truſt. Beſides, there is nothing to be met with in all his large Work, which is not to be found in this Collection, digeſted in its proper Place, from the Memoirs of Authors of indiſputed Credit.

The other Piece is in *French*, written by Mr. *de la Barbinais le Gentil*, and printed at *Paris* in 1728. The Author embarked at a *French* Port, and in a *French* Veſſel, *Auguſt* 20, 1714, but for ſome Reaſons which he does not diſcloſe, he conceals both the Name of the Port, and of the Veſſel. He proceeded to *Chili*, and after making ſome Stay in *South America*, embarked on board another Veſſel, in which he went to the Port of *Amoy* in *China*, from whence he returned into *Europe* in the Year 1718, touching by the Way at the *Brazils*. The whole of this Relation is digeſted into fifteen Letters, written in a very pleaſant and entertaining Stile, agreeable to the Deſign of the Author, who travelled only out of Curioſity, and of which we have made the beſt Uſe we were able, by extracting every Thing that is curious, and inſerting it in the Accounts we have given of *Chili*, *Peru*, *China*, and the *Brazils*, which appeared to be more ſuitable to the Nature of our Deſign, than making a profeſſed Tranſlation of a Piece, which the Author himſelf acknowledges to be made up of occaſional Remarks and curſory Obſervations; which he thinks is a ſufficient Reaſon for its being defective in other Points, that had however been abſolutely neceſſary to intitle him to the Honour of being a *Circumnavigator*, in the ſtrict and proper Senſe of the Word.

There is no Doubt, that after all much is wanting to render this Kind of Hiſtory compleat; but to make it abſolutely perfect, future Diſcoveries muſt contribute; and there is no Doubt that *Circumnavigations* by new Routes, that is, by the North-eaſt and North-weſt Paſſages, will afford a noble Supplement to what has been already done. Yet the moſt important, the moſt curious, and the moſt entertaining Circumnavigation would be through both thoſe Paſſages, for we ſhould then have a diſtinct Account of the Countries that lie between *Aſia* and *America*, with which the Inhabitants of *Europe* are moſt deſirous of being acquainted, and towards obtaining of which we have done all that lies in our Power, by labouring to ſhew, that ſuch a Circumnavigation is not either impoſſible or impracticable, notwithſtanding what has been alledged by ſome very underſtanding Perſons to the contrary.

III. The Plan upon which the HISTORY *of the Commerce of the* INDIES is written, the Publick muſt be ſatisfied is entirely new; and as it is very extenſive, taking in the Accounts of the remoteſt Antiquity; ſo, upon reviewing it, there appears to be ſome Room for Emendation. There is not the leaſt Doubt to be made, that the firſt Mention we have of *Indian* Commodities, is the Traffick carried on in *Spices* by the *Idumeans*; and we have ſaid in general Terms, that they carried on a Trade with *Arabia*, *Perſia*, and *India*, from which we have no Reaſon to depart; but perhaps that Matter is not quite ſo clearly explained as it might be, and as the beſt Lights that can be obtained from Hiſtory confirm it, ſo there is much Probability in the Conjectures offered upon this Subject, ſince the Publication of this Work, that the firſt Traders by Sea in the World were the *Arabians*. We will therefore lay hold of this Opportunity of inſerting a very curious Paſſage from a late Treatiſe on Trade and Commerce, which will very much illuſtrate, though it does not in the leaſt contradict what is advanced in the third Section of the ſecond Chapter of our firſt Book; that Paſſage runs thus:

“ It is a Point as yet undecided by the Learned, to what Nation the Invention and firſt Uſe of Commerce belonged; ſome attribute it to one People, ſome to another, for Reaſons that are too long to be diſcuſſed here. But after mature Reflection, I muſt confeſs it ſeems moſt probable to me, that the Inhabitants of *Arabia* were thoſe that firſt made long Voyages. It muſt be allow'd, that no Country was ſo happily ſeated for this Purpoſe as that which they inhabited, being a *Peninſula* waſhed on three Sides by three famous Seas, the *Arabian*, *Indian* and *Perſian*. It is alſo certain, that it was very early inhabited, and the firſt Notice we have of any conſiderable Trade, refers it to the *Iſhmaelites*, who were ſettled in the higher Part of *Arabia*. To them *Joſeph* was ſold by his Brethren when they were going down with their Camels to *Egypt* with Spicery, Balm and Myrrh.

“ It may ſeem ſtrange to infer from hence, that Commerce was already practiſed by this Nation, ſince Mention is here made of Camels, or a Caravan, which certainly implies an Inland Trade; and it muſt be likewiſe allowed, that Balm and Myrrh were the Commodities of their Country. But whence had they the Spicery? Or how came *Arabia* to be ſo famous in ancient Times for Spices? Or whence proceeded that Miſtake of many great Authors of Antiquity, that Spices actually grew there? Moſt certainly becauſe theſe People dealt in them; and that they dealt in them the firſt of any Nation that we know of, appears from this very Inſtance: *Strabo*, and many other good Authors, aſſure us, that in ſucceeding Times they were very great Traders; they tell us particularly what Ports they had, what prodigious Magazines they kept of the richeſt Kinds of Goods; what wonderful Wealth they obtained; in what prodigious Magnificence they lived; and into what Exceſſes they fell, in reſpect to their Expences, for Carving, Building, and Statues. All this ſhews that they were very great Traders; and it alſo ſhews that they traded to the *Eaſt Indies*, for from thence only they could have their Spices, their rich Gums, their ſweet-ſcented Woods, and their Ivory, all which it is expreſly ſaid that they had in the greateſt Abundance. This therefore proves they had an extenſive and flouriſhing Commerce, and that they had it earlier than any other Nation, ſeems to me evident from their dealing at that Time in Spices.

“ Beſides, there is much leſs Difficulty in ſuppoſing that they firſt diſcovered the Route to the *Indies*, than if we aſcribe that Diſcovery to any other Nation; for in the firſt place, they lay neareſt, and in the next, they lay moſt conveniently; to which we may add *Thirdly*, That as the Situation of their Country naturally inclined them to Navigation; ſo by the Help of the *Monſoons*, they might make regular Voyages to and from the *Indies*, with great Facility; nor is it at all unlikely that this Diſcovery might be at firſt owing to Chance, and ſo ſome of their Veſſels being blown by a ſtrong Gale to the oppoſite Coaſt, from whence they might take the Courage to return, by obſerving the Regularity of the Winds at certain Seaſons. All theſe Reaſons taken together, ſeem to favour this Opinion, that Commerce flouriſhed firſt among them; and as to its Conſequences in making them rich and happy, there is no Diſpute about them.

The ſame Author having mentioned the *Phœnicians* in Terms perfectly agreeable to what we have ſaid of them, proceeds to ſhew what Uſes were made of their great maritime Skill by *Solomon*, and takes Occaſion from thence to confirm what he had before advanced in reference to the *Arabians*; the Paſſage is not long, and withal equally curious and inſtructive, it runs thus: “ It is very certain, that *Solomon* made uſe of their Aſſiſtance in equipping his Fleets at *Elath* and *Ezion Geber*, and it is very probable that they put him upon acquiring thoſe Ports, and gave him the firſt Hints of the amazing Advantages that might be derived from the Poſſeſſion of them, and from the Commerce he might from thence be able to carry on. Theſe Ports were moſt commodiouſly ſituated on the *Arabian* Gulph, and from thence his Veſſels, manned chiefly by *Phœnicians*, ſailed to *Ophir* and *Tharſis*, where ever thoſe Places were: Some Writers will needs have them to be *Mexico* and *Peru*, which is certainly a wild and extravagant Suppoſition; others believe, that we are to look for *Ophir* on the Coaſt of *Africa*, and *Tharſis* in *Spain*; but the moſt probable Opinion is, that they were both ſeated in the *Eaſt Indies*.

“ By this adventurous Navigation he brought into his Country, Curioſities not only unſeen, but unheard of before, and Riches in ſuch Abundance, that as the Scripture finely expreſſes it, He made Silver in *Jeruſalem* as Stones, and Cedar Trees as Sycamores that grow in the Plains. The Metaphor is very bold and emphatical; but when we conſider that it is recorded in this Hiſtory, that the Return of one Voyage only to *Ophir* produced 450 Talents of Gold, which make 51328 *lb.* of our *Troy* Weight, we cannot doubt of the immenſe Profit that accrued from this Commerce. It is alſo obſervable, that the Queen of *Sheba* or *Saba*, which lies in that part of *Arabia* before-mentioned, ſurprized at the Reports that were ſpread of the Magnificence of this Prince, made a Journey to his Court, on purpoſe to ſatisfy herſelf, whether Fame had not exaggerated the Fact, and from the Preſents ſhe made him of 120 Talents of Gold, of Spices in great Abundance, and precious Stones, we may diſcern the true Reaſon of her Curioſity, which proceeded from an Opinion, that no Country could be ſo rich as her own. And there is another Circumſtance very remarkable, and which ſeems ſtrongly to fortify what we have advanced in the Beginning of this Diſcourſe, it is added, *neither was there any ſuch Spices as the Queen of* Sheba *gave to King* Solomon; which ſeems to intimate, that the *Arabians* had penetrated farther into the *Indies* than even the Fleets of this famous Prince, and brought from thence other Spices (perhaps Nutmegs and Cloves) than had ever been ſeen before.

“ It was by his Wiſdom, and by his ſteady Application to the Arts of Peace, all of which mutually ſupport each other, as they are all driven on by the Wheel of Commerce, which ſupplies every Want, and converts every Superfluity into Merchandize, that this Monarch raiſed his Subjects to a Condition much ſuperior to that of any of their Neighbours, and rendered the Land of *Iſrael*, while he governed it, the

“ Glory and Wonder of the Eaſt. He made great Acquiſitions without making Wars; and his Succeſſors, by making Wars, loſt thoſe Acquiſitions. It was his Policy to keep all his People employed, and by employing them, he provided equally for the Extention of their Happineſs and his own Power; but the following Kings purſued other Meaſures, and other Conſequences attended them. The Trade of *Judea* ſunk almoſt as ſuddenly as it roſe, and in Proceſs of Time they loſt thoſe Ports on the *Red Sea*, upon which their *Indian* Commerce depended.”

After this, there is nothing dark or intricate in that Part of the Hiſtory of the Commerce of the Ancients, of which we have undertaken to treat. It appears very clearly, that from the earlieſt Times, even the remoteſt Countries of the Eaſt have been the Sources of all the Advantages derived from Trade, and the Poſſeſſion of this particular Branch of Traffick has conſtantly given the Aſcendant to the Nation in whoſe Hands it was. In tracing this Hiſtory we have made it apparent, that the moſt conſiderable Points in the Syſtem of Commerce, conſidered as a Kind of Science, were both very well known, and very ſteadily practiſed in ancient Times, and produced exactly the ſame Conſequences then that they do now; or, in other Words, enabled People to heap up immenſe Riches, induced them to encourage Arts and Sciences, by rewarding plentifully ſuch as excelled in them, propagating Magnificence and Luxury, from whence, in Proceſs of Time, aroſe Indolence, Effeminacy, and a total Depravation of Manners, which made Way either for foreign Conqueſts, or ſuch a Declenſion of Morals at home as produced Ruin and Poverty, and from which hardly any of the ancient States ever recovered.

We have ſhewn the true Source of that incredible Wealth, for which, in the earlieſt Times of which, Hiſtory affords any Record, the *Egyptians* were renowned; and we have ſhewn alſo how all this was transferred to the *Perſians*, in Conſequence of their becoming Maſters of *Egypt*, and of the Means by which its Inhabitants amaſſed ſuch prodigious Wealth. This leads us to conſider the Conqueſts and the Views of *Alexander* the Great, in a Light very different from that in which they have been hitherto ſeen, and from which it is unqueſtionably evident, that he was a much greater and wiſer Prince than he has been repreſented, not by Hiſtorians only, but by Panegyriſts, that his Views were of quite another Nature than are commonly imagined; and that his Notions were incomparably more juſt and more extenſive than that of any other Conqueror, either ancient or modern, ſince he did not barely aim at eſtabliſhing an univerſal Monarchy, but was alſo deſirous of making this turn to the univerſal Benefit of Mankind, by ſettling a conſtant and regular Intercourſe amongſt all the Nations he ſubdued, and rendring them thereby uſeful to each other; to facilitate which, he formed Projects impracticable indeed with Regard to their ultimate Intention, but which, notwithſtanding, were deſigned with wonderful Sagacity, and from their Conſequences in ſuch Parts as could be executed, fully anſwered all that he expected from them.

It was by making uſe of the Lights afforded him by this great Monarch and his indulgent Maſter, that *Ptolemy* erected a *Greek* Empire in *Egypt*, which in point of Strength and Duration, as well as Magnificence, ſo much exceeded all the reſt that were formed out of his Conqueſts. We have had many large and well-written Hiſtories of that Empire, conſidered in a political Light, but there was ſtill wanting a Commercial Hiſtory of *Egypt*, which we have endeavoured to ſupply, and from the attentive Peruſal of which the Reader will ſee, that nothing can contribute ſo much to the Power and Splendor of Sovereigns, and at the ſame Time to the Welfare, Happineſs and Tranquillity of a People, as commercial Maxims well applied. All the other Succeſſors of *Alexander* lived as it were upon the main Stock, and only waſted in fruitleſs Projects, and wild and extravagant Expeditions, the Riches which they extorted from their Subjects, and which they continued to extort, till by totally exhauſting them, they were no longer able to maintain that Power which was requiſite to ſupport their Tyranny. Whereas *Ptolemy* and his immediate Succeſſors, by following in their Dominions the judicious Maxims of *Alexander*'s Policy, kept their Countries full of People, and by providing for the Happineſs of thoſe People, were able to keep up larger Armies, to maintain greater Fleets, and to live with infinitely more Magnificence than thoſe Monarchs, whoſe Dominions were much larger, and who, till they ruined them by their Exceſſes, might have been more powerful and conſiderable, and might have made their Empire as permanent as his.

It is true, that at length the Government of *Egypt* ſunk and fell into Confuſion from its falling under the Dominion of weak Princes, and from the prevailing Corruption of Manners, againſt which Accidents human Policy affords no Defence. Yet it appeared great even in Decay, and its Magnificence was apparent in its Ruin. The *Romans*, when they became poſſeſſed of it, were very ſoon made ſenſible of its Importance, and of the Wiſdom of thoſe Maxims by which its Monarchs ruled in better Times. They therefore adopted thoſe Maxims, and not only purſued but improved the Methods formerly employed to make this Country the Center of Commerce, and the great Magazine of the civilized part of the World. All theſe Points we have at large explained, by which it appears, that the Splendor and Glory of the *Roman* Empire was chiefly built upon this important Conqueſt, and the Conſequences that attended it. That in Proportion as the *Roman* Affairs were wiſely and prudently, or weakly and indiſcreetly managed, the Concerns of *Egypt* were attended to or neglected; and that the great Blow given to the real Power and internal Force of the *Roman* Empire, was transferring this Province to the Princes that reigned in the Eaſtern parts of that Empire, and fixed their Seat at *Conſtantinople*.

We have deſcribed, tho' very conciſely, what were the Effects of this Change, and how the Imperial Reſidence laſt mentioned became ſo large, ſo beautiful, and ſo immenſely rich as it was, by drawing thither, in a great Meaſure, the Trade of the whole World. The gradual Ruin of the Eaſtern Empire, and the Growth of the *Arab* or *Saracen* Power, did not make a greater or more univerſal Change in the political Affairs of *Europe*, than in the commercial; for *Egypt* falling early under the Power of thoſe Barbarians, ſince however learned they became afterwards, they certainly deſerv'd that Title, when they ſubdued *Egypt*, all Thoughts of Commerce were laid aſide. At that Time War was their Trade, and they knew no other Way of making Acquiſitions than by the Sword. The Countries of which they became Maſter, were exceedingly rich and populous, and they had no Views beyond ſeizing the former by Force, and impoſing Slavery upon thoſe whom they had deprived of their Property. But by Degrees, Experience, which is the proper Miſtreſs of ſuch Sort of People, taught them, that Force and Violence were not the ſureſt Means of maintaining Empire, and therefore they had Recourſe to Learning and Arts; and though they did not apply themſelves to Trade, yet they encouraged and promoted that of their Subjects, and allowed Strangers to deal with them, but upon ſuch Terms as were highly advantageous to theſe Conquerors, who were never at a Loſs how to ſqueeze the Money out of the Purſes of their Subjects, provided they had any to be ſqueezed out.

IV. This regular Series of Hiſtory is extreamly uſeful in a great Variety of Caſes, and is at the ſame Time exceedingly entertaining; it at once raiſes and ſatisfies our Curioſity, it informs us of what is to be found in the moſt diſtant Countries, and the Uſes that have been in all Ages made of this Propenſity to viſit other Countries, and to bring back their Produce to our own. But above all, it ſerves to deſtroy thoſe weak and vulgar Prejudices, by which Men are inclined to fancy, that in former Ages Mankind were abſolutely deficient in Learning, Politeneſs, and above all, in underſtanding the Nature, and conſequently acquiring the Advantages deducible from Commerce. But upon examining this Hiſtory, we ſee preciſely in what the Ancients excelled, in what they came up to, and in what they were defective, when compared with the Moderns. From hence alſo we diſcover; to what all this was owing, what were the natural, what the accidental Advantages they had over us; and, on the other Hand, what we really and certainly poſſeſs, which were inacceſſible to them. To give a few Inſtances of both.

The Ancients ſeem to have carried the Art of cultivating and improving Countries to a Height of which we have hardly any Comprehenſion. In the earlieſt Times *Egypt* was wonderfully cultivated, admirably improved, and exquiſitely adorned. We cannot form a Notion of an Agriculture more perfect than what was practiced by the ancient *Egyptians*; their Temples, Palaces, and other publick Structures, were magnificent in the higheſt Degree; and if we incline to doubt the Veracity of the Records that relate to them, the very Ruins that ſtill remain afford us Teſtimonies that are abſolutely inconteſtable. The Contrivances made uſe of for ſupplying Water, and the Conveniency of Water Carriage, not only to all the great Cities, but to every Town and Village, ſurpaſs any thing that is to be ſeen at this Day in the moſt civilized Part of the World, unleſs perhaps we except *China*. This ſhews that the Ancients excelled alſo in Policy, or the Art of eſtabliſhing right Rules for the Government of Mankind, which are beſt diſcovered from their Effects, the true Criterion of Government being the Exerciſe of human Induſtry about uſeful Things; for without Queſtion that Nation is beſt governed where Individuals are beſt employed, that is, where, on the one Hand, the Laws provided ſuitable Encouragements for the active, and by a right Direction and Diſtribution of Authority, prevent any from being idle. The Ancients excelled alſo in all the Sciences that depend either on the Quickneſs of Parts, or the Solidity of Judgment, and in all the Arts that furniſh the Neceſſities, procure the Conveniencies, or exhibit the Elegancies of Life; the Proofs of all which are to be found in their Writings, in the Hiſtory of their Manners, and in the Remains of their Buildings, Utenſils, Coins, Curioſities, &c.

On the other Hand, they were certainly defective in thoſe Sciences that depend upon Experience, as well as Sagacity and Genius. Their Coſmography was equally narrow and erroneous; the ſame may be ſaid of their Aſtronomy, which was not either accurate or well applied. Hence it came to paſs, that their Navigation was uncertain, ſlow, dangerous, and confined. Neither had they any Notions of managing Commerce by Factories or Settlements. In theſe and many other Things we certainly ſurpaſs them, but then it muſt be alſo allowed, that they could, and we cannot do without them, which perhaps is the real Cauſe of their Defects, as well as of our Proficiency.

But there is one Advantage they had, which is very little attended to, and yet it was the principal Source of that Wealth, the very Relation of which appears to us almoſt incredible; I mean that amazing Fertility in valuable Commodities which ſeveral Countries enjoyed, and of which there are ſcarce any Traces to be met with now. Several Inſtances of this, with regard to the Regions of the Eaſt, occur in our Hiſtory of them; but becauſe we had no Opportunity of mentioning it elſewhere, it may not be amiſs to ſet down a Teſtimony here that is very well worth Conſideration. The *Phœnicians* conſidered *Spain*, and with very good Reaſon, in the very ſame Light that *Spain* now conſiders *Mexico* and *Peru*, that is to ſay, they drew from thence in Return for Merchandize of ſmall and inconſiderable Value, immenſe Quantities of the richeſt Metals, and of Silver more eſpecially.

If we may credit *Ariſtotle*, they not only found wherewith to load their Ships, but when that was done, they forged Anchors, Bolts and Bars of Silver, to ſupply the Place of Iron, that they might carry away the more of it. *Diodorus Siculus* aſſures us that it was chiefly owing to the prodigious Riches they drew from *Spain*, that the *Carthaginians* were able to ſet on Foot ſuch numerous Armies, to equip ſuch potent Fleets, and to raiſe ſuch ſtupendous Fortifications, as made them at once the Wonder and the Terror of their Neighbours. In a Word, one might produce good Authorities to prove, that there was hardly a maritime Province in *Spain*, from *Algarve* and *Andaluſia*, to *Galicia*, *Aſturias*, and the *Pyrenean* Mountains, but what abounded in Gold, Silver, Copper, Tin, or ſome other valuable Metal. Yet except a Silver Mine in *Portugal*, of which the Reader has had a very particular and authentick Account in this Volume, there is not the leaſt Sign or Token of theſe vaſt Treaſures, excluſive of the Appearances that yet remain of the Works that were carried on for maintaining them.

V. But though we have attended cloſely to the Commercial Hiſtory of the *Indies*, yet we have not neglected or omitted what might be thought as uſeful or more entertaining. We have drawn together, from the beſt and moſt authentick Writers, whatever would contribute to the true Repreſentation of the Religion, Government, Hiſtory, Laws and Cuſtoms of the ſeveral Nations of *India*, and have been more eſpecially ſolicitous in ſetting forth the Learning, Diſcipline, Offices, Way of Living, and peculiar Privileges of the *Brachmans*, now called *Bramins*, and have taken the Pains to ſet forth the principle Doctrines of their Theology and Philoſophy. We have been as ſolicitous about the natural Hiſtory of the *Indies*, and have compared what ancient Authors have recorded, with the Remarks made by modern Travellers upon that Subject.

By this Means we have given the Reader, in a very narrow Compaſs, and in ſuch a Manner, as that Things of a like Nature are all placed together, what would have coſt very great Labour to aſſemble out of the different Books in which they are diſperſed, and yet to preſerve, as far as poſſible, all the Advantages that ariſe from a Variety of Reading, we have, generally ſpeaking, made uſe of the Author's own Words, and have cited the Places where they are to be found in the Notes. We have very frequently taken Occaſion, from this Manner of handling the Subject, to diſtinguiſh Fables from true Hiſtory, and to ſhew ſometimes, that there is a great deal of true Hiſtory in what many haſty Criticks have rejected as Fables. For if, on the one Side, it be true, that Ignorance is the Mother of Credulity, one may very much doubt, whether Incredulity be not her Daughter alſo. This will be the more eaſily apprehended, if we conſider that there is a Kind of Similarity between Extreams, and that different Deviations from Truth may very well ariſe from the ſame Cauſe. For, after all, what is Credulity, but believing without Evidence? And what Incredulity, other than believing againſt Evidence? And whence can either of theſe ariſe more naturally than from Ignorance. If this mean and deteſtable Vice occupies the Breaſt of one of a mild and placid Spirit, he believes without examining whatever he hears; and again, if Ignorance be coupled with Obſtinacy, there is hardly ſuch a Thing as driving Belief into a Mortal, whoſe Mind is over-run with ſuch Maladies.

It is very poſſible, that notwithſtanding all the Care we have taken, ſome Miſtakes may be diſcovered in this Part, by thoſe who have been ſo happy as to obtain better Light; but a diligent Enquiry, and a ſtrict Examination, were the only proper Methods to be employed to prevent ſuch Miſtakes, and they were employed to the utmoſt of our Power. We may add to this, another and a very juſt Apology, that in this Tract we were without any Guide, all who had gone before us chuſing rather to ſave their own Pains than that of the Reader, and to heap up Relation upon Relation, Extract upon Extract, by which they multiplied their Volumes, and neither repreſented Things diſtinctly themſelves, nor left it in the Power of a Reader, who had not uncommon Leiſure, to form any diſtinct Notion of what was really worth knowing, in that vaſt Load of Materials that they exhibited to his View. In ſhort we ſaw very plainly, what was amiſs in the Compilations that went before us, and we were very willing to take Warning by their Miſcarriages, which put us upon purſuing another Method, and if we have miſſed of Perfection in that, we have at leaſt this to plead, that we meant well, and have done our beſt.

VI. After ſhewing how Commerce was in a Manner totally overwhelmed in the Eaſt, we proceed next to point out the Methods by which it was in ſome Meaſure revived by the Subjects of the two trading Republicks of *Venice* and *Genoa*; and we have taken great Pains to diſcover the different Ways, by which, at ſeveral Times, and under various Circumſtances, the Commodities and Manufactures of the Eaſt were brought into *Europe*. But as the Manner of our treating that Subject would not allow us to digreſs there, ſo far as to give any Account of the Riſe of thoſe two celebrated States, it cannot be amiſs, in this Review of our Performance, to ſupply that Defect in as conciſe a Manner as it is poſſible.

When the Weſtern Part of the *Roman* Empire was over-run by *Barbarians*, and Arts and Sciences ſunk with that Power which had cultivated and protected them; Commerce alſo viſibly declined, or to ſpeak with greater Propriety, was overwhelmed and loſt; for in Times of Confuſion and publick Deſolation, when the Giant WAR ſtalks abroad, overturns great Cities, tramples down the nobleſt Improvements, and lays whole Countries waſte, it is impoſſible that Trade ſhould continue; or rather, it is highly probable, that on the very Approach of theſe Dangers ſhe muſt have already fled. It is a common Saying, that Riches are the Nerves of War, rather, I think, the Food of it; and therefore where War devours, there Commerce cannot ſubſiſt, which is a perpetual Reaſon why all Trading Nations ſhould avoid offenſive Wars; for by thoſe that are abſolutely defenſive they can never be hurt. But to keep to the Point; when that Irruption of various Nations had driven the *Roman* Policy out of the greateſt Part of *Europe*, ſome ſtraggling People, either forced by Neceſſity, or led by Inclination, took Shelter in a few ſtraggling Iſlands that lay near the Coaſt of *Italy*, and which would never have been thought worth inhabiting in a Time of Peace.

This was in the Sixth Century, and at their firſt fixing there, they had certainly nothing more in View, than living in a tolerable State of Freedom, and acquiring a Subſiſtence as well as they could. Theſe Iſlands being divided from each other by narrow Channels, and thoſe Channels ſo incumber'd by Shallows, that it was impoſſible for Strangers to navigate them, theſe Refugees found themſelves tolerably ſafe, and uniting among themſelves for the Sake of improving their Condition, and augmenting their Security, they became in the Eighth Century a well ſettled Government, and aſſumed the Form of a Republick.

Simple and mean as this Relation may appear, yet it is a plain and true Account of the Riſe, Progreſs, and Eſtabliſhment of the famous and potent Republick of *Venice*. Her Beginnings were indeed weak and ſlow, but when the Foundation was once well laid, her Growth was quick, and the Increaſe of her Power amazing. She extended her Commerce on all Sides, and taking Advantage of the barbarous Maxims of the *Mohamedan* Monarchies, ſhe drew to herſelf the Profits of the *Indian* Trade, and might in ſome Senſe be ſaid to make *Egypt* a Province, and the *Saracens* her Subjects.

By this Means her Traffick ſwelled beyond Conception, ſhe became the common Mart of all Nations, her Naval Power arrived at a prodigious Height, and making uſe of every favourable Conjuncture, ſhe ſtretched her Conqueſts not only over the adjacent *Terra Firma* of *Italy*, but through the Iſlands of the *Archipelago*, ſo as to be at once Miſtreſs of the Sea, of many fair and fruitful Countries, and of Part of the great City of *Conſtantinople* it ſelf. But Ambition, and the Deſire of Lording it over her Neighbours, Paſſions equally fatal in publick and private Life; to States and Empires, as well as to great Men, and to great Families, brought upon her thoſe Evils which firſt produced a Decay of Trade, and then a Declenſion of Power. General Hiſtorians indeed aſcribe this to the League of *Cambray*, when all the great Powers in *Europe* combined againſt this Republick; and in Truth, from that Period the ſinking of her Power is truly dated; but the *Venetian* Writers very juſtly obſerve, that though this Effect followed the League, yet there was another, a more latent, but, at the ſame Time, a more effectual Cauſe, which was the falling off of their Commerce.

Her Subjects were become leſs frugal, and leſs wealthy, and, at the ſame time, more ambitious and more profuſe. It was impoſſible, in ſuch a Situation, that the State ſhould maintain itſelf when ſo warmly attacked; a Man in a Conſumption cannot ſtruggle with the ſame Force as in Health; and though By-ſtanders may attribute the Fall he receives to the Strength of his Adverſary, he cannot help knowing, that it proceeds ſolely from the failing of his own Strength. This was the Caſe of the *Venetians*, and they have ever ſince been more indebted to their Wiſdom, than their Power, to the prudent concealing of their own Weakneſs, and taking Advantage of the Errors of their Enemies, than to any other Cauſe; for their keeping up that Port which they ſtill bear, and which had been loſt long ago by any other Nation but themſelves.

At the ſame Time that *Venice* roſe, as it were, out of the Sea, another Repuplick was erected on the Coaſts of *Italy*; there could not well be a worſe Situation than the narrow, marſhy, unprofitable and unwholſome Iſlands in the *Adriatick*, except the rocky, barren, and inhoſpitable Shores of *Liguria*; and yet as Commerce raiſed *Venice the Rich*, on the one; ſo ſhe erected *Genoa the Proud* on the other. In Spite of ambitious and warlike Neighbours, in ſpite of a confined and unproducing Country, and which were ſtill greater Impediments, in Spite of perpetual Factions and ſucceſſive Revolutions, the Trade of *Genoa* made her rich and great. Her Merchants traded to all Countries, and throve by carrying the Commodities of the one to the other. Her Fleets became formidable, and beſides the adjacent Iſland of *Corſica*, ſhe made larger and more important Conqueſts. She fixed a Colony at *Caffa*, and was for ſome Time in Poſſeſſion of the Coaſts on both Sides of the *Black Sea*.

That Emulation which is natural to neighbouring Nations, and that Jealouſy which riſes from the Purſuit of the ſame Miſtreſs, Commerce, begat continual Wars between theſe Rival Republicks, which after many obſtinate and bloody Battles, was at laſt terminated in Favour of *Venice*, by that famous Victory of *Chiozzi*, gained by her Doge *Andrew Contarini*, from which Time *Genoa* never pretended to be Miſtreſs of the Sea. Theſe Quarrels were fatal to both; but what proved more immediately deſtructive to the *Genoeſe* was their Avarice, which induced them to abandon the fair Profits of Trade, for the Sake, by that vile Method, of acquiring Wealth by Uſury.

This leads us to mention another Subject that has a cloſe Connection with Commerce, and that is, the Buſineſs of Exchanges. This, tho' in many Caſes uſeful to Commerce, concerns alſo many other Things, ſuch as Tranſactions of State, and of War, the Removal of Families, or the Deſcent of Succeſſions upon Strangers; all of which create the Neceſſity of removing Money from one Country to another, which ſometimes cannot be done at all, and in moſt Caſes muſt be attended with Inconveieniency, if practiſed in the plain Way of Tranſportation. The *Lombards*, one of the many Nations that eſtabliſhed themſelves in *Italy* after the Ruin of the *Roman* Empire, and who have beſtowed their Name on one of the fineſt Countries in it, deviſed a Method for removing, in a great Meaſure, this Inconvenience; for they obſerved that Money was very often wanting reciprocally in ſeveral Countries, and therefore they imagined, that if a Way could be found to eſtabliſh a Correſpondence capable of ſupplying their mutual Wants, it might prove very advantageous to the middle Perſons, and this produced that Kind of Practice now known by the Name of *Exchange*; which, as it was invented by, ſo it continued long in the Hands of the *Lombards*. For this Purpoſe, they ſettled themſelves in moſt of the great Cities in *Europe*, and having a ſtrict Correſpondence one with another, they managed this new Branch of Buſineſs, of drawing and remitting Money with vaſt Advantage to themſelves; and to do this the more effectually, they enter'd into Partnerſhip, kept large Houſes, and had vaſt Capitals, which were ſtiled *Banks*; and as it was their Cuſtom (as indeed it was of all Sorts of Merchants) to live together, ſo the Street in which they reſided in this City, acquired from thence its Name; and tho' Things are long ſince changed, yet it is ſtill inhabited by *Engliſh* Bankers, and retains its old Title of *Lombard ſtreet*.

We may diſcern the wonderful Effects of Induſtry in this Invention, for the *Lombards* inhabiting an inland Country, drew by this Means to themſelves a very conſiderable Profit out of foreign Trade, and made *Milan* and other great Cities in which they reſided, populous and opulent, by their becoming the Center of their Exchanges. But when the *Genoeſe* fell into it, they began to carry it farther, for they not only drew and remitted Money, but lent it alſo, and by this Means, as their Profits increaſed, they began to ſlight their foreign Trade or rather their Capitals, however large, becoming unequal to the double Demands of Commerce and Banking, the former gave Way to the latter, as the moſt ſecure if not the moſt profitable; and by this Alteration Individuals became immenſely rich and great, while the State grew weak and poor; and thus the Republick of *Genoa* dwindled into a low Condition, and by Degrees was obliged to pawn almoſt all its Revenues to its own Bank of St. *George*, which amidſt a long Series of foreign Wars and domeſtick Seditions, remained unhurt and inviolable, till the laſt taking of that City by the *Auſtrians*, when the Bank of St. *George* met with the ſame Fate with the Common-wealth, and whether either of them will recover their former Luſtre, is a Problem that muſt be left to Time to reſolve.

While the *Venetians* were able to maintain their Commerce in *Indian* Commodities, and while the *Genoeſe* had any Kind of foreign Trade, they maintained a conſiderable Naval Force, and frequently made Attempts to retrieve, at leaſt in ſome Meaſure, the Figure they had formerly made; but in Proceſs of Time, as other Nations purſued the Route diſcovered by the *Portugueſe*, new Maritime Powers aroſe, and the whole Syſtem of Commerce in *Europe* was thereby changed in ſuch a Manner, as to leave hardly any Hopes of Recovery to theſe *Italian* States. I do not ſay abſolutely that they are without hopes, for if ever the *Ruſſians* ſhould make themſelves Maſters of the *Black Sea*, but more eſpecially if they ſhould ever conquer *Crim Tartary*, this may alter Things again, and prove the Means of reviving the Trade of *Italy*.

VII. The new Commerce to the *Eaſt Indies* by the Way of the Cape of *Good Hope*, takes up the remaining Part of the firſt Volume; by Way of Introduction to which, we have given the Reader the Travels of *William Rubruquis* and *Marco Polo*, which gave this Part of the World the firſt Knowledge of *Tartary*, *China*, and *Japan*. We intended likewiſe to have given the Travels of our Countrymen Sir *John Mandevile*, but finding that theſe ancient Accounts were thought very dry Reading, we deſiſted from that Deſign. To ſay the Truth, his Travels are rather Matters of Curioſity than of Uſe; for though it is very certain, that many Circumſtances of his Narration may be ſo explained as to juſtify them from being abſolutely fabulous, yet he is not, upon the whole, a Writer that deſerves to be commended, becauſe of that ſtrange Propenſity he had to repreſent every thing as marvellous, and to make his Book rather a Collection of Wonders than of Travels. It is nevertheleſs certain, that from the Peregrinations of adventurous Perſons by Land, the *Portugueſe* received thoſe Lights that enabled them to find their Way to the *Eaſt-Indies* by Sea; and therefore it is of great Importance where Diſcoveries may be proſecuted by Land as well as by Sea, to make uſe of both Methods; upon which Subject we ſhall have Occaſion to ſay ſomething very curious hereafter.

The Voyages we have given by the Way of the Cape of *Good Hope*, are the beſt that we could ſelect, and in Conjunction with thoſe that are contained in the firſt Book, will afford the Reader as clear, as copious, and as comprehenſive an Account of the paſt and preſent State of thoſe Countries as he can reaſonably deſire; and therefore it would have been to little or no Purpoſe to have ſwelled our Collection with a greater Number of Voyages and Travels, which muſt unvoidably have made Way for numerous Repetitions, equally fatiguing and diſtaſteful. Inſtead of theſe, we choſe to inſert an authentick, regular, and compleat Hiſtory of the *Mogul* Empire, from the earlieſt to the preſent Times, which though much deſired, was ſtill wanting. By this Means we had an Opportunity of ſhewing the Progreſs of that extenſive Empire, together with the Means in, and the Manner by which it has ſwallowed up many of thoſe ſmall Kingdoms that were heretofore famous in theſe Parts of the World. Yet it is not at all impoſſible that the next Age may ſee that Empire diſſolved, and either the old Kingdoms revived, or new ones erected out of its Ruins. For it is viſible enough from this Hiſtory, that the *Mohametan* Power declines greatly in the Eaſt, and that the Native *Indians* begin to retrieve their Strength, and to affect an Independency, which they will find it the more eaſy to eſtabliſh, if they continue to apply themſelves, as they have done during the current Century, to the Cultivation of a Naval Force.

It is indeed very highly to be regretted, that we have not ſo much as a tolerable Account of the preſent Princes of *India*, whom we affect to treat with Contempt, and who are generally repreſented in modern Travels as Robbers and Pirates; whereas if we would but conſider that they are the native Proprietors of the Countries which they inhabit, and have as much Right, at leaſt, to retrieve what has been taken from them, as thoſe who took it have to keep what they have got, we ſhould in all Probability, change our Notions. There was indeed, ſome Years ago, an Account of Mr. *Mathews*'s Expedition into the *Eaſt Indies*, publiſhed, in which ſomething of this Kind was contained, but it was written by a common Sailor, and the proper Names more eſpecially, ſo terribly disfigur'd, that it was a difficult Matter to pick out any thing from it with Certainty; of which I will leave the Reader to judge from one ſingular Inſtance only. An *Indian* Prince, well enough known in better Books by the Name of *Seva Rajah*, he is pleaſed to call throughout the whole of his Relation, the *Sow Roger*, and in the ſame manner he confounds every Thing elſe. We have been promiſed by the *French* more diſtinct Accounts of theſe Matters, and ſome little Hiſtories we have had from them that are, though of an ancient Date, very curious and entertaining.

But our People have ſo many more and better Opportunities, that if ſome of them who have Abilities and abundant Leiſure, would attempt it, they might certainly give us a better *Indian* Hiſtory than is yet extant in any *European* Language. Mr. *Frazer*, who is at preſent in the *Indies*, and to whom we are indebted for an excellent Account of *Kouli Kan*, would be the propereſt Perſon in the World to undertake a Work of this Kind; and one would imagine that if he did undertake it, he might meet with proper Encouragement. That we are at preſent but very indifferently inſtructed as to the Temper and Diſpoſition of many Eaſtern Nations, and therefore ought to be willing to get better Accounts, is out of all Doubt, and might be fully demonſtrated from the very lateſt Books that are publiſhed.

Our Writers commonly repreſent the *Arabs* on the Sea Coaſts as Pirates, juſt as our Travellers, when they ſpeak of them by Land, treat them as a whole Nation of Thieves; but Men of Candour and Senſe ſpeak otherwiſe from their own Experience, as may be ſeen from the following Relation of a Perſon who ſpent many Years in the *Indies*, and did not affect to treat all as Barbarians whom he converſed with there. The *Muskat Arabs* (ſays he) are remarkable for their Humility and Urbanity. I had one Inſtance of their Civility. As I was one Morning walking the Streets, I met accidentally the Governor of the City, by them called the *Waaly*, and, according to my Duty, I went into the Door of a Shop to let him and his Guards have the Street, which generally are narrow; but he obſerving by my Complexion and Garb that I was a Stranger, made his Guard to go on one Side, and beckoned me to come forward, and ſtood ſtill till I paſſed by him. And for an Inſtance of their cool Temper in hearing Debates, and rectifying Miſtakes between Parties diſagreeing about Commerce, a Perſon of my Acquaintance was Commander of a Ship from *India*, and had freighted her to *Muskat*. The Freighter, who was a *Mohamedan*, delay'd paying the Freight long after it was due by the Tenor of the Charter-party; upon which he being in a Paſſion with the Freighter for his continued Delays, went to the *Waaly* to complain. He obſerving by the Gentleman's Countenance that his Mind was diſcompoſed, anſwered him, That being at that Time very buſy about ſome of the King's Affairs, he had not Time to ſend for his Freighter, but deſired that he would come ſome other Time, and he would hear him and order the Payment. The Delays ſtill continuing, the Captain went again in an angry Mood to make his Complaint, but was ſtill put off with gentle Excuſes; but at laſt, addreſſing the *Waaly* with Coolneſs, he was deſired to ſit down, and he would ſend for the Freighter; which accordingly he did, and on his Appearance, the *Waaly* ask'd him, why he did not comply with his Contract as was ſtipulated by the Charter-party? And his Excuſes being thought inſufficient, he was ordered to make Payment forthwith, or go to Priſon; but the Freighter choſe rather to bring the Money, and end the Diſpute. The Captain ask'd the *Waaly* why he did not do him Juſtice ſooner; who returned for Anſwer, That it was his own Fault for coming drunk to make Complaint. The Captain proteſted that he had not been drunk in many Years; but the *Waaly* replied, That he ſaw him drunk with Paſſion, which was the moſt dangerous Sort of Drunkenneſs. This ſufficiently ſhews of what Nature thoſe Accounts are which we really want, as well as the juſt Reaſon we have to complain of too many of thoſe that we have already.

VIII. The Detail we have given of the Hiſtory of the Affairs of the *Europeans* in the *Eaſt-Indies*, is the firſt Attempt of its Kind, and is as methodical, regular and copious, as we could make it. It ſhews at what Time each *European* Nation entered the *Indies*, what Succeſs they met with, where and how they eſtabliſhed themſelves, and what ſubſequent Fortune has attended their Commerce and their Settlements. All this is undoubtedly of very great Importance in reference to the acquiring with Facility an extenſive Circle of intrinſick and uſeful Knowledge. We ſhall be the more ſenſible of this, if we conſider how many different Sorts of Perſons may reap conſiderable Benefit thereby.

In the firſt Place, for ſurely his Station intitles him to that, the Stateſman will be the better for our Labours. This is a Subject of which he will be obliged often to think ſeriouſly, and may ſometimes be obliged to enquire into it carefully. Now what we offer to his View, may be eſteemed a general Introduction to all that can be known upon this Head; and if he afterwards examines Projects for Improvement or Diſcovery, he will be the better able to judge whether they are chimerical, grounded upon private Intereſt, or really calculated for the publick Good; and he will likewiſe be able to form a ſhrewd Gueſs whether they are practicable or not. If he is under a Neceſſity of examining Treaties, or the Pretenſions of different Nations, he will receive ſuch Lights as may render them perſpicuous without much Trouble; or if it imports him to learn what is the true State of Things in that Country, and how Power, Poſſeſſion and Commerce are divided amongſt the Nations intereſted in the *Indies*, he will find a Scheme of all this ready drawn up to his Hands.

A young Adventurer, who is on the Point of being ſent into theſe Parts to raiſe his Fortune, will, doubtleſs, wiſh to go thither with ſome general Notions of what he is to expect, what may merit his Attention, and what may deſerve his Enquiries. Here he will find all theſe Matters drawn together to his Hand, and ready digeſted for his Peruſal; ſo that without any Loſs of Time, he may acquire a larger Stock of uſeful and applicable Knowledge, than he could poſſibly have fiſh'd out even from a well choſe Collection of Voyages and Travels, which however are not eaſily made, more eſpecially by a freſh Man, or one who has but juſt turned his Thoughts to ſo extenſive a Subject. Not to multiply Inſtances, a Gentleman who deſires to gain, with as little Trouble as may be, a competent Notion of thoſe Topicks that enter frequently into Diſcourſe, will find in this Hiſtory what will effectually anſwer his End, and ſet him upon a Level at leaſt with moſt other People in reference to theſe Matters, which ever were, and ever will be thought of great Importance. Beſides all this, we perceive every Day new Cauſes and new Inducements to attend to Things of this Sort, from beholding what Effects they have upon the wiſeſt Heads in other Nations.

It is a Thing ſo recent, that few People can have forgot to how great a Degree the Affairs of *Europe* were influenced by the Emperor's ſetting up an *Eaſt-India* Company at *Oſtend*, which actually produced a total Change in the Syſtem; and as it began with an Alliance between the Courts of *Vienna* and *Madrid*, ſo it brought about a Conjunction as extraordinary between *France* and the Maritime Powers. This Conjunction indeed proved too hard for the Alliance, and brought about at length the Subverſion of that Company; but this only removed, it did not eradicate the Evil with reſpect to the Maritime Powers, ſince the *Swediſh* and *Daniſh Eaſt-India* Companies roſe up inſtead of this of *Oſtend*. If they affected us leſs at the Beginning, it was ſo far from being an Alleviation, that in Reality it was an Aggravation of our Misfortune, becauſe it hindred the Maritime Powers from perceiving immediately the Conſequences of theſe Eſtabliſhments. It was indeed alledged, that the Remoteneſs of the Navigation, their Inexperience with regard to Commerce, and Diſappointments they had already met with in Schemes of this Sort, would make them very quickly weary of ſuch Kind of Projects, and conſequently deliver the Maritime Powers from all Apprehenſions of this Sort for the future.

We ſee however, that theſe Allegations were without Foundation, and the Event forces us, whether we will or not, to diſcern that theſe Obſtacles are not inſurmountable, and which is ſtill more, that this Trade has preciſely the ſame Effects in thoſe Countries, that it had when firſt engaged in by the *Engliſh* and *Dutch*, that is to ſay, it has put the *Swedes* and *Danes* upon erecting Manufactures, opening other Branches of Commerce, and enabling them thereby to become Maritime Powers.

The Hiſtory of all this, which will become every Day more and more worthy of our Cognizance, is to be found here, and here only; for hitherto Collections of this Kind had been made, rather with a View to Amuſement than Inſtruction, and were better calculated to entertain the idle, than to inſtruct the Induſtrious; which in a Nation like this, that derives its Grandeur, Independency, and Influence from Trade, was equally melancholy and ſurprizing. We may add to all this, that whatever we may think of the Matter, who in Fact are moſt concerned to think of it, if the Welfare and Proſperity of our Country be at all our Concern, the Succeſs of theſe new Companies have made a very ſenſible Impreſſion upon other Powers, in ſo much that the King of *Pruſſia* is meditating the Eſtabliſhment of an *Eaſt-India* Company at *Emden*, which, if carried into Execution, as what is there that he has contrived and not carried into Execution, will infallibly diminiſh the *Eaſt-India* Trade of the United Provinces, not without ſome Detriment alſo to ours.

It is moreover no Secret, that his Imperial Majeſty, in Quality of Great Duke of *Tuſcany*, has likewiſe a Deſign of ſetting up a new *Eaſt-India* Company at *Leghorn*, which will very ſenſibly affect our *Italian* Commerce, not only by furniſhing immediately and directly all the Countries bordering on the *Mediterranean*, with *Eaſt-India* Commodities, but ſtill more by its remoter Conſequences in promoting and encouraging the ſpeedy Erection of new Manufactures in thoſe Countries, which cannot but leſſen very greatly our Exportations, and circumſcribe our Trade in a Manner eaſily apprehended, and which at preſent it is needleſs to deſcribe.

But if upon this Occaſion it ſhould be demanded what Remedy there is for theſe Things, we can only anſwer, that all the Remedy in the Power of private Perſons, is to foreſee and point out the Cauſes of ſuch Evils; and by acquainting their Countrymen with the real Importance of this Commerce, to awaken and excite their Diligence, to preſerve what is yet left, and if poſſible, to open new Channels, which may balance the Deficiencies that muſt naturally ariſe from the loſing thoſe Branches of Trade, which, by theſe new Attempts, are likely to be cut off. All this the Reader will find regularly digeſted to the utmoſt Extent of our Power, and throughout the ſeveral Sections which relate to them, interſperſed with a great Variety of probable Expedients, by which theſe great and important Ends may be attained.

It is not at all in ours, or indeed within the Compaſs of private Peoples Abilities, to carry Things of this Nature any farther; but the Rectitude of carrying them thus far, and of publiſhing and making manifeſt the mighty Advantages that would reſult from directing our Councils to the Improvement of our Commercial Concerns, rather than the ſettling the Intereſts of other Nations upon the Continent, which perhaps the better they are ſettled, the leſs it may tend to our Benefit, ſince we ſee that the firſt Conſequence of their Independency and Security is to proſecute Projects for the Benefit of their own Trade, and to the Prejudice of ours, is put out of all Diſpute.

Thoſe who affect to treat theſe Things either as Chimera's or Trifles, Points of inconſiderable Moment, or remote and incertain in their Conſequences, are either really or affectedly Ignorant; and which ever they are, ſo far as they can carry their Opinions and Influence, the moſt dangerous and moſt deſtructive Enemies to their Country; for to propagate Notions of Security, and to rock us as it were in the Sleep of Indolence, while other Nations are awake and full of Attention to the Means of improving Traffick, and laying the Foundations of Maritime Power, is to enervate and deſtroy us, more eſpecially, if at the ſame Time we are exhauſted by Taxes, which neceſſarily render our Manufactures dear, and give thereby great Advantage to our Rivals, and oppreſſed with Debts, a very large Proportion of which being due to Foreigners, muſt ſpeedily and infallibly draw the laſt Shilling out of theſe Kingdoms, if freſh Supplies of Wealth are not regularly and conſtantly brought in by foreign Trade.

Theſe are the Subjects chiefly inſiſted upon in the firſt Volume of this Collection, diverſified by a great Variety of pleaſant and entertaining Reading, ſo diſpoſed as to heighten Inſtruction, and not to diſtract the Mind, by aiming at no uſeful or perceptible End. We come next to ſpeak of the Contents of the ſecond Volume, and to ſhew how far they are likewiſe calculated to anſwer the ſame uſeful, important and national Purpoſes.

IX. As an Intercourſe and Commerce with the *Eaſt Indies* was the great Concern both of the Ancients and Moderns, to the Time that AMERICA was found out, ſo that DISCOVERY, and the great Conſequences that have attended it, have been the juſt Subjects of the principal Attention of the trading Nations in *Europe* ever ſince; and hence the examining every Thing relating thereto in its proper Order, became naturally the next Object of our Care. We begin with a copious and circumſtantial Relation of the ſeveral Expeditions of the great *Chriſtopher Columbus*, in which we have fully explained the Motives upon which they were grounded, the many Diſcouragements he met with, and the various Difficulties he encountered before he was able to bring Things to bear. In treating theſe Subjects, we have taken the Liberty to intermix ſome Reflections on the Detriments that *Spain* received from the early Interpoſition of Stateſmen in the Management of the new Colonies, from whence many Miſchiefs aroſe, and the Profits of thoſe early Eſtabliſhments were very much leſſened, and their future Progreſs greatly checked.

We then proceed to the intermediate Expeditions between thoſe of *Columbus*, and the Conqueſt of *Mexico* by *Ferdinand Cortes*, which affords the Reader an ample Proſpect of the mighty Difficulties that Men will go through from the Hopes of Gain, more eſpecially, when it is to come immediately to themſelves, and they are not circumſcribed either by the unreaſonable Power or particular Views of Companies, to which alone is to be aſcribed the rapid Progreſs of the *Spaniards* in thoſe Countries where their Conqueſts in our Times, when nothing is done but at an immenſe Expence of Time, Men and Money, appear incredible. The Paſſage being now open, we go on to the Conqueſt of *Mexico*, and to ſhew from the beſt Authorities, how a very great and powerful Empire, governed by a wiſe and brave Monarch, and ſupported by numerous Armies of faithful Subjects, was nevertheleſs ſucceſsfully attacked, and in the End totally over-turned by a very handful of Men, and thoſe too all the Time caballing, conſpiring, and quarrelling amongſt themſelves, ſo that the proſperous Event of that marvellous Expedition, is intirely due to the incomparable Abilities, indefatigable Labours, and ſingular Virtues of the Commander in Chief; to whom however there was but very little Gratitude ſhewn by his Countrymen, who reaped all the Benefits of that moſt important Conqueſt.

After recording his Actions, the Reader will find a ſuccinct Account of the Manner in which the *Iſthmus* of *America*, and the Country adjoining, were ſubdued, and of the Diſputes that aroſe amongſt the *Spaniſh* Officers, or rather Adventurers that undertook and effected thoſe Conqueſts, which, how fatal ſo ever they might be to themſelves, turned notwithſtanding, as much, or more, to the Benefit of the *Spaniſh* Crown and Nation, as if they had proceeded with all the Harmony and good Underſtanding poſſible; ſo valuable a Principle is Activity, and ſo advantageous to the Publick a buſy and enterprizing Spirit, when employed at a Diſtance, whether well or ill conducted, by which very often prodigious Conqueſts are made abroad by thoſe of reſtleſs and turbulent Minds, that very probably had ſtirred up Rebellion and Confuſion, if they had ſtaid at home. We may enter farther into the Truth of this Obſervation, if we conſider how little has been done in theſe Parts in ſo long a Courſe of Years, in Compariſon with what was then done in ſo few; from whence it is viſible, that as Example excites and encourages vigorous Meaſures, ſo it likewiſe countenances Indolence, and by degrees fixes and eſtabliſhes it by Habit.

X. The *Conqueſt* of PERU was not at all the Effect of any deep laid Scheme of Policy, or of Meaſures taken in Conſequence of Orders from *Spain*; on the contrary, it aroſe from a Kind of Agreement or Compromiſe between two or three enterprizing Adventurers, and thoſe too in deſperate Circumſtances. All the Force they could muſter up was ſo inſignificant, as ſcarce to exceed a Modern Independent Company; the Veſſels on which they embarked, were ſtill meaner than the Forces they carried; and as for the Funds which were to defray the Expences of this Expedition, they were equally inſignificant in Money and in Credit. What is ſtill more extraordinany than all this, theſe Undertakers had little or no Intelligence; they knew that the Country they were to attack was very large, and well peopled, but they knew very little of its Government, and ſtill leſs of the Cuſtoms and Manners of thoſe People. We are not to imagine from hence, that the Inhabitants of *Peru* were wild and barbarous Savages, or that they were defeated and ſubdued for Want of a Conſtitution, Laws and Policy; for this was ſo far from being the Caſe, that Sir *William Temple*, than whom there hardly ever was a better Judge of Things of this Nature, has given us, within a very narrow Compaſs, a moſt excellent Syſtem of the *Peruvian* Empire, which having had no Opportunity to inſert elſewhere, it cannot be diſpleaſing to our Readers, upon this Review of the whole Work, to find it here, more eſpecially, as it is juſtly eſteemed the Maſter-piece of that polite Writer, who has therein given us both Facts and Obſervations that might very well furniſh Matter for a conſiderable Volume. “ The Empire of *Peru* deduced its Original “ from their great Heroes *Mango Copac*, and his Wife and his Siſter *Coya Mama*, who are ſaid to have firſt appeared in that Country, near a mighty Lake, which is ſtill ſacred with them upon this Occaſion. Before this Time, the People of theſe Countries are reported to have lived like the Beaſts among them, without any Traces of Order, Laws, or Religion, without other Food than from the Trees, or the Herbs, or what Game they could catch, without further Proviſion than for preſent Hunger, without any Cloathing or Houſes but dwelt in Rocks or Caves, or Trees, to be ſecure from wild Beaſts; or on Tops of Hills, if they were in Fear of fierce Neighbours. When *Mango Copac* and his Siſter firſt came into theſe naked Lands, as they were Perſons of excellent Shape and Beauty, ſo they were adorned with ſuch Cloaths as continued afterwards the uſual Habit of the *Ynca's*, by which Name they called themſelves.

" They told the People who came firſt about them, that they were the Son and Daughter of the SUN, and that their Father taking Pity of the miſerable Condition of Mankind, had ſent them down to reclaim them from thoſe beſtial Lives, and to inſtruct them how to live happily and ſafely, by obſerving ſuch Laws, Cuſtoms and Orders as their Father the Sun had commanded theſe his Children to teach them. The great Rule they firſt taught, was that every Man ſhould live according to Reaſon, and conſequently not either ſay nor do any Thing to others, that they were not willing others ſhould ſay or do to them, becauſe it was againſt all common Reaſon to make one Law for ourſelves, and another for other People; and this was the great Principal of all their Morality. In the next Place, that they ſhould worſhip the SUN, who took care of the whole World, gave Life to all Creatures, and made the Plants grow, and the Herbs fit for Food to maintain them; and was ſo careful and ſo good as to ſpare no Pains of his own, but to go round the World every Day to inſpect and provide for all that was upon it, and had ſent theſe his two Children down on purpoſe for the Good and Happineſs of Mankind, and to rule them with the ſame Care and Goodneſs that he did the World.

" After this, they taught them the Arts moſt neceſſary for Life; as *Mango Copac* to ſow *Mayz*, or the common *Indian* Grain, at certain Seaſons, to preſerve it againſt others; to build Houſes againſt Inclemencies of Air, and Danger of wild Beaſts; to diſtinguiſh themſelves by Wedlock into ſeveral Families; to cloth themſelves ſo as to cover at leaſt the Shame of Nakedneſs; to tame and nouriſh ſuch Creatures as might be of common Uſe and Suſtenance. *Coya Mama* taught the Women to ſpin and weave both Cotton, and certain coarſe Woolls of ſome Beaſts amongſt them. With theſe Inſtructions and Inventions they were ſo much believed in all they ſaid, and adored for what they did and taught of common Utility, that they were followed by great Numbers of People, obſerved and obeyed like Children of the SUN ſent down from Heaven to inſtruct and govern them.

" *Mango Copac* had in his Hand a Rod of Gold, about two Foot long and five Inches round. He ſaid that his Father the SUN had given it him, and bid him, when he travelled Northward from the Lake, he ſhould, every Time he reſted, ſtrike this Wand down into the Ground, and where at the firſt Stroke it ſhould go down to the very Top, he ſhould there build a Temple to the SUN, and fix the Seat of his Government. This fell out to be in the Vale of *Cuſco*, where he founded that City which was Head of this great Kingdom of *Peru*. Here he divided his Company into two Colonies or Plantations, and called one the *High Cuſco*, and the other the *Low*, and began here to be a Law-giver to theſe People. In each of theſe were at firſt a thouſand Families, which he cauſed all to be regiſter'd, with the Numbers in each. This he did by Strings of ſeveral Colours, and Knots of ſeveral Kinds and Colours upon them, by which both Accounts were kept of Things and Times, and as much expreſſed of their Minds as was neceſſary in a Government where neither Letters, nor Money, or conſequently Diſputes or Avarice, with their Conſequences, ever entered.

" He inſtituted Decurions through both theſe Colonies, that is, one over every ten Families, another over fifty, a third over a hundred, a fourth over five hundred, and a fifth over a thouſand; and to this laſt they gave the Name of *Curaca*, or Governor. Every Decurion was a Cenſor, a Patron, and a Judge or Arbiter in ſmall Controverſies among thoſe under his Charge. They took care that every one cloathed themſelves, laboured and lived according to the Orders given them by the *Ynca's* from their Father the Sun, among which one was, That none who could work ſhould be idle, more than to reſt after Labour; and that none who could not work by Age, Sickneſs, or Invalidity, ſhould want, but be maintained by the others Pains. Theſe were ſo much obſerved, that in the whole Empire of *Peru*, and during the long Race of the *Ynca* Kings, no Beggar was ever known; and no Woman ever ſo much as went to ſee her Neighbours but with their Work in their Hands, which they followed all the Time the Viſit laſted. Upon this I remember a Strain of refin'd Civility among them, which was that when any Woman went to ſee another of equal or ordinary Birth, ſhe worked at her own Work in the other's Houſe; but if ſhe made a Viſit to any of the *Palla's*, which was the Name by which they called all the Women of the true Royal Blood, as *Ynca's* was that of the Men, then they immediately deſired the *Palla* to give them a Piece of her own Work, and the Viſit paſſed in working for her.

" Idleneſs ſentenced by the Decurions, was puniſhed by ſo many Stripes in publick, and the Diſgrace was more ſenſible than the Pain. Every Colony had one ſupreme Judge, to whom the lower Decurions remitted great and difficult Caſes, or to whom, in ſuch Caſes, the Criminals appealed. But every Decurion that concealed any Crime of thoſe under his Charge above a Night and a Day, became guilty of it, and liable to the ſame Puniſhment. There were Laws or Orders likewiſe againſt Theft, Mutilations, Murders, Diſobedience to Officers, and Adulteries; for every Man was to have one lawful Wife, but had the Liberty of keeping other Women as he could. The Puniſhment of all Crimes was either corporal Pains or Death, but commonly the laſt, upon theſe two Reaſons which they gave; firſt, That all Crimes, whether great or ſmall, were of the ſame Nature, and deſerved the ſame Puniſhment, if they were committed againſt the Divine Commands, which were ſent them down from the Sun: Next that, to puniſh any Man in his Poſſeſſions or Charges, and leave him alive, and in Strength and Liberty, was to leave an ill Man more incenſed or neceſſitated to commit new Crimes.

" On the other Side, they never forfeited the Charge or Poſſeſſions of a Son for his Father's Offences, but the Judges only remonſtrated to him the Guilt and Puniſhment of them for his Warning or Example. Theſe Orders had ſo great Force and Effect, that many Times a whole Year paſſed without the Execution of one Criminal. There is no Doubt, but that which contributed much to this great Order in the State, was the Diſuſe of other Profeſſions than what were neceſſary to Life, and the eminent Virtue of their firſt great Hero or Legiſlator, which ſeemed to have been intailed upon their whole Race in the Courſe of their Reign: So as in the whole Length of it, it is reported among them, that no true *Ynca* was ever found guilty or puniſhed for any Crime. Thus particular Qualities have been obſerved in old *Rome* to be conſtant in the ſame Families for ſeveral hundred Years, as Goodneſs, Clemency, Love of the People, in that of the *Valerii*; Haughtineſs, Pride, Cruelty, and Hatred of the People in that of the *Appi*; which may come from the Force of Blood, of Education, or Example.

“ It is certain, no Government was ever eſtabliſhed and continued by greater Examples of Virtue and Severity, nor gave ever any greater Teſtimonies, than the *Ynca's*, of an excellent Inſtitution, by the Progreſſes and Succeſſes, both in the Propagation and Extent of Empire, in Force and Plenty, in Greatneſs and Magnificence of all publick Works, as Temples, Palaces, Highways, Bridges, and in all Proviſions neceſſary to the common Eaſe, Safety, and Utility of human Life: So as ſeveral of the Jeſuits, and particularly *Acoſta*, are either ſo juſt or ſo preſuming, as to prefer the civil Conſtitution of *Mango Copac*, before *Lycurgus*, *Numa*, *Solon*, or any other Lawgivers, ſo celebrated in the more known Parts of the World.

“ To every Colony was aſſigned ſuch a Compaſs of Land, whereof one Part was appropriated to the Sun, a ſecond to the Widows, Orphans, Poor, Old, or maimed, a third to the peculiar Maintenance of every Family according to their Number, and a fourth to the *Ynca*. In this Order the whole was tilled, and the Harveſt or Product laid up in ſeveral Granaries, out of which it was diſtributed by Officers to that Purpoſe, according to the ſeveral Uſes for which it was deſigned, and new Seed iſſued out at the Seaſon for the new Tillage. Every Decurion, beſides the Office of a Cenſor and Judge, had that likewiſe of a Patron or Sollicitor, for Relief of the Neceſſities or Wants of thoſe under his Charge. They were bound to give in to the publick Regiſter, an Account of all that were born, and of all that died under their Charge. None were ſuffered to leave the Colony or People he was born in without Leave, or to change the Habit commonly uſed in it (by ſome Parts or Marks whereof thoſe of each Province was diſtinguiſhed); none to marry out of it, any more than the *Ynca's*, out of their own Blood.

“ The *Ynca* that reigned was called *Capa Ynca*, which the *Spaniards* interpret *Solo Sennor*, or *Only Lord*. He ever married the firſt of his Female Kindred, either Siſter, Niece or Couſin, to preſerve the Line the pureſt they could. Once in two Years he aſſembled all the unmarried *Ynca's* Men above Twenty, and Women above Sixteen Years old, and there in publick married all ſuch as he thought fit, by giving each of their Hands one to the other. The ſame was done among the Vulgar by the *Curaca* of each People. Every Family at their Time of Meals, eat with their Doors open, ſo that all might ſee their Temperance and Order. By theſe and ſuch other Laws and Inſtitutions, *Mango Copac* firſt ſettled his Government or Kingdom in the Colonies of *Cuzco*, which were in Time multiplied into many others by the willing Confluence and Recourſe of many ſeveral People round about him, allured by the Divine Authority of his Orders, by the Sweetneſs and Clemency of his Reign, and by the Felicity of all that lived under it; and indeed the whole Government of his Race of the *Ynca's*, was rather like that of a tender Father over his Children, or a juſt, careful and well-natured Guardian over Pupils, than of a Lord or Commander over Slaves or Subjects. By which they came to be ſo honoured or adored, that it was like Sacrilege for any common Perſon ſo much as to touch the *Ynca* without his Leave, which was given as a Grace to thoſe who ſerved him well, or to new Subjects that ſubmitted to him. After the Extent of his Kingdom into great Compaſſes of Territory round *Cuzco*, by voluntary Submiſſion of the People, as to ſome Evangelical rather than legal Doctrines or Inſtitutions, *Mango Copac* aſſembled all his *Curaca's*, and told them that his Father the Sun had commanded him to extend his Inſtitutions and Orders as far as he was able for the Good and Happineſs of Mankind; and for that purpoſe, with armed Troops to go to thoſe remoter Parts that had not yet received them, and to reduce them to their Obſervance. That the Sun had commanded him to hurt or offend none that would ſubmit to him, and thereby accept of the Good and Happineſs that was offered him by ſuch divine Bounty, but to diſtreſs only ſuch as refuſed, without killing any that did not aſſail them, and then to do it juſtly in their own Defence.

“ For this Deſign he formed and aſſembled Troops of Men armed, with offenſive, but chiefly with defenſive Weapons. He caſt them into the Order of Decurions, in the ſame Manner as he had done the Families; to every ten Men was one Officer, another to fifty, and another to one hundred, a fourth to five hundred, and a fifth to a thouſand. There was a ſixth over five thouſand, and a ſeventh as a General over ten thouſand, of which Number his firſt Army was compoſed. With this and other ſuch Armies he reduced many new Territories under his Empire, declaring to every People he approached, the ſame Things he had done firſt to thoſe who came about him near the great Lake; and offering them the Benefit of the Arts he had taught, the Orders he had inſtituted, the Protection he had given his Subjects, and the Felicity they enjoyed under it. Thoſe who ſubmitted were received into the ſame Rights and Enjoyments with the reſt of his Subjects. Thoſe who refuſed, were diſtreſſed and purſued by his Forces, till they were neceſſitated to accept of his Offers and Conditions.

“ He uſed no offenſive Weapons againſt any till they attacked them, and then defenſive only at firſt, till the Danger and Slaughter of his Men grew otherwiſe unavoidable; then he ſuffered his Forces to fall upon them and kill without Mercy, and not to ſpare even thoſe that yielded themſelves after having ſo long and obſtinately reſiſted. Thoſe who ſubmitted after the firſt Threats or Diſtreſſes, or bloodleſs Oppoſition, he received quickly into Grace, ſuffered them to touch his ſacred Perſon, made great and common Feaſts for them and his own Soldiers together for ſeveral Days, and then incorporated them into the Body of his Empire, and gave to each of them Cloaths to wear, and Corn to ſow.

“ By theſe Ways and ſuch heroic Virtues, and by the Length of his Reign, he ſo far extended his Dominions as to divide them into four Provinces, over each whereof he appointed an *Ynca* to be a Viceroy, having many Sons grown fit to command, and in each of them eſtabliſhed three ſupreme Councils; the firſt of Juſtice, the ſecond of War, and the third of the Revenue, of each of which an *Ynca* was likewiſe Preſident; which continued ever after.

“ At the End of a long and adored Reign, *Mango Copac* fell into the laſt Period of his Life; upon the Approach whereof he called together all his Children and Grand-children, with his eldeſt Son, to whom he left his Empire, and told them, that for his own Part, he was going to repoſe himſelf with his Father the Sun, from whom he came; that he adviſed and charged them all to go on in the Paths of Reaſon and Virtue which he had taught them, till they followed him the ſame Journey; that by this Courſe only they would prove themſelves to be true Sons of the Sun, and be as ſuch honoured and eſteemed. He gave the ſame Charge more eſpecially and more earneſtly to the *Ynca* his Succeſſor, and commanded him to govern his People according to his Example, and the Precepts he had received from the Sun, and to do it always with Juſtice, Mercy, Piety, Clemency, and Care of the Poor; and when he the Prince ſhould go in Time to reſt with his Father the Sun, that he ſhould give the ſame Inſtructions and Exhortations to his Succeſſor. And this Form was accordingly uſed in all the Succeſſions of the Race of the *Ynca's*, which laſted 800 Years with the ſame order, and the greateſt Felicity that could be of any State.

“ I will ſay nothing of the Greatneſs, Magnificence, and Richneſs of their Buildings, Palaces, or Tem-

"ples, eſpecially thoſe of the SUN, of the Splendour, of their Court, their Triumphs after Victories, their Huntings and Feaſts, their military Exerciſes and Honours. But as Teſtimonies of their Grandeur, mention only two of their Highways, whereof one was 500 Leagues, plain and levelled through Mountains, Rocks and Vallies; ſo that a Carriage might drive through the whole Length without Difficulty. Another very long and large, paved all with cut or ſquared Stone, fenced with low Walls on each Side, and ſet with Trees, whoſe Branches gave Shade, and the Fruits Food to all that paſſed.

"I ſhall end this Survey of their Government with one Remark upon their Religion, which is, that tho' the Vulgar worſhipp'd only the SUN, yet the *Amanta's*, who were their Sages or Philoſophers, taught, that the SUN was only the Miniſter of PACHACAMAC, whom they adored in the firſt Place, and to whom a great and ſumptuous Temple was dedicated. This Word is interpreted by the *Spaniards*, *Animador del Mundo*, or, He that animates or enlivens the World, and ſeems to be yet a more refined Notion of the Deity than that of the *Chineſes*, who adored the Spirit and Soul of the World. By this Principle of their Religion, as all the others of their Government and Policy, it muſt, I think, be allowed, that human Nature is the ſame in theſe remote, as well as the other more known and celebrated Parts of the World.

"That the different Governments of it are framed and cultivated by as great Reaches and Strength of Reaſon and Wiſdom as any of ours, and ſome of their Frames leſs ſubject to be ſhaken by the Paſſions, Factions, and other Corruptions, to which thoſe in the middle Scene of *Europe* and *Aſia* have been ſo often and ſo much expos'd. That the ſame Cauſes produce every where the ſame Effects; and that the ſame Honours and Obedience are in all Places but Conſequences or Tributes paid to the ſame heroick Virtue or tranſcendent Genius, in what Parts ſoever, or under what Climates of the World it fortunes to appear."

This may ſatisfy the moſt critical Reader, that the old Inhabitants of *Peru* were far enough from being Barbarians; though at the ſame time it muſt be confeſs'd, that they were very much degenerated before they were delivered up by Providence to that ſevere Correction they have received from the haughty *Spaniards*, under which they ſtill groan, and ſuffer their Slavery with infinite Grief and Pain of Mind; neither have they forgot the Splendor of their ancient Empire, but in certain Songs ſet to melancholy Tunes, deplore its Downfall and Ruin. After deſcribing the capital Settlements of the *Spaniards*, we proceed to examine how they ſpread themſelves into the remoteſt Parts both of the Northern and Southern Continents, ſet forth the Regulation and Dependency of their ſeveral Governments, compare the Value of their ancient and modern Revenues extracted from *America*; lay down the Manner of their working their Mines, give a true Account of the Commerce carried on amongſt their Settlements, as well as of that to *Europe*, and the contraband Trade.

We have likewiſe omitted nothing that might give the Reader intire Satisfaction as to the preſent State of Things in that Part of the World, and of the true Sources of that Feebleneſs and Decay which is inconteſtably viſible in all the *Spaniſh* Settlements, and which is gradually increaſing; ſo that if a Stop is not quickly put to this Declenſion by an abſolute and thorough Change of Meaſures, which however is hardly to be looked for, the whole of their Power muſt crumble by Degrees, at leaſt in the Extremities and in the Iſlands, and leave thoſe Countries in other Hands better diſpos'd to make a right Uſe of them.

XI. In the Execution of the remaining Part of our Plan, we give the Riſe, Progreſs, and preſent State of the Settlements of all the other Powers that are now fixed in that Part of the World, *viz.* the *Portugueſe*, *Engliſh*, *French*, *Dutch*, and *Danes*. With reſpect to the firſt, we have drawn together out of an infinite Number of Books in which they are ſcattered, the Materials that are requiſite to form a ſuccinct Hiſtory of the great Country of *Brazil*; and this obliges us to enter into the Detail of the Conqueſt of that Country, once made by the *Dutch*, a Thing of very great Importance, and yet never thoroughly treated in our Language; we have alſo ſhewn, how the Recovery and Improvement of this Country became the principal Cauſe of the Declenſion of the *Portugueſe* Power in the *Eaſt-Indies*; that Nation finding it too hard for them to combat ſo great a maritime Power as the Republick of *Holland* was become; in both *Indies* at once. We have alſo endeavoured to ſet in a clear Light the preſent State of that Country, which is of ſo great Importance, not only to its preſent Maſters, but to all the trading Nations in *Europe*; and though in the Courſe of the whole Work there was nothing that gave greater Trouble, yet it is hoped that it now appears in a tolerable Light; and that with reſpect to the Gold and Diamond Mines eſpecially, much more has been ſaid than will be eaſily met with elſewhere, for which we are greatly indebted to the Communications received from ſeveral Perſons to whom we are not permitted to make any more particular Acknowledgements.

As to the *Britiſh* Plantations, both on the Continent and in the Iſlands of *America*, we have been almoſt as copious as the Subject required, and have laboured with indefatigable Diligence to ſet the prodigious Advantages derived from them, and their very high Importance to this Crown and Nation, in a true Light. To ſpeak freely, there is no Part of this Collection that we had ſo much at Heart, or in the compiling of which we proceeded with greater Induſtry, Care, and Freedom of Spirit, without having the leaſt Regard to any private Intereſt, or the Senſe of this or that Body of Men, who might be oblig'd or offended by our Manner of treating certain Subjects one Way or other. We were ſenſible that the Intereſts of the Publick ought to be dearer to us than any other Conſideration whatſoever; and we dare confidently affirm, that to the utmoſt Extent of our Knowledge, and to the beſt of our Skill and Judgment, theſe Subjects have been treated with the utmoſt Zeal and Impartiality; and as they have had the Honour to be commended and approved by thoſe who were beſt acquainted with our Plantations abroad, and thoſe who have moſt at Heart the promoting their Welfare here at home; ſo we look upon this as the higheſt Reward, as indeed it was the only one ſought by this Performance, which if at preſent or hereafter it ſhall any Way contribute to the Eaſe, Security, or Benefit of thoſe diſtant Parts of *Great Britain*, for ſo they ought ever to be eſteemed, will afford us infinite Satisfaction.

The *French* Power in the *Weſt-Indies* has been of late Years the Subject of much Diſcourſe; one would wiſh to ſay that it had been likewiſe the Object of much Care and Attention, which it moſt certainly deſerved, as it is more likely to claſh with our commercial Intereſts than any other. It is for this Reaſon that we have repreſented it as fully and as truly as it was poſſible; that we have ſhewn its Advantages and Diſadvantages, the Probability there is that the former may be promoted, and the latter removed; the Methods neceſſary to be employed in both Caſes, and the Remedies that may be applied to prevent the Conſequences of thoſe Improvements from becoming prejudicial to our ſelves. In doing this, we have likewiſe taken Occaſion to mention the Precautions that may be uſed to ſecure our Settlements from running any Risk from the Vicinity of theſe ambitious, enterprizing, and dangerous Neighbours; neither have we omitted to ſet in a juſt Light our preſent Superiority, that it may appear we are not in ſo much Danger, either from the Power or the Capacity of our Rivals, as for Want of Circumſpection, Unanimity and Prudence in our own Conduct; and that conſequently, if we do ſuffer, there will be no body ſo much to blame as ourſelves.

Neither have we been afraid to profeſs our Senſe of the Chimericalneſs of ſome Apprehenſions, and the too great Sanguineneſs of others, or of aſſigning our Reaſons for both; whence we hope it will be ſufficiently apparent, that nothing but unexpected and unexampled Vigour and Vigilance on their Side, and inexcuſable Indolence and Inattention on ours, can poſſibly cauſe any great Alteration in the preſent Situation of Things between the two Nations in that Part of the World during our Times. All which is delivered, not with the leaſt Intention to render us careleſs and ſecure, but to keep up the Spirits of our People, and to introduce and maintain a right Opinion of our own Strength and Capacity of maintaining and extending our Commerce, notwithſtanding the Growth of that of *France*, and the Pains taken to improve and encourage it. This we conceive to be a Spirit that ought to be excited in our Plantations, as of all other the moſt capable to enliven their Hopes, invigorate their Conduct, and give Succeſs to their Endeavours.

The Poſſeſſions of the *Dutch* in the *Weſt Indies*, are in themſelves far enough from being conſiderable, and yet through the Induſtry of their Inhabitants, and that Wiſdom and Dexterity with which they manage their clandeſtine Trade with the *Spaniards*, they are of no ſmall Conſequence, as we have largely ſhewn. It is indeed true, that ſince the Writing of that Part, we have been aſſured from very good Hands, that the Colony of *Surinam*, which we gave them in Exchange for their Settlements at *New York*, is very much improved, and is improving daily; nor can there be much Doubt of this, if we may believe what the *French Gazettes* have told us of the Value of the Prizes taken by their Privateers in that ſhort Space that actual Hoſtilities were exerciſed between the Subjects of the two Powers, which according to thoſe Accounts amounted to between two and three hundred thouſand Pounds; and this too in the actual Commodities and Manufactures of that Colony. This is the more ſurprizing, becauſe there has been a general Opinion, though I doubt not very well grounded, that the *Dutch* were not very expert in making Settlements in that Part of the World; however it muſt not be concealed, that the modern Improvements of *Surinam* are ſaid to have been in a great Meaſure owing to the Planters receiving great Aſſiſtance from the *Engliſh* and *French*, that from *Cayenne* and the Leward Iſlands have come and ſettled amongſt them, and have taught them new Methods of manuring their Lands, of raiſing Sugar, and other valuable Commodities.

The Court of *Copenhagen* has for two Reigns applied it ſelf with ſo much Attention and Diligence to commercial Affairs, that we cannot at all wonder at the Reports which are daily ſpread of the *Danes* having an Intention to extend their Commerce in the *Weſt Indies*; but conſidering that the ſmall Iſland of St. *Thomas* is all that they poſſeſs there, and is in itſelf incapable of being render'd much more beneficial than hitherto it has been, we cannot eaſily apprehend, how any Pains that can be taken about it, will be brought to yield any adequate Returns; unleſs there ſhould be ſome Truth in what has been likewiſe intimated from *Denmark*, that there is a Scheme on Foot for reviving their *African* Commerce, with a View of tranſporting their Negroes to the Iſle of St. *Thomas*, and ſupplying from thence the *Spaniſh* Plantations. Time will ſhew whether this Project has any Foundation, and alſo whether it is poſſible for the *Daniſh* Government to bring it to bear.

XII. The *ſecond* Book conſiſts of a Deſcription of the *Northern Parts* of the Globe, and of Travels thro' moſt of the Countries in *Europe*. We have handled the firſt Part of the Subject very largely, and that chiefly for this Reaſon, becauſe it had been very much overlooked and neglected by others. We have alſo taken the Opportunity of giving very compleat Hiſtories of the Attempts made for diſcovering the North-eaſt and the North-weſt Paſſages. With reſpect to the firſt, it was our Misfortune not to receive any certain Intelligence with reſpect to the *Ruſſian* Diſcoveries, till long after that Part of the Work was finiſhed and publiſhed; but we have endeavoured to ſupply that Defect, as far as poſſible, in the laſt Section, as being willing to run the Hazard of ſome Impropriety, rather than bury in Oblivion thoſe curious and important Paſſages that came ſo lately to our Notice.

In reference to the North-weſt Paſſage again, we were ſtill more unlucky, as not having an Opportunity to ſee the Account of the laſt Voyage, made with a View to that Diſcovery, till many Months after that Hiſtory had been in the Hands of the Publick. But it gives us great Pleaſure to find, that the Event of this laſt Voyage is ſo far from deſtroying the Credibility of what we have advanced upon that Head, that it agrees in all Reſpects with what we have delivered, and adds much greater Strength to our Conjectures than we could well have hoped for or expected. This too has encouraged us to add ſome farther Thoughts upon that important Diſcovery in the laſt Section, which we flatter ourſelves will not be diſapproved by our Readers, and which, we have little Doubt, will be alſo confirmed by the Event of the next Voyage, when-ever it ſhall be undertaken, which for the Honour and Welfare of our Country, we hope will be very ſoon.

As to the Voyages on the Coaſts of *Norway*, *Lapland*, and *Muſcovy*, the Accounts of *Sweden*, *Denmark*, and *Poland*, and the Remarks upon them, they will be found to give as much Light into the preſent State and Condition of the Countries to which they relate, as any thing that could be extracted from what has been publiſhed about them; and if any who peruſe them think that we have carried Matters a little too far, with reſpect to that very extenſive View which we have given of the commercial Improvements in the North, all the Favour we deſire is, that they will ſuſpend a deciſive Judgment for ſome Time, and we ſhall then both readily and patiently ſubmit to any Cenſure that ſhall be grounded in Reaſon.

Of the Travels thro' the middle Parts of *Europe*, particularly the *United Provinces*, the reſt of the *Low Countries*, *Germany*, *Italy*, *Switzerland*, &c. we can only ſay, that they are ſuch as were poſſeſſed of the publick Eſteem long before they enter'd into this Collection; and as we have given them very faithfully, and with no other Corrections than what relate to their Stile, and ſome Part of their Diſpoſition with a View to prevent tedious and needleſs Repetitions, we have no Cauſe to fear any Strictures upon our Conduct in relation to them.

The ſame Care and Fidelity was ſhewn in the other Travels through *France*, *Spain*, &c. and ſome Merit we aſſume from recalling to the Eye of the World, the Travels of Dr. *Edward Brown* through *Hungary*, *Auſtria*, and other Countries, even to the very Frontiers of *Europe*, which, without Queſtion, are in all Reſpects as worthy of Attention and Credit as any Thing of their Kind in our Language. What Additions we have made, more eſpecially in regard to the preſent State of *France*, and the reigning Syſtem of Policy in that Kingdom, will be found very agreeable to Truth, and not at all unworthy of the Reader's Notice.

The great End of this Sort of Reading, is the very ſame that is ſought by actual Travelling, that is to ſay, the ſhaking off thoſe narrow Notions; and, if I may be allowed ſo familiar an Expreſſion, thoſe clowniſh Conceptions which ſuch People have, as have never ſuffered either their Bodies or their Minds to make any Excurſions beyond the Limits of their own Countries, or to acquire a general Idea of the principal Nations about us, as well as ſome tolerable Notions of the Countries they inhabit; the Manners, Cuſtoms and Policies of the one, and the Climate, Soil and Produce of the other.

Such Books therefore as were moſt likely to anſwer theſe Intentions, were fitteſt for our Purpoſe, and were therefore taken into this Collection in Preference to ſuch as were written perhaps in a more elevated Stile, and were fuller of that Kind of curious Learning which renders them the Delight of Antiquaries and *Virtuoſi*; not that theſe are not alſo valuable in their Kind, but that they are leſs fit for general Reading, leſs uſeful to the

Bulk of Mankind, and leſs likely to invite the Peruſal; and then to fix the Attention of thoſe, who, it is probable, will reap the moſt Benefit from this Kind of Reading, and who may afterwards, if they think fit, peruſe thoſe more refined Travels with much greater Satiſfaction and Pleaſure.

XIII. The *third* Book, and, as Things ſtand at preſent, the laſt in this Collection, takes in the entire Deſcription of *Aſia*. In order to effect this, we have made uſe of thoſe Writers that have the higheſt Character in Point of Accuracy, Sincerity and Abilities; and, wherever the Subject required it, or the Helps received from later Writers put it abſolutely in our Power; we have improved, explained, and continued their Performances down to the preſent Times. Thus in Reference to the Cuſtoms, Manners, Laws, Policy, and preſent Condition of the *Turks*, we have augmented the Author from whom our principal Collections were made very conſiderably, and this for two Reaſons, firſt, becauſe it was impoſſible that in the ſhort Space of Time which a Man ſpends in his Travels, or even tho' he reſides a little longer in a Place, he ſhould enter deeply into the Concerns of a great Nation; and ſecondly, becauſe at the Time Mr. *Thevenot* travelled through the *Turkiſh* Empire, the *Ottoman* Power was far greater than it is at preſent. We have therefore to his Remarks, joined thoſe of a moſt worthy and intelligent *Turkiſh* Merchant, who reſided a long Time in that Country, and many Years at *Conſtantinople*; and we have alſo, after proving that the Opinion of the Declenſion of the *Ottoman* Force is well founded, pointed out the real Cauſes of that Decay, and aſſigned the Reaſons which render it very probable this Empire is ſick of a mortal Diſeaſe, from whence it is ſcarce poſſible it ſhould recover.

The Travels of the Reverend and learned Mr. *Maundrell* through the *Holy Land* are ſuperior to Correction, and all we could do was to bring them within proper Bounds, ſo as to ſuit with our Deſign; in order to which, we have done little more than was neceſſary to reduce the Copiouſneſs of the Stile, that we might bring the Matters of Fact cloſer to each other.

The Travels through *Perſia*, and the very full Deſcription of that extenſive Empire, was drawn from ſeveral Authors, but the beſt Parts of it from the incomparable Writings of the late Sir *John Chardin*, the laſt *French* Edition of whoſe Travels is certainly one of the beſt Books of its Kind that ever was publiſhed. The ſuccinct Hiſtory we have given of that Empire, was in ſome Meaſure without our Bounds, and ought to be conſidered as a Preſent made to the Publick, not the leſs valuable for being voluntary. It happened that while this Part of the Work was in the Preſs, the famous *Shah Nadir*, better known by this old Name of *Thamas Kouli Kan*, was murdered, and thereby a new Revolution brought about in that Country. This excited the Curioſity, and awaked the Attention of the Publick; we were willing therefore to gratify the one, and do our utmoſt to ſatisfy the other. At the ſame Time we did this, we afforded a Specimen of the Poſſibility of bringing a modern Hiſtory, even for a long Series of Time, and fruitful of great Events, within a very moderate Compaſs. In this, and in the other Parts of the Collection relating to theſe oriental Regions, we have not failed to keep in View our primitive Purpoſe, of giving, from the beſt Materials we could obtain, an Account of their Commerce; and if this is not altogether ſo accurate or ſo ample as we could wiſh, it cannot but prove acceptable, ſince for the moſt Part it is entirely new, at leaſt in regard to our Language, and the Fruits of thoſe generous Communications which the Concern we expreſſed for Things of this Nature, drew from ſeveral Perſons of as great Candour and Modeſty, as of Knowledge and Experience.

The Deſcription, the Hiſtory and Trade of the *Eaſt Indies*, and more eſpecially of the *Mogul* Empire, having been explained at large in the preceding Volume, there was no need of our repeating any Thing here, which is the Reaſon of our paſſing directly to thoſe Travels that lead us to the great Empire of *China*. Yet not ſo directly, but that we take the vaſt Countries between *Ruſſia* and *China* in our Way, theſe Countries which have been hitherto the leaſt known of any in *Aſia*, except the North Eaſt Regions within the Arctick Circle, and which however deſerve to be as well known as any, notwithſtanding thoſe Reproaches of Stupidity and Barbarity which the Nations that inhabit them lie under, and which perhaps ariſe full as much from our own Prejudices as from their Ignorance.

The Deſcription of theſe Countries we owe to the indefatigable Pains of his Excellency *Ysbrant Ides*, Embaſſador from the late Czar *Peter* the Great, in the Beginning of his Reign, to that famous *Chineſe* Emperor, equally remarkable for the great Length of his Reign, the Equity and Moderation of his Temper, and his Contempt of thoſe invariable Rules the *Chineſe* Policy preſcribes, even to their Emperors, by which the moſt abſolute Sovereigns are kept, as it were, in Chains. As the Account of *China* by that illuſtrious Traveller is very ſhort, he, and we following his Example, have ſubjoined an ample Deſcription of *China* by a Native; and have alſo interſperſed throughout the Whole, ſuch explanatory Remarks as were either communicated to us, amongſt which we acknowledge that excellent Diſſertation upon the making of Porcelain, or that we had an Opportunity of collecting from other Writers. We have alſo given many curious and entertaining Accounts from the Journal of the Sieur *du Lange*, who reſided for a long Time in *China* with the Character of Envoy from the Court of *Petersburgh*, not that ſhort and meagre Journal which had been formerly publiſhed in *Engliſh* by way of Appendix to the preſent State of *Ruſſia*, but from the Author's own original Memoirs, in which we have a far better Account of the interior and exterior Commerce of that Empire, than are to be met with elſewhere; the great Collection of Father *Dubalde* not excepted.

The Deſcription, Hiſtory and Diſcourſes relative to the *Peninſula* of *Corea* are entirely new, and are not to be met with either in our own, or in any other Language, ſo that it is hoped they will be found as pleaſant and entertaining as they are uſeful and important; more eſpecially as they tend to excite a Spirit of making new Diſcoveries for promoting Navigation and improving our Commerce. The laſt Section, in which the Reader has an Account of the lateſt *Ruſſian* Diſcoveries, compleats the Hiſtory of *Aſia*, and of the whole trading World.

It is true, that in preparing it, we treſpaſſed not a little on the Patience of the Publick; but when it is conſidered from how great a Diſtance Part of the Materials were to be expected, and how much Care and Caution were requiſite in diſpoſing and digeſting them, we ſhall ſtand in ſome degree excuſed; more eſpecially, if now, when they are all put together, they ſhould afford the Generality of the World a Variety of new Lights in reference to the Poſſibility of opening freſh Channels of Trade, and thereby in a great Meaſure changing the whole Commercial Syſtem.

There are indeed ſome who think this Point driven rather too far, and that we have carried our Reſpects for Trade beyond its due Bounds. But if theſe Criticks imagine that this proceeds from a particular or overweening Fondneſs for a Favourite Subject, they are at leaſt in that Circumſtance very much miſtaken. In the Dedication prefixed to the firſt Volume of this Work, we have at large aſſigned the Reaſons why Commerce ought to be conſidered in the Light that we have placed it. We have there ſhewn, that it procures moſt of the real and ſubſtantial Bleſſings which Mankind can either hope for or enjoy; and that the only Way to avert the Evils and Miſeries to which we are expoſed, is to cultivate and promote it. As there is in every Man a Spark of Ambition, there is and muſt be the ſame in Nations. Now this natural Deſire of Greatneſs and Fame, can be gratified only by an inceſſant Application to War, or by a conſtant and uniform Regard to Commerce. The former may indeed, though it ſeldom does, render a

Nation rich and powerful by the Spoil of others; but then it carries the Seeds of Deſtruction in the very Principles of its Greatneſs; for where Military Power is the Source of Grandeur, there muſt be perpetual Hazards, not only as to the Iſſue of Foreign Conteſts, but from the frequent Convulſions of inteſtine Troubles, as not only Reaſon teaches, but Experience vouches. Moſt of the ancient Empires were ſubverted by this Means. That of the *Greeks* laſted but for a ſingle Life; the great Captains of *Alexander*'s Army thought they had the ſame Title to be Kings, that he had to rule over Kings. The *Roman* Hiſtory is, at the Bottom, no other than a Record of foreign Expeditions, to gratify the Thirſt of Dominion, and of Civil Wars ariſing from the ſame Cauſe. But an Application to Commerce cannot be charged, at leaſt not juſtly, with any of theſe Inconveniences. We may trade with People without ſubduing them, and we may become potent, rich and happy, from the Effects of our Induſtry, without injuring; but, on the contrary, exerciſing our Beneficence towards our Fellow Creatures. It is indeed true, that ſome, or to ſpeak the whole Truth, moſt trading Nations, have purſued a contrary Conduct; but as in this they deſert the Principle that we recommend, ſo it affords no real Objection to what we have advanced, nor are we under any Neceſſity of defending them. Factories are very neceſſary, and in diſtant Countries ſo are Fortreſſes; but the Humour of ſubduing thoſe with whom we trade by Force is rarely beneficial. In Countries thinly inhabited, or by Savages, Plantations may be made agreeable to the Law of Nature; and theſe will be found equally honourable and profitable to the Nations that make them. By a due Diſtribution therefore of Factories, Fortreſſes, and Plantations, and by a juſt Regard to Maritime Power, a Nation wiſely governed may preſerve a Correſpondence with every Part of the Globe, without Injury to the Subjects of other Powers, and without Danger to their own Independance; which Plan comes the neareſt to political Perfection of any that has been laid down. Providence has diſpoſed large Chains of Mountains, and other natural Fortifications, to check warlike Ambition, but the Seas are every where open to promote Commerce between the moſt diſtant Countries; and navigable Rivers, or artificial Canals, ſerve in civilized Nations, to nouriſh and maintain Trade amongſt themſelves, as the Notion of communicating with each other, and thereby reciprocally removing Want, is the very Source of Civility itſelf. Conquerors we may be, and Barbarians ſtill, but a Race of barbarous Traders is at once a Soleciſm in Language, and an Abſurdity in Nature.

Thus, by giving the Reader firſt a ſuccinct Detail of the Scheme, the End and the Aim of this Work, and by proceeding afterwards to an expreſs Enumeration of its ſeveral Parts, and exhibiting their Relation to and Connection with each other, we have put it in his Power to judge how far we have executed what was originally propoſed and promiſed, and that too within the Bounds which were aſſigned it by the Proprietors Stipulations with the Publick. He will alſo ſee what the peculiar Advantages are which ariſe from the very Nature of this Collection, and from the known Characters of the ſeveral Pieces of which it is in a great Meaſure compoſed; he will farther enter into, and it is hoped, will at the ſame Time approve, the Reaſons for which ſuch Pieces as are of dubious Authority, contain Matters of mere Amuſement, are filled up with extravagant and uninſtructive Adventures, and have nothing to recommend them but Livelineſs of Thought and Vivacity of Stile, have been rejected; to which we may add, that he will be alſo ſenſible of the great Uſefulneſs of the Introduction, in which the Principles of thoſe Sciences, ſome Tincture of which was abſolutely neceſſary, to the underſtanding both the Hiſtorical and Argumentative Part of this large Collection, are laid down with ſuch Plainneſs and Perſpicuity, as to render them obvious to every Underſtanding.

Theſe Conſiderations, as they were of continual Weight with us in the compiling, diſpoſing, and adjuſting that great Variety of Treatiſes which in Whole or in Part have been admitted into this Performance, it was equally reaſonable and requiſite they ſhould be brought to the View of every Peruſer; which being done, there remains nothing farther but to wiſh the great Purpoſes that have been honeſtly purſued in the Execution of this Deſign, may be ſucceſsfully promoted thereby, and that the Publick will afford a kind Reception to Labours that have been moſt ſteadily, as well as moſt ſincerely, dedicated to their Service.

FINIS.

A
